Initiate an informative program that will bring to your members the true principles of our party; discuss political problems from all perspectives; do not hesitate to approach a problem that seems to be controversial; do not hesitate to suggest solutions that differ from those our elders have expressed.

THE CLOAK OF LEADERSHIP

This will take great leadership. You may face disappointment and even ridicule. Success will not come easily, but if you are willing to expend an effort for a cause in which you believe, you will succeed. The cloak of leadership can be tailored to fit anyone who has the desire to wear it. Will you wear this cloak, or will you be content to wear the mass-produced coat of the follower.

Once we have educated ourselves to the problems, we must give body to our solutions. It has been said that "the true object of education should be to train one to think clearly and to act rightly."

Therefore, if we are to follow through this objective, we must meet and discuss—and eventually formulate—a policy that reflects the will of this organization. This task should not be taken lightly, for it can have far-reaching implications.

Today, in our deliberations, we represent the various college Republicans clubs from which we come and yet, in a larger sense, we

represent more than that. We represent the hopes, spirit, and the expectations of all young people.

LIKE A BOAT WITHOUT AN ANCHOR

Do not shrug off these decisions as not concerning you, because, by so doing, you say that young people do not care what course our Government takes. I personally am not willing to believe this is the case, that our generation has no aspirations, believes in no guiding principles, cannot make intelligent decisions, and like a boat without an anchor simply drifts with the tides of time and the waves of events.

I believe that many of us are more aware of the ills that beset our Government than we will admit. I believe that it is much easier to close our eyes to these troubles than to attempt to solve them.

I further believe, however, that you—as well as I—realize this is wrong, that we cannot go on forever with our head buried in the sand, that these problems will not solve themselves, and that we must make an honest attempt to examine them, weigh the alternatives, and select the solution we feel most compatible to our generation.

BORN INTO DEPRESSION

And ours is a generation quite different from all the rest. Many of us were born into depression and raised in war, aware of the fact that our Nation faces a constant crisis. Educated in a world that has changed drastically from that in which our parents and grandparents were raised, our generation will have a different outlook on life.

Today we stand on the threshold of assuming a tremendous responsibility. The responsibility of facing up to, and handling, each new crisis as it arises—and recognizing the fact that what was sufficient in the past may not be adequate in the future.

AS SOUTH DAKOTA'S FUTURE LEADERS

The problems that our generation will be called upon to solve will have long-lasting effects, for we must live with them for many years. As South Dakota's future leaders, it is imperative that you consider long-range solutions. In this day and age solutions built upon expediency many times merely postpone and pile up the problems we must eventually meet and solve.

Our generation will inherit much that is good, in the sense of governmental policies, but also some that is bad. We can profit by the mistakes of the past, but we must be concerned with the future. It is here that our generation will provide the political leadership, the forward thinking, the new ideas, that our State needs from us. Our generation must provide the stimulation for positive action, because it is our generation that will reap the positive results.

All this, however, will not accomplish our purpose of assuring a voice in the councils of our party. For once having strengthened the position of the college federation by our increased education and actual contributions to the party, we must press onward—prepared to fight, if fight we must, for what we believe to be true.

Do not expect to be greeted with open arms by the senior party on all occasions. While the vast majority of them sincerely welcome our participation and our thoughts, there will be those who jealously guard their position and will view us as intruders.

WE SHOULD NOT HESITATE

Nor will our ideas be accepted by the majority of the party at all times, but disagreement within a political party is not unheard of—it is common—and it is not bad, but rather it is healthy. When we disagree with a position taken by the senior party, we should not hesitate to make our disagreement known to them.

Not publicly, if we can to it privately, but we must be active rather than passive. Above all, we must be true at all times to ourselves, for if we fail in this, we have forfeited all rights to call ourselves leaders.

If we have fought and lost, do not become disheartened. At times the decision will be justified because we will not be infallible. However, even when we may feel it is not justified, we must forget our difference and give our wholehearted support to the majority opinion. At this point we must exhibit the loyalty to a cause that is much larger than any one portion of the party.

COOPERATION SHOULD BE EQUAL

To the senior party I would say this: The burden of leadership still lies heavy upon your shoulders, but the spirit of cooperation should be of equal weight. In the past 2 years you have made a noble effort to help our growth, and we are grateful. I say what I say not out of ingratitude, but only because I am concerned for the future greatness of our party in South Dakota.

Do not close your eyes and your minds to our appeals when they come. Do not force us to foresake the State in which we were born, in which we have played, in which we were educated, in which we cherish. Let our voice be heard.

OUR MOST PRESSING PROBLEM

I have deviated somewhat from the general conception of a keynote speech. I did this not because I could not praise our party—for there is much to praise. I did this not because I could not attack the opposition party—for there is much to attack. I did this because I feel that the problem I have just outlined is our most pressing problem, and that it must be solved. It must be solved for the future welfare of the State, and it must be solved by the Republican Party for the future welfare of the party It would have been much easier not to mention these problems, but we must be realistic.

Our party has always been the leader in this State, and I want to make sure that it continues to be so. We will continue to be if we can maintain the political loyalty of our youth. But we must also recognize that South Dakota will soon undergo the political revolution that is now sweeping other States, and that—sooner or later—one party must provide the nest on which the loyalty of the youth of this State will come to rest. It must be the Republican Party.

I cannot accept the argument that our party is not conducive to attracting young people. I am firmly convinced that the basic principles of the Republican Party are those most suited to appeal to young people. All that remains is for us to generate the enthusiasm and for the party to accept our leadership.

This is our greatest challenge * * * to strengthen our party by bringing a new voice and a new spirit into the Republican ranks. The danger to the Republican Party in South Dakota is just as much from within, as it is from without. Our party must be strong inside if it is to withstand the attack on the outside. The new blood and new ideas that you college people represent can be the salvation of our party.

TO A PARTY STRONG

My thoughts are those of a young man about to leave this State, but who some day hopes to return. I want to return to a party as strong then as it is now.

Many of us have labored long and hard to bring the college federation to the position it now holds. We have achieved much of what we set out to achieve, and yet much is left undone. It will be up to you to complete this work.

The future will be up to you. Therefore, strive to build a better college federation in the knowledge that, by so doing, you will build a better party, and ultimately a better State.

A Tribute to Franklin D. Roosevelt, American Statesman

EXTENSION OF REMARKS
OF
HON. WILLIAM A. BARRETT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 12, 1961

Mr. BARRETT. Mr. Speaker, the name of Franklin D. Roosevelt is brought to mind today for two reasons. First, it is the 16th anniversary of his death; and, second, the times are calling forth a demand for statesmanship, a quality for which Franklin D. Roosevelt was justly famed.

Statesmanship is about as rare in this world as a precious diamond. Yet, unlike the diamond, it is essential in the life of a nation. And, again unlike the diamond, it is not consistently appreciated.

In times of tranquillity the statesman is often forsaken by the people. For statesmanlike leadership requires that the people act in unison, and the activity thus evoked is exhausting to everyone concerned.

Yet, as soon as crisis threatens, the people invariably cry out again for statesmanship, and woe betide them if the cry goes unanswered.

At the opening of the present century, our Nation was imperiled by giant industrial trusts and the people called upon Teddy Roosevelt to solve the resulting economic crisis.

Soon afterward, international aggression periled American freedom, and the people called upon Woodrow Wilson to settle that issue for them.

Then came a decade of tranquillity, in which statesmanship was forgotten; and at its close, the Nation stood faced with disaster.

Lack of statesmanship in economic matters had brought us to the brink of economic revolution; Wall Street was in turmoil, millions were unemployed, banks were failing daily and radicals, economic and political, were crying for the head of American free enterprise.

Lack of statesmanship in foreign relations had bred political upheaval in Europe and Asia; democracies were falling right and left and dictatorship was becoming the order of the day.

At this point the American people appealed to Franklin D. Roosevelt, then Governor of New York, to lead them from the swamp of chaos and despair. The issues were momentous: depression at home, aggression abroad, and the ominous threat of national destruction on every hand. But Roosevelt met the tasks before him in the manner of a statesman, with astonishing results.

Mustering the national wealth in behalf of the needy, he provided food for those who were hungry and jobs for the unemployed. Utilizing his knowledge of economic history, he revised the economic framework of the Nation, to bolster and strengthen its capitalist basis with Federal aid and Federal regulation. Critics cried paradox; that the Roosevelt

New Deal would kill off capitalism in America. But instead American capitalism was revived and Roosevelt was vindicated.

In the matter of international relations, Roosevelt again stood forth as a statesman: rallying the support of all the American nations to the common cause; urging the vigilance of the United States; bolstering the Army and Navy, and aiding the valiant British people in their struggle for democratic liberty.

When war came it was violent and terrible, but the Nation, under Roosevelt, was strong enough to meet the foe with a counterattack that carried the day, won the respect of our friends abroad, and established the United States as the leading power on earth.

Such were the exploits of Franklin D. Roosevelt, statesman extraordinary. Faced with two of the greatest crises in American history, he dealt with each in turn and brought his people through to victory. Nothing less than statesmanship could have saved the Nation when he appeared upon the scene. Sensing this, Roosevelt provided what was needed. For so doing, his memory is blessed today in the hearts of millions who worked and fought beneath his banner, and millions more to whom he was merely a name—yet a name symbolic of American statesmanship in action.

Migrant Farm Labor Problems and "Harvest of Shame"—IV

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

Mr. ROGERS of Florida. Mr. Speaker, this is the fourth in a series of articles presented in the public interest by the Palm Beach Post-Times to show the Members some of the progress being made in Florida to solve problems relating to migrant farm labor which were left out of the television presentation "Harvest of Shame."

The omissions of all that has been, and is being done in this field did a great injustice to the Floridians who have given their time and efforts to these problems over the years. It is hoped that by reading these articles and the ones to follow the Members and public will have a better understanding of this important matter:

[From the Palm Beach Post, Feb. 3, 1961]

THREE MILLION IS FAR TOO MANY

("From towns like this throughout Florida and throughout the South, the 2 to 3 million move out on their annual migration, which ends in late November—"Harvest of Shame.")

According to the U.S. Department of Labor, approximately 400,000 different individuals at some time of the year engage in migratory farmwork.

The American Farm Bureau Federation cited figures supplied by the U.S. Department of Agriculture as grossly misleading, if improperly used without explanation, as in this instance.

The figures show the total hired farm labor force varies from 900,000 in winter to 2,800,000 during the late summer. Those apparently were used by CBS.

"The harvest labor force includes hundreds of thousands of local people—children, high school students, retired people, housewives and others who work a few weeks at harvest period, but who are not a permanent part of the farm labor force, and in most cases, are only interested in temporary local employment," the federation said.

In "Farm Labor Market Developments," the U.S. Department of Labor reported 293,000 was the largest number of seasonal farmworkers employed in a 1-month period (July) of 1960.

In May of 1960, the figure was only 114,000.

What about Florida? What portion of those persons worked here?

The figures are not available. But in May of 1956, 32,654 Florida-employed workers signed up for work in the Atlantic Seaboard States following the end of the Florida harvest, the Florida State Employment Service reported.

Of that number, Pompano Beach led seven cities in this area with 4,089. Belle Glade had 4,006 and Fort Pierce 3,448. Pahokee signed up 2,070, Immokalee 2,082 and West Palm Beach 599.

Under the cooperative plan, 14,577 workers agreed to go to New York and 10,629 to Virginia. Maryland obtained 6,604 and North Carolina 5,226 to lead the others.

Such an arrangement, the FSES said, prevents countless hours from being wasted in the search for jobs.

Food for Peace Program in the Congo

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 12, 1961

Mr. HUMPHREY. Mr. President, one of the most effective programs for peace through the means of humanitarian assistance is that of the food for peace program under the directorship of George McGovern. It is with pleasure that I call attention to this agency's most needed efforts to raise the minimum nutritional standards of the starving people of the Congo, and I ask unanimous consent that an article describing this program entitled "Food To Save 300,000 Sent Congo by United States" in the April 10, Washington Post be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FOOD TO SAVE 300,000 SENT CONGO BY UNITED STATES

The chairman of the food-for-peace program said today the United States has shipped enough food into the Congo to save 300,000 people from starvation for a year.

George McGovern said that, if need be, his agency stands ready to make additional shipments available.

"There are about 300,000 people in the Congo who are confronted with acute hunger and we're trying to gear our shipments to feed that many people at minimum nutritional standards," McGovern declared.

The director, appearing on a New York State TV program with Senator KENNETH B. KEATING, Republican, of New York, said Russia and Red China are far behind the United States in the shipment of food to the hungry nations of the world.

McGovern said the Soviets, with food production problems and Communist China, with "a very acute food famine," are physically unable to compete with the United States in the field.

He said that as long as there is hunger in the world and as long as the American people have the capacity to assist, "I'm convinced we will have a food-for-peace program."

McGovern said operations are conducted in such a way that shipments do not compete with the flow of commodities that would normally be handled in commercial channels.

Contributions to Sgt. Alvin C. York To Erase Income Tax Owed

EXTENSION OF REMARKS
OF
HON. ROBERT A. EVERETT
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 12, 1961

Mr. EVERETT. Mr. Speaker, there follows a fine letter from Mr. Melvin T. Weakley, of Dyersburg, Tenn., and an editorial, which are self-explanatory. I think all of these concerned in this matter have certainly done a wonderful job. The letter and editorial follow:

DYERSBURG, TENN., *April 6, 1961.*

Hon. ROBERT A. EVERETT,
House of Representatives,
Washington, D.C.

DEAR ROBERT: As you probably know, Jere Cooper Dyersburg Post No. 30, American Legion, Department of Tennessee, originated the now apparently successful drive to get Congressional Medal of Honor Winner Alvin York's alleged income tax liability compromised and paid through public subscription.

Sometime prior to the department convention here last June, our post adopted a resolution, which was subsequently adopted at a district meeting and finally adopted as a department resolution at the June 1960, convention. After that, our post commander and other local officials visited Sergeant York on several occasions, contacted Representative JOE EVINS for assistance in procuring a compromise settlement of the alleged tax liability and raised over $2,000 by public subscription long before the compromise settlement was finally worked out and the national fund drive started.

In the March 30, 1961, issue of our Dyersburg Daily State Gazette, Editor Russell M. D. Bruce, World War I veteran and longtime member of the Dyersburg post, published an editorial recognizing the efforts of our post. Having been a member of this local post since the close of World War II and one of its past commanders, I felt that you would be glad to see that a copy of the editorial mentioned, which is enclosed herewith, is inserted into the CONGRESSIONAL RECORD.

Our entire post membership will greatly appreciate your doing this for our post and we would like to have you send us a copy after you get it put into the CONGRESSIONAL RECORD.

Sincerely yours,

MELVIN T. WEAKLEY.

[From the Daily State Gazette, Mar. 30, 1961]

BIGGEST CONTRIBUTION

Members of Jere Cooper Dyersburg Post No. 30 of the American Legion must feel very proud of the manner in which the

Nation is responding to the move to raise money to pay off the income tax obligation of Sgt. Alvin York, America's greatest hero in World War I.

Among the stirring moments devoted to the fundraising campaign was the lengthy time given to it Sunday night by Ed Sullivan at the outset of his weekly Sunday evening program.

For years the Internal Revenue Service had dogged York in trying to collect the tax which it was claimed he owed from income on the motion picture, "Sgt. Alvin York," which starred Gary Cooper.

York did not have the money to pay. He had given away practically all of the movie earnings to build schools in his beloved east Tennessee rural country. He had little property left and less income.

For years the efforts of the Internal Revenue Service to collect went on, while the World War I hero, whose outstanding feat, despite the fact that he was a conscientious objector, still amazes the world, grew old and sickened.

Several months ago the Dyersburg post of the American Legion conceived the idea of turning to loyal and patriotic Americans to collect the money and pay off the obligation.

They moved slowly, but succeeded in getting information about their undertaking spread far enough to receive donations from more than half the States of the Union and three foreign countries.

They succeeded in having their fundraising resolution adopted by the district and then the State Department of the Legion while news of their gallant efforts spread across the country and caught the fancy of those who had not forgotten York and those who seemed never to have heard of him despite his outstanding heroic accomplishment.

Finally success was achieved in having the income tax obligation reduced to $25,000, and by that time the idea which originated in Dyersburg was taken over at Washington by national leaders in the Congress.

Dyersburg post tossed in the mite which it had collected to start the movement. It amounted to almost 10 percent of the total, but the biggest local contribution was awakening the Nation to a neglected obligation.

Five Thousand Additional Industrial Jobs Target of Greater Wilkes-Barre

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 12, 1961

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the most gratifying and highly optimistic news story from the New York Times of Sunday, March 26, 1961, which reports on the highly successful industrial fund drive recently carried out in my congressional district of the Greater Wilkes-Barre area where the target of $1.5 million was exceeded by over $200,000. It indeed gives me a great deal of personal pleasure and satisfaction to insert this news story written for the Times by Mr. William G. Weart.

The indicated news story follows:

GIFTS BRINGS JOBS IN WILKES-BARRE—1.7 MILLION IS CONTRIBUTED IN LATEST SELF-HELP DRIVE OF DEPRESSED REGION

(By William G. Weart)

WILKES-BARRE, PA., March 25.—Once again the Wyoming Valley, center of a depressed anthracite area of northeastern Pennsylvania, is tugging at its own bootstraps.

With $1,703,000 raised in the midst of the recession and the prospect of Federal aid, the Greater Wilkes-Barre area has embarked on a new era of self-help. This time it is after 5,000 additional industrial jobs.

The area, frequently at the top of the Nation's list of economically distressed sections, knows the value of such hometown effort. In the last decade, with $2,088,000 contributed to previous campaigns, the Greater Wilkes-Barre industrial funds have obtained land and buildings valued at $9,375,000, created 8,000 jobs and picked up 6,000 others in service and retail trades.

But even this success, before last year, had not been sufficient to keep pace with the loss of employment arising from the closings of collieries and strip mines. The scars of these enterprises dot the countryside.

"We reached the break-even point in 1960," said Samuel M. Wolfe Jr., chairman of the industrial development committee of the Greater Wilkes-Barre Chamber of Commerce.

"Twelve years ago there were 30,000 miners in the Wyoming Valley," he recalled. "Now there are less than 900 and mining has become just a part of an economy that is growing more diversified each year."

The goal of the 1961 industrial fund campaign, which is to continue for 3 years, had been $1,500,000. Last week it was announced that pledges solicited from labor and industry had already surpassed that by $203,000.

Previous campaigns had been limited to big contributions, but the latest appeal was communitywide, with labor leaders taking a prominent role. Through payroll deduction workers contributed $331,000 "to get jobs for unemployed relatives, friends and neighbors."

To date the industrial funds have been directly responsible for the establishment or expansion of 30 industries. They attract new industries by building shells and providing financial aid in other ways.

Generally, the funds supply 20 percent of the initial cost and the Pennsylvania Industrial Development Corporation 30 percent, at 2.5 percent interest. Bankers provide the balance in 6 percent loans.

Similar self-help programs are operating throughout the 10-county anthracite region. However, according to Frank W. Earnest, Jr., executive vice president of the chamber, the Wilkes-Barre funds "are unique in that all contributions are outright gifts."

Most business and industrial leaders of the hard coal region are against "handouts" from the Federal Government.

"We're not in favor of giveaway programs," Mr. Earnest observed. "In the Federal program we'd like to be able to borrow another part of the money we need to go along with our own."

As a whole, the anthracite area wants Federal aid in a form that will help it solve its own problems. The Federal Government, it is felt, can help with highways, industrial development loans, urban funds, defense contracts, and decentralization of government.

The population of Luzerne County, of which Wilkes-Barre is the seat, has declined 100,000 to 348,000, because of the migration of surplus workers. Hundred of young job hunters, especially women, have gone to Washington for secretarial and clerical employment.

Decentralization of government, it is claimed, "would stop this migration, and would be of benefit to national defense in an emergency."

Unemployment in the Wilkes-Barre-Hazleton labor market, which takes in most of Luzerne County, totals 17,958, or 14.9 percent of the total labor force. About three out of every four job seekers, are men. Of the total, approximately 58 percent are skilled or semiskilled.

VA Domiciliary Facility for Boston

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 12, 1961

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include my statement in support of my bill H.R. 694, to provide for the establishment of a VA domiciliary facility in the vicinity of Boston, Mass., in connection with my appearance before the House Veterans' Affairs Committee on April 10, 1961:

STATEMENT OF HON. THOMAS J. LANE, OF MASSACHUSETTS, IN SUPPORT OF H.R. 694, TO PROVIDE FOR THE ESTABLISHMENT OF A VETERANS' ADMINISTRATION DOMICILIARY FACILITY IN THE VICINITY OF BOSTON, MASS., BEFORE THE HOUSE VETERANS' AFFAIRS COMMITTEE, APRIL 10, 1961

Mr. Chairman, in proposing "the establishment of a Veterans' Administration domiciliary facility in the vicinity of Boston, Mass., and to operate and maintain a convalescent and rehabilitation hospital of not less than 1,000-bed capacity at such facility." I am concerned with the average age of our veterans, and particularly those of World War I.

In meeting their needs, we shall have the facilities in being, to provide for the veterans of World War II, and Korea, when they in turn reach the age where some of them will require the services of "an old soldiers' home" and convalescent care.

The increasing life span of our population, accompanied by the steady increase in the number of private nursing homes to meet the special needs of the aging, is a fact of modern life that we cannot ignore.

Ever since World War I, the Government of the United States has recognized its responsibility to provide medical and surgical care for veterans whose disabilities are a direct, or indirect result of their military service.

Apart from the small number who are the victims of an incurable mental breakdown, it was taken for granted that most veterans, after medical or surgical treatment, would return to their families, their jobs and to participation in the general life of the community.

But, the more than 2 million surviving veterans of World War I, whose average age is between 67 and 68, confront us with a new problem. A few of them, without families and dependent upon public assist-

ages, are living a lonely and threadbare existence in "skid row" lodging houses. A larger number have reached the stage of physical deterioration requiring the care that their families cannot provide for them. This is a problem that will become more urgent month by month.

Mr. Sumner G. Whittier, the previous Administrator of the Veterans' Administration, in a letter to me dated December 21, 1960, replying to my suggestion that more beds be made available for veterans in Massachusetts, made the following comment:

"I would rather not use the phrase 'long term' because it does not quite describe the two basic types of veterans: Those needing hospital or medical care; and those needing only nursing home care. This becomes quite a complicated problem with many ramifications. The States are attempting to come to grips with it; so is the VA. And although the VA would prefer to maintain as its primary aim, the hospital program, next year the Committee on Veterans' Affairs will consider a new program involving intermediate care for veterans which will be a step in the right direction. VA has worked out such a program and had I stayed as Administrator, I would have presented it to Congress. Whether I remain or not, the program will be carefully reviewed because it is a matter in which OLIN TEAGUE has a deep interest.

"Indeed the committee staff and VA staff people here have been working together on this."

There seems to be general agreement that we must work out a new program to provide for veterans who need "long term" or convalescent care, as distinguished from the conventional hospital and medical care.

As concerns the aging veteran, he frequently needs both domiciliary and convalescent care.

The Veterans' Administration has no domiciliary beds in the whole six-State New England area. It is not an adequate excuse to point out that State soldiers' homes are maintained in four of these six States. Such an argument is an attempt to shift the Federal Government's responsibility over to the States.

Massachusetts, for instance, has two veterans' hospitals of its own, at the State (soldiers') homes in Chelsea and Holyoke. They can only accommodate a limited number of applicants. The one at Chelsea always has a waiting list.

This is so because the Federal Government is not fulfilling its obligations to the aging veterans of World War I. They feel, with good cause, that they are second-class veterans in the eyes of their own Government, insofar as entitlement to benefits is concerned. There was no GI bill of rights for them. To compensate for this lack, they believe that the Government should provide care for those of their comrades who cannot look after themselves.

As of June 30, 1959, the Veterans' Administration had 17,395 operating beds for domiciliary care, but not one of them was available within the New England area with its large population of veterans.

With a clearly expanding need for this type of service, top priority should be given to the establishment of a VA domiciliary facility and to operate and maintain a convalescent and rehabilitation hospital of not less than 1,000-bed capacity at such facility, in the vicinity of Boston, Mass.

H.R. 694, the bill I have introduced for this purpose, will authorize and direct the Administrator of Veterans' Affairs to establish such a facility.

Migrant Farm Labor Problems and "Harvest of Shame"—V

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

Mr. ROGERS of Florida. Mr. Speaker, this is the fifth in a series of articles presented in the public interest by the Palm Beach Post-Times to show the Members some of the progress being made in Florida to solve problems relating to migrant farm labor which were left out of the television presentation "Harvest of Shame." The omissions of all that has been, and is being done in this field did a great injustice to the Floridians who have given their time and efforts to these problems over the years. It is hoped that by reading these articles and the ones to follow the Members and public will have a better understanding of this important matter:

[From the Palm Beach Post, Feb. 3, 1961]

ONE HUNDRED DOLLARS A WEEK—
THE KING STORY

"Aleen King, I saw your children yesterday at the Okeechobee Camp. Why don't you put them in the nursery?"

"I don't have the money to pay for it."

"How much does it cost to put them in?"

"Eighty-five cents."

"Eighty-five cents?"

"That's right."

"Tell me, what time did you come out to the field this morning?"

"Six o'clock."

"What time will you get home?"

"About 3:30 to 4."

"From 6 this morning to 4 o'clock this afternoon?"

"That's right."

"How much did you earn?"

"A dollar."

"One dollar?"

"That's right, $1."

"Is that because the beans were of poor quality?"

"That's right."

"How much money does food cost you today?"

"About $2."

"Aleen, how old are you?"

"Twenty-nine."

"How many children do you have?"

"Fourteen."

"Hold old were you when you first started working in the fields?"

"Eight."

"You've been working 21 years in the fields?"

"That's right."

"Aleen, do you ever expect to be able to get out of this work?"

"No sir."—"Harvest of Shame."

As this story of abject, hopeless poverty unfolded before the cameras of CBS, Aleen King's husband, Will King, went about his customary duties as a laborer in a regular weekly job in the Glades.

His regular weekly salary is $83.40.

This would still be a small amount for 14 children, even after adding Aleen's wages, but the truth of the matter is that there are only seven living King children. Seven are dead, with twins having been stillborn.

Two different committees who have investigated some of the scenes in "Harvest of Shame" have singled out this interview as an excellent example of how much misinformation can be implied by leaving out highly pertinent facts.

Members of the Belle Glade Chamber of Commerce committee pointed out that bean pickers just don't get out into the fields at 6:00 in the morning.

"They just don't start picking until after the beans have dried in the sun," Urban Felsing, committee chairman, said.

"There has never been a time when bean pickers made only $1 a day in this area," another member said.

The committee statement of migrant earnings is supported by the American Farm Bureau Federation which says: "The minimum rate for picking beans in the area is 60 cents a hamper."

And most workers have little difficulty in picking two hampers an hour, according to the federation.

A committee of the Florida Fruit and Vegetable Association, headed by Ruth S. Wedgworth, reported detailed facts of King's employment and of the number of King children to Senator SPESSARD L. HOLLAND, of Florida, and added this paragraph:

"Lest it be alleged that the deceased children were the victims of inadequate medical care due to the 'financial plight' of this family, the record shows that in 1958, the county welfare agency in West Palm Beach paid $943.30 to St. Mary's Hospital for the care of Katherine King (still living), and additionally, over $1,000 in hospital and medical bills have been written off by the local hospital and doctors at Belle Glade in connection with medical treatment afforded the King family over the last several years."

Day-care nurseries giving supervision, a meal and snacks are available to migrants at all large camps, and none charge as much as 85 cents per day.

Although accurate records are not available, it appeared obvious from the findings of the two committees that when the King family heads north each year, they will be leaving a 4- or 5-month period in which the family income has been considerably higher than $100 per week.

Kennedy's Tax Program

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 12, 1961

Mr. DEROUNIAN. Mr. Speaker, will President Kennedy's tax proposals, now awaited by the Congress, offer safeguards against Government's abuse of our tax system, as well as individual abuse? Here is an interesting article by David Lawrence, which appeared this morning in the New York Herald Tribune:

TODAY IN NATIONAL AFFAIRS—KENNEDY'S TAX MESSAGE MAY CHANGE IMAGE OF HIM

(By David Lawrence)

WASHINGTON, April 11.—Within a few days the American people will get for the first time some basic information which will enable them to begin to make up their minds whether or not they like their new President.

For what has happened thus far hasn't realy been decisive. It doesn't matter much whether the Kennedy household hires a French chef or whether the Peace Corps is going to convert native Africans to civilization. What does matter is whether the Federal Government is going to collect more tax money out of the worker's take-home pay.

The President is planning to send his tax message to Congress next week. It has been delayed for unexplained reasons, though it is widely suspected that the drafts of the message proposed by the President's "task forces" and advisers—the "theoretical" boys—have run into some penetrating criticism from Members of Congress—the "practical" boys.

It's always wise to have a lot of idea men around. Perhaps, however, the comment of Prime Minister Macmillan in a speech in Britain not long ago apropos of the Socialist Labor Party is worth repeating as applicable to the current situation in this country. Mr. Macmillan said the Socialists have had some "original and sound ideas, but the trouble is that some of the ideas that are original are not sound and some of the sound ideas are not original."

A COMPLICATED AFFAIR

Tax rates and regulations are at present a complicated affair that cannot be defended as either equitable or productive of adequate tax revenues. There isn't, to be sure, any tax system that will yield enough revenue for the "spenders." But the important fact today about new taxes is not whether they are going to be made more equitable as between different classes of taxpayers, but whether forthcoming changes will disrupt the economic stability of the country for a long time to come. Far from being a cure for recession, tax changes can prolong a recession by producing a disequilibrium in the economy.

The average citizen will be affected in many ways and particularly in his purchasing power. It seems ironical that, with all the talk about increasing consumer power to buy, the Government should be considering a tax program that will curtail incomes for many people and many businesses.

Take, for instance, the Social Security taxes which affect almost everybody. Some will go up in a few months, and some will be further increased at the end of the next year. If Congress goes ahead with pension changes and medical care for the aged, the Social Security taxes on the whole program will go up by nearly 33 percent on a person who makes a little less than $90 a week. Thus, the man who earns $4,800 a year or more now pays $144 a year in Social Security taxes, but the amount the Federal Government will take from him will go up to $193.75. This means that the employer and the employee together will pay nearly $100 a year more than they do now. This may subtract billions of dollars in purchasing power.

MORE REDTAPE

Perhaps the most irritating change is coming in the plan to withhold taxes on interest and dividends at the source. Low-income persons, especially retired people who do not have much income, will find their regular monthly stipend decreased. Also, if the companies have withheld more than later will be found due in taxes on certain individuals, a lot of redtape and plenty of time will be necessary before the money improperly collected will be refunded. Likewise, this means more trouble and expense for the businesses concerned. It is not clear as yet whether this procedure will apply to interest on savings accounts, but it does mean a lot more work without recompense.

There's another item that will cause much controversy. It is the proposal to remove the limited tax credit on dividends. The argument against full taxation of dividends is that the citizen is taxed doubly if he puts his money in a corporation but not if it is invested in a partnership or a proprietorship. The argument being made here in favor of it is that double taxation is a myth.

Another plan of the administration calls for an increase in certain taxes which will add to the cost of tires, tubes and the like. This isn't going to help business, either.

"HAVENS" NEED CORRECTION

There are, to be sure, some "tax havens" that need correction, such as those enjoyed abroad by individuals who stay there for relatively brief intervals and get certain benefits anyway. Also, there is need to eliminate abuses in what is defined as "ordinary and necessary expenses" in business. But such a reform process tends to upset many established practices that have long been considered legitimate and equitable but which the Government, in its zest for more tax collections, feels it will have to modify.

All this adds up to painful change—an impact on the economy which may not be felt for some months but would appear to be inevitable.

Once the tax message of the President is sent to Congress, it will be interesting to see what happens to the popularity curve of the President in the Gallup poll.

FBI Figures Refute High Crime Rate Charge in Luzerne County

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 12, 1961

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newsstory from the Wilkes-Barre Times Leader of Tuesday, March 21, 1961, the figures in which refute the charge made by a newspaper columnist in New York City that my congressional district has a high rate of crime. It indeed gives me great pleasure to set the record straight on this most vital subject. I wish to compliment Mr. Herman Otto, director, Wilkes College Community Research Center, Wilkes-Barre, for the thorough manner in which he compiled this report.

The indicated news story follows:

VALLEY IS NOT BANDIT RIDDEN—FBI FIGURES SHOW LOW CRIME RATE

Despite the below-the-belt swing taken at greater Wilkes-Barre recently by a New York columnist, the area ranks third lowest in total crime offenses compared with 182 metropolitan areas in the United States, according to a comprehensive report based on authentic figures made public today by Community Research Center of Wilkes College. All data in the report have been extracted from Uniform Crime Reports issued September 16, 1960, by Federal Bureau of Investigation, according to Herman Otto, director, Wilkes College Community Research Center.

Mr. Otto revealed the center's report was compiled to refute a statement made by Victor Riesel, columnist for the New York Mirror, who in his column of February 20, carrying a Wilkes-Barre dateline, wrote: "If you go east by northeast into this corner of Pennsylvania, you roll into some sectors tougher than the bandit-ridden hills of Sicily."

The community research report is based upon surveys by some 7,000 law enforcement agencies throughout the country who report regularly to Federal Bureau of Investigation. These reports, begun 30 years ago, have been constantly refined and improved. They are recognized as the most complete, uniform, and reliable crime statistics available on a nationwide basis.

The purpose of the center's analysis made from the FBI report is to compare the rate of incidence of crime in the Wilkes-Barre-Hazleton area with other standard metropolitan areas of the United States, of 14 Northeastern States and with Pennsylvania.

COMPARES FAVORABLY

Wilkes-Barre-Hazleton's relative position as to the rate of incidence of crime per 100,000 population speaks very favorable for itself.

Compared with 182 metropolitan areas, it is third lowest in total offenses. Compared with 51 standard metropolitan areas in Northeastern United States, it is third lowest in total offenses; compared with 12 standard metropolitan areas in Pennsylvania, it is lowest in total offenses.

Pennsylvania cities used for comparable analysis include Allentown, Bethlehem, Easton, Altoona, Erie, Harrisburg, Johnstown, Lancaster, Philadelphia, Pittsburgh, Reading, Scranton, Wilkes-Barre, Hazleton, and York.

Principal cities in the following States are included in the report: Delaware, District of Columbia, Maryland, Virginia, West Virginia, New Jersey, New York, Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, and Ohio. Total figures of the entire United States were also used, but were not broken down into specific areas.

Compared with 182 metropolitan areas of the United States, the Wilkes-Barre-Hazleton area ties for lowest in murder and nonnegligent manslaughter; is 43d lowest in forcible rape; 2d lowest in robbery; 16th lowest in aggravated assault; 4th lowest in burglary; 9th lowest in larceny; and 6th lowest in auto theft.

Compared with 12 standard metropolitan areas in Pennsylvania, the immediate area is lowest in total offenses; lowest in murder and nonnegligent manslaughter; lowest in robbery, fourth lowest in aggravated assault; lowest in burglary; fifth lowest in larcency of $50 or over, and third lowest in auto theft.

LOWEST IN REGION

Compared to Scranton's 1960 population of 232,702, Wilkes-Barre-Hazleton's population of 345,952 shows 296.6 per 100,000 in total offenses as opposed to Scranton's 453.4; Allentown-Bethlehem-Easton's 344.4; Reading's 413.5, and Lancaster's 321.7.

It is interesting to note that Atlantic City with a 1960 population of 157,139 shows 1,521.6 total offenses per 100,000 population as compared with 1,304.7 total offenses for New York City with a 1960 population of 10,545,360; and 927.4 total offenses per 100,000 population for Philadelphia with a population of 4,289,194.

As Wilkes-Barre and the Wyoming Valley have endeavored to develop a new economy based upon multiple industries, the need for research and planning have become ever more essential. Each successive effort for community redevelopment has created a greater awareness of the need for facts and figures. In consequence, Wilkes College and other agencies have been called upon to make a number of isolated studies. These studies have served a limited purpose and then have become useless because no person or office has been responsible for the continued gathering and reporting of significant facts.

Because of this situation, Wilkes College organized and developed the Community Research Center, located in Parrish Hall and supported partially from funds of the Ford Foundation. The foundation also supports

in like manner the Institute of Municipal Government and the Labor-Management-Citizens Committee, all three functioning outside the specific Wilkes College area.

The purposes of the research center are to coordinate studies of community problems; to assure continuity of studies and to make special studies for public and private groups.

Migrant Farm Labor Problems and "Harvest of Shame"—VI

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

Mr. ROGERS of Florida. Mr. Speaker, this is the sixth in a series of articles presented in the public interest by the Palm Beach Post-Times to show the Members some of the progress being made in Florida to solve problems relating to migrant farm labor which were left out of the television presentation "Harvest of Shame." The omissions of all that has been, and is being done in this field did a great injustice to the Floridians who have given their time and efforts to these problems over the years. It is hoped that by reading these articles and the ones to follow the Members and public will have a better understanding of this important matter.

[From the Palm Beach Post, Feb. 8, 1961]

SOME MIGRANTS ARE CAPITALISTS

"Some have tried to leave the endless migrant stream."

"I'd like to get on a farm somewhere out away from so many people, where they could attend one church and be interested mostly in one school. In that way, I think they'd all be better satisfied."

"Mr. Parson, do you think this will ever happen?"

"Not at the rate I am going now, no."

"Aleen, do you ever expect to be able to get out of this kind of work?"

"No, sir."—"Harvest of Shame."

In Belle Glade, members of Everglades Progressive Citizens Inc., are looking forward to a good year.

W. C. Taylor, who founded the organization in 1954—largely in behalf of migrants—points with pride to its accomplishments during the 6 years as evidence the community is doing something about its problems.

The group began operation with 13 members, who put up $20 each and agreed to contribute at least $10 per month.

Now the number has grown to 244. The number includes 49 stockholders who were migrants at the time of the telecast.

And 26 still are in the migrant stream, Taylor said after a study of his records.

The corporation pays regular dividends to its stockholders. The story of its success is an amazing one.

Taylor's group recently bought a 15-acre plot on Avenue E for $50,000 and plans to create an FHA housing project of 24 homes. The corporation posted $5,000, and the FHA office has stamped its approval on the work, subject to the city's completion of drainage and sewage plans.

The project can grow, Taylor pointed out, because there is space for 65 homes, and the area is suitable for 12 new places of business.

The corporation has been recognized by lending institutions as qualified for construction work, and it regularly bids against older contracting firms. Right now it has two homes for school teachers under construction and plans to start two others soon.

W. L. Clark is in charge of construction.

He is one of many former migrant workers in the area who have emerged successfully from the stream.

Questioned at the scene of a job, Clark commented with assurance, "You can get out of the stream if you want to."

He was supervising construction of apartments over the Citizens' Service Station at Seventh Street and Avenue E.

The corporation invested $15,000 last year to buy the land and build the station, which also includes a garage.

The station is managed by the corporation president, Ulysses Kerr.

Like Clark, he is a former migrant. He got out of the stream in 1952.

Former migrants are easy to find in the corporation. The board of directors includes seven.

Taylor, a funeral home operator, said the corporation began its investments in 1957 by building the Cozy Queen Diner at Seventh Street and Avenue East at a cost of $9,000.

In 1958, he said, $32,000 went into an eight-unit CBS apartment building at 514 Seventh Street, mostly for permanent Belle Glade residents. These now rent for $14.75 per week.

How did the group come into existence?

As a businessman, Taylor said, he cosigned notes for some migrants, and a few of them defaulted.

"They were not being dishonest," he said. "It was just that they had no education in money matters. They were good people."

But as a result of that, he said, he called the original group together to see if something could be done for their mutual benefit.

"We finally agreed to put up $20 each and contribute $10 a month into a fund from which we could borrow," he continued.

"Many of them at first said they couldn't do it because they didn't make enough money. But we drew up lists of our income and wrote down just where all of the money was spent. From that, we determined just where money was being wasted and what could be done to make the plan possible."

The group was in conference for 5 hours, Taylor said, and he found many migrants had obligated themselves to pay 25 percent interest for the privilege of borrowing money.

Chuckling, Taylor recalled a telling sales pitch he gave the original group to convince them of the wisdom of the plan.

"My daughter drew a picture of some telephone wires filled with birds," he said. "Other birds were flying around looking for a place to land. I asked the group where they thought they were going to land if they didn't start saving."

The plan worked so well, Taylor said, that it was possible to incorporate for $20,000 after 2 years. New Citizens is incorporated for $75,000 and planning to enlarge that figure as soon as the housing project details have been ironed out.

The corporation has been paying 5 percent dividends.

Taylor's group, anxious for the welfare of the migrants, sponsors an educational program for them to show it is possible to get out of the stream if they so desire.

The corporation has found jobs for some migrants, Taylor said, but has found that many other migrants have accepted their life and show no desire to get out of it.

The funeral director is a native Floridian. He appears much younger than his 53 years. Active in scouting, he also is a deacon in the Baptist Church and teaches Sunday school.

With a desire to be a funeral director, he went to Palm Beach County and worked as a cane cutter to earn money for his education.

"It was while I was working in the fields that I learned I'd have to serve a 3-year apprenticeship with a funeral director before I could go to embalming school," he said.

Citizens contains 10 of the original 13 members.

"Only one dropped out," Taylor said. "Two others moved away."

Taylor himself hasn't taken any money for his work, he said, and his wife also worked years for the corporation. Now she is the secretary and draws $35 per month.

He now is business manager and director of the corporation.

Active assistance is provided by President Kerr, Treasurer Haywood Campbell, Secretary Willie M. White, Director Charles Butts, and F. Malcolm Cunningham, legal adviser.

St. Louis Globe-Democrat Calls for Return to Real Issue in Aid-to-Education Controversy

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 12, 1961

Mr. CURTIS of Missouri. Mr. Speaker, in its issue of March 27, the St. Louis Globe-Democrat pointed out in an editorial, "Federal Aid—Back to the Issues," that the interest of the Congress and the people of this country has strayed from the truly basic questions involved in the controversy over Federal aid to education. As the editorial points out:

It would be tragic if the main issues were lost sight of in the smoke of battle over loans or grants to private schools.

I should like to enter this editorial into the RECORD at this point and commend it to the attention of my colleagues:

FEDERAL AID—BACK TO THE ISSUES

Ever since Catholic spokesmen asked for Federal loans for private and parochial schools, the matter of Federal "aid" to education has been bogged down on a side issue. The crux of this matter is not whether private schools should get Federal "aid"—but whether any school districts need it, or should accept it.

To get the debate back on the tracks, the Globe-Democrat would like to point out that the main objections to so-called Federal aid are these:

First. Federal subsidies will lead to Federal control in education as in any other field.

Second. The States and local school districts have been meeting their educational needs with flying colors.

Third. Federal "aid" is a misnomer, since every dime kicked back to local taxpayers must be taken from them in the first place by Washington.

These are the important issues in the debate over Federal "aid." They are the reasons why the proposal will be defeated, we believe, just as it has been every other time it was proposed.

When Washington helps pay teachers' salaries, or helps build local schools, it will say who qualifies, and how. In fact, the bill already lays the groundwork for Federal regulation when it set forth the formula for distribution of funds.

When Washington dictates how the pie will be cut, it is already sticking its foot in the door of the public schools.

Let no citizen, or schoolteacher, be misled on this point. When the Department of Health, Education, and Welfare starts handing out funds, it won't be long until it lays down detailed rules on who gets the money, how it will be spent and why.

Ample facts and figures show that the American people, through their State governments and local school districts, are already meeting the challenge. In the last 10 years they have tripled the amounts spent on public grade schools and high schools.

This sum has gone up from about $5,800 million a year in 1949–50 to $15,500 million in 1959–60. This, of course, is almost seven times as much as the $2,300 million spent in 1930.

In the last 10 years, the number of public school classrooms has increased 60 percent.

Spending has increased far faster than the increase in school population. In the past 30 years, school enrollment climbed 42 percent, but spending on schools rose 571 percent.

Nor does this mean that a few States are meeting their school obligations but others can't.

Just a few years ago, the White House Conference on Education candidly conceded that no State was too poor to provide schools for its children. It conceded, however, that taxpayers in some States were not willing to make the effort.

Finally, it is important to point out that no one gets something for nothing from the Department of Health, Education, and Welfare. Its Federal "aid" is simply Federal taxes, collected locally and returned minus Health, Education, and Welfare's handling charge.

It would be tragic if the main issues were lost sight of in the smoke of battle over loans or grants to private schools.

Federal "aid" to our local school districts is a snare and delusion. No one will really benefit, least of all the taxpayers.

Winchell Should Apologize and Retract Insult to Italian-Americans

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 11, 1961

Mr. ANFUSO. Mr. Speaker, in his column of April 3 Walter Winchell struck below the belt. He insulted millions of Americans of Italian descent by insinuating that President Kennedy has not appointed any Italians to high public office because Italians are controlled by or linked with "the Big M," presumably meaning the maffia.

I have this day sent a letter to Mr. Winchell demanding an apology and a retraction for his insult against a whole people. If he has any decency left in him and an appreciation of the feelings of other people, whom he has caused untold harm, he should publicly recant for his misdeeds in this instance.

Mr. Speaker, I am inserting into the RECORD the text of my letter to Mr. Winchell so that my colleagues in both Houses of Congress may read it. In order that I may not be accused of quoting out of context, I want to quote here exactly what Mr. Winchell wrote in his column:

Insiders say the reason Kennedy hasn't made an Italian appointment is not his fault. More than 100 names, prominent Demos, were submitted. But always lurking in the background "is the Big M control or link." Characters right out of "The Untouchables."

I invite my colleagues to comment either on Mr Winchell's statement cited above or on my letter to him. They may do so on the floor of their respective Chamber, through the pages of the RECORD, or via direct mail to me. Incidentally, I am sending copies of my letter to President Kennedy and Attorney General Robert F. Kennedy.

The full text of my letter to Mr. Winchell is as follows:

Mr. WALTER WINCHELL,
Daily Mirror,
New York, N.Y.

DEAR MR. WINCHELL: I was shocked to read your column of April 3 in the New York Daily Mirror, in which you bluntly state that it has been impossible for President Kennedy to make "an Italian appointment" because "always lurking in the background is the Big M control or link. Characters right out of 'The Untouchables'."

I don't believe that you personally wrote this article, since I have always thought of you as being tolerant of all minorities. The article, however, is published as yours and you must take the responsibility. You refer to Italians in a slurring manner as though the name "Italian" is supposed to be something evil. By the use of the "Big M," you brand all Italians as members of the Mafia. And by saying that the hundred names submitted to President Kennedy were all "characters right out of 'The Untouchables'," you not only implied, but openly went on record as saying that there wasn't an Italo-American qualified to hold public office in this country.

I have never been one to appeal to racial and national prejudices. I have always spoken as an American and I have not hesitated to criticize members of my own national origin whenever they have appealed to Italian audiences on strictly national lines.

Although I was not born in the United States, I have always been proud of the opportunities which this country has afforded to me and to millions of others of Italian ancestry. I have been in the forefront of various movements to aid minority groups to better their lot in this country. Need I tell you that without minority groups there would be no America today? Need I also remind you of the tremendous contributions made by Italo-Americans in all walks of life? Our history books are replete with such contributions, from Columbus down to our own times, which are too numerous to mention here.

To be as blunt as you have been, I want to say that by your article you have insulted every American of Italian descent including prominent legislators, the Governors of four great States, many mayors, judges, and others, all of whom are upholding the dignity of America.

Furthermore, you have insulted the intelligence of our great Chief Executive, President Kennedy, who has many friends in Italian circles—and I pride myself in being one of these—and who has already appointed a number of them to high public office.

You have conceived the idea, which I know is only a minority view, that the power of the press is the power to destroy. Many of our great writers, editors, and publishers take pride in the contributions of all Americans. They do not feel as restricted as you do in writing, unless they can resort to slander or unless they can associate Italians with the Apalachin raid, the Mafia, and "The Untouchables."

On behalf of all the decent upright Italo-Americans, I demand not only an apology from you but a full retraction in your column. If you wish to treat this matter lightly, let me advise you that I will sponsor a congressional investigation of such un-American activities as these. It may interest you to know that I have already introduced a bill, H.R. 4502, to make it unlawful for radio and television stations to portray in their broadcasts any religious, racial, or nationality group in a degrading or criminal manner. This bill can easily be amended to cover the situation at hand to expose all of the destructive influences in our country.

At a time when this country should be more united than ever to combat the foreign evil of communism, it ill behooves a writer such as yourself, by means of a poisonous pen, to cause disunity, cofusion, and chaos.

I sincerely hope that I shall not have to resort to any of the things which I have mentioned in this letter in this moment of anger, for which you alone are the cause. It would be in the best interests of all concerned for you to print an appropriate retraction. I want to assure you that what I have said above expresses the views of every Italo-American in public office.

Copies of this letter are being sent to the President, and to the Attorney General of the United States.

Sincerely,

VICTOR L. ANFUSO,
Member of Congress.

Proposed New Rule for Congressional Investigating Committees

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Wednesday, April 12, 1961

Mr. KEATING. Mr. President, I have been concerned for some time with the complex and time-consuming processes now required to test the lawfulness of challenged congressional inquiries. In my opinion, the present procedures are unfair both to the committees of Congress and to the witnesses involved. I have proposed legislation on this subject under active review at this time, and I intend to introduce my specific proposal in the very near future.

Recently, Mr. Ralph de Toledano, the well-known King Features Syndicate columnist, discussed my proposed bill in his "In Washington" column. His analysis of the subject is very incisive. It is apparent that Mr. Toledano has given this problem careful study.

Mr. President, because Mr. Toledano's article may be of interest to many Members of Congress who are concerned with this problem, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IN WASHINGTON
(By Ralph de Toledano)

A NEW RULE FOR INVESTIGATING COMMITTEES?

"Cumbersome" is Senator KENNETH B. KEATING's word for the way in which House

and Senate committees must handle contempt-of-Congress cases. For some time, Mr. KEATING has been troubled by what he considers these outdated procedures. To protect witnesses and to expedite the work of congressional probers, he believes that legislation should be enacted to modernize the current practice. Two examples demonstrate what bothers Senator KEATING:

1. Recently, Chairman EMANUEL CELLER of the House Judiciary Committee mounted an investigation of the New York Port Authority. When he attempted to subpoena its records, however, he ran into the objections of Austin Tobin, head of the authority. Mr. Tobin and his attorneys argued that the port authority was a State agency, independent of Federal control or coercion. In this, the port authority was backed by Gov. Nelson Rockefeller. Cited for contempt of Congress, Mr. Tobin was arrested, mugged and fingerprinted, and subjected to litigation that will undoubtedly wend its weary way to the Supreme Court.

2. Dr. Linus Pauling, a Nobel Prize physicist who has participated actively in several scores of Communist-front groups, was subpenaed by the Senate Internal Security Subcommittee. He was ordered to produce the signatures of 11,000 scientists who signed a petition calling for an immediate ban on nuclear testing—and to supply the names of those who helped him collect those signatures. Dr. Pauling reluctantly submitted the signatures—earlier he had made them a matter of public record—but he flatly refused to give the subcommittee any information about those who had worked with him. He thereby paralyzed one phase of an important investigation into the widespread "Communist peace offensive." His reason: this information was "not pertinent."

In Dr. Pauling's case, the subcommittee was intimidated by the outcry he made, allowing its authority to be challenged with impunity. Had the subcommittee chosen to cite Dr. Pauling, he would now be spending his days with lawyers and in courts. In both the Pauling and the Tobin cases, however, congressional procedures were clumsy and unfair to the Congress and the witnesses.

"As the law now stands," Senator KEATING protests, "if a witness refuses to appear or to testify, the subcommittee must first report the matter to the full committee, the committee must then report to the Senate or House, which must then resolve to cite the witness for contempt, after which the President of the Senate or the Speaker of the House must refer it to a U.S. attorney, who must in turn present the case to a Federal grand jury. If an indictment is returned, a full-scale trial must follow." By the time the courts have ruled, "the original investigation has long been closed without having obtained the desired testimony or evidence."

Senator KEATING recognizes that there are times when a witness is fully within his rights in refusing to answer particular questions or surrender his records. The Supreme Court has repeatedly ruled that pertinency is necessary before a witness can be compelled to answer questions or be penalized for failing to do so. KEATING is also aware that on occasion congressional committees go far afield of their mandate. Therefore, if a witness is right in questioning pertinency, he should not be put through the time-consuming and expensive process of defending himself. If he is wrong, there should be some way of making this known to him promptly. His refusal, then, becomes deliberate contempt.

The solution suggested by Senator KEATING meets both these tests. If a witness refuses to testify, KEATING proposes, he should be required to appear in Federal court that same day. A judge, who unlike a committee is not a party to the dispute, would then determine whether the witness' refusal was justified or not. If the judge decided that the committee's demands were pertinent, the witness could acquiesce or face immediate contempt-of-court action.

"The net effect of this procedure," says Senator KEATING, "would be both to restrain unauthorized inquiries and to facilitate compliance with proper demands for information." It would also satisfy the requirements of due process and speed up the work of investigating committees. Simultaneously, it would strengthen the Bill of Rights without crippling the congressional investigative process.

Oddly enough, there is one major block to enactment of the legislation Senator KEATING proposes. Is it constitutional? Does Congress have the right to surrender some of its powers to the Federal courts? Able lawyers in Washington are divided on this point, though they all agree that Senator KEATING has a first-class legal mind.

Nevertheless, the legal consensus in Washington is that the Keating proposal be put to the test. (The Supreme Court will be the final arbiter.) Particularly in the internal security field, congressional committees have been systematically hampered by efforts to halt their investigations. Students of government concur with Woodrow Wilson's contention that orderly congressional investigation is not only a vital part of the American system but also serves an educational function by giving the public a chance to know what is happening in the darker corners of the national life. Anything that streamlines this process is all to the good.

Comment on National Problems

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 12, 1961

Mr. BERRY. Mr. Speaker, during the past few weeks I have been receiving a tremendous response to the questionnaire I distributed throughout my district. In a number of instances, individuals have found they could not adequately express their views on the questionnaire and have chosen to write letters instead. Such was the case when Dr. R. C. Erdmann of Rapid City replied to my questionnaire. I felt his letter was so well written and reflected a deep understanding of the problems facing our Nation that it should be shared with other Members of Congress.

Under leave to extend my remarks, therefore, I wish to include Dr. Erdmann's letter as follows:

RAPID CITY, S. DAK.,
April 8, 1961.

Hon. E. Y. BERRY,
House Office Building,
Washington, D.C.

DEAR MR. BERRY: This is a singular privilege for me, and I want to express my gratitude for your questionnaire. Because of the complexity of the many problems facing our Nation today and the confusion that exists in my mind because of those problems, this reply to your questionnaire is belated. In opinion, I concur with you, in the realization that a yes or a no is not always adequate and it is for that reason my reply is in the form of this letter instead of your answer sheet.

Today, as never before we are faced with a heterogeneity of circumstances, not of our individual creation, but those that require the deference of our integrity. I would be remiss if I did not express my respect and appreciation for what you are trying to do. Both the patience portrayed and the fair-mindedness exhibited would command the respect of any honest-minded citizen.

My attitude is based principally on the dislike for the "hidden power" that seems to control our great country through our Government with questionable "pressures." Unhappily, my contentions inflict the accusations that we have been and are being controlled by a block of "internationalists" and "do-gooders" that originally sought growth and function in an environ incongruous in standards, cloistered in attitude and ambivalent in purpose. However, since War II, this group has undergone a noticeable change in intent, attitude and disposition of function; namely, a deliberate, unmitigated design to use a bureaucratic, big tax Government as the instrument for elimination of our Constitution and all for which it stands. The inroads in this situation are so deep and the diameter of coverage so expansive, that any attempt to outline in one letter, the ramification of the issues involved, or to attempt to prognosticate the eventual outcome would be ludicrous. Therefore, I seek simply to function as competently and honestly as I can with things as they are and may evolve with a sincere hope that I will be granted the privilege for continuation of occasional sincere criticism and reflection. It is in this spirit that I try to focus other persons attention on how I look at the issues.

All of the things I have in mind result in the American people being forced into either direct or indirect Government dependency with yours truly being no exception. This circumstance is and should be our concern but it does not and should not constitute a moral persuasion for the acceptance of the circumstances as they exist today. With this in mind I make the following comments and evaluations.

I am among those that would like to continue to evolve as a strong Nation, representing a society including a mosaic of occupations, degrees of education, ambitions, and wealth. On the other hand, we have those that want to establish a common denominator in technique of government and distribution of wealth, that they consider to be fair and equitable to all—for example, a welfare state and a welfare world. In all fairness, I carefully think this over and I must always ask the questions:

How can I with my sincere attitude, say yes to higher wages, higher taxes, increase in postal rates, more social welfare of great variety, and a high tariff as a necessity caused only by pricing ourselves out of the world markets? I cannot help but feel a moment of vindictiveness when I find our people expect to be asked about massive Government ownership and the continuation of pouring our money down foreign "rat holes". Because of the road block of poorly managed economics we must experience a serious threat from foreign competition and consequently suffer from unemployment and its complexity of associated problems.

Certainly, we should keep our Un-American Activities Committee and we should augment that committee and insist they do their very best to destroy the power that threatens our freedoms and even our country from within.

Believe me, it seems ambiguous and ridiculous to try to cure the malignancy of creeping socialism with the medicines of increased spending, big government, government in business, government control in business, government interference in business, forced higher wages, higher taxation, foreign aid, etc. Why not try the medication provided for in our Constitution, then destroy the

slums and disease of bureaucratic government and build anew.

It should be stated that you, of the U.S. Congress, are charged with a very difficult task; namely, to seek the right answers for the many important questions that you are confronted with daily. May God grant you the strength that will command extended wisdom, foresight, and tolerance. Progress in Government is also difficult to attain. It demands tremendous sacrifice of personal time and effort. The statesman, the individual who qualifies for statesmanship, is often the forgotten man in our society and the ideals and integrity that a statesman must have do not always pay off very handsomely, yet, you are compelled to persist and make improvements when they can be done. For men like you I am grateful. I only wish most of your colleagues looked at our important issues and problems the way you do.

Mr. BERRY, my comments have been too extended. I hope they have not been distasteful. Whatever has been intimated or suggested has been done, I assure you, with a feeling of deference. Our problems are not easy and I realize their solution cannot be immediate and complete. I sincerely request that you grant me the continuation of the privilege of your counsel. I know that you will constantly try to find new and good ways for Government improvement.

With kindest regards to you and yours, I am,

Sincerely,

R. C. ERDMANN, D.C.

Social Security Benefits

EXTENSION OF REMARKS

OF

HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, April 12, 1961

Mr. PROXMIRE. Mr. President, the social security system has become so much a part of our lives that today most of us take it for granted. We take it for granted that we will pay social security taxes and that when we retire we will have an income to support us in our declining years. It is easy today for young people especially to fail to realize what a tremendous problem would face them if they had to undertake their own individual planning for their old age; how extremely difficult it would be for them to provide an adequate retirement income without the systematic operation of social security.

In a recent issue of Vogue, Sylvia Porter, in some excerpts from her forthcoming book, tells her readers, "You're Richer Than You Think." Her discussion of social security points up very dramatically the great benefits which our system of social insurance brings not only to the individual but to the economy as a whole.

Mr. President, I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

YOU'RE RICHER THAN YOU THINK

(By Sylvia Porter)

(EDITOR'S NOTE.—A handsome woman with a flash of brown eyes that see clearly through figures and production indexes, Sylvia Porter writes a column with the fascinating name, "Your Dollar," and the biggest distribution 333 newspapers, in the business column business. When she was just out of her teens and out of several Wall Street brokerage firms, she started writing that column for the New York Post as S. F. Porter, because it seemed wiser to attribute her extraordinary perception in finanicial matters to a man. The wife of G. Sumner Collins, and the mother of an 11-year-old daughter, she runs two houses, one in New York, one in the country, produces, in addition to her column, a weekly newsletter on Government bonds, "Reporting on Governments," and an annual Income Tax Guide. Twenty years ago, in Vogue, she started her first magazine article, one of five financial primers Vogue published between 1941 and 1943, with these words: "You know, a fallacy that we've permitted to go unchallenged because of innocence or indifference is that men control the wealth and finances of America." Now, in this article from her book to be published in May by the World Publishing Co., she explores and dismantles some other fallacies.)

Most of us are worth a lot more than we may think. You would need a fortune of over $100,000—invested at 3-percent interest tax free—to produce interest to duplicate the $254 a month maximum benefit a family will be able to get under today's social security law.

You would have to have an estate of more than $76,000, also bringing you 3 percent a year tax free, to produce interest to duplicate the $190.50 maximum pension that a retired worker and his wife, both 65 or older, will be able to get under the social security law now in effect.

You would need a hefty nest egg of over $50,000, again invested at 3 percent tax free, to produce interest to match the $127 a month maximum you, as an individual worker covered by social security, will be able to get when you retire.

As these calculations surely dramatize, that social security card of yours really is becoming the equivalent of a fortune in retirement benefits. Few of us could even hope to accumulate the estates essential to give us the monthly incomes that payment of our social security taxes guarantees we will receive when we retire in the years ahead.

What's more, millions are also accumulating impressive retirement incomes under private pension plans; it is estimated that 34 percent of all workers in industry are covered by private pension programs now. Millions of others have insurance programs that will pad their retirement incomes, too; 8 in 10 families have life insurance coverage today and many have annuity and similar policies. And a growing percentage of us have reserves in cash, U.S. bonds, stocks, and other investments which will, in addition to our social security benefits, help us live on a decent scale in our senior years.

We are, in fact as well as in theory, creating an economy in which the person working today and contributing to public pension and private retirement programs can look forward to retirement with confidence that he will not need to depend on family charity for support. We are doing it by taxing ourselves on an increasing scale. Let's not kid ourselves—the social security tax is becoming a real pocketbook "bite." Consider the record just of the past 10 years.

In 1949, the social security tax was a minor 1 percent on a maximum of $3,000 of your pay, meaning it amounted to $30 a year at most. In 1950, the tax went up to 1.5 percent on a maximum of $3,000, meaning it amounted to $45 a year at most. In 1954, the tax went to 2 percent on a maximum of $3,600 of annual earnings, a top of $72 a year. In 1958, it was 2.25 percent on a maximum of $4,200, a top of $94.50 a year. In 1959, it was 2.5 percent on a maximum of $4,800, a top of $120. In 1960, it rose to 3 percent on a $4,800 maximum, a top of $144.

What are we getting for this? The answer is, "Plenty." For as the taxes on our pay have climbed so have the expected benefits they provide. In 1949, the peak benefits an individual worker could get were only $45.20 a month, and the peak social security benefits a family could receive were only $85 a month. Under the latest law, the peak an individual can get is $123 a month while the peak a family can get is $254 a month.

What do these tax and benefit changes mean to us?

They certainly mean that the millions of us who have been working for years and paying social security taxes, and who will continue working and paying the taxes for many more years, are now contributing major amounts of our pay to the support of our older citizens. Our taxes are providing the benefits to those already retired, maintaining the basic social security pension at a decent level. And, incidentally, a record 14,800,000 are now drawing social security benefits.

They also mean that these taxes are helping to protect our own jobs, for one of the great props under our economy today is the spending of social security checks by our senior citizens. The spending of these benefits has become a crucial jobmaking and antirecession weapon.

And, most important, they mean that we are building a system which some day will give us in turn an adequate, basic retirement pension.

Glance again at the jump in the benefits in one decade. Let yourself enjoy the feeling of confidence inspired by the knowledge that there will be a pension for you, too. Then you'll truly understand how rich our older folks are now and how rich you will be.

A YOUNG WIDOW'S FORTUNE

Social security is not just of value to older people. A young father of three infants was killed in a freak accident in our community the other day, leaving not only a heartbroken widow but also an empty bank account. While we were discussing with the neighbors how to east at least her financial tragedy, I volunteered, "One 'good' angle is the fortune she'll get from social security from now on. It'll run into tens of thousands of dollars in cash."

The astonishment at the size of the "inheritance" I mentioned pounded home again the fact that most Americans—and this probably includes you—don't realize that social security can be worth more to young people than to the older citizens of our land.

The cash stake of this young widow and her infants could be almost $70,000. And this inheritance is free of income and estate taxes. Social security is so very much more than retirement benefits, pensions for aged widows, aged parents, and retired people. It is, as the following details dramatize, also tremendous protection for young children and young widows. In our neighbor's case, the father had been fully insured at the top social security salary level of $4,800 a year. His infants are 1, 2, and 3 years old. Now:

On application, his widow will get a lump-sum death benefit. This amounts to $255.

His infants and their mother will get a pension of $254 a month until the oldest child is 18. Assuming she doesn't remarry during the 15-year period, this adds up to $45,738.

For the next 12 months, his widow and her two children still under 18 will still get a monthly pension of $254. This amounts to $3,048 over the year.

For the next 12 months, she and her one child still under 18 will get a monthly pension of $180. This amounts to $2,160 over the year.

Her widow's pension ceases when all three children are 18, but she gets widow's bene-

65 when she reaches her 62d birthday. At that date and for the rest of her life, assuming she hasn't remarried, she draws $90 a month, equal to three-quarters of her husband's monthly retirement pension. If she then lives for her normal life expectancy of about 17 years, she will receive an additional $18,360.

Add it up. It comes to $69,561. And all this income is, by law, free of all tax.

Of course, the totals will vary from family to family, depending on the number of children, their ages, the amount of credits in the social security account. But the key angle is not the precise total of benefits; rather it is the impressive value of social security to the young family as well as the old. How many young people can accumulate nest eggs and invest them at returns sufficient to guarantee over $250 a month for years?

The ironic tragedy is that it often is those most in need who forfeit their benefits because they don't know the elementary details of the social security program. If this tale of the young widow's fortune jolts you into learning more, her heartbreaking loss may be your gain.

The knowledge of your earning credits should give you a lift, and the knowledge will be vital to your intelligent planning for your financially independent older years. Of course, a social security pension is hardly adequate for comfortable retirement, but it is a darn good base on which to build a personal investment program. And the knowledge will give you new understanding of how your social security tax contributions are protecting not only your future but also your Nation's future. For you, as a citizen with a pension check to spend every month, will be a distinct prop under the economy's prosperity. So check your credit now. Whatever is in it is a plus for you, and I'll wager you'll find more in your account than you think.

Inheritance of a Kansan

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 12, 1961

Mr. BREEDING. Mr. Speaker, under leave to extend my remarks, I wish to include in the RECORD the following poem "Inheritance of a Kansan," by Mrs. Hazel M. Hardtarfer, of Sedgwick, Kans.

Mrs. Hardtarfer's poem in free verse won two State prizes in the 1961 literature contest of the Kansas Federation of Women's Clubs. In this centennial year of Kansas statehood, this poem expresses so eloquently for all Kansans their awareness of the rich heritage we celebrate this year that I feel it deserves a wide audience.

The poem follows:

INHERITANCE OF A KANSAN

(By Mrs. Hazel M. Hardtarfer)

Why should I seek Cibolas in my land?
Riches lie at my feet;
Riches in traveled trails and pathless skies;
Mine is the heritage of pioneers
Who crossed the hills and plain
To build their homes of prairie sod—
Wealth of the prairie's openness,
And ocean-waves of wheat;
Ice-diamonds on nude trees at misty dawn—
Then heat, and sunset like a painter's dream!
Sunflower and tumbleweed; song of meadowlark;
Wide shallow streams, and on their banks
The Judas tree, red sumac, yellow cottonwood.
My legacy embraces the whole of Kansas' lore:
Tales of Apache raids, and John Brown's fiery work;
The bitter strife that came before the calm—
The growth of cities sprawling on the countryside;
Jet-birds that split the air with sound;
Chisholm and old Santa Fe—ribbons of concrete and of iron.
This opulence is mine.
But millions share my heritage:
The proffered gold
Of Kansas' destiny.

What's Wrong With Urban Renewal?

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, April 12, 1961

Mr. JAVITS. Mr. President, the March 1961 issue of the Mortgage Banker contains an article on the Federal urban renewal program which should receive the careful attention of all those concerned with the continuing viability of our cities. This article, written by James Wm. Gaynor, housing commissioner of the State of New York, points out the inherent problems in the present restricted urban renewal program, which is able to deal only with scattered symptoms once they have become serious community problems, rather than being able to deal with the broad causes of urban blight and contributing to its future prevention.

Mr. Gaynor recommends that urban renewal programs be broadened, not only in their physical area, but also in their scope of planning, that rehabilitation and modernization be stressed equally with new construction, that there be adequate recognition of the importance of retaining the middle-income family in the urban area, and that more participation be encouraged by the private homebuilding industry.

I hope this article will receive the careful attention of all Members of the Congress. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHAT'S WRONG WITH URBAN RENEWAL

(By James Wm. Gaynor)

Urban renewal—the current "catchall phrase for expressing our efforts toward renewing and rebuilding our urban areas—was once considered the exclusive province of the esoteric planner—in the main, trained as architects, and emphasizing in our earlier urban renewal programs the single element of physical planning.

During the last few years there has been a growing awareness among the business community that urban renewal is more than just physical redevelopment; it is also good business. Economic and civic improvements, in addition to physical redevelopment, are basic considerations today; and a comprehensive urban renewal plan requires the teamwork of not only architects, but economists, engineers, public administrators, and builders.

Despite the broadened scope of our urban renewal planning, we can still be considered fumbling pioneers if we compare the scale of our efforts with the scope of the problems these efforts are intended to resolve. Consider New York City, the largest urban center, and where the State has invested most of its housing and community renewal resources. It has:

The largest public housing slum clearance program in the country.

The largest, and (despite criticism of several projects) by far the most successful title I urban renewal slum clearance program.

A pioneering State- and city-financed program to aid private builders with low-interest mortgage loans for middle-income housing.

A consolidated housing and title I urban renewal program under one agency.

A revitalized city planning commission which has embarked on total planning by area or neighborhood under the community renewal provisions of the National Housing Act.

A $52 million garage construction program in the business center of Manhattan.

These efforts represent a massive attack on the urban renewal problems of the country's largest urban center, expenditures of private and public funds in the billions, renewal of thousands of acres of city slums, generally improved business conditions, and increased tax revenues to the city.

Yet, the maximum potential of this massive program probably will not be realized because the program lacks an essential element: an effective transportation plan. 3,300,000 persons enter Manhattan daily, almost 2,500,000 of these by public transportation that is far from adequate. Sleet, snow, heat, and rain stay all but the postal workers from the swift completion of their appointed rounds, and newspapers carry regular boxes under the head "Why you were late today."

The 800,000-plus persons that arrive in Manhattan daily by private cars, taxis, and trucks represent only one-quarter of the daily travelers to the heart of the city, but they cause almost all the street congestion. The solution proposed at present is more parking in the center of the city. Experience elsewhere has shown that additional parking brings additional congestion and commercial stagnation.

The trip from Newark airport to the center of Manhattan, a distance of 13.5 miles, can be made by public transportation at the rush hour in 1 hour and 30 minutes, or about one-sixth of a mile a minute. A hundred years ago a horse and buggy could travel the same distance in 1 hour and 17 minutes, or just a little faster. So much for progress.

Victor Gruen, the country's outstanding planner of large urban and suburban shopping centers, has analyzed New York City's parking program and is convinced that the direct gain in retail sales in the center of Manhattan would be only a fraction of the $100 million a year that the garage planners anticipate. The intent to provide a place to park is laudable, but the economic objective is unrealistic. The answer is not more parking to attract more cars into the center of the city. The answer lies in more parking at the periphery and, most importantly, improved public transportation into the center core.

This particular situation represents only one aspect of urban renewal; but it should demonstrate in a concrete way the need for a comprehensive approach. It may show how

the lack of an adequate long-range view and proper coordination in planning public improvements not only will not restore an urban core, but, conversely, can ultimately destroy the economy of the entire urban area.

Another new concept in urban renewal requires not only comprehensive planning for redevelopment, but comprehensive planning for conservation as well. Rehabilitation of existing housing is an aspect of conservation that must be undertaken on a vast scale as part of our urban renewal efforts. An effective financing device exists under section 220 of the National Housing Act, provided a more imaginative and effective administration of the section can be brought about. David Walker, the outgoing Urban Renewal Commissioner, recommended income tax benefits, for homeowners as a means of creating customers for a new industry to develop competent, all-around conservation and rehabilitation contractors.

The third new concept in urban renewal is the general recognition that a basic need in our urban areas is an expanded housing inventory—an inventory that will emphasize housing for middle-income families. Too late have we witnessed the results of piecemeal planning that has produced a concentration of low-rent subsidized public housing and a spate of so-called luxury housing for high-income families. The effect now so readily apparent brought about the exit to the suburbs of middle-income families, the prime element of our urban society.

My recommendations are:

Urban renewal programs must be broadened, not only in the physical area covered, but in the scope of planning. Specifically, the Federal title I program should require a comprehensive area plan, in greater detail than at present, as a condition of assistance for even a small urban renewal project that lies within the greater area. This would assure that overall area needs had been considered, and that a given project is a part of a long-range program and not, as at present, a neighborhood renewal plan not necessarily related to the larger area's needs.

In broadening our urban renewal plans, rehabilitation and modernization of existing housing must be emphasized as well as the construction of new housing. We must prevent the economic waste that results when residential areas decay, real estate tax returns decrease, and capital improvements such as schools and utilities are underutilized while others must be built for new housing elsewhere.

We must recognize the prime importance of retaining our middle-income families in our urban areas. To continue to exclude them from our reuse programs will be fatal to our urban economy.

Finally, we must develop more participation of the entire homebuilding industry in urban renewal.

Fallacy in Revival of Buy American

EXTENSION OF REMARKS

OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 12, 1961

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks I would like to include in the CONGRESSIONAL RECORD the following column by Joseph Ator from the Chicago Daily Tribune of Monday, March 27, 1961:

FALLACY IN REVIVAL OF BUY AMERICAN—CAN'T SELL EXPORTS UNLESS NATIONS ABROAD HAVE DOLLARS TO PAY

(By Joseph Ator)

The worst thing that has happened to efforts to increase American export trade is the recession-born revival of the Buy American fallacy. There are several reasons why it is poison.

First and foremost, we can't expect to sell things to foreigners if they don't have the dollars to pay us. The dollar shortage of the late 1940's has vanished, thanks to our antiquated Good Time Charlie foreign-aid policy. We can't pay our current foreign obligations without dipping into our slipping gold reserve.

It doesn't take a genius at political science to figure out that we are better off to give foreign purchasers the dollars to buy our exports by buying from them, instead of giving to them. And it should take no more than elementary arithmetic to figure out that we wouldn't have realized $19,600 million on our exports last year if we hadn't provided most of the dollars that were paid for them through $14,700 million in American imports.

START OF TROUBLE

That is just the beginning of the Buy American trouble, however. One of the principal obstacles to American exports is restrictions that other nations have placed on them, through tariffs and quotas. Our State Department can't argue very convincingly for the removal of these barriers if we start erecting some of our own for the benefit of American industries which complain that they can't meet foreign competition.

Such tactics are not only self-defeating in specific cases, they buck a world trend toward freer world trade. Trade between countries today is at a higher level than it ever has been in history, even accounting for the inflated prices in which its total is reckoned.

The old rationale of free trade is still sound. If every nation does what it can do best and most cheaply, the whole world benefits by free exchange of goods. There are thousands of exceptions to this rule in the form of tariffs and quotas, but bit by bit they are being relaxed. Any trend against this relaxation hurts us more than anyone else, because we are the biggest exporter.

The normal objective of placing a tariff umbrella over a weakling industry is to assure it of a monopoly in the country in which it is. If it can't compete at home, it pretty obviously can compete in the export field.

Such special favors do more than invite foreign reprisals. They make it harder for existing exporters to compete on a cost basis. Their employees' cost of living is increased by the added cost of protected articles. As wages go up, ability to compete in exporting goes down. Frequently tariff protection will destroy more jobs in export industries than it saves in the protected domestic industry.

Recognition that we have to buy if we are going to sell in foreign trade is the keystone of the campaign which the Chicago Association of Commerce is conducting to increase Chicagoland's trade. Its annual international trade fair, the largest in the Western Hemisphere, will be in McCormick Place July 25 through August 10.

PROMOTION AND DISPLAY

Foreign governments, manufacturers, and merchants will promote tourism and display their products at the fair, as they have at two preceding fairs, the first of which was in 1959 to celebrate the St. Lawrence Seaway opening. Alongside them will be the exhibits of American manufacturers of products which they offer abroad.

There have to be two parties to every sale. Getting those two persons together is the primary purpose of the fair. Present will be 500 to 1,000 foreign buyers and salesmen, and a far larger number of buyers of imports and salesmen of exports from the United States. All of these will exchange ideas at two conferences to be held in conjunction with the trade fair, the Chicago World Marketing Conference and the 1961 Inter-American Industries Conference, both of which will run from July 24 through 28.

Tribute to Ronald W. May

EXTENSION OF REMARKS

OF

HON. ROBERT W. KASTENMEIER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 11, 1961

Mr. KASTENMEIER. Mr. Speaker, the sudden death of Ronald W. May, Washington correspondent for the Madison (Wis.) Capital Times, shocked and saddened all who knew him either personally or as readers of his independent, searching coverage of Washington.

Ron May knew that our society's freedom and survival are dependent on integrity in every individual at every level of government and he knew that the essential responsibility of the press is to demand this integrity. The press, Ron May believed and proved, must make this demand by searching out failures no matter who the individual or organization involved.

Another respected Washington correspondent and author, Tris Coffin, wrote the following tribute to Ron May which I would like to share with my colleagues. The tribute appeared in the Capital Times of Monday, April 10, 1961:

RON MAY, A REPORTER WHO STIRRED SILT AT BOTTOM OF GLASS OF LIFE

(By Tristam Coffin)

(EDITOR'S NOTE.—Tristram Coffin is a Washington correspondent who knew Ron May, the Capital Times Washington correspondent who died of a heart attack last week. Coffin is the author of a new book about Washington which is causing widespread comment.)

A big, crumpled brown manila envelope with notes scribbled and clippings foaming out of the top was his hallmark. When this envelope was tipsily leaning against a typewriter in the Press Gallery, we knew Ron May was wandering around.

A tall, rugged fellow in a rumpled blue suit, a wild shock of hair and some of the keenest eyes in Washington, Ron could usually be found—a cigarette clamped in his lips—a stub of pencil in his hand, furiously writing notes on napkins.

He was the correspondent of the stubbornly independent and clear-thinking Capital Times of Madison. But even this stamp is too limiting. Ron was a breed of reporter almost entirely died out—the muckraker. These were the great reforming newsmen of the twenties, who stirred into the silt at the bottom of the glass of life, particularly of Government, and brought to light infamous abuses. Reform usually followed their revelations. Men lived better and freer because of their digging.

Ron was constantly on the trail; he could pick up a lead most of us would miss and track it down with an awesome thoroughness.

Nothing stopped him. He kept on asking blunt questions and demanding answers. He seemed driven by a furious reforming spirit most of us, his colleagues, lack. We are content to rewrite the mimeographed handout or take down the words of the press agent. This never satisfied Ron. He knew that behind the false front, there was many times corruption, stinking corruption.

Ron May was one of the first to tear the mask from Joe McCarthy. His stories and his book, with an almost ruthless tolerance and patience, described the petty hates and fears and jealousies of a politician who stunned other reporters to silence or nervous praise.

He helped drive from power a big west coast politician by showing his unseen alliance with the Mafia. His articles on millionaire oilmen who abused their friendship with President Eisenhower were devastating. His file on the blunders of the Central Intelligence Agency is startling. He had been working, more recently, on lifting the lid on congressional conflicts of interest.

What bothered Ron the most was the indifference with which editors, investigating committees and the public received his research and prying. "Nuts," he would say in an occasional moment of bitterness, "no one seems to give a hoot whether a Cabinet member or a Presidential assistant or a Senator steals or cheats, so long as they've got their TV westerns to watch."

Then he would brighten quickly and follow a new stink with all the enthusiasm of a child hunting hidden Easter eggs. His untidy files in the Senate press gallery, in the Library of Congress, and at home were bulging with odd scraps of information which he patiently put together with the thoroughness of a great detective. Ron would notice a one-paragraph item in a newspaper—innocent enough to the rest of us—and let out a wild whoop.

"This is it," he would cry. "This is the missing piece of the puzzle."

Ron spent hours talking to people—Senators, crime investigators, elevator operators, reporters, clerks. He had an engaging charm; he was the country boy in town looking at the sights and asking questions. In the most unlikely casual contacts, Ron picked up clues leading to hidden guilt. The blurted word of a secretary, the boasting of a Congressman, the inference of a general.

His life must have seemed frightfully daring to the Government clerk who comes to work precisely at 8:30 and leaves at precisely 3:30, and has annual leave and a pension. Ron would get up around 10 or 11, stretch and yawn over hot coffee, and be off. On the bus jolting downtown, he did his reading—books, newspapers, investigations. He usually arrived at the Capitol shortly after noon, his big legs taking him impatiently across the plaza. Then in the halls or over the long table in the Senate restaurant, he talked and listened. He drank coffee. None of us ever recall seeing Ron eat a whole meal.

Scraps of his philosophy would drift out. He demanded much of the men and women of politics. He asked them to be dedicated to public services, to be scrupulously honest, to be fair and just and tolerant. He was surprised, hurt and angered when he discovered the opposite.

"What's the matter with that guy?" he would ask indignantly. The rest of us shrugged our shoulders. Ron went to work.

He spent afternoons and far into the evening digging, digging, digging. He rarely left the press gallery before 9 o'clock. You would see him, a big, engrossed man hunched over his typewriter. Then a lonely ride on the bus, thinking and reading and planning. He rarely went to bed before early morning. He could not shut off that great engine of thinking that consumed him. He did not let ideas go, even to eat or sleep.

Once he came to my house and met a friend who was talking of waste and corruption in foreign aid. Ron became so excited, he walked downtown with my friend and at 4 o'clock in the morning they were seated at a counter of a White Tower with coffee still talking.

Many times I wished I was the editor of a very large newspaper or magazine with a crusading spirit. For then I could hire Ron May to do this kind of work he was ideally suited for—lifting off the top soil and exposing rot. Our country would be stronger, more dedicated for Ron May's digging.

But the chance is gone. It was only a dream anyway. A few days ago, Ron May's heart stopped beating. He was only 38. For even a big, rugged fellow as he was, the strain was too much. Indifference, frustration, the choking mass of weeds in our national life took their toll. One gallant reformer.

Today, I wandered into the press room. Unconsciously I looked to the corner where the big, brown paper envelope used to rest. The corner was bare. I felt a pang of loneliness. The good guy was gone.

Salute to Local Heroes

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 12, 1961

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Wilkes-Barre Times Leader of Thursday, March 30, 1961, which comments upon the tribute paid by the Greater Wilkes-Barre Chamber of Commerce to John and Timothy Connolly whose actions saved the lives of five people in an explosion and a disastrous fire last March 13. I, too, wish to compliment and recognize the brave exploits of these two men in the face of a grave emergency and I certainly join the Luzerne Lions Club who have adopted a resolution nominating the Connolly brothers for an award by the Carnegie Hero Fund Commission. In my judgment there are none more deserving of this high honor.

The indicated editorial follows:

SALUTE TO LOCAL HEROES

Directors of the Greater Wilkes-Barre Chamber of Commerce voiced the sentiments of the community at a luncheon meeting of the board yesterday afternoon when they paid an impressive tribute to John and Timothy Connolly, of Luzerne, for saving the lives of five workers at the risk of their own in two explosions and a fire at the Schuyler Manufacturing Co. plant on March 13.

Spokesmen for the board lauded them for their valor and its members gave them a rising vote of thanks. Russell Gardner, president, presented each with a letter of commendation, signed by the officers, with plaques, now being made, to be presented later. The board adopted a resolution to join with Luzerne Lions Club in nominating the brothers for an award by the Carnegie Hero Fund Commission.

Their feat is a matter that concerns more than Luzerne. The chamber's interest stems from the fact that it has been spearheading industrial development in its own name and through its affiliates. Moreover, it speaks for the whole area which is proud of the heroism of the Connolly brothers on the home front.

It is a privilege to salute these young men, not only for their courageous actions in a grave emergency, greatly reducing the toll, but for their stimulating example of initiative, cooperation, and unselfishness, the solid foundation on which the future of the area must be built.

Newel Perry: Teacher of Youth and Leader of Men—Speech in Honor of Blind Leader

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 12, 1961

Mr. COHELAN. Mr. Speaker, on February 10, 1961, Dr. Newel Perry died in Berkeley, Calif., at the age of 87. He was thus full of years, and his years were full of accomplishment.

During most of his long life Dr. Perry lived and carried on his work in Berkeley. His career was that of a pioneer in the fields of public welfare and education of the blind. He was founder and first president of the California Council for the Blind. He was for 35 years director of advanced studies at the California School for the Blind in Berkeley. It was through his inspiration and leadership that the blind people of my State came to be welded into an organized democratic movement to improve their status and condition.

On March 25, 1961, a memorial convocation was held at the School for the Blind in Berkeley in honor of Dr. Perry. The main address was delivered by another noted Berkeleyan and leader of the blind, Dr. Jacobus tenBroek, president of the National Federation of the Blind, chairman of the California Board of Social Welfare, and chairman of the Speech Department of the University of California. I believe that Dr. tenBroek's moving address deserves the attention of Members of Congress and of all citizens concerned with welfare and the public good.

The article follows:

NEWEL PERRY: TEACHER OF YOUTH AND LEADER OF MEN

(Address by Prof. Jacobus tenBroek at a Memorial Convocation for Dr. Newel Perry at the California School for the Blind, Berkeley, March 25, 1961)

I come before you today—indeed we are all gathered here—to discharge a public duty and to honor a private debt. Newel Perry was a public figure. To us, he was also a personal friend. We can appraise his public contribution. We can only acknowledge our private obligation and personal attachment. We can detail his public record, define his influential role, itemize his accomplishments, recount his deeds, enumerate his statutes, specify his doctrines, disentangle the elements of his social philosophy, identify the general and the institutional fruits of his life's work, analyze and psychoanalyze the personality traits that made him a leader. Upon the life we shared, we can

only dwell in memory, sifting through the loose meshes of the mind the hours, the days, the nights, the months, the years of our common experience; the fears, the travails, the aspirations, the laughter that were ours together.

We were his students, his family, his intimates, his comrades on a thousand battlefronts of a social movement. We slept in his house, ate at his table, learned geometry at his desk, walked the streets interminably by his side, moved forward on the strength of his optimism and confidence.

The boundless devotion to him of his wife Lillie (to whom he was married from 1912 until her death in 1935) spilled over onto us to balm our institution-starved spirits, to lighten with gentle affection the bewilderment of our eccentricity and the unnatural confinement of our segregation. Upon a later generation of us, after the death of Lillie the same bounty was conferred in her turn by his sister Emma Burnham, who lived with Doctor during the last 21 years of his life.

As a forward youngster of 12, who made so bold as to address him as "Doc," I was once thrown out of a class by Doctor with such a lecture as still rings in my ears. As a somewhat older youngster, still forward but now also bored by the slow pace and the unimaginative techniques of high school, I was expelled by him altogether for incorrigible recalcitrance. Eventually, despite these unpromising beginnings, I did graduate from high school. With plenty of ambition but no money, I prepared to enter the university. At that point I was denied State aid to the blind, a program then newly instituted as a result of Doctor's efforts in sponsoring a constitutional amendment and a comprehensive statute. The reason was not that my need was not great. It was that I intended to pursue a higher education while I was being supported by the State. That was too much for the administrative officials. Almost without discussion, Doctor immediately filled the gap. Just as Warring Wilkinson had earlier done for him, he supplied me with tuition and living expenses out of his own pocket for a semester while we all fought to reverse the decision of the State aid officials.

It was ever thus with Doctor. The key to his great influence with blind students was, first of all, the fact that he was blind and therefore understood their problems; and second, that he believed in them and made his faith manifest. He provided the only sure foundation of true rapport: knowledge on our part that he was genuinely interested in our welfare.

Aside from these immediate personal benefactions, there were three habits of life—one might almost say three elements of personality—which I formed out of his teaching and example when I was an adolescent in his charge. First, an attitude toward my blindness, a conception that it is basically unimportant in the important affairs of life. A physical nuisance, yes. A topic of unembarrassed conversation, a subject of loud questions by small children in the street as you pass, certainly. But not something which shapes one's nature, which determines his career, which affects his usefulness or happiness. Second, a basic assumption that sighted people generally have boundless good will toward the blind and an utterly false conception of the consequences of blindness. It is their misconception about its nature which creates the social and economic handicap of blindness. Third: public activity as a rule of life, a sense of responsibility to exert personal effort to improve the lot of others. While I was still a lad in my teens, I was attending meetings and doing work that Doctor assigned me in the blind movement. He was a social reformer. He made me one, too. Through participation with him, these attitudes and practices became habits of my life. So deeply instilled were they that they have remained ever after an almost automatic behavioral pattern—potent and often governing factors in my outlook and activity. Mature reflection in later years could only confirm through reason what his influence had so surely wrought in my youth.

It is altogether fitting that we should hold this memorial convocation at the California School for the Blind. It was here that Newel Perry came in 1883 as a 10-year-old boy—penniless, blind, his father dead, his home dissolved. Two years earlier, he had lost his sight and nearly his life as the result of a case of poison oak which caused his eyeballs to swell until they burst and which held him in a coma for a month. It was here at the school that Warring Wilkinson first met and took an interest in him, laying the basis for future years of intimate relationship and mutual endeavor. Warring Wilkinson was the first principal of the California State School for the Deaf and the Blind. He served in that capacity for 44 years, from 1865 to 1909. With his characteristic interest in his charges, he soon saw young Newel's full potentiality. He sent him from here to Berkeley High School to complete his secondary education. It was he who overcame the numerous obstacles to this arrangement, so fruitful in its understanding of education and of the needs of the blind. Newel continued to live here at the school while he attended the University of California from 1892 to 1896. Again admission had to be secured over strong resistance. Again Wilkinson was the pathfinder; Newel his willing and anxious instrument. Wilkinson's role in Newel's life as a youth can hardly be overestimated: father, teacher, guide, supporter—in Newel's own words, "dear Governor."

As this institution was not only the school but the home of his boyhood and the foundation of his manhood, so 16 years later, in 1912, at the age of 39, Newel Perry returned here to take up his permanent career as a teacher. He remained in that post until 1947—a third of a century. It was here that his life's work was accomplished. It was from this place as a base that he organized and conducted a movement for social reform. It was here that many of us first met him as his students. It was here that his impact upon us first made itself felt. It was here that our lifelong association with him began. How often in these halls have we heard his footsteps? How often in this chamber, his voice? The sound of those footsteps and that voice have now gone from the world as a physical reality. How often hereafter will they continue to sound in the halls and chambers of our lives?

In the years between departure from the school in 1896 and return to it in 1912, Newel Perry devoted himself to further education and to the search for an academic job. He took graduate work at the University of California, meanwhile serving successively as an unpaid teaching fellow, a paid assistant and finally as an instructor in the department of mathematics. In 1900, following a general custom of that day, he went to Europe to continue his studies. He did this for a time at the University of Zurich in Switzerland and then at the University of Munich in Germany. From the latter he secured the degree of doctor of philosophy in mathematics with highest honors in 1901. He lingered in Europe for a time traveling and writing an article on a mathematical topic which was published in a learned journal. He then returned to the United States in 1902, landing in New York where he was to remain until 1912. He had about $80 in capital, a first-class and highly specialized education, and all the physical, mental, and personal prerequisites for a productive career, save one, visual acuity.

During this period, he supported himself precariously as a private coach of university mathematics students. He applied himself, also, to the search for a university position. He had begun the process by mail from Europe even before he secured his Ph. D. He now continued the process on the ground in New York. He displayed the most relentless energy. He employed every imaginable technique. He wrote letters in profusion. In 1905, he wrote to 500 institutions of every size and character. He distributed his dissertation and published article. He haunted meetings of mathematicians. He visited his friends in the profession. He enlisted the aid of his teachers. He called on everybody and anybody having the remotest connection with his goal.

Everywhere, the outcome was the same. Only the form varied. Some expressed astonishment at what he had accomplished. Some expressed interest. One of these seemed genuine—he had a blind brother-in-law who, he said, was a whiz at math. Some showed indifference, now and then masked behind polite phrases. Some said there were no vacancies. Some said his application would be filed for future reference. One said for what—ironically, "as an encouragement to men who labor under disadvantages and who may learn from it how much may be accomplished through resolution and industry." Some averred that he probably could succeed in teaching at somebody else's college. Many said outright that they believed a blind man could not teach mathematics.

Many of these rejections were, of course, perfectly proper. Many were not. Their authors candidly gave the reason as blindness.

We know about this period of Newel Perry's life from reports of contemporaries or near contemporaries such as Hugh Buckingham, a student at the school from 1896 to 1900 during Doctor's absence, who has prepared a manuscript about Doctor's boyhood and youth. We know about it from what Doctor told many of us in later years. But we know about it in all its poignancy, desolation and bleakness, from Newel Perry's own intimate accounts written at the time to his old mentor and true friend, Warring Wilkinson. These accounts, with copies of many of the letters of rejection, have been preserved by the Wilkinson family through the intervening years. In the last 2 weeks, they have been opened to my inspection by Wilkinson's granddaughter, Florence Richardson Wyckoff, who is here with us today.

I have dwelt on this period and these experiences for several reasons. They reflect, they accurately portray, a phase of all of our lives as blind people. In fact, 35 years later, I personally received identical letters from many of these same institutions. It was almost as if a secretary had been set to copying Doctor's file, only changing the signatures and the name of the addressee. Yet great progress has been made. Many of us are now teaching at colleges and universities around the country and filling many other jobs hitherto closed to us.

Doctor Perry's reaction to this decade of defeat and privation was remarkable. He did not break. He did not resign. He did not even become embittered. Discouragement, frustration, a sense of wrong and injustice, certainly these; but never collapse. He was not licked. We see in these bitter years of hunger and rejection the source of true knowledge about the real problems of the blind and an ineradicable determination to do something about them. Here was a mainspring of social reform, an ever-flowing motivation to redirect public attitudes and actions toward the blind. To this was added the thrust of an active and restless disposition and the wit to perceive remedies and adapt them to the need.

Out of these elements of mind, personality, and experience were compounded the public career of Newel Perry; and out of these elements also were constructed the programs the initiation of which made that career publicly signficant.

First of all, the distress of poverty must be relieved. The necessities of life must be available. The minimum essentials must be assured. So much in some way had been provided in the Anglo-American system for three centuries before Newel Perry faced near starvation and economic exclusion in New York City. The Elizabethan poor laws did it in one way. County direct relief, instituted in California in 1901, did it in another. The almshouse and the county hospital and poorfarm did it in still other ways. At the very minimum, it had to be done better. It should be done by a system of cash grants, adequate in amount to maintain standards of decency and health, receivable upon fixed and uniform standards of eligibility, made generally applicable by State participation and control, and expendable by the recipient through a free exercise of self-management and consumption choice. To bring this about, however, prohibitions in the State constitution would have to be removed by the arduous process of a people's amendment, an organic statute would have to be lobbied through the State legislature, faithful administration would somehow have to be secured. Year by year and session by session into the indefinite future, the myriad minor corrections and major improvements made necessary by time and disclosed by experience would have to be worked through the legislature and the administration. And so indeed it came to pass in California.

Secondly, much more had to be done than merely relieve the distress of poverty. Security is a necessity. As an unmixed blessing, however, it is a stultifying concept. An indispensable ingredient of any welfare system is opportunity. One of the objects of public aid must be to stimulate and enable people to become independent of it. Accordingly, their initiative must not be hemmed in. The means of productive activity must not be withdrawn or denied. Independence of action and self-reliance must be encouraged. Legal liability of relatives must be relaxed so as not to spread poverty, increase dependence and disrupt family life. Economic resources, reasonable amounts of real and personal property must be devotable to plans for self-support instead of being required to be consumed in meeting daily needs. Incentive to earn must be constructed out of retention of the benefits of earning. And this too presently came to pass in California. The new system took cognizance of the need of the blind for adjustments on the social and psychological as well as the physical level. It permitted and encouraged them to strive to render themselves self-supporting. It applied the democratic principle of individual dignity to an underprivileged class of American citizens. It guaranteed them a fair measure of independence and self-respect in the conduct of their lives. The California system, the Newel Perry system, was thus far in advance of its time. It is still envied and emulated throughout the Nation.

Thirdly, the reintegration of the blind into society on a basis of full and equal membership could only be achieved if they had a chance to earn their daily bread as others do in the community. Accordingly, action must be taken to eliminate restrictive barriers and legal discriminations. The main channels of opportunity must be swept clear of artificial and irrational obstructions. The public service, private employment, the common callings, the ordinary trades and occupations, the professions must be rescued from arbitrary exclusions based on blindness when blindness is not a factor bearing on competence and performance. Doctor was a prime mover in securing legal, constitutional and other provisions which; protect the right of the blind to enter a number of professions; forbid arbitrary discriminations against us in the State civil service and in secondary teaching; enable blind college students to pursue their studies with the aid of sighted readers hired by the State; bring the blind in an ever-increasing stream into the colleges and universities of the State and thence into the higher callings.

These achievements—legal, social, economic and political—have been the fruits at once of Dr. Perry's leadership and of the collective self-organization of the blind which that leadership engendered. More than any other person, it was Doctor who implanted and nurtured among the blind of California the sense of common cause, the spirit of collaborative effort in seeking solutions to our problems. More than any other person, it was he who taught us that the blind can and must lead the blind and the sighted, too, when dealing with the problems of the blind. More than any other person, it was he who made us aware that to go on unorganized was to remain disorganized, that only through concerted action can the blind hope to convert and enlist the power of government and to defeat the thoughtless tyranny of public prejudice and opportune ignorance.

Newel Perry was a teacher: a teacher of subject matter and a teacher of men. He taught his specialty of mathematics and taught it very well indeed; but he taught his pupils even better. To be sure, not all the students who came his way during his 35 years on this campus were wholly inspired by him. His personality was vigorous and his standards rigorous. But for many of us who attended the school during those three and one-half decades it was Dr. Perry who furnished the impetus and incentive, the goad and the goal, that would light our later lives and nourish our careers. Our bond with him was not broken when our schooldays ended. We went on to become his comrades and colleagues in the cause which was always his true vocation.

Newel Perry was, in short, both a teacher of youth and a leader of men. These two roles were not, however, quite separate. For the secret of his success in both of them lay in this: that his teaching was a kind of leadership, and his leadership a kind of teaching. In his pedagogical method as well as his social purpose Doctor was thoroughly Socratic. His classroom manner was essentially that of the platonic dialogue: dialectical, inquiring, insistently logical, and incessantly prodding.

In this Socratic combination also lies, I think, the secret of Doctor's success as the leader of a social movement. Just as in the classroom he taught his students by leading them, so as the pioneer of the organized blind movement he led his followers by teaching them. His power, like that of all leaders, rested in the last analysis upon persuasion. His triumphs, however, were not the product of oratorical or literary skill, although he had a notable gift for trenchant and incisive phrasing, the epigrammatic thrust which distills the essence of a complex issue. His persuasive power was not that of the demagog but of the pedagog. And it was not only his followers who learned from him. He educated the blind people of the State to an awareness of their capabilities as individuals and of their powers as a group. He educated the legislators in the State capitol by dint of dogged, relentless, well-nigh incorrigible campaigns of persuasion carried on year after year and decade after decade. He educated the general public by his preachment and his example to regard the blind not in the traditional terms of charity and custody but in the realistic terms of normality and equality.

And most of all, in his role as leader, Newel Perry educated, indoctrinated, and persuaded a distinguished group of cohorts to join him in carrying on the struggle and carrying out its goals. Those whom Doctor gathered around him were other blind men and women, mostly former students, whose special talents and professional positions uniquely supplemented his.

Raymond Henderson: By profession an attorney, self-taught, by preoccupation a reformer, with poetry in his soul and literature in his stylus. Born in 1881, he attended this school from 1889 through high school and continued to live here until his graduation from the University of California in 1904. He practiced his profession in Bakersfield, Calif., from his admission to the bar until his death in 1945. Raymond came to the organized blind movement in his maturity from a long background of experience in other causes. He brought to it a notable array of personal abilities, a high degree of professional skill, a fine spirit of humanity, and the enrichment of wide and intensive activity.

Leslie Schlingheyde: also by profession an attorney, gentle and religious by disposition, practical rather than reflective in frame of mind, with a brilliant academic record and a liberal outlook. He was born in 1893, attended this school from 1906 to 1913, and thus came under Doctor's influence in the year of his graduation. He received a J.D. from the law school of the University of California in 1920 and from that time until his death in 1957 practiced his profession in Modesto, Calif., and served the blind movement all over the State.

It was Raymond Henderson and Leslie Schlingheyde who were primarily responsible for handling cases in court, for preparing innumerable legal briefs and arguments, for drafting projected bills and constitutional amendments, for continuous legal counsel during the insurgent and formative years. They were in a real sense the legal arm of the organized blind movement.

Ernest Crowley: again by profession an attorney but distinguished for his service in another arena. He kept a law office open in Fairfield-Suisun from the time of his graduation from the University of California Law School in 1923 unti lhis death in 1952. To him, however, the law was only a necessary and not a particularly attractive means of earning a living. His law office was a cover for his real love and active life—the practice of politics. He was born in 1896 and attended this school from 1910 to 1916. He was thus under Doctor's tutelage as a student for 4 years. His significant contribution was made as a member of the State legislature from 1928 to 1952. It was he who introduced and skillfully maneuvered through to passage the memorable bills which are now the statutory landmarks of our movement. In a very real sense, he was the legislative spokesman and arm of the movement.

Perry-Sundquist: social worker and public administrator by profession, bringing to his work a sympathetic personality, an unshakable faith in blind people and skillful management of administrative techniques and devices. He was born in 1904 and attended this school from 1918 to 1922. For exactly 20 years now he has been chief of the division for the blind in the State department of social welfare. During those two decades he has translated the principles of the organized blind movement into concrete administrative action, from legislative parchment into practical reality. Under his direction programs for the blind have multiplied and prospered, services have been expanded and their benefits spread. Most important of all, the working philosophy of the movement has been transformed into a working practice. In a very real

sense, he has been the effective administrative arm of the movement.

Through the years this little band grew in numbers and evolved in formal structure. It formed the nucleus of the California Council for the Blind, which came into being in 1934 with Doctor Perry as its first president. For 19 productive years, until his retirement in 1953 at the age of 80, Doctor forged and shaped the council on the anvil of his own will into an instrument larger and more formidable but essentially similar to the informal group from which it originated.

Doctor's social vision in the field of blind welfare outdistanced his time and placed him in the advance guard of thought and planning. His liberality on these matters gains, rather than loses, in significance when it is placed alongside his broader attitudes toward politics and human affairs; for in matters unrelated to the blind, Doctor was fully an heir of the 19th century, conservative, even reactionary, by nature, often inflexible and not without a touch of old-fashioned nationalist-imperialism. When it came to the cause to which he was most committed, he was far less a victorian than a utopian—less a standpatter than a restless progressive in search of new horizons.

How shall we sum up a man's life? How capture the essential quality of a human career? How convey the inward meaning, the imponderable and intangible qualities of will and heart and spirit? There are the vital statistics. But they are more statistical than vital. All that they can tell us of a man is that he was born, he lived, he loved, he died. For Newel Perry we must amend the litany at least this much: he lived, and he brought new life to many; he loved, and he was beloved; he died, and he will not be forgotten.

On the day following the death of Franklin Delano Roosevelt, Walter Lippmann wrote some words about him which might also stand as an epitaph to the leader and comrade whom we honor today: "The man must die in his appointed time. He must carry away with him the magic of his presence and that personal mastery of affairs which no man, however gifted by nature, can acquire except in the relentless struggle with evil and blind chance. Then comes the proof of whether his work will endure, and the test of how well he led his people. * * * The final test of a leader is that he leaves behind him in other men the conviction and the will to carry on."

College Loans Help Students in New Orleans

EXTENSION OF REMARKS

OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 12, 1961

Mr. BOGGS. Mr. Speaker, for the past 2 days the RECORD has included two articles in a newspaper series on the current federally financed student loans available at New Orleans universities and colleges. Today, I am pleased to include the third and last of these fine articles by Mr. Robert N. Kelso, a reporter for the New Orleans States-Item. Mr. Kelso relates in detail what New Orleans institutions of higher learning are doing through the National Defense Education Act to help young students to pursue a college education.

The third article follows:

LOANS HELP 1 STUDENT IN 10 THROUGH COLLEGES IN ORLEANS

(By Robert N. Kelso)

Federally financed loans are helping put about 1 student in 10 through college in New Orleans.

This program is authorized by the National Defense Education Act, which expires June 30, 1962. But indications are similar aid to needy and capable students will be continued.

President Kennedy has called for passage of a $5.7 billion aid to schools program, of which more than $500 million would be earmarked over a 5-year period for college scholarships.

The fate of this proposal will have a strong bearing on possible renewal of national defense student loans.

Aid to students in a Nation which has been jolted into putting a premium on brainpower seems certain to persist.

Spiraling costs of getting a college education will shut out thousands of capable youngsters unless they get financial help to continue their training.

Tuition costs are being boosted next fall at New Orleans' two largest universities. The flat fee at Tulane will jump from $990 to $1,200, and at Loyola from $600 to $700.

These amounts are only a starter, particularly for students who either reside on the campus or maintain residences of their own while attending school.

A male undergraduate at Tulane living on campus will have to spend some $2,275 for his tuition, university activiities fee, room, meals and books.

Living off campus, his tuition, university fee, and books alone will cost more than $1,400.

At Loyola, the average student living on campus will need $1,625 a year to meet fixed expenses. The off-campus student will need $825 for tuition, basic fees and books.

Additional expenses like clothes, laundry, spending money and incidentals add an undetermined, but substantial, amount to the student's education bill.

Six institutions in New Orleans have dispensed approximately $450,000 in national defense student loans this year to more than 900 of their students.

This roughs out to an average of $500 per student.

Tulane and Loyola may, and sometimes do, lend the full $1,000 a year authorized under the Federal loan program.

But other schools here set a general limit on the loan at either $500 or the cost of tuition.

The amount of money a student can expect to get from the national defense loan program is geared precisely to the amount he and his parents can afford to contribute.

This is calculated with some nicety by the institution from which he seeks a loan.

The school requires the prospective borrower to submit a detailed statement on his own and his parents' financial resources.

The question of how much a family should contribute toward college expenses has been worked out by the College Scholarship Service.

College Scholarship Service is an organization of more than 300 colleges and universities (Tulane is one of them) that distribute scholarships, jobs and loans to able students with financial need.

It has a number of other functions in the educational picture, but its main purpose is to act as a clearinghouse for the family financial information all participating institutions require of students seeking financial assistance.

Here are a couple of examples from a College Scholarship Service chart on what is considered a minimum of annual family support, from income, toward college expenses:

A family with two children with an income before taxes of $6,000 would contribute $680; a $6,000-income family with three children, $620, and with four children, $540.

A family with two children and a "before taxes" income of $9,000 would contribute $1140; with three children, $980, and with four children, $890.

The amounts expected are reduced if the family faces unusual financial difficulties or responsibilities, and when the student is commuting from college to his or her home.

In addition to its income, a family's liquid assets are also tapped for college expenses under College Scholarship Service procedure.

Assets are considered to include the family's cash savings, stocks, bonds, and other investments, one-half of its equity in a home or other real estate, one-half the loan value of its life insurance, and varying portions of holdings it may have in a small business or a farm.

In a manner weighed to give the family a fair shake, the College Scholarship Service would expect a family with one child and $6,000 in liquid assets to contribute $25 from its assets toward a year's college expenses.

With only $6,000 in assets and more than one child, the bite on assets would be zero.

In ascending scale geared to its assets, an average family with three dependent children would be expected to contribute annually:

With $8,000 assets, $55; $10,000, $125; $12,000, $200; $15,000, $305; $20,000, $615; $30,000, $1,310.

Most or all of a student's own savings, if he has no sizable assets, are expected to be applied to college expenses.

A student planning on a 4-year program with $1,000 of his own in savings would be expected to draw about $200 annually from his savings.

When all of these sources of income are tallied, the college computes the difference between this total and the cost of a year's attendance. That difference determines what is considered the student's financial need.

At many schools, Tulane among them, a thoroughgoing effort is made to provide the balance needed through scholarships, loans and part-time jobs.

Dr. Joseph E. Gordon, associate dean of admissions and loan administrator at Tulane, says a third of Tulane's 4,500 full-time students are getting financial help from one or more of these sources.

The Reverend Father Robert L. Boggs, dean of admissions and loan administrator, says about 100 Loyola students have gotten loans ranging from $319 to $1,000 this year.

"The majority of them are in the dental school," Father Boggs said, "but we have borrowers in every department."

Xavier University limits its loans under the program to $500 because of the number of applicants. It has lent out $40,000 to 101 students.

A Dillard University spokesman said more than 100 students there were getting varying amounts under the loan program, but declined to state the total lent or the spread between individual amounts borrowed.

At St. Mary's Dominican College, 21 students have borrowed $29,707 in Federal money this year. All but three of them, who sought bigger loans to help pay for their room and board, were limited to the $600 tuition charge.

College officials handling the loans here think they could use more Federal money than they're getting.

But $450,000 in 1 year isn't a meager contribution from Uncle Sam.

Tulane's Dr. Gordon, who is overseeing disbursement of the top amount allowed any one institution says there is some talk of raising the $250,000 Federal loan limit per school.

"At Tulane," Dr. Gordon said, "we haven't gotten a great many more applications than we've had money to loan.

"But tuition is going up next year, and every time that happens we find more students who have legitimate financial need.

"So far, I would say that any student denied a loan didn't get one because of academic qualifications rather than a lack of funds."

Father Boggs agreed that Loyola, thus far, has gotten enough loan money to take care of students with sufficient brain power but a shortage of money.

Whether the situation will work out as well next year with more students knocking on the loan-man's door, nobody is prepared to hazard a guess.

Railroad Mergers

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 12, 1961

Mr. CAPEHART. Mr. President, the distinguished majority leader, the distinguished Member from Washington, and chairman of the Senate Committee on Interstate and Foreign Commerce, and Senator BURDICK, have recently directed attention to the need for proceeding with caution, in connection with proposed mergers of railroads.

With the ever-declining share of intercity ton-miles of freight traffic, which the railroads are transporting, and with the great decline in railroad passenger traffic, it may well be true that there is a surplus of railroad facilities, and in the light of the present financial plight of the industry, mergers are no doubt necessary. Authorities on the subject are generally agreed on that. There is serious disagreement, however, as to how mergers should be accomplished. The great railroad industry is too important to this Nation in time of peace as well as in wartime to approach railroad mergers on a piecemeal basis. They should be carefully planned to protect the public.

Mergers in the railroad industry are not an innovation; the great railroad systems of America today are the result of thousands of mergers of smaller railroads. I have no doubt that the public interest will be given full consideration by the Interstate Commerce Commission as proposed mergers are considered by that body. It is of great importance that the Commission do just that.

One of the country's great railroad executives, commenting upon the merger situation, in the annual report of his company, just a few days ago, had something to say about the public interest in these railroad mergers which I believe should be considered by everyone.

Mr. President, I now ask unanimous consent to have printed in the Appendix of the RECORD, the statement of Mr. A. E. Perlman, president of the New York Central System, in his annual report, entitled "A Special Report on Railroad Mergers."

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

A SPECIAL REPORT ON RAILROAD MERGERS

In recent months, there has been a flurry of merger activity ranging from proposals to actual accomplishment, within the railroad industry in the East, West, and South.

Historically, mergers are an old subject within the railroad industry, for nearly all of our present rail systems are but the end results of many mergers of smaller companies. This new interest in consolidation is a result of railroads moving to meet the challenges of adapting modern technology to our modern-day economy. Through sound mergers, the Nation's railroads can build stronger, healthier and more competitive rail networks.

The Central, itself a product of some 500 mergers, has a long history of favoring the merger philosophy. We still do. Our only qualification is that such mergers be in the public interest—for healthy, competitive real service is still the keystone to our transportation system and our economy.

For these reasons, the Central has engaged during the past few years in numerous merger discussions. In 1958, we studied such a consolidation with the Pennsylvania Railroad. This study was suspended because of our belief that merging the two largest lines in the East would so overbalance the remaining rail carriers that effective competition would be impossible.

Instead, the Central initiated three-way studies with the Baltimore & Ohio Railroad and the Chesapeake & Ohio Railway. It was, and is, our belief that a consolidation of these three roads, in addition to being to the best interest of each, is the only effective rail system that can be assembled in the East to meet the competition from the Pennsylvania Railroad's ever-growing rail empire.

However, the Chesapeake & Ohio chose to unilaterally seek control—not merger—of the Baltimore & Ohio through an exchange of stock. The Central, still hopeful of a three-way merger, also made an exchange of stock offer to B. & O., which our shareowners approved last October.

At the present time, the Central has become a substantial shareowner of the Baltimore & Ohio Railroad. Through purchases, the Central and its affiliated interests now own in excess of 20 percent of the total outstanding B. & O. shares.

Within a few months, the Interstate Commerce Commission will be asked to rule upon the C. & O.'s plan to control the B. & O.

Our philosophy is to encourage carefully formulated, well-planned mergers designed in the interest of promoting and building an ever-improving rail system to the benefit of the public, the investors and owners, and the industry itself.

A piecemeal approach to mergers, haphazardly thrown together without regard to other than self-interest, or the aggrandizement of the stronger railroads, can do irreparable damage to our already weakened transportation system and, consequently, to the public and economy.

While we of the Central stand ready to work toward the three-way merger we have so often proposed, we stand equally ready to resist with every resource at our command, the C. & O.'s attempt at unilateral control of B. & O. and its detrimental consequences to the economy and the industry.

The choice is not ours to make. But we shall accept either course in full confidence of our ultimate success.

Education

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 12, 1961

Mr. DORN. Mr. Speaker, education is important. The tax burden is almost unbearable. The following article is plain horsesense:

SUGGESTIONS GIVEN FOR MORE SCHOOLING

(By George W. Crane)

(College heads are notoriously poor businessmen, so you State legislators and members of the board of trustees must stop the needless demand for more taxes. Make the colleges use horsesense, and they can handle twice their present enrollment without a penny for new classrooms or additional faculty. Let's also stop panhandling from Uncle Sam for education.)

Case H-450: George G., aged 45, is a member of the Nebraska State Legislature.

"Dr. Crane," he asked me recently, "we are constantly being urged to appropriate more money for new buildings at our various State universities and teacher's colleges.

"I am very much in favor of education, and as much free schooling as we can offer, but we can't go on forever increasing our tax rates, even for schools and public welfare.

"So what is the solution?"

HORSESENSE IN COLLEGE

More horsesense on the part of our colleges.

Despite the widespread clamor that we shall have twice as many college students in 1975 as today, and many educators are sending up trial balloons to get legislatures favorably inclined toward bigger appropriations, let's face facts.

You legislators (and college boards of trustees) should just demand more American business efficiency on the part of the colleges before you grant them any more funds.

Our colleges can handle double their present enrollments and without an extra cent of appropriations, either for new classrooms or for any new teachers.

Read that sentence again for it is gospel truth.

All we need to do is schedule a second educational "shift," just as efficient factories run double (and often triple) shifts of workers.

Our present classrooms, microscopes and other lab equipment would handle not only double our present school enrollment, but if need be, we could run a third shift and handle triple the number.

College students are adults in physical and mental age, so they don't need be limited to grade school hours of 8 a.m. to 3 p.m.

Let the second shift start at 3 or 4 p.m., and run through 9 or 10 p.m.

"Yes, Dr. Crane," you may protest, "but what about the extra faculty members needed to handle that double enrollment?"

Again, use horsesense which has been ominously lacking on our college campuses for 300 years in America.

The typical college professor today handles an average of only 12 students, whereas each high school teacher handles 24.

Why shouldn't college profs work as hard as high school profs and thus raise that student-teacher ratio from 12:1 up to 24:1, where it easily could be?

Then the present college professors would be handling twice the present college enrollment, without adding to their number at all.

And that added number of tuitions per prof would permit a 50 percent jump all the way along the line in salaries and without 1 cent of new appropriations from our State legislatures.

The only new buildings needed to accomodate double our present college enrollments would be dormitories. And thousands of townsfolk still have vacant rooms available, which could easily be used for that purpose.

Fancy million-dollar-college dormitories don't raise the students' grades. You can rate just as high on exams by living in a rented room in a private home of the townfolk.

So let's stop this mad stampede toward ever-increasing taxes. You can do it easily by simply using American horsesense.

"The Sod-Busting Senator"—Milton Young, of North Dakota

EXTENSION OF REMARKS

OF

HON. FRANK CARLSON

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Wednesday, April 12, 1961

Mr. CARLSON. Madam President, the farmers of our Nation, and particularly in the Midwestern and Northwestern sections of the United States, are fortunate to have as a Member of the U.S. Senate, Senator MILTON YOUNG, of North Dakota.

MILTON YOUNG knows agriculture, not only from experience as a farm operator, but also as a student of the problems of agriculture for many years. He is a recognized authority in the U.S. Senate in this field.

As a member of the U.S. Senate from the State of Kansas, it has been my privilege to have been associated with him in proposing and in having enacted legislation affecting all agriculture, and particularly wheat.

Kansas and North Dakota are the two leading wheat producing States in the Nation, and therefore, we have many mutual interests in the solving of the wheat problem.

The ever-increasing surplus of wheat is a problem that must have consideration by the Congress and Senator YOUNG will, I am sure, have great influence in writing this legislation.

The 1961 spring issue of the Co-op Grain Quarterly of the National Federation of Grain Cooperatives, St. Paul, Minn., contains an article written by Lew Muenz, entitled "The Sod-Busting Senator," and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OUT OF NORTH DAKOTA—THE SODBUSTING SENATOR

Nowhere in all the land are the furrows as long and as straight as they are in the wheat country of North Dakota. Mile after mile they flow each spring, in a dusky pattern that reaches across the earth to the horizon and beyond.

It has been thus ever since the sodbusting days of the homesteader and the bonanza farms that followed the opening of the upper Great Plains. And the furrows seemed even longer in the olden days. Often they were a mile in length and that meant a half hour of plodding for a team of four horses pulling a two-bottom plow. It was a lonely walk for the farmer or the farmer's son who held the reins. But it gave a fellow a chance to think and a time to dream, and a dream has carried many a farm boy from a furrow to lofty places—perhaps even to the Congress of the United States.

That's what happened to the Honorable MILTON R. YOUNG, the sodbusting Senator from North Dakota whose highly respected voice in the farm affairs of the Nation is a voice of experience.

Senator YOUNG, who has served in the Congress of the United States since 1945, is known throughout that body as "Mr. Wheat." The title is not unwarranted or lightly bestowed, for when it comes to a long and devoted record of service to agriculture, with particular emphasis on the welfare of the wheat producer, the Senator's record is second to none.

Not even in his own North Dakota, where this lanky, soft-voiced, immensely popular servant of the people has held some kind of a public position since the mid-1920's, do men always agree with Republican Senator MILTON REUBEN YOUNG. But they respect him, an applied virtue that in the affairs of men often transcends conformity. Politics in the land of the long furrow are spirited, and at times raucous. But opponents in his home State, as well as in Washington, have learned that you don't scare Senator YOUNG by hollering at him.

As a matter of record, the Senator got some of his most valuable background experience in public affairs back in the days of the great depression by out-hollering traveling men in the little town of Berlin in southeastern North Dakota near the farm where YOUNG was born on December 6, 1897.

"I became interested in politics about the mid-1920's but didn't become active until the late 1920's or early 1930's," he recalls. "I got my start in politics arguing with traveling men and other visitors with whom I came in contact on the streets of Berlin during the depression. Invariably their argument was that farmers would do all right if they would only diversify their operations. Actually, there were surpluses and low prices for every farm commodity in those days. There was no opportunity to switch to some other production to improve your economic situation, yet this was the propaganda with which many outside interests tried to pacify North Dakota in the depression days."

Transient debaters found it difficult to win a point against the young man whose logic came out of the very soil. YOUNG'S formal education was not extensive. It began in a one-room schoolhouse near his father's farm, about 3 miles from the Berlin townsite. Soon afterwards the one-room school was moved into the town of Berlin.

Berlin was the typical North Dakota country town, born of the farmers' need for a center of activities and a source of services which the farmers themselves could not supply.

Settled by sturdy folk, many from far-off lands, the very name of MILTON YOUNG'S birthplace is the out growth of an immigrant's memory of his Teutonic homeland.

Once started, the community gradually grew to fill, quite adequately, the expanding needs of the countryside's citizenry. One man built a two-story frame building and opened a grocery store in it. The next spring another store appeared. A blacksmith came and opened for business. Soon there was a hotel and restaurant; and even a drug dispenser set up a little shop. The bank was a brick building, strong and imposing.

The community was not what you would call rich. But some of the leading citizens were "well-fixed" and there was a comfortable feeling of solidity within the town.

MILTON finished grade school there, and in 1915 was graduated from high school in the larger town of LaMoure, about 11 miles away. After that came a brief stint at North Dakota Agricultural College at Fargo and a period at Graceland, a small college in the southern Iowa town of Lamoni.

He would have liked to continue his schooling. But the pull of the land was strong and, besides, young MILTON was in love.

In 1919 he married petite, blond Malinda Benson, a neighbor girl who looked almost diminutive as she stood beside her lanky bridegroom.

Malinda's parents were a sturdy Norwegian couple who had moved to North Dakota from Spring Grove, Minn., and started farming in 1888. Their farm was near Benson Corners, about 8 miles northwest of the village of Verona. This was near the farm of MILTON'S father, John, one of the best-known and most highly regarded farmers in that part of the State.

The elder Young was a good farmer, kindly, ambitious and wise. He was born at Reed's Landing, Minn., of German parents. With his wife, Rachel, a Swiss girl from Anoka, Minn., he went to North Dakota in 1881 and started farming that same year. MILTON often heard his father recall that to help finance his farming operations he hauled groceries by ox team from Jamestown to the inland community of Grand Rapids, near his farm and about 35 miles from the railroad. It was pleasant, in the warmth of a prairie summer, to loll in the wagon seat behind the plodding oxen, their cloven hoofs scuffing out a percussive rhythm for the meadowlark's flute. "You know I want your wheat to grow," is what the old folks said the meadowlark sang in his lilting eight-note call.

But in the winter, it was another story. Strong winds, icy and cruel, often whipped the snow into belly-deep drifts. Trails vanished under the dangerous white, and it took all the red-eyed cunning the oxen possessed to reach home.

John Young prospered in his business. He had started farming on section 1 in LaMoure County's Henrietta Township, about 3 miles from the town of Grand Rapids. Six years later he bought the south half-section 3 in the same township, and these acres today are called by the Young clan the old home farm. Soon the elder Young owned the entire section, and when the Northern Pacific Railroad established a branch line from Fargo to Edgeley in the early 1890's he opened a small land office. The site of this little office later became the town of Berlin.

Early in his farming operations, Mr. Young became active in inducing immigrants to come to North Dakota. This gave him further opportunity to expand his business of buying and selling land, and he finally quit active farming in 1909. But he continued in the land business, was an active partner in a farm machinery sales company, and joined with his oldest son (not the Senator) in an automobile sales agency. But always his major interest was in the land.

It wasn't always fair weather for John Young, however. He had made considerable money from the land he had purchased over the years, not a fortune but enough to be regardless as "well fixed." All of this went down the drain in the great depression, part of it when a local bank went to the wall at Forman, N. Dak. Those were the Dust Bowl

days, when for weks at a time a great ceiling of soil particles, cast into the air by the relentless winds, hung over all the plains. Men cursed as the earth died.

Out of that time comes a story about the elder Young—an anecdote which perhaps has had an effect on the way Senator MILTON YOUNG thinks. Certainly it is evidence of why neighbors held John Young in such esteem.

During the Dust Bowl time, landowners, particularly absentee owners and the large corporate firms which had vast holdings in the State, were making every possible effort to collect cash rentals from their tenants. Only a few could pay, however. Most of the cattle in the area had been sold to the Government, as had the hogs and most of the sheep. The few remaining head were being kept alive on high-priced hay, straw, and grain shipped in from other States where nature was being more benevolent. From these scanty sources, farmers were trying to scratch out a living—and an occasional dollar with which to pacify the landowners. The story about the elder Young is perhaps best told by the man who played an important part in it, a man named Thorfinnson who at the time was the Government extension agent in Sargent County.

"Mr. Young came into my office one day, in the depths of the drought, and asked if I knew any of his tenants," Thorfinnson recalls.

"You have three in Sargent County," the county agent replied, and Thorfinnson bristled as he envisiond another case of trying to extract the last penny from men already on relief.

"Probably you can help me then," said Young. "I'm remitting all my cash rent so that I can help these farmers get through the winter. And I've got one old codger who's too proud and ornery to take any help. So I want you to watch him, and if the going gets too rough you can let me know and maybe between us we can get him to take some help."

"I wept," says Thorfinnson.

That is some of the background out of which came North Dakota's sodbusting Senator. The Senator farmed through the depression, on "the old home place" which had been rented out from 1909 until 1919 when the newlyweds, Milton and Malinda, moved onto it to start farming on their own.

Like his father, the future Senator confined his operations mostly to small grain although most of the time he kept from 15 to 25 milk cows. And with the same restless urge to always be doing something that characterized his father, he specialized in doing custom threshing for his neighbors and for other farmers for miles around.

Milton's threshing rig was gas-powered. But his Dad had a steam-powered rig, headed by a big fire-eating boiler and engine on great wide wheels, as huge and as awesome as the blood-sweating behemoth of Holy Writ.

It was not strange that the young man who dreamed at the plow handle and enjoyed a verbal set-to about politics with a traveling man should also be fascinated by the big machines that were so colorful a part of farm life in those days. The annual threshing season was looked forward to eagerly by most farm boys, and their elders as well.

Childhood excitement began when the distant whistle heralded the approach of the threshing rig and its crew.

On that exciting day, a boy would watch agape as the overalled crew set up the rig in the farmyard or in the field and began the threshing from stacks or from bundle wagons. The red bandana around the neck of each itinerant crewman was the badge of adventure; and, oh, the status symbol that was the blue-and-white-striped peaked cap of the engineer.

To the boy, it was worth getting up early in the morning and staying up until he was dog tired. The noise was like music as the clattering separator sent a golden cascade of grain into wagons while straw flew high from the blower.

Spirits were high, too, as workers vied to outdo each other in feeding bundles into the great maw of the machine, or in carrying away the product of the harvest.

Most of all, though, a boy liked to watch the smooth powerful piston on the puffing engine—or the spinning governor that lifted its iron weights as the engine gained speed.

It was wonderful to be alive.

As late as 1945, MILTON YOUNG did some custom threshing back home during the fall congressional recess after he had been appointed to the Senate in March of that year. It was to help out some of his neighbors, for whom he had been threshing for years, when they were unable to buy or rent combines or otherwise get their crops threshed.

Today, all three of the Senator's sons—Duane, Wendell, and John—are active farmers, and they still help the neighbors at threshing time. Duane and Wendell are on "the old home place"; John, the youngest, has a farm about a mile west of Berlin.

Senator YOUNG's service as a public official started as a school board and township board member in the mid-1920's. In 1932 he was elected to the North Dakota House of Representatives, and in 1934 to the North Dakota Senate. His senate colleagues named him president pro tempore in 1941, and he became floor leader in 1943.

During the 1930's, the Berlin farmer-politician was chairman of various agricultural action groups established under the New Deal farm program and later was a member of what was known as the Wheat Allotment Board. Service in these groups proved to be mighty valuable experience for him as a member of the State legislature and in the U.S. Senate.

Senator YOUNG's appointment to the Senate perhaps was due in large measure to an early friendship with Fred G. Aandahl of North Dakota.

When MILTON YOUNG was president of the LaMoure County Corn-Hog Committee back in the 1930's, Aandahl was president of the same unit in neighboring Barnes County. The two also served together in the North Dakota Senate, and in the fall of 1944 YOUNG managed the political campaign which resulted in Aandahl's election as Governor of North Dakota.

In that same election, John Moses, the tall, white-maned former Governor of the State—one of the most popular men ever to win North Dakota's highest administrative office—defeated Senator Gerald P. Nye in a knockdown, dragout Senate race.

But Moses died shortly after taking office; and Governor Aandahl named YOUNG to fill the senatorial vacancy. North Dakotans reaffirmed Aandahl's choice at a special election on June 25, 1946, for the Senate term ending January 3, 1951. Then, Senator YOUNG, in a general election on November 7, 1950, was reelected to a full 6-year term. He repeated on November 6, 1956. As a measure of his popularity with North Dakota voters, the records show that in all these statewide elections, both primary and general, MILTON YOUNG lost only 1 country (1950) of the entire list of North Dakota's 53 counties. He was the only Republican candidate for the U.S. Senate in the 1956 general election who received a larger majority than did reelection candidate Dwight D. Eisenhower.

Senator YOUNG has been secretary of the Senate Republican conference since 1948. He is a member of the Senate Committee on Agriculture and Forestry, where he is the second ranking Republican, and a member of the powerful Senate Committee on Appropriations, on which he sits as the third ranking Republican. He has been on the Agriculture Committee since 1945 and on the Appropriations Committee since 1947; and he has been serving as a member of the Select Committee on National Water Resources.

A visit to Senator YOUNG's Washington office is a flashback to the Plains. Photos of his beloved North Dakota adorn the walls, with pictures of old-fashioned smoke-belching steam threshing engines among the favored memorabilia.

That's something of the story of MILTON RUBEN YOUNG, the "Mr. Wheat" to whom Senators on both sides of the aisle listen with respect—important member of the most powerful lawmaking body in the world, a son of the soil, the sod busting Senator from North Dakota.

Why Probe Scurrilous Drivel?

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 12, 1961

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Richmond Times-Dispatch of Monday, April 10, 1961:

WHY PROBE SCURRILOUS DRIVEL?

The Times-Dispatch was, we believe, the first newspaper in this area, and one of the first in the United States, to comment on the preposterous pronouncements of the founder of something called the John Birch Society, concerning President Eisenhower, and other public figures.

We raised an editorial eyebrow practically to the ceiling on August 9, 1960, over the incredible nonsense uttered by this man—Robert H. W. Welch Jr., a native North Carolinian and Harvard graduate who had led in establishing the society some 2 years previously.

Recently the John Birch Society has been much in the news, and there has been a great deal of comment in the press. Some of our liberal friends rushed to demand a congressional inquiry.

These demands grew out of such irrational declarations as that of Founder Welch that Mr. Eisenhower is a "dedicated, conscious agent of the Communist conspiracy," and that "treason" was the only word for some of his actions. Mr. Welch prides himself on being violently anti-Communist, and the society fights what it terms "pro-Communist" activities.

After a considerable amount of secrecy concerning the makeup of the society, and mysterious references to "cells," Mr. Welch himself has now asked for a congressional investigation. Furthermore, he has promised that neither he nor any other member of the organization will take the fifth amendment in such an inquiry—an impressive pronouncement.

But there is no occasion for any congressional inquiry at this time into the John Birch Society. Such horrendous drivel as its founder has been guilty of isn't worth an investigation.

Furthermore some of the liberals now say they see no occasion for an inquiry. Among these is Americans for Democratic Action.

However, it should not pass unnoticed that some of the very liberals who wanted to investigate the John Birch Society have been shuddering dolefully over the House Un-American Activities Committee, on the theory that it has been harassing honest patriots. These liberals blow their tops

when efforts are made by that committee to expose the Reds who have been boring into our Government as agents of the Communist conspiracy, but they wanted to mount an investigation of the John Birch Society on the basis of a few screwball pronouncements by its founder. (Since the House of Representatives voted recently, 412 to 6, in favor of increasing the appropriation of the Un-American Activities Committee, instead of abolishing it, the attitude of Congress seems obvious.)

As we say, there has been no showing that an investigation of the John Birch Society is called for. If the organization should ever do anything overtly dangerous, there will be plenty of time for a congressional probe.

Proposals to Transfer Silver Bullion From the U.S. Treasury to Private Users

EXTENSION OF REMARKS
OF
HON. FRANK CHURCH
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Wednesday, April 12, 1961

Mr. CHURCH. Mr. President, some time ago the Bunker Hill Co. circulated a letter which contains impressive arguments against the Treasury's present policies with respect to silver. Since Idaho ranks No. 1 in the Nation in silver production, and since the Treasury policies to which this letter refers seem to favor commercial users of silver at the expense of those who produce it, I have asked the Treasury to give me its comments on the criticisms of its policies which the letter contains. Meanwhile, I believe the letter is of special interest to all those who are concerned with the problems of the silver-mining industry, and I ask that it be printed in the Appendix of the RECORD as a part of these remarks.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE BUNKER HILL CO.,
San Francisco, Calif., March 15, 1961.

Hon. FRANK CHURCH,
U.S. Senate,
Washington, D.C.

DEAR SENATOR CHURCH: There have been indications that proposals will be made to the 87th Congress that may have, as their ultimate purpose, the transfer to private hands of a substantial portion of the wealth now held by the U.S. Treasury in the form of silver bullion, the effect of which would be much the same as the present serious drain upon our gold reserves.

As you may know, by reason of coinage requirements and sales to private industries, the Treasury's formerly ample stock of so-called free silver (meaning the seigniourage on that acquired at prices below the monetary value of $1.29 per ounce) has dwindled from well over a billion ounces to about 125 million ounces, or approximately a 2-years' supply at the present rate of decrease. Whereas in 1958 practically the entire U.S. production of 35.7 million ounces was purchased by the Treasury under the Silver Purchase Act, at the present time almost no domestic silver whatsoever is being tendered to it—in fact the reverse is true—the Treasury is now a substantial seller of silver on balance.

What has brought about this abrupt reversal in the movement of silver? In 1 year's time the trend has changed from "into the Treasury" to "out of the Treasury." The reason is simple—the Treasury is selling silver at bargain prices. In the bullion market in London, the spot price of silver today is the equivalent of 92.9 cents an ounce and the futures price 93.6 cents an ounce, whereas the Treasury's inflexible selling price is 91 cents an ounce. In other words, the U.S. Treasury is deliberately selling off the wealth of this country for less than others are willing to pay for it elsewhere.

At the same time we are selling silver at bargain prices, our requirements for coinage purposes are mounting steadily due to the tremendous growth in machine vending and in the population. When used for coinage purposes, the free silver on hand at the Treasury becomes worth around $1.60 per ounce to it because of being combined with alloys. Thus the difference between coining the free silver stocks into money and selling it to consumers at 91 cents an ounce amounts to about 70 cents an ounce loss in value, or to put it another way, a giveaway of about 75 percent of the value of the silver sold.

Those who would plunder the Treasury raise specious argument that silver is no longer the standard of value anywhere in the world. The fact of the matter is that the consumption of silver, for coinage as well as industrial purposes is constantly rising worldwide in the face of a static supply situation, and were it not for the intervention of the U.S. Treasury in obligingly making up the deficiency, there would be a critical shortage in silver supplies today. It is this interference with the free play of supply vs. demand that prevents the increase in price which is so necessary to bring forth the additional production so sorely needed. Because silver is essentially a New World mineral, this unorthodox and costly interference with fundamental economic forces prevents the stimulation of mining in the severely depressed areas of this country and the new jobs this would create, and likewise works a hardship on our Latin American neighbors, where so much of the world's silver is normally mined. All this merely to maintain artificially low costs for the silver manufacturers and fabricators who are hardly in a depressed condition.

There is no possible justification for the policy which the U.S. Treasury has been following. The gratuity which is being handed those who do not need it is at the expense of those, here and abroad, who cannot afford the injury which is being done them. Furthermore, it is not, we believe, within the province of any democratic government to discriminate against any particular segment of industry, as in this case.

We therefore respectfully urge your mature consideration of any proposals which may have, as their ultimate objective, a subsidization of a type of business where relatively little risk is involved (the silver consumers) at the expense of the risk-takers (the mining industry), at the same time further sacrificing our dwindling reserves of precious metals badly needed to support our currency.

Sincerely yours,
D. L. FEATHERS,
Vice President-Secretary.

Condemnation Not Enough

EXTENSION OF REMARKS
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 12, 1961

Mr. ASPINALL. Mr. Speaker, there is much talk about increasing tendencies toward the so-called welfare state. An editorial in the Daily Sentinel of Grand Junction, Colo., vividly expresses the need for community cooperation and individual responsibility in creating opportunities. The editorial follows:

CONDEMNATION NOT ENOUGH

It is easy to applaud condemnation of Federal aid; easy to take a stand against the welfare state. Millions do it daily. What most of them do not do is to accept the National, State, and civic responsibilities in the fields of economics, culture, and community life which will prevent the welfare state.

The welfare state is not imposed upon us from the top. It is instigated, advocated and supported from the bottom. This is a democracy, and we will not have a welfare state unless we want it.

A free and vigorous nation depends upon a vigorous economy in which all individuals face emergencies imaginatively and with a willingness to plan and to sacrifice the profit of the moment for the growth of the future. This is true whether the field is finance, education, religion, or health.

It is not a matter of charity. It is a matter of preserving or creating a climate in which opportunities are continually expanding. It is not enough to "be against" government dole. It is necessary also be vitally and emphatically for any community expansion, any new industry, any project which will improve and expand the area.

When this rich Nation slides into a welfare state the blame must fall upon the refusal of the total community to accept its total responsibilities. It must be considered to have grown up out of a home, community and national atmosphere which promoted it by neglecting the hard work and sense of obligation which keep a nation alive.

Pressures against Federal assistance, whether in the field of medical care, unemployment subsidies, or educational help, are not enough. Community cooperation to prevent the need of Federal aid and individual responsibility in preserving a healthy economy are far more important and in the long run the only effective weapons.

Unfair Tax Burdens on the Clay Tile Industry

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 12, 1961

Mr. HAYS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution by the City Council of East Liverpool, Ohio:

RESOLUTION 9

Resolution requesting the U.S. Congress for legislation eliminating unfair tax burdens on the clay tile industry

Whereas the manufacture of clay sewer pipe is one of this city's most important industries; and

Whereas it is in competition with the cement pipe industry which has been given depletion allowances under code, see 613 and the Tax Rate Extension Act of 1960 and rulings thereunder over and above those given to the manufacture of clay sewer pipe; and

Whereas this has added to the financial burden of the clay sewer pipe industry to meet the competition aforesaid resulting in possible industrial failure: Now, therefore, be it

Resolved by the Council of the City of East Liverpool, State of Ohio:

SECTION 1. That the Congress of the United States be and it is hereby petitioned to change the income tax laws pertaining to the above-described inequity in order that competition between the two industries be restored on a just and equitable basis.

SEC. 2. That certified copies of this resolution be forwarded to Representative WAYNE L. HAYS for presentation to the Congress of the United States and additional copies be forwarded to Senators LAUSCHE and YOUNG and to Hon. Arthur J. Goldberg, Secretary of Labor.

SEC. 3. That this resolution shall take effect and be in force from and after the earliest period allowed by law.

Passed this 3d day of April 1961.

CHARLES N. EDWARDS,
President of Council.

Attest:

OWEN D. KOUNTZ,
Clerk of Council.

Approved by the mayor this 5th day of April 1961.

BERT H. GOODBALLET,
Mayor.

The Greek Way

EXTENSION OF REMARKS
OF
HON. GEORGE GRANT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 12, 1961

Mr. GRANT. Mr. Speaker, Mr. Norman Meese, editor of the New Age and assistant to the Grand Commander of the Supreme Council, 33d degree of Ancient and Accepted Scottish Rite of Freemasonry Southern Jurisdiction, United States of America, in the April issue writes a timely article entitled "The Greek Way." I am sure that these wisely spoken words will interest all who are members of fraternities and sororities and many others who are interested in our colleges:

THE GREEK WAY

The precise nature of the spontaneous protest, staged by rioting students in San Francisco during the hearings by the House Un-American Activities Committee in May 1960 was made clear by the motion pictures taken there during the demonstration. That it was part of a worldwide Communist conspiracy operating on American soil by an enemy dedicated to the destruction of this Republic can hardly be questioned. This was substantiated in a report on the occurrence issued by the Director of the Federal Bureau of Investigation in his "Communist Target—Youth."

Many of our young people are being continually victimized and exploited by Communists, and Mr. Hoover points to the San Francisco riots as an example. In connection with this defiance of authority, however, it is worth noting that nowhere has the name of any fraternity or its members been mentioned as having taken part in this or any other antisocial student demonstration elsewhere.

Here is a trenchant lesson for those who have for years advocated the abolition of our college fraternities or the making of changes in their structure or composition that would be the equivalent of their destruction.

The Greek letter college fraternity has flourished because it meets certain well-defined needs of the students. They are an important influential part of the collegiate picture today. Because of their structure and setting they provide a substantial segment of the social control made necessary by a rapidly growing student body and the increasing complexity of the American cultural pattern. They serve in their own way, but within a more restricted framework, the same disciplinary purposes that the civic and service organizations serve in their own fields. They also share with these many of the same problems.

The exemplary aloofness of these Greek letter fraternities from the recurrent student disorders reported in our news media should constitute reasonable proof that they have a common interest in promoting those values upon which the life of this Republic depends. In addition to fostering fellowship and scholastic excellence, they look to the cultivation of self-discipline, honorable conduct, leadership, and self-reliance in a world in which these sterling virtues seem to be in eclipse. The fraternities serve a most useful and worthwhile purpose and should be supported and encouraged because of their obvious contribution to their social milieu.

World Economic Development

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 12, 1961

Mr. MULTER. Mr. Speaker, I am pleased to commend to the attention of our colleagues the following pamphlet written by Julius Stulman. The program outlined by Mr. Stulman touches upon a problem which I am sure we will all agree is of the utmost importance to our Nation:

WORLD ECONOMIC DEVELOPMENT—A PROGRAM FOR UTILIZATION OF FULL CAPACITY PRODUCTION

FOREWORD

In every period of crisis, the expectancy runs high throughout the world that the idea and its time will meet. In our time, the urgency is great for ideas that will shed light on the way to solution of those crucial problems, which if they remain unsolved can precipitate mankind into catastrophe.

The new ideas which may generate bold, new policies and programs to ameliorate the human condition will not necessarily emerge from public offices, no matter how high these may be. This is not to say that our leading officials and their aids are without the knowledge, wisdom and creative intelligence to face problems of magnitude and advance their solutions. The point is, if there are others with creative insights who have something to say that might be important and useful, their thinking should be heard and appraised.

An example of this kind of thinking may be found in this monograph by Julius Stulman, "World Economic Development." It proposes an approach to hasten the economic development of needy areas through a program utilizing the full productive capacity of the United States and other producing nations. It is a program that has not yet been tried by us in the various undertakings we have underwritten to help new nations develop within a system of growth and freedom; but because it is fresh, compassionate and practical it deserves the attention of policymakers and is entitled to the benefit of public discussion. Only through such aeration can the idea be helped to meet its time.

Julius Stulman is a successful businessman with a greatly respected reputation in the lumber industry. He is founder of the World Institute Council, one of the founders of the Foundation for Integrative Education and publisher of Main Currents in Modern Thought, a magazine prized by scholars. The magazine's great virtue is that it provides a forum for the ideas of men who have something unconventional to say.

HENRY MARGENAU,
YALE UNIVERSITY, *New Haven, Conn.*

ABOUT THE AUTHOR

Julius Stulman is a successful New York businessman who for over 25 years has been one of the major wholesale distributors of forest products in the United States. He heads the Stulman-Emrick Lumber Co. and its many affiliates throughout the country and the Lumber Exchange Terminal, the largest facility of its kind on the east coast.

In 1949 Mr. Stulman laid the basis for the establishment of the World Institute in a statement submitted to the members of the Foundation for Integrative Education. In this statement he proposed a bold, new approach to the solution of the onrushing, explosive problems of mankind in terms of ideas he first formulated in 1941. The integrative and synthesizing methodology of the World Institute has attracted the interest of policymakers, educators and social planners.

Mr. Stulman's thinking on public affairs has influenced many who help formulate public policy and action. Dr. Donald Faulkner of Western Reserve University in 1958 wrote to him, saying, "I have noticed so often analyses and recommendations which you propound becoming common discussion months later." In his book "Integration of Human Knowledge," Dr. Oliver L. Reiser, professor of philosophy at the University of Pittsburgh, pointed out that Mr. Stulman's "thinking about social problems has influenced my own at a number of points."

In 1951, at the request of Prime Minister Nehru, Mr. Stulman worked with the Indian Planning Commission on India's first 5-year program. His approach to the socio-economic problems of India was widely reported and discussed in the press of that country.

It is the author's thesis that only by integrating human knowledge and pooling the best talents available can a whole effort be made to solve our problems. Central to his thinking is the idea that the problems of every nation are inseparable from the total problem of mankind. This view is at the core of this monograph.

(By Julius Stulman)

Since 1945 the United States has spent approximately $75 billion on various foreign aid programs. This massive outpouring of capital helped revive the economies of Western Europe where, to begin with, the technological base was sturdy and contemporary. But it has not succeeded in catalyzing the dormant energies of the greater part of the world. In total balance, per capita standard of living, on a global basis, has hardly budged upward at all. Nor has the vast grants program fed back to the United States the kind of economic return that has lessened the toll of cyclical recessions or minimized the level of unemployment here. As a direct effect, it has contributed substantially to our gold imbalance. Moreover, the enormous expenditure has not succeeded in decreasing the effects of the Communist appeal in impoverished and uncommitted areas.

It is clear that the traditional foreign aid programs, even abetted by our own prospering allies, are inadequate to the larger purpose to which the American people and the free world must be attached. This purpose is no less than upgrading the impoverished peoples of the world to a level of decent living and to formulate the methods and means to make possible a progressive increase in well-being and freedom for everyone.

Large-scale handouts will not accomplish this purpose. The solution lies in the full utilization of natural and human resources, in the full employment of productive capacity, and in the stimulation of constant growth to ever higher levels of capacity and output.

Essential to any program conceived in such large terms is a view of mankind as a whole integrated economic unit, interdependent, growing in a process of taking and feeding back. A program based on such a view excludes the piecemeal palliative and calls instead for solutions that produce growth not only for recipient nations but donor nations as well.

In terms of the United States, such a program, to be creative, must also stimulate our own growth while it contributes to the development of deprived nations.

THE GAP BETWEEN FERTILITY AND PRODUCTION

Time worn methods, even though they flow from generous impulses, cannot meet the world's needs. The solemn fact is that the growth of population is faster than the rate of industrialization, posing a crisis that threatens equally the Western, the noncommitted and the Communist-dominated nations. Procreativity and longevity, already the causes of the gravest contemporary problems, can in the short term future reduce the major segment of mankind to a permanent condition of poverty.

At a 3 percent rate of annual increase from births and growing longevity, it takes only 23 years to double a population. The Ivory Coast has an annual increase of 5.3 percent, a rate that will double its population in under 20 years. The population of South America grew from 60.3 million in 1920 to 110.4 million or 83 percent in 1950. Mexico's population rose in 30 years from 19.2 million to 34.6 million.

The logic and logistics of the warfare between fertility and production are such that not even the richest nation can afford to ignore the impending danger of poverty. Between 1950 and 1959, the population of the United States rose from 151 million to 175 million, an increase of one-sixth in 9 years. Only increasing our production by more than the annual percentage of population increase can we secure jobs and livelihoods for our people. In view of technological improvements, permitting the creation of more goods by fewer people, our production increase must substantially exceed our population increase to supply ample levels of employment.

Clearly the only solution to the problem of population growth is an effort to outrun human fertility by human productivity. Produce or perish has become the imperative of nations.

For the American people, the imperative is to lead the way through a new effusion of idealism and new ideas. The mission falls to our lot because of our capacities and our unique know-how in the mastery and use of technological and managerial power. No other nation has the excess productive capacity and the wealth of skills that we have. Moreover, there are other untapped resources throughout the world that could be put to work if an adequate method of utilization were devised.

In accepting the commitment of leadership in the mission to transform a world half free and half slave into one of freedom for all, the American people will finally have a clear vision of a national goal in the latter part of the 20th century. To fulfill this commitment and regain thereby an unassailable stature of world leadership, we must begin now to mobilize our brainpower, resources, will, and ingenuity in what might be the last struggle of the human race for a full, safe, and free life.

International politics can no longer be viewed in the form of power relationships, but must now be concerned with profound socio-economic impulses driving all mankind.

The program proposed in these pages offers a breakthrough to a new method of rapidly increasing the world's rate of productivity under a growing system of freedom and without coercion. It outlines a process by which social, economic, and psychological needs of emerging nations can be creatively served.

The program outlines a method by which the United States can:

1. Achieve full maximum capacity production at declining costs.

2. Progressively increase its capacity.

3. Distribute to needy nations the difference between what we require for home consumption and trade and the full output of a rising capacity.

4. Provide the opportunity for other nations voluntarily to join by the same means this global economic mission to raise the standard of living of all people.

5. Increase the consumption and rapidly expand the technological development of emerging nations and help them to acquire the ability to pay for their own economic growth.

6. Progressively diminish the power of the Communist economic offensive, the allure of Communist slogans, and the effects of other doctrinaire propaganda.

7. Broaden and firm up the base of freedom by which men can find their true stature throughout the world.

FULL MAXIMUM CAPACITY PRODUCTION

In the light of the apparent needs of the world, including those of the United States, it is unimaginative and paradoxical that either industrial or agricultural production should continue to be restrained. Our schizophrenic farm program is torn between the alternatives of reducing productive acreage and of supporting farm prices, while at the same time accumulating stockpiles of many billions of dollars. To its credit, where the program has implemented oversea disposal, some results have been economically creative. As a result of barter arrangements, the U.S. Government has received, in exchange for food, minerals, fibers, and other raw materials with a heavy labor content from recipient countries. In other instances, where payment for American farm products has been made in local currencies, reserves of working capital have been set up for economic development. While national policy has cut back our agricultural capacity, surplusage nevertheless occurs and is used with wisdom by our Government in its program for impoverished areas.

Fundamentally, however, with half the world still starving the immorality of restraining food production should by now have created a strong sense of national guilt. The frustrations of a bad policy are felt by all of us. The American people basically want a better way to handle this problem, but as of now they have not been able to devise one. The promised food-for-peace crusade may alter this condition and liberate our farm policy from its inhibiting attachment to parity prices.

Our industrial output, which is consistently much lower than actual capacity will not have the benefit of a products-for-peace crusade and has no program supporting utilization of excess output. Production is maintained at levels determined by classical market conditions both here and abroad. There is certainly no extra stimulation to produce at maximum capacity.

Yet maximum capacity production offers the way out of a vast number of problems, not only in our commitment to needy nations but domestically as well.

Production at full capacity is feasible of attainment, but it requires an ability to override historic blockages which now tie production planning to traditional standards.

The method proposed in this program for full capacity output is a dual system of production, one cycle of which will be used to meet normal market requirements, the other cycle to be used for the requirements of needy nations.

In the first cycle, an enterprise participating in this program will maintain the necessary levels of production, within existing formal patterns of costing, to serve its traditional domestic and foreign markets. Standard accounting procedures will continue to be applied in this production cycle, in which overhead and other standard costs will be charged to the cost of production.

In the second cycle, the participating enterprise will assign its total excess capacity to produce products, stripped of the frills and trappings required for competition in normal markets, for distribution to underdeveloped areas. Such products are to be made to meet the psychological requirements of emerging nations, at a price they can meet, and at a profit to the company supplying them. Prices of products so destined for underdeveloped countries can be rolled back to include principally costs of direct labor and materials, and to exclude charges for general overhead, design, warehousing, selling, advertising, promotion, fancy packaging and like items. These charges can continue to be absorbed by the percentage of production earmarked to meet the demands of normal markets.

In addition to making products available at low cost to underdeveloped nations—in some instances as low as one-fifth of normal cost—this system will increase the profitability of any enterprise adopting it. A company, for example, producing at a given time 70 percent of rated capacity and which assigns the 30 percent unused capacity to production for needy nations will manage this share of its output at "bargain" costs enabling it to sell it at "bargain" prices with a true profit. Full capacity production, moreover, will make possible benefits in purchasing, labor utilization, plant efficiency and other elements which will beneficially affect the total cost of production.

Companies participating in this program should have agreements between management and labor which establish the conditions to insure the success of the program.

Appropriate safeguards can easily be erected against the dangers of a dual pricing system and the possiblities of black market operations. Products made for underdeveloped countries will be uniquely marked. A clear definition of eligibility should be made for the procurement of goods under this program. Proper policing can prevent the lower priced products from affecting normal market structures. India, for example, has a double pricing system for foods. Eligible families below a certain annual income level receive as proof of eligibility food cards entitling them to purchase food far below the free market prices. Those not eligible have to pay free market prices.

INCREASING OUR PRODUCTIVE CAPACITY

In addition to the need for producing at full capacity, the world's requirements are so enormous that a continuous increase in capacity is one of the imperative targets. To increase capacity requires a constant replacement of production equipment by the most technologically advanced substitutes.

Since the proposed program excludes enforced participation or any other form of coercion, attractive inducements must be set up to encourage enterprises to underwrite capital expenditures for new, advanced equipment. The tax structure should be revised permitting very rapid depreciation write-off of equipment used in production for underdeveloped countries. A governmental, or as will be seen later, an international pool of depreciated equipment should be established for delivery to under-

developed countries, as second-hand tools and equipment. Contributions to this pool by individual enterprises should be paid for under a schedule which will encourage replacements by the most advanced types of production machinery, so that our ability to produce quality goods in increasing capacity and at declining costs will be constantly enhanced. Such strong encouragement to technological progress can be an important contribution to freedom.

This process can result in other major benefits both to underdeveloped countries and to the people of the producing nations of the world. With respect to underdeveloped countries, tools and equipment for the erection of factory systems can become available in abundance. Production set up around such equipment will almost certainly be for home consumption exclusively, and because the equipment will not have the same productivity rate as the new, advanced types replacing it, it will not pose a competitive threat to the world's markets. Nevertheless, it will be the best available at the time of disposal and a challenge to the machine adaptability of the emerging peoples.

As for the economy of the United States and that of any other industrialized nation participating in this program, the large-scale replacement of existing equipment with new types will open the door wide to the latest in automation. It will increase productivity per man-hour; reduce unit costs; increase real wages, purchasing power and consumption at lower prices; and provide a strong underpinning for full employment. As the level of technology rises in underdeveloped countries, the process of machinery disposal through the equipment pool will include automated equipment, stimulating a constant turnover of capital equipment, toward ever advanced types. Eventually, as the machine-orientation of the emerging peoples increases, their own equipment will be replaced through this pool by automated equipment from level to level.

DISTRIBUTION AND PAYMENTS

As we conceive of this program as a "products and machinery for peace" crusade and as a method for our own continued growth, and, concerned as it is with the solution of mankind's gravest problem, it would be futile to bind it to traditional forms of international payments. The distribution of products and machinery to underdeveloped nations is not part of a grant-in-aid program proposing stop-gap solutions at random sore spots. It is a total, integrated program promising solutions in which the recipient underdeveloped nations, in the very act of receiving, will be catalyzing the advance of the industrialized nations to higher levels of technology.

In spite of its force for growth, the program, nevertheless, requires a practical approach to the question of payment. Neither the psychic reward of moral satisfaction nor the overriding benefit of minimizing a major cause of world strife is sufficient compensation if we are to insure human freedom and human dignity. The emerging peoples, however, cannot now pay for what they may receive and rightfully should have. Currently the underdeveloped nations are rich in manpower, potentially the most productive resource of all. Conversion of this resource into an increasingly productive force will provide the ultimate means of payment for products and equipment. The capability of paying from future earnings will increase as the industrialization impetus drives on. Even in the short term, increased productivity in farming, mining, and some industrial operations can produce net earnings out of which debts for the purchase of tools can be paid.

For the long term, there must be inherent in this program a persuasive faith in the desire and ultimate ability of the underdeveloped peoples to make good their debts. Supported by such a faith, a system of credits should be established that will enable needy nations to postpone payments for products and machinery in the form of labor and goods. To convert the promise of payment into current receipts it will be necessary to equip existing international banking institutions with an adequate revolving fund. For this fund, the present capital of the International Bank, the International Monetary Fund, the U.S. Export-Import Bank and the banking systems of Western Europe may well supply the means. Some of these institutions are not now using substantial parts of their resources. Added funds can be mobilized in the capital markets of the world if the institutions implementing the program continue to enjoy the confidence of financial communities. Moreover, funds earmarked for giveaway grants should be used to support this program.

It should be recalled that the wealth of the United States could never have been developed without massive investments in its future by the European financial community during the 19th century. These investments were based on confidence in the debtor's ability and readiness to honor obligations. They were made in the light of our natural resources and in the desire to make this Nation a trading partner, buying goods from Europe and selling its products in payment to the markets of the world. The relationship between the underdeveloped nations and the industrialized countries today cannot be very much different from the earlier relationship between the United States and its more advanced European partners. History will also record that the emerging nations helped the producing nations as the United States helped its European sponsors. Actually, the manpower and natural resources of the emerging nations offer the largest pool of production ingredients in the world, and they should be viewed as strong collateral for long-term credits.

The total program of industrial surplus sales to underdeveloped countries and consumers within them should be transacted by private sellers and buyers. The interference of government bureaucracies should be reduced to a minimum at the source of procurement as well as the place of destination. This does not mean an exclusion of government supervision. As in the disposal of U.S. farm surplus commodities, the problem of protecting growing normal sales against price destruction by surplus disposal must be solved.

The needy countries at the receiving end of this program can set up an exchange system in which consumer goods are traded with their own nationals for hours of labor contributed to natural resources exploitation, public works, educational institutions, and other construction projects. An underdeveloped country, for example, can purchase commodities under long-term credit made possible by this program. It can then sell these commodities to its people for their surplus hours of labor rated at prevailing wage scales.

By way of illustration, an item for which the country is charged $3, and in the normal markets sells for $12, may be exchanged for $6 worth of work assigned to a roadbuilding project, an assembly plant construction or comparable capital developments. In this manner, basic wealth accumulations can be built up. Let us say, a volume of goods for which the country is charged $1 million may be exchanged for $2 million worth of labor poured into a capital project. The gain in terms of national wealth is $3 million, together with a new capacity to produce goods or other values, and at the same time provide a capital base for continuing credit. On a large scale, this process can bring about rising levels of consumption and larger accumulations of capital. In the long term, the compounding of national wealth by this means will make possible repayment of the country's debt to the international credit agency.

While surplus labor hours can be used for public works, housing, and similar developments, they will also be available in volume for assignment to the erection of processing, assembly, and manufacturing plants built around the equipment sold from the machinery disposal pool. The formations set up around such equipment can be organized under credit systems devised in the recipient country. In all cases the principle is to transform the country's manpower resources into productive wealth.

A MULTILATERAL PROGRAM

While the United States has the potential in resources, know-how, and capital to carry a substantial burden of the program alone, rapid fulfillment of its material and moral aims can best be attained if all the industrialized nations participate. The program, therefore, proposes the organization of a central international body, within or outside the United Nations, to supervise its operations, set up the required structure of payments and credits, act as a central management counseling body and establish thorough research facilities.

Whether the program is wholly American or ideally international in sponsorship, its research adjuncts must be given high priority. Among their functions will be to research and design products that can be manufactured in excess capacities and that are acceptable to recipients in needy nations; to research the potentials in developing areas that can be encouraged by selected types of industrial equipment; to research local market needs, labor skills, natural resources, and other areas of potential wealth.

The central organization will also have to face up to the widespread lack of machine orientation in the emerging nations and establish training programs around works in progress or for installation in the planning stage. The rapid development of even marginal skills will make possible final assembly of many products produced in preliminary stages in the excess capacity of plants in the United States and elsewhere. Management know-how and the men who can teach it are exportable items and should be made available for assignment to needy nations as a basic phase of this program.

To preserve the free enterprise character of the program, the central organization should eventually be self-supporting, and although nonprofitmaking, it should earn its keep from income out of royalties on patents and developments, nominal commissions on the sales it engineers, and nominal fees for management services.

INCREASING CONSUMPTION AND INDUSTRIALIZATION OF NEEDY PEOPLES

Industrialized United States and Western Europe, in command now of extraordinary scientific resources and imminently capable of fully automated production, will in greater degree have to find expanding markets for their output. All producers, including the Soviet Union, are contending for all available markets in which to trade. The hope everywhere is that the vast underdeveloped populations will be converted rapidly into full consumers and therefore rich markets.

Currently per capita income in scores of underdeveloped nations is below $100 per annum. The explosive rate of population increases prevents current industrialization efforts to upgrade per capita income. Only rapidly increased productivity can raise the level of income and expand these nations into richer markets.

The proposed program essentially will achieve this end. Capital equipment, in the

quantities it envisions, put to use in extractive industries, public works, fabrication, and assembly, will hasten the process of technology, raise productivity and with it purchasing power. By exchanging labor hours contributed to the industrial buildup for commodities, people in underdeveloped countries will have the means to purchase products imported within this program from the surplus production of participating enterprises. These products, stripped to the core and redesigned if necessary to serve these people, will contribute to a rising standard of living. This is the beginning of the process of transforming underconsumers into full consumers, and the beginning of consumer education, an essential factor of market strength and healthy people.

As the process continues under this program, production tools, in increasing diversity, will be supplied by industrial nations by which emerging nations will manufacture the basic needs of their people. These tools will come out of the pool of depreciated equipment, adapted where necessary to local conditions. Again, in the normal process of development, this is the beginning of a large, advancing, maturing capital goods market.

NULLIFYING THE COMMUNIST OFFENSIVE

The principal strength of the Communist economic offensive and the allure of Marxist slogans derive largely from the grave deficits of capital throughout the underdeveloped world. Goaded by the historic imperative to industrialize, caught in the gap between productivity and procreation, and driven by nationalistic pride to be contemporary among nations, underdeveloped countries are the natural prey of the Communist offensive. Unless a nation is helped quickly to industrialize in freedom and in freedom to develop the capital wherewithal for growth, it can succumb easily to the promise of Communist slogans. The next step is a consolidation of economic power in a central government and the establishment of a system of duress in which power manipulates men, money and machines for its own aggrandizement and perpetuation.

In the long run, the imperative of history is produce or perish. In this generation, the imperative is to lead the underdeveloped nations in freedom to industrialization or watch them, or by one, fall into the Communist trap. The U.S.S.R. claims to have spent 9 billion rubles or $2,250 million on aid to Asian and African countries. William O. Douglas has characterized Soviet aid as having "no charity in it." He pointed out that every economic favor rendered in the form of loans at 2½ percent interest per annum had its political price. Russia, however, is also a have-not nation; it does not have the productive capacity and technological abundance to remake the world in the Soviet image. It cannot now, nor will it for a long time, have the ability to satisfy the needs of its own people.

There unquestionably obtains in Russia a great capacity of scientific and technical talents, but there is also a great incapacity in management. Russia—and this is evident as the momentum of its growth picks up—does not posses the managerial know-how, communication skills and technological orientation rapidly to change-over itself from a basic have-not nation to one of opulence. The U.S.S.R. tends to resist change and improvement and intellectually cannot adopt a method involving a process of change. No matter what it promises to the needy nations, without the power to produce and manage, it can only succeed in socializing poverty. If the resources of the United States and the free world are mobilized in a program as outlined, involving the full utilization of productive capacity, products and machinery could be sold to needy nations at a profit to us, not only at a price below the cost of production in the Soviet Union, but in quality and quantity the U.S.S.R. cannot equal. In the face of such strength, the Soviet boast to swamp us would be reduced to a whimper.

THE BASE OF FREEDOM

No program sponsored by the American people can ever enhance our stature or give us moral satisfaction unless it flourishes in freedom and extends the base of freedom to all people. The commitment to make the half-slave part of the world free, to extend the frontier of freedom to a new and distant horizon, is the American mission. The program based on full and growing capacity production has the means within it to begin the achievement of freedom and economic independence for deprived nations, and through its methods give the people of these nations the opportunity to raise their standards of living through productive labor, and through their own will and toil capitalize their growth and development. The feedback to us and other producing nations will be the way to our own new growth dimensions.

With inducements of self-interest, without coercion, and with methods that are humanly manageable, no people will choose to surrender their right to freedom if given the opportunity for a proud, dignified, and creative way of productive growth.

Hospital Care for Gold Star Mothers

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 12, 1961

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include my statement before the Veterans' Affairs Committee in support of my bill, H.R. 699, to authorize the furnishing of hospital care at Veterans' Administration hospitals for Gold Star Mothers:

STATEMENT OF HON. THOMAS J. LANE, OF MASSACHUSETTS, IN SUPPORT OF H.R. 699, A BILL TO AUTHORIZE THE FURNISHING OF HOSPITAL CARE AT VETERANS' ADMINISTRATION HOSPITALS FOR GOLD STAR MOTHERS, APRIL 10, 1961

Mr. Chairman, the Congress of the United States has been most thoughtful and generous, in legislating a wide range of benefits for veterans, and extending in part to their dependents.

The GI bill of rights that was enacted in 1944 was the most comprehensive program of its kind in human history. It recognized the special obligation of the Government "to care for him who shall have borne the battle and for his widow, and his orphan."

In order to help the 16 million veterans who returned from World War II, in their adjustment to civilian life, we overlooked a need that would come for the mothers of those who gave their lives in defense of our country. Some of them were the beneficiaries of Government insurance. A few of them are on the pension rolls. But not one of them is entitled to hospital care at Veterans' Administration hospitals.

There are not many Gold Star Mothers of World War I living today. And the Gold Star Mothers of World War II are in their fifties. Their great need is for hospital care which is not provided for them under veterans' legislation in effect today.

To many Americans this is an unintentional but serious neglect of those to whom we owe so much. By example and instruction, these brave mothers raised their sons and daughters to be good citizens and to give their lives, if need be, in defense of our country and its freedoms.

I know the admirable character of these women. I saw some of them soon after they had received official notice that a son had been killed in action. In their grief they did not complain of the most difficult loss of all to bear.

The least we can do for them, in return for the sacrifice that they made, is to provide hospital and medical care in their time of need. It is not enough to honor them with words, on Memorial Day and Veterans' Day.

As a mark of our sincere gratitude and enduring respect, we should care for them when they need our assistance, in veterans' hospitals, where they would be treated and comforted and restored to health. Not because they claim it as a right, but because we want to help them who gave of their own flesh and blood to save us. In a Veterans' Administration hospital they would be cheered by visible evidence of our Government's consideration for them.

Last year, a mother in my district who had lost two sons on the battlefield in World War II, became gravely ill. She did not have any health insurance, or enough money to pay for private hospital care. Through the veterans' aid department of her community, we made arrangements to finance her hospital expenses until she passed away. But as this was a form of welfare, it was embarrassing to the pride of this poor woman and to those of us who tried to assist her.

For her service to the Nation, she deserved more than this.

In order to protect her during the emergency of sickness, I have introduced H.R. 699. To the extent that the furnishing of such care will not jeopardize the availability of facilities for the furnishing of hospital care to veterans it will authorize hospital care at Veterans' Administration facilities for Gold Star Mothers.

Textile Industry Must Have Protection

EXTENSION OF REMARKS
OF
HON. JOSEPH W. MARTIN, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 12, 1961

Mr. MARTIN of Massachusetts. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Fall River (Mass.) Herald-News of Monday, April 10, urging the necessity of curbing a rising tide of textile imports into the United States, to the detriment of American industry and labor:

NEED PROTECTION

The Amalgamated Clothing Workers of America has announced its intention to stop cutting Japanese fabrics on May 1. The boycott on Japanese goods is intended to put pressure on Japan to impose voluntary quotas on its exports of finished men's and boys' suits to this country. Whether it will be successful is questionable, but it certainly makes plain just how determined many Americans are to reverse the tide of imports flowing into this country.

Evidently the clothing workers are tired of Washington's dilatory and half-hearted

attitude toward what is one of the most pressing economical problems in the country today. By now the administration has heard management and labor, to say nothing of deputations from Congress, all expressing the same fear of the damaging effect these imports from abroad are having on our own industry. There is nothing new about the situation. It has been basically the same for the past 15 years. But it is getting rapidly worse, and its repercussions are being felt everywhere.

The problem it presents to the Government is complex. Washington does not wish to weaken its allies economically and thereby make them more susceptible to Communist blandishments. At the same time, it is keeping them strong at the expense of American taxpayers. The conflict of interests here is sharp, and in the end domestic industry will have to be preserved, or this Nation's own strength will be sapped.

The time is not far off when the administration will have to reappraise the situation, however agonizing that reappraisal may be. The action of the clothing workers should hasten that day.

A Program for Progress

EXTENSION OF REMARKS
OF
HON. MARTHA W. GRIFFITHS
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 12, 1961

Mrs. GRIFFITHS. Mr. Speaker, at this time I would like to bring to the attention of the House the activity of a Michigan company that wants to aid the economy by a direct program of action by all business management. Mr. Clyde H. Reeme, president of the Udylite Corp. of Detroit, is to be commended for the following address he gave to members of Udylite management on April 10, 1961:

For practically a full year now, the headlines of the morning papers have made a poor side dish for your toast and coffee. You have read about the increasing rate of unemployment, the falling rate of national growth, about higher prices and lower profits, about regression and recession and other types of crises in our national economy. And if you are like any other member of business management, this talk disturbs you and makes you wonder a little bit as you make your way to work.

As men of management we have willingly accepted the leadership. We have willingly joined the ranks of men who, like ourselves, determine how business can best serve the needs of the people of this country. Now we are faced squarely with the question: What are we going to do about this deadly state of mind faced by our Nation and our business community?

One answer—and I believe a valid one—has come from a man on our own management team. Just a few days ago Chet Clark suggested to me a simple, yet purposeful program that will place the economic situation of ourselves, our company, and our country back in its proper perspective.

You may be apprehensive about spending your money on the new car you had planned to buy—on signing the mortgage for the new homestead you've been looking forward to having for years—on taking that trip that you'd really like for this year's vacation. You may comprehend all these apprehensions as evidence of some unspoken kind of insecurity about your own job.

Without realizing it, we have let ourselves—not only here at Udylite, but all throughout the country—be drawn into a situation from which it becomes harder and harder to extricate ourselves.

But let's look at it in another light. Because the purchases we postpone today mean fewer jobs in the industries we supply, fewer orders on our own order books, fewer jobs in our own plant, we are working ourselves deeper and deeper into more of the same kind of apprehension that started this cycle in the first place. It promises to rob us—our personal selves, our industry and our Nation—of vitality and confidence.

Obviously we don't want this kind of thing to happen. Nobody does. As men of management, it is our responsibility to shape the course of events. We exert the power we have earned to make things happen, not to permit things to happen to us. And the program resulting from Chet's suggestion offers a guide to solving today's particular problem.

What, then, am I asking of you business leaders here at Udylite, and all business leaders throughout the whole U.S. economy? Simply this: I am proposing that we start now the recovery program for the economy by our own action.

I am going to ask you to show your vitality and confidence by proceeding with those purchases you were planning on making * * * by buying the new car and appliance * * * by signing the mortgage * * * by taking the vacation. Pour the fruit of your labors back into the wealth of the Nation. Enjoy the benfits you deserve unhampered by an unholy specter of fear for the future.

This is the surest way of guaranteeing the security of your own job—which really may be what is haunting us all. By making jobs for others we make job security for ourselves. It is as simple as that, and it works as quickly as that.

We would like to see this program spread to your friends, to our suppliers, to the other industries here in Detroit and, in fact, throughout the entire Nation.

Take for our example, the contributions already made by other groups, and the sacrifices suffered by them during our national economic decline. Our own organized labor has already paid more than its share through lost jobs and lost wages, through reductions, even in jobless benefits in critical unemployment areas. Can we who do not feel the job pinch so quickly stand by while fellow employees return to their homes without work today?

We have seen time after time that we can plan for progress and achieve it. Sometimes it takes daring. Sometimes it takes no more than doing the job to be done today, with confident hope that we will achieve the awards of tomorrow.

I mentioned a second part to the program being proposed initially to you today. That is, to spread this gospel as far and as wide as you can. You will be interested to know that I am sending a copy of this talk with the Udylite plan for progress to the presidents of leading corporations in the country. In a covering letter there is a request that they encourage their own management teams to take the same action I am asking you.

Will you, then, convert others to it, and ask them to serve as missionaries as well? This includes your friends and neighbors, your grocer and milkman—anyone who has ears to listen to your voice. It is through concerted efforts on the part of all confident men in the country that this program can really succeed. And it is through the enthusiastic beginnings made by this group at Udylite here today that such a worthy program can get started.

Consider this program thoughtfully—seriously. Discuss it at home and with your fellow employees. Then act. Don't hesitate any longer. Get out and show your confidence with your purchasing power and revitalized objectives, letting your confidence rub off on every friend and acquaintance you know.

A Dormitory for Congressional Pages

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 12, 1961

Mr. MULTER. Mr. Speaker, it was my privilege to testify on April 11, 1961, before the Accounts Subcommittee of the House Administration Committee, in behalf of H.R. 1221, a bill to provide a residence for the pages of the Senate and the House of Representatives. I introduced this bill on January 3, 1961, and I commend to the attention of our colleagues my remarks before the subcommittee:

Mr. Chairman and members of the committee, I want to thank you for this opportunity to give you my views on H.R. 1221, a bill to provide a residence for the pages of the Senate and House of Representatives under the supervision of a Capitol Pages' Residence Board.

The absence of a properly supervised dormitory or other suitable living quarters for the Capitol pages continues to be a serious problem which should have our prompt and careful attention. I have proposed that three Senators, to be appointed by the President of the Senate, and three Members of the House of Representatives, to be appointed by the Speaker, form a Capitol Pages' Residence Board. This board is to be responsible for the maintenance and operation of a dormitory-type residence for the Capitol pages. Fees to be deducted from the salary of the pages at rates that would make the operation of the residence self-sustaining, so far as practicable, would be set by the board. In most cases, it is expected that these rates would be less than the rents now being paid for private housing. Construction is not contemplated at the present time and none of the appropriated funds will be used to purchase real property unless specifically authorized in the appropriation act. The board is authorized to accept voluntary donations for the purchase or construction of a residence.

Each page employed by the Senate or the House of Representatives would be required to reside at the pages' residence while Congress is in session and during all periods when he is entitled to receive compensation as a page, unless the board had approved alternative living arrangements. One or more persons with the necessary maturity and experience to provide the care and supervision these boys need would be appointed by the board.

This lack of any adequate housing for the Capitol pages is deplorable. It is almost unbelievable that these boys of high school age must seek living accommodations wherever they can in a city as big as Washington. Many of the pages must rent rooms or share apartments in various parts of the city, sometimes at exhorbitant rents. Only a fortunate few have relatives with whom they can live. The rest must do the best they can and often live under conditions where they run the risk of associating with persons of less than the most desirable character.

The page boys are still in their formative years. They must be between the ages of 14

and 17 in order to be eligible for appointment. Since they are appointed on a patronage basis by a Congressman or a U.S. Senator from their home State, many come from across the country.

Under the present conditions, they are, in effect, thrown out into the city without any protection or guidance after they arrive. They are allowed to come and go as they please without sustained supervision over and above that given by some of their landlords.

These boys are not mature enough to cope with city life under these conditions. The possible consequences have been amply demonstrated on two occasions in the past years. Only a year ago a street gang attacked four 16-year-old pages at Fifth and East Capitol Streets and stabbed one of the boys. Another page boy was attacked and brutally beaten near the Capitol the year before that. A similar tragedy or worse is liable to happen again unless proper housing and supervision is provided for these boys. The pages will continue to be vulnerable to such attacks until the situation is rectified.

Congress has furnished the Capitol pages a school in the Library of Congress which has an unusually good teaching staff that does an admirable job under difficult conditions. The physical plant of the Capitol Page School is limited. The necessarily irregular hours constitute another hardship. There is no way to provide organized or supervised study periods under present conditions.

It is equally essential that we in the Congress provide the Capitol pages with suitable living conditions, an inspiring rather than a degrading environment, and proper supervision. These things are as important to the healthy development of these young men as a good education. We have a special responsibility to give the Capitol pages the kind of academic and spiritual atmosphere we would like our own children to have away from home.

These boys have a rare opportunity to observe the workings of our Government. Their job here in the Capitol gives them an insight into governmental processes which they can get no other way. The Capitol pages can form a valuable nucleus for education and training in politics in the best sense of the word. If we give them a decent chance, they have an opportunity to become outstanding citizens and leaders of the future. But adequate housing facilities where they can eat, sleep, play, and study under proper supervision are essential to the achievement of this goal.

Congress has appropriated large amounts of money for our office and service needs in recent years. The least we can do for these fine boys, who provide a valuable service for our work, is to give them better living conditions. Their schedule is a demanding one which involves early hours for schoolwork and late hours when Congress works late.

We all share a common responsibility for the welfare of the Capitol pages whom we have brought here to serve us. Many bills have been introduced to provide the pages with a suitable residence in the last 10 years. The matter is already long overdue.

I first introduced a similar bill in the 85th Congress. It aroused considerable favorable comment. In the 86th Congress many Members joined me in urging enactment of the bill I then introduced.

I am happy that this committee has seen fit to order this hearing. I sincerely hope that this bill will receive your early and favorable consideration. Thank you for hearing me.

Legislation To Help Small Business

EXTENSION OF REMARKS
OF
HON. TOM STEED
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 12, 1961

Mr. STEED. Mr. Speaker, the Honorable WRIGHT PATMAN, chairman of the House Small Business Committee, today addressed the convention of the National Independent Dairies Association which is meeting here. As a member of that committee and chairman of its Subcommittee on Small Business Problems in the Dairy Industry, I think his remarks on "Legislative Proposals To Help Small Business" will be of interest to all of our colleagues. While Mr. PATMAN's remarks are particularly pertinent to the dairy industry, they also offer avenues of approach to help remedy the ills of other small independent business firms who need legislative aid to ease their burdens.

Under unanimous consent, I include his remarks in the Appendix of the RECORD:

LEGISLATIVE PROPOSALS TO HELP SMALL BUSINESS

(Address by WRIGHT PATMAN, of Texas, chairman, Select Committee on Small Business, House of Representatives, National Independent Dairies Association, Washington, D.C., April 11, 1961)

It is pleasing to see and visit so many independent and small processors and distributors of dairy products. Indeed, it is surprising that so many of you have survived the rigors of trade practices and conditions to which you have been subjected.

Those of us who have served with the House Small Business Committee have learned much about your problems. Well do I remember the first hearings our Small Business Committee held regarding the problems in the dairy industry. We opened those hearings in Dallas on December 30, 1957. They produced some shocking evidence about how some large processors and distributors were selling milk at prices below cost with devastating effects on small business.

Since then our colleague and good friend, TOM STEED, of Oklahoma, has held hearings and made investigations in various parts of the country about the practice of selling dairy products at prices below cost. The work he has done has added substantially to the evidence we collected in our hearings at Dallas.

DISCRIMINATORY PRICING BY THE FIRMS HURT SMALL FIRMS

"You know better than I how the below-cost selling practices have increased your difficulties in your efforts to survive," he said: "Some of the larger firms do not experience the same difficulties.

This is true even though they engage in the practice of selling milk at prices below cost in some areas. They are able to do this by recouping their losses through the sale of milk at higher prices in other areas.

"Some of them are such large, conglomerate corporations that they are enabled to survive for some time even if they should make all of their sales of milk at prices below cost."

National Dairy Products Corp., (Sealtest) is not only the largest processor and distributor of dairy products, but its operations are widely diversified. Its total gross sales now approximate $1,600 million annually.

This large conglomerate corporation is engaged in the sale and distribution of many products. In one of its annual reports a few years ago to its stockholders it stated:

"We move ahead on our program to expand manufacturing and distributing facilities for our lines of cheese, salad dressings, cooking oils, margarine, confections, and other grocery products. A new cheese plant was started at Stockton, Ill. Construction also moved along on our new vegetable oil refinery at Champaign, Ill.

"We entered the glass container industry in the late summer of 1956, acquiring the Metro Glass Co. with plants in Jersey City, N.J., Washington, Pa., and Dolton, Ill. Metro is a supplier of containers to National Dairy, as well as to many other companies in the food, beverage, household products and cosmetics industries.

"In Mexico, we began to make and distribute cheese and salad products at a new plant in Monterrey.

"Products introduced during the year were orange juice, fresh fruit salad, jellies and preserves, a new line of flavored cheese spreads and a new whipped cream cheese.

"Our newly developed orange juice, packaged ready for use in quart paper containers, began to appear in grocery dairy cases under the Kraft brand. Derived from selected sweet ripe oranges, this is a reconstituted juice maintaining a constant, peak-of-season flavor. We also introduced Kraft fruit salad. The orange, grapefruit, pineapple and maraschino cherry sections going into these salads are processed and packed at our plant in Lakeland, Fla., where special care is taken to conserve all the natural fruit juices.

"We also expanded the company's business with a new Kraft line of jellies and preserves in a wide variety of flavors."

Its more recent reports to its stockholders have described in detail how this expansion into new product lines and into new markets has continued. Many of the plants this large nationwide corporation has acquired by buying out small and individual firms who had built goodwill in their respective sections of the country and on the products they had developed. Thus, some of these large firms have not only bought the facilities, but also, the businesses of many competitors.

According to testimony which has been presented to a subcommittee of the House Small Business Committee, the viewpoint has been expressed by representatives of at least one of these large processors and distributors that through the practice of making sales in particular areas at prices below cost, they can destroy competing small business firms and take over their business more cheaply than by going through the process of buying them out.

On May 14, 1960, a representative of small business complained to members of the House that the National Dairy Products Corp. (Sealtest) was selling dairy products in Kentucky at unreasonably low prices, and in that connection stated:

"The unreasonably low price at which these products are being sold would seem to be for the sole purpose of destroying competition, especially independent dairies such as ourselves. This can be very easily done by a large national concern such as Sealtest who operates in many different geographical localities and are able to finance and subsidize a price war against small dairies who sell in competition.

"By using these unfair competitive practices they would in effect force us out of business within 30 to 60 days. Therefore,

the urgency for action is of the utmost importance. We ask that you help us eliminate these unfair practices as quickly as possible."

This method of expanding business by making sales at prices below cost has been referred to as "advertising."

Not long ago the Committee on the Judiciary, in the course of hearings regarding monopoly power, heard a witness who had engaged in loss-leader selling. In the course of the testimony and with reference to that practice, he stated:

"What cheaper method of advertising is there if I advertise a commodity that cost me a dime for 5 cents and that customer comes into my store. And my only hope is he will buy something else from me."

The advertising characteristics and any misleading and deceptive effects incident thereto are not necessarily the worst aspects of making sales at prices below cost. Its deadly effect upon small and independent competitors of the loss-leader selling is one of its most dangerous characteristics.

EXISTING LAW IS INADEQUATE TO MEET THIS PROBLEM

Existing law has been interpreted as unusable by small businessmen in their effort to deal with the problem of selling at prices below cost. The Supreme Court of the United States on January 20, 1958, by a 5-to-4 decision held that section 3 of the Robinson-Patman Act is not a part of the Federal "antitrust" laws, and therefore is not available for proceedings by persons injured as a result of things forbidden by the antitrust laws. The Court so held in the cases of *Nashville Milk Company* v. *Carnation Company* and *Safeway Stores, Inc.* v. *Vance*. The ruling by the Court in these cases means that under existing law, small and independent business concerns are not permitted to use section 3 of the Robinson-Patman Act in proceedings against unlawful selling at unreasonably low prices—even at prices below cost—and even though those practices result in the creation of monopoly.

Section 3 of the Robinson-Patman Act, as approved June 19, 1936, was authored by Senators Borah and Van Nuys. It became an amendment to the bills introduced by me and Senator Robinson. I did not discuss with Senators Borah and Van Nuys whether it was their intention to have their amendment apply as an amendment to the Federal antitrust laws.

However, I have made it clear on more than one occasion that the definition of antitrust laws as set forth in section 1 of the Clayton Act, should be amended so that there would be no question about section 3 of the Robinson-Patman Act being embraced as a part of the antitrust laws. Indeed, on January 23, 1958, 3 days following the 5 to 4 decision by the Supreme Court in the cases to which I have referred, I introduced H.R. 10243 (85th Cong.) to accomplish that objective. On the same day, Senator SPARKMAN, chairman of the Senate Small Business Committee, introduced a companion bill. Those bills were referred to the Committees on the Judiciary, as are all proposed amendments to the antitrust laws. However, no action was taken. Therefore, at the opening of the 86th Congress, we reintroduced bills for the same purpose. In the House, my bill was H.R. 212. The Judiciary Committee did not consider it. On January 3, 1961, I presented to the present 87th Congress an identical bill; it is H.R. 125. The Judiciary Committee has been asked to schedule hearings on it.

In the meantime, practices of selling at prices below cost, as I have explained, are continuing unabated.

SOMETHING MUST BE DONE TO HELP SMALL BUSINESS

Our investigations and hearings, and the reports made by other agencies and organizations, have made clear that action must be taken if we are to help small business survive and prosper.

Our report on Small Business Problems in the Dairy Industry concluded with a statement to that effect. Our committee recommended that new legislation be considered and enacted which would strengthen our laws against price discriminations, and provide for more expeditious processes under the law, and, thereby, provide small business firms with speedy and needed relief.

STATES HAVE TRIED TO HELP

Many of the States have enacted legislation to combat this practice of selling at prices below cost. The courts have upheld the State laws, but due to the fact that the law of any State does not reach beyond the State line, it can have no application to transactions in interstate commerce. The need for Federal legislation on the subject to fill this void is apparent.

BILLS HAVE BEEN INTRODUCED IN CONGRESS

The recommendations made in the House Small Business Committee report on small business problems in the dairy industry for new Federal legislation have been followed up. I, the Honorable TOM STEED, and the Honorable JAMES ROOSEVELT, have introduced a number of bills to help carry out those recommendations.

I introduced H.R. 11 and H.R. 124—bills to strengthen the Robinson-Patman Act against discriminatory pricing practices, and H.R. 127 to amend the Federal Trade Commission Act to make it unlawful to discriminate in price when the discriminatory prices include prices at unreasonably low levels and at levels below cost.

H.R. 127 has been referred to the Commerce Committee of the House of Representatives. I have requested the chairman of that committee to schedule hearings on it. There is hope for favorable consideration during this term of the Congress. Members of your association and representatives of small business organizations all over the country are expressing support for this legislation. We have just been informed that one such organization polled its members of more than 160,000, and that more than 70 percent of those who responded expressed their support for H.R. 127.

Also, I may say that there is strong support for H.R. 11 and H.R. 124, to strengthen the Robinson-Patman Act. Those bills have been referred to the House Committee on the Judiciary. I have requested that hearings be held on them at an early date.

Our colleague and friend, Hon. TOM STEED, Democrat, of Oklahoma, introduced H.R. 1233. That bill would empower the Federal Trade Commission to enter temporary cease and desist orders in cases where during the pendency of prolonged litigation, the Commission would be enabled to stop destructive practices pending the completion of long, drawn out cases. We know that it is of little value to small business firms for the Federal Trade Commission to issue cease and desist orders years after the challenged practices have destroyed the complaining small business firms. That bill has been referred to the House Committee on Commerce, and the chairman, Hon. OREN HARRIS, has been asked to schedule hearings on it at an early date. We have much hope for this legislation because the 1960 Democratic platform contained a plank providing for it. Also, the recent report by Dean James M. Landis suggested legislation along this line.

On February 2, 1961, our colleague, Hon. JAMES ROOSEVELT, Democrat, of California, introduced H.R. 3798. That bill would amend the Packers and Stockyards Act of 1921, to strengthen independent competition by providing for a separation of some of the distributive functions from some of the processing functions. This would be a reversal of the trend to vertical integration of processing and distribution. The bill would make it unlawful for any meatpacker whose gross sales were more than $30 million during the preceding calendar year, or for any person engaged in the business of manufacturing or preparing livestock products for sale or shipment in commerce, or in wholesale marketing in commerce of meats, meat food products, livestock products, dairy products, poultry, poultry products, or eggs, whose gross sales were more than $30 million during the preceding calendar year, to engage in the business of selling at retail meats, meat food products, livestock products, dairy products, poultry, poultry products, or eggs.

This, naturally, brings up the question as to whether a large dairy processor, national in size, with gross sales of more than $30 million would be prohibited by the terms of this bill from distributing milk at retail to various homes throughout the cities where it operates. If unqualified, this question should be answered in the negative. In other words, this bill would not apply to large dairy processors as it would be large meatpackers.

The large dairy processors would be prohibited by the terms of the bill from selling dairy products at retail only in those situations where they were also engaged in the wholesale marketing of dairy products in commerce. Thus, you can readily see that the bill would apply to a large dairy processor only in those situations where it sought to compete with its customers by engaging in dual methods or systems of distribution.

Despite the provisions in this bill which would limit its application to large dairy processors and distributors, nevertheless, it would be expected to have a healthy effect in helping restore fair trade practices and conditions to the dairy industry. It would compel the large dairy processor and distributor to choose whether it would distribute at wholesale or distribute at retail. This choice would provide small business firms which distribute dairy products only at retail a better opportunity to compete with its larger competitors.

Representative ROOSEVELT's bill has been referred to the House Committee on Agriculture. Representatives of many small business firms are asking that hearings be held on it, but none have been scheduled as yet.

It is hoped that this discussion about small business problems in the dairy industry and the measures which are being taken to solve those problems have been of interest and value to you. I repeat that it has been a pleasure to participate in this meeting of yours and to visit with you on this occasion. Thank you.

Bataan and Corregidor

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 12, 1961

Mr. DORN. Mr. Speaker, on Sunday, April 9, we witnessed in this Capital City a ceremony that was both inspiring and uplifting. The District of Columbia named two streets, located near the Philippine Chancery, Bataan and Corregidor. Three remarkable speeches were made by Secretary of State Dean Rusk, Ambassador Carlos P. Romulo, and Commissioner Walter N. Tobriner, which should be called to the attention of the American people. The speech of Secretary Rusk is a tribute to the gal-

lantry of the Filipinos which we Americans should always remember. The speech of General Romulo describes eloquently the difficult position of the Philippines as a committed country under unrelenting attack by communism on the one hand and surrounded by neutralist countries on the other. I would like to quote the paragraph that has reference to this question because we Americans should realize the difficulties with which our Filipino friends have to contend:

And yet, I must say, that the new house of the Philippines is not yet as welded a structure as is your house of America. It is still a mosaic held together by new rivets of remarkable design, and all depends upon how seriously and how soon they can loosen. For we are under the shadow of a Communist nation of more than 600 million people and we are under unrelenting attack by the dangerous Communist subversive pattern of infiltration and subversion. We are at the same time surrounded by another 600 million fellow Asians who are uncommitted and our people see how they are wooed and courted by the two power blocs.

The American people must bear in mind the loyalty that our Filipino friends and allies have always shown to democracy. It is for this reason that the ceremony commemorating the fall of Bataan is really an American national day.

The last broadcast of the Voice of Freedom before Bataan surrendered was quoted by Minister Mauro Calingo of the Embassy, who was master of ceremonies.

In view of the importance of the three speeches delivered at Sunday's ceremonies, I, under unanimous consent, include them in the RECORD:

REMARKS OF SECRETARY RUSK COMMEMORATING BATAAN DAY, APRIL 9, 1961, WASHINGTON, D.C.

Mr. Commissioner, Mr. Ambassador, Members of Congress, ladies, and gentlemen, it is not for me, an American, to match the golden voice of the Philippines we have just heard. Indeed, it would be fitting for us to spend our time in deep and silent contemplation about what it is we here commemorate.

Some 20 years and 4 months ago the waves of aggression swept through the peaceful Pacific—in the Philippines, in Hawaii, in southeast Asia. It was a war unwanted, unprovoked, and for which we were not prepared. Once again we learned that peace-loving peoples who neglect their arms can tempt the ambitious who make the mistake of confusing democracy's desire for peace with a willingness to submit. Our friends in the Philippines were moving rapidly toward the complete freedom which a free people in America had pledged to them in full measure. The land was bright with the promise of dreams about to be fulfilled.

But in those months of early 1942, freedom was hanging by the sheerest threads in Europe, the Middle East, and Asia. The human spirit was called upon to provide, in gallantry and courage, what slender arms could not accomplish. The final victory of freemen was assured by what was revealed on Bataan and Corregidor, by the Philippine and American men and women who fought with General MacArthur and General Wainwright. It was their splendor which gave the ring of true prophecy to the words, "I shall return." The enemy flag was finally hoisted on Corregidor but it was only occupied and not conquered. The courage of the regiments which were overcome there became the courage of individuals who continued the fight, singly, and in small groups. The war continued within the Philippines until MacArthur and his forces came ashore to link up with those who had been carrying the struggle to bring it to a prompt and victorious end. The march to Philippine freedom was then resumed and a great democracy arose from the consuming fires of those bitter years.

Today, Mr. Ambassador, the Filipino and American peoples are joined with us here in Washington. In every State of our Union are homes which shared with yours the glory and the suffering of Bataan and Corregidor. Both in your land and in ours the wounds of war will heal, for reconciliation is a great source of hope in the tragic story of man. But we shall not forget our comrades, and the personal friends, who reminded us that freedom is not cheap, but is for the strong in spirit.

Bataan and Corregidor make up another inspiring chapter in the history of freedom. It is a history not fully told, filled with great deeds by individuals and nations, who staked all they had on the hard choices which had to be made. Here was an entire people denying to mere power a privileged intrusion upon the dignity of man. Here might have been a judge, throwing his arm around a prisoner at the bar, saying to a despotic king that the king must do no wrong. In another place it was a writer or an orator who proclaimed at great hazard the simple truth that man was born to be free. Bataan and Corregidor are a part of the greatest story written by man, a story not yet finished, but a story which can have only one end because the nature of man will have it so.

It is a great privilege for me to be here today to speak for the President and for the people of the United States in sending our greetings to President Garcia and the people of the Philippines and to pay tribute to those we remember as we establish here in Washington a perpetual reminder of their gallantry in the naming of Bataan and Corregidor Streets.

ADDRESS BY GEN. CARLOS P. ROMULO, PHILIPPINE AMBASSADOR TO THE UNITED STATES, AT THE CEREMONIES MARKING THE NAMING OF BATAAN AND CORREGIDOR STREETS NW., WASHINGTON, D.C., SUNDAY, APRIL 9, 1961

Your Excellencies, Mr. Secretary, Commissioner Tobriner, ladies and gentlemen, to name these two streets in this Capital City of the United States—Bataan and Corregidor—is to bring back to American conciousness the story of an epic that is part of the timeless pattern of history.

Nineteen years ago, Filipino and American soldiers fought side by side against a common enemy. The names Bataan and Corregidor conjured up the picture that those of us who were there and were fortunate to survive can never forget: of handsome, blond American lads—dead, in the foxholes or in the tunnel, and alongside them, also dead, handsome, black-haired Filipino lads, killed by the same enemy bomb, their blood freely intermingled in the sacred cause of freedom. Their bones now lie in Philippine soil, dust, and ashes, sacred earth—and who will dare sift that dust and those ashes, by race, for separate honor?

That is the meaning of Bataan and Corregidor. East and West met and fought together for the same ideal. It was a portent of things to come. For the first time, of their own free and positive choice, an Asian people rose, almost unanimously, to the defense of an Occidental power, not because America was white and Western, but because the United States never carried the mantle of imperialism with ease and despite initial errors, when your leaders saw our firm determination not to settle for less than our freedom, every step that you took was to implement the policy announced by William H. Taft: "The Philippines for the Filipinos."

In your one great adventure into colonialism, you retreated almost before you began. You came to the Philippines, you saw, but you did not conquer. Instead, you worked with us, and learned with us, and out of the relationship emerged your promise to help us achieve and assure our independence. That promise went through the purfication of fire 19 years ago. And in 1946 the promise was fulfilled.

What have we done in the Philippines since 1946 to be worthy of the sacrifices in Bataan and Corregidor? Something new has arisen in our country, something strong and fresh, something identifiably Filipino, and upon this we have built. Because we have a history of which we are proud, we opposed communism successfully. We fought for democracy and we had no hesitancy, despite its dangers, to choose the hard sinews of dignity, integrity and freedom—your side—against a gutless peace and the degradation of slavery implicity in a ruthless monolithic ideology that reduces everything to materialistic dialectics which is communism.

We now see a Philippine economic renaissance, where under the leadership of President Carlos P. Garcia, we won our fight against inflation; our international reserves have gone up to a new high level; we have refused to devalue our peso; we have partially decontrolled and will soon eliminate all exchange controls; we have achieved a favorable balance of trade; we have established more than 800 new industries; we produce more rice than we consume; we have improved the living standards of our masses; we have an uninhibited press, one of the freest in the world. All these we have accomplished under a system of free enterprise and we have not deviated from the truly democratic pattern. We are proud of our progress because it is a progress that shows the vitality of our devotion to constitutional government, the maturity of our political philosophy, and the stability of our political understanding.

And yet, I must say, that the new house of the Philippines is not yet as welded a structure as is your house of America. It is still a mosaic held together by new rivets of remarkable design, and all depends upon how seriously and how soon they can loosen. For we are under the shadow of a Communist nation of more than 600 million people and we are under unrelenting attack by the dangerous Communist subversive pattern of infiltration and subversion. We are at the same time surrounded by another 600 million fellow Asians who are uncommitted and our people see how they are wooed and courted by the two power blocs.

By our record these last 15 years since our independence we have shown we can achieve progress. But history tells us that societies change and achieve cohesion by fits and starts and in the process there may be ruptures or dislocations. Under the pressure of communism on one side and neutralism on the other, if the binding rivets of our house begin to loosen, to sustain it and keep it whole and unimpaired we must depend on the unity of our friendship, the comradeship of our alliance, and the victory to America that is Bataan and Corregidor, in the words of one of your great writers "the spirit of unswerving Filipino loyalty which is our creditor often enough in the past."

The men who died on Bataan and Corregidor offered that which was most precious to them—their own lives—on the altar of human freedom and human friendship. We who survive have an obligation to them that cries out to be repaid. We owe them the continuation of the battle. We owe them the never-ending pledge to carry on, that the Filipino-American friendship they sealed

in war with their blood we will not allow narrow self-interest or greed to weaken or undermine in peace.

REMARKS OF THE HONORABLE WALTER N. TOBRINER, PRESIDENT OF THE BOARD OF COMMISSIONERS OF THE DISTRICT OF COLUMBIA, ON THE OCCASION OF THE CEREMONY COMMEMORATING THE NAMING OF TWO STREETS, CORREGIDOR AND BATAAN, ON APRIL 9, 1961

Mr. Ambassador, distinguished guests, ladies and gentlemen, I am honored to participate today in this special occasion dedicated to the memory of the heroic Philippine and American dead who gave their lives at Corregidor and Bataan.

Since the beginning of this century, when through the war with Spain our peoples first became acquainted, the people of the Philippines and the people of the United States have become steadfast friends. Our Governments have worked together to establish and to extend the blessings of democracy.

The war in the Pacific brought us closer. From the depths of despair at the fall of Corregidor and the death march on Bataan came a stronger common devotion to the cause of freedom, democracy and peace.

The sharing of struggle and sacrifice in the liberation of the Philippines bound in blood our peoples forever. The associations of the war years developed a deep, mutual understanding and appreciation which tends to grow progressively stronger with time.

The Philippines have become an example for people of other areas seeking their freedom. Bataan and Corregidor represent the ultimate victory of man's quest to determine his own destiny. At one time exemplars of humiliating defeat, they shine now in history as glorious victories of the spirit to be free.

Therefore, it is most fitting that in this Capital we should preserve those names perpetually as the names of streets, so that all who come here may be reminded that when, as at Corregidor and Bataan, valor and justice shall meet, freedom remains imperishable.

Nonprofit Firms Under Scrutiny

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1961

Mr. BROOKS of Louisiana. Mr. Speaker, the Committee on Science and Astronautics is conducting an investigation of numerous so-called private nonprofit organizations which operate as virtual adjuncts of Federal agencies.

Recently the New York Herald Tribune news service distributed to its syndicated news clientele throughout the country an article dealing with the committee's study of these comparatively little known, but tremendously important, private groups.

Under unanimous consent, I insert the article in the CONGRESSIONAL RECORD.

NONPROFIT FIRMS UNDER SCRUTINY—CONGRESS EYEING COSTLY R. & D. OPERATIONS

(By Joseph R. Slevin, Herald Tribune News Service)

A congressional committee is taking a long, hard look at the "nonprofit" organizations that do research jobs for the military and space agencies.

The nonprofit firms have been multiplying in recent years. Their rise has gone hand in hand with the missile and space boom.

The investigation is being run by the House Committee on Science and Astronautics. The congressional group is worrying about everything from outsized salaries to possible conflicts of interest.

All of the organizations under investigation work chiefly for the Federal Government, and most of them work exclusively for the Government.

"There are dozens of these companies," a committee source says. "Their contracts range from a few million dollars to many tens of millions of dollars."

FUNCTIONS OVERLAP

The nonprofit concerns ostensibly are research and development organizations, but they often provide technical direction and systems management for production operations that are carried on by profit-making corporations.

The committee still is asking questions instead of making charges. It is concentrating its initial investigation on about 12 nonprofit firms, giving them detailed questionnaires to answer.

The group plans to disclose its findings at public hearings in Washington during the late spring or early summer.

"There's no statutory control over these outfits and some of us think there ought to be," one source declares.

The nonprofit groups commonly operate under contracts that pay them their costs plus 15 percent.

"That hardly provides an incentive for efficient, low-cost operations," the same committee source said.

FORMER U.S. OFFICIALS

The congressional group is disturbed by evidence that some particularly juicy contracts have gone to firms that employ—or are run by—executives who have held high Government jobs in the agencies that awarded the contracts.

It's checking, too, into reports that the well-paid officials of nonprofit firms often hold even higher-paying jobs with profit-making corporations that have been given large subcontracts by the nonprofit company.

Many of the nonprofit companies are used as a device for paying scientists and technicians more than the Government can pay them.

Federal salaries are controlled by the Civil Service, and the Government frequently cannot get top experts to work for it at the Civil Service salary scale. But it can get the services of a reluctant expert by giving a research contract to an existing nonprofit firm that is set up just for the purpose.

SALARY DISCREPANCIES

Eight Government agencies are allowed to pay as much as $19,000 a year to key research people, and the National Aeronautics and Space Agency can pay $21,000 to 13 specialists, but most Government scientists can receive no more than $15,000, Committee Chairman Overton Brooks reported recently.

The Louisiana Democrat said a $15,000 Government scientist and a $40,000 scientist employed by a nonprofit organization both are paid by the Federal Government—one directly and the other indirectly.

"This practice is obviously a means of getting around the Civil Service pay scales," Brooks said. "I am not passing judgment upon the practice, but I question whether this is the solution to the problem of obtaining skilled personnel for the Government."

The Continued Need for REA Loans

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 12, 1961

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a speech made by Walter H. Johnston, vice president, Association of Illinois Electric Cooperatives, Springfield, Ill., at a breakfast meeting with Illinois Members of Congress this morning. Mr. Johnston's remarks follow:

Today in rural America, over 97 percent of the farms and rural residences have the blessings of central station electricity. In Illinois, the figure is close to 99 percent.

From these facts some people might conclude that the job of rural electrification has been completed, and that there is no longer any need for REA loans. But these conclusions are erroneous. They would be comparable to assuming that since every child in America has a school available to him, that the job of education is over. Actually the opposite is true. The biggest problems of education lie ahead. And the same can be said of rural electrification.

In all of our estimates of the use of kilowatt-hours by rural electrics, we in the rural electric co-op business must readily admit that our guesses have most often been too conservative.

The rapid growth of the rural electric cooperatives has astonished us as much as it has any of the so-called experts. The experience of most cooperatives has shown in the past a doubling of the load every 5 to 7 years. So if we were to predicate the future growth solely on normal past experience, we could expect that the thousand rural electric cooperatives in the United States will be selling about 250 billion kilowatt-hours of electricity by the time the REA program is 50 years old, or in 1985.

Experts tell us that modern farms will then be averaging 40,000 to 50,000 kilowatt-hours of electricity per year. Presently, the rural electric systems in America have an input of about 29 billion kilowatt-hours. Thus you can understand that to meet the future power needs of rural America, the investment of considerable sums will be required. However, gross revenue from the sale of power by co-ops in 1985 is estimated to be around $3⅓ billion, thus insuring the funds to repay REA loans.

Now that is what future outlook was like until a few months ago. But, if the rural redevelopment program becomes a reality (and I wish here to credit our great Senator DOUGLAS as being one of its prime movers) and we believe it will, then the growth of rural electric cooperatives will be accelerated beyond our present most visionary estimates.

While rural electric cooperatives alone would not anticipate being able to meet all of the zooming demands for power that a rural redevelopment program would create, it should be obvious that by the nature of the location of rural electric systems in the heart of areas directly affected by redevelopment, that they will be called upon to play a primary role in this exciting new stage of restoring economic health to the rural sections of our Nation.

With the stimulus of a government program designed to attract industry to the rural areas that we have been serving for so many years, the demand on our co-op systems for electricity would be tremendous. Besides the power requirements of new

industries, cooperatives would be expected to supply the needs of the countless thousands of homeowners who would be attracted to the rural areas by the new economic opportunities.

Yet even without the stimulus of such a program as Senator DOUGLAS is sponsoring and which President Kennedy has endorsed so enthusiastically, it can be expected that more and more industries and more and more people will seek to locate in the uncluttered areas of the Nation which our rural electric systems serve.

To meet this challenge of restoring economic vigor to rural America, rural electric systems will need a source of low-cost loan funds and in greater quantities than ever before. And we believe the only practical source for this financing will be REA. But as always we shall accept the funds on a self-liquidating basis and we shall point to our enviable record of repayment as the guarantee of security for these loans.

It is quite logical to assume, I believe, that since we have been able to maintain a near-perfect loan repayment record during the formative years of our cooperatives when the pickings were slim and when much of the cream had already been skimmed, we should be even better financial risks in the years ahead.

The promising prospects for a rejuvenated rural America should add new loads to our lines and should increase the density of our areas substantially, thus strengthening our financial feasibility greatly beyond what it has been in the past.

I might mention here that so far REA has loaned $4.2 billion to 1,087 borrowers. Ninety-three percent of these loans went to cooperatives. So far our rural electrics have repaid a total of $1,372 million and this included $759 million in principal, $448 million in interest, and $165 million paid ahead of time on principal. Only two borrowers were overdue in payments as of February and the amount involved was $102,000.

One of the principal uses of REA loans in the future, we believe, will be for building co-op generating and transmission systems. As you know, the cost of these systems is sizable and that it is REA's policy to make them only when feasible.

A year ago three of our southern Illinois rural electric systems received a loan in the amount $25,800,000 to build their own power-plant and transmission grid.

We realize from our many years of negotiating with our power company suppliers that we have little control over our wholesale rates or over the conditions of service. We also realize that if we are to continue to be successful that we must utilize the same cost-saving techniques that the private power companies have employed so successfully for many years. Here I refer to interconnections.

Our cooperatives in Illinois are now aware that their lack of interconnections isolates them from the benefits of power exchange with Federal, municipal, and other sources.

In addition to the billions in loan funds that will be needed to accomplish some of the objectives that I have referred to, a considerable amount of additional financing will be necessary to bring telephones to rural America. At the present time only 70 percent of the farms in the United States have telephones and a large portion of these are not modern, automatic dial phones. Much remains to be done in the REA telephone program. And its future depends on a continuation of REA loans.

While the success of the rural electrification program is one of the brightest pages in the history of American agriculture, and while this success has been accomplished on a sound financial basis, it still cannot be overlooked that cooperatives are generally earning net margins that cannot be compared to those of private power companies.

It is, of course, a great credit to rural electric cooperatives that they have been able to do as well as they have financially in the thinly populated areas which they serve. The steady influx over the years of new industries and homeowners in rural areas, have benefited cooperatives financially and have increased their feasibility considerably.

However, rural electric systems in America are a long way from being able to borrow the huge sums of money they will need in the private money markets.

When you consider that the rural electric cooperatives of America have less than 20 percent member equity; that they are prohibited by law from serving towns of over 1,500 population, and that they must repay their REA loans with interest in contrast with the practice of the power companies which never liquidate their indebtedness but continue to float it in perpetuity, you realize that the only practical source of financing in the foreseeable future for rural electric cooperatives is the Rural Electrification Administration.

Moreover, it is doubtful that private sources of investment could be induced to risk their money in rural electric cooperatives when these cooperatives in most States have no guarantee of territory and have no status as regulated monopolies with a guaranteed rate of return.

It is unrealistic to believe that investors would prefer rural electric cooperatives to private power companies which enjoy the protection of territory and assured returns on investment. Moreover, the cost of borrowing money in the private market, even if we were unrealistic enough to assume all of the State objections did not exist, would be so high that many cooperatives and generation and transmission systems could no longer operate feasibly.

So just as in 1935, when 90 percent of the farm and rural residences were waiting for electricity and the administration and the Congress launched the REA program in recognition of the fact that rural America could be lighted only through low-cost government loans, the rural electrification program of today still faces great challenges. And if these future challenges are to be met successfully by our rural electric systems, then our co-ops must be able to rely on low-cost REA loans which have proved to be among the soundest investments in the welfare of the Nation that the Government has ever made.

Many-Sided Educator, Dr. Samuel Belkin

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 12, 1961

Mr. MULTER. Mr. Speaker, I am pleased to commend to the attention of our colleagues the following editorial as it appeared in the New York Times of March 27, 1961, concerning the president of Yeshiva University, Dr. Samuel Belkin:

[From the New York Times, Mar. 27, 1961]

MANY-SIDED EDUCATOR—SAMUEL BELKIN

The president of Yeshiva University likes to describe himself as "a rabbi who doesn't preach, a doctor who doesn't cure, and a professor who doesn't teach."

Dr. Samuel Belkin is also, more positively defined, a scholar, an amazing fundraiser and a dynamic administrator who usually lunches at his desk on nothing but many cups of black coffee, while smoking plenty of cigarettes. He praises the "blessing of the night" when he at last has the leisure for research in his special field, Hellenistic philosophy.

"His books have been written between 11 p.m. and 3 a.m.," an associate said. "They are the safety valve of an enormously busy man."

After an academic ceremony yesterday in which he conferred an honorary degree on Chief Justice Earl Warren, Dr. Belkin found time to discuss the Hellenistic period, when classical Greek and Jewish civilization blended while the barbaric threats that were to destroy the ancient world were already visible. "There are dangerous menaces also today, and they can destroy more than ever before," he remarked.

Dr. Belkin was speaking in his unadorned office where a personal reference library attests to the variety of his interests and preoccupations. A "Survey of Dentistry" is wedged between rabbinic literature and Aristotle.

INVITED TO ISRAEL

A little more than a year ago Dr. Belkin had his first meeting with another Jewish lover of Greek leters, Premier David Ben-Gurion of Israel. Witnesses of the encounter recall that the Premier was deeply impressed by his visit to Yeshiva University. He invited its president to Israel.

However, Dr. Belkin says, he has no immediate travel plans, because "all my work belongs to Yeshiva." Rather than further expansion of the university, he envisages its "strengthening, academically and in terms of physical facilities."

Running America's oldest and largest university under Jewish auspices is a complex and demanding job. From his apartment at 65 East 96th Street, Dr. Belkin rides at 9 a.m. every morning to the institution's main building at Amsterdam Avenue and West 86th Street. Almost every day he visits at least one outlying unit of the university, which is scattered over six sites.

The administrative work and the necessity of attending many formal functions prevent him from teaching, and this is his great regret.

BORN IN POLAND

Samuel Belkin (he has no middle name) was born in Swislicz, Poland, on December 12, 1911. As a boy 6 years old he watched with terror as the police, searching for "Communists," took away his father, a dreamy teacher of Hebrew. The father never returned, and all of Dr. Belkin's 11 brothers and sisters disappeared tragically before and during World War II.

Dr. Belkin was ordained a Rabbi at Radin when he was only 17. Soon afterward, in 1928, he came to America, an immigrant who spoke Polish, Yiddish and Hebrew, but no English.

With distant relatives scraping together the money for tuition, he was able to continue studying, and in 1924 won a Ph. D. from Brown University.

In 1935, Dr. Belkin joined the staff of Yeshiva, then a small institution, as an instructor in Greek. He became a full professor in 1940, and in 1943, when he was not yet 32 years old, was elected university president.

Since then, the enrollment of Yeshiva has increased from 850 to 5,000, its faculty from 94 to 1,200 and its annual budget from $444,000 to $4 million.

Dr. Belkin's wife is the former Selma Ehrlich, a granddaughter of the late Rabbi Bernard L. Lewenthal, who for many years was the dean of the rabbinate of Philadelphia. Their daughter, Linda, married Rabbi Ralph Schuchalter, and Dr. Belkin is twice a grandfather. A son, Salo Maurice, goes to private school.

On Saturdays Dr. Belkin attends congregation Kehilath Jeshurun, at 125 East 85th Street, to pray but not to preach. Despite his disclaimer, he does "teach," though—in his books. The latest of them, "In His Image" (Abelard-Schulman, 1959), is a compendium of Jewish philosophy. An inscribed copy was presented to Chief Justice Warren yesterday.

Assistant Secretary Kelly Reviews Interior Department Mineral Resources Program

EXTENSION OF REMARKS
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 12, 1961

Mr. ASPINALL. Mr. Speaker, we all received with great enthusiasm President Kennedy's message of February 23 on natural resources and have looked forward to its implementation. Among the first steps in this direction was an address by the new Assistant Secretary of the Interior for Mineral Resources, John M. Kelly, at a meeting of the Western Petroleum Refiners Association at San Antonio, Tex., on April 11, 1961.

Even though there are some individual statements which may require further examination, I commend this address to all Members and, under leave to extend my remarks, submit the full text for inclusion in the RECORD:

ADDRESS BY ASSISTANT SECRETARY OF THE INTERIOR JOHN M. KELLY AT MEETING OF WESTERN PETROLEUM REFINERS ASSOCIATION, SAN ANTONIO, TEX., APRIL 11, 1961

Several years ago, in addressing another oil industry group in Texas, a leading representative of the steel industry chose a term common to airline pilots—the phrase "a point of no return"—as the starting text of his remarks.

He related the disquieting feeling which came over him on a trip across the ocean when someone mentioned that the plane had passed the point of no return. It meant, he said, the plane was committed to continue onward, for good or ill. To turn back had become impractical, if not impossible.

He philosophized that individuals and nations also have their point of no return—a point where certain decisions and actions had irrevocably dictated the future.

To a large degree, this has happened in the United States and in the world. We live in a period of tremendous transformation in our national attitudes and our national institutions, as well as in a world in which two powerful ideologies stand opposed to one another.

In my lifetime and yours, there have been profound changes in the political, economic, and social institutions and attitudes of our Nation. The past is dead. And, it is an idle pastime to shed nostalgic tears for the good old days when the present forces upon us, in President Kennedy's words, "the role of defending freedom in its hour of maximum danger."

Today, the leaders of industry and the leaders of government are bound together by mutual responsibility for the social, economic, and political impact of our individual actions on the affairs of our country and of our world. We in Government, and you in industry, must accept this responsibility—a responsibility which we must meet on common ground, side by side.

In his inaugural address, President Kennedy also uttered these now historic words, "Ask not what your country will do for you—ask what you can do for your country." A few days later, in his first message to the Congress, the President pledged his administration "* * * to a continuous encouragement of initiative, responsibility, and energy in serving the national interest."

These are times which demand far more than mere cooperation between Government and industry. In this troubled world, a world restless, changing, a world challenging old ideas and moving toward new horizons—in a world of this fabric, the United States must demonstrate that its economic system is efficient, that it is flexible, and that it is the servant not the master of a free people. Such demonstration demands, on the part of us all, an identity of purpose and a dedication to the common interest.

The petroleum industry is one of the key building blocks in the foundation of American economic strength. The industry is essential to the welfare and social progress of our Nation and the free world. We in the Kennedy administration know its importance, we recognize its complexities, and we respect the intelligence and ingenuity of those who direct it.

In looking realistically at the future, the petroleum industry itself must bury the shibboleths and totems of the past—the outworn creed that looks at cooperation with Government as a mutually antagonistic partnership, temporarily formed by expediency—at Government as an evil to be tolerated.

Government is inescapably involved in this industry, and this involvement—particularly in the Department in which I serve—will grow rather than diminish in the years ahead. The petroleum industry itself, on many counts, has actively sought this involvement as being in its own best interests. Conversely, it must willingly accept Government as a referee of the industry, as its shield in foreign affairs, and as the protector of the public interest.

We have a new administration in Washington, a new attitude toward national affairs, and a new dedication to the principle of mutual action in the best interests of the people. We have a Secretary of the Interior who personally maintains an open door and an open mind on the pressing subjects of natural resource development.

And his policy is also my policy in the field of mineral and fuel resource matters falling under my jurisdiction.

The door of my office—and the doors of those who work in the mineral and fuel bureaus of the Department—will always be open to your industry, to the coal industry, to the extractive industries, and last but foremost of all, to the public.

We want your ideas, we seek your counsel, and we value your suggestions. There will be times when we will not see eye to eye—when our views will not coincide. Responsible Government cannot let others make its decision by default, and this administration intends to renew and revitalize responsibility in Government.

There will be times when our views will be identical—and I hope this will be the rule—because that which is in the best interest of the American people is also in the best interest of American industry, whether it be oil or oysters.

In recent years, fuels programs have been hammered out behind locked doors. We in the Department of the Interior intend to reverse that trend. We actively seek greater public participation in Government, greater public awareness of the programs of Government and their impact on all aspects of American life.

We seek an active, participating citizenry from all walks of social and economic life which will work together without regard to personal interest but dedicated rather to the utilitarian principle of the greatest good for the greatest number.

In the area of our Nation's mineral resources, we face many problems—complex problems which were not made in a day and which will not be solved by a stroke of a pen or in a constant reassurance that we live in the best of all possible worlds.

In the metals and the nonmetallic mineral industries, we have—as in the petroleum industry—a mixed picture. A number of commodities have shown steady growth and radical progress has been made with respect to some of the newer metals.

It is, however, in the group of metals which in their own right are as essential to our economic well being as oil that serious difficulties have been encountered in recent years. I speak primarily of lead, zinc, and copper.

Lead and zinc have been subject to declining domestic production and increasing pressures from imports. The copper industry has been affected materially by events in distant parts of the world with resulting instability, although production has expanded. Speaking parenthetically, these generalizations should have a familiar ring to this audience.

These are pressing problems which require—and which will get—a substantial portion of my energies and the energies of my staff.

In coal, we have the problem of an underdeveloped, underused natural resource. Let me say, at this point, that underdevelopment of a vital natural resource is as abhorrent to true conservation as wasteful use.

The coal industry today has fewer employed miners than in the year 1890—the first year for which reliable statistics are available. Coal production declined drastically from 1947 to 1958, and, while minor gains were achieved in 1959 and 1960, the rate of activity is falling again in 1961.

We have a coal industry which cannot be allowed to decline, if it is expected to meet the greatly increased demands which would be placed upon it in time of national emergency. This is a disturbing situation—a situation to which the Department of the Interior will direct its efforts to alleviate.

In oil, we have almost a parallel situation. Current refinery capacity and current crude oil productive capacity in the United States, even after allowance for a "defense reserve," exceeds the consumptive capacity of the American people.

However, this is more closely defined as a current economic problem, as distinct from some of the more technological problems which stand in the way of a marked increase in coal consumption. No matter which economic crystal ball you look into, the picture is always the same: Progressively mounting petroleum requirements in the years ahead.

Here is the crux of the petroleum problem. Reserves of crude oil available to the people of the United States must be abundant, must be secure, and must be available on a reasonable economic basis.

In this regard, we are distressed by the 1960 showing in exploration and development. In 1960, the volume of new crude oil discovered in the United States was only slightly higher than in 1946. Furthermore, the addition to proven reserves by extension of known fields was the lowest in 10 years. It was only through an increase in natural gas liquids that total liquid hydrocarbon reserves made any advance over 1959 levels. Here also, the picture is not completely bright

because the discovery rate of natural gas liquids was also declining.

Although we have skirted them briefly, I think we can see a similarity in the various minerals problems of the Nation, a basic pattern of immediate abundance of resources, underdeveloped demand, and overdeveloped productive capacity.

These problems present a unique, tremendous challenge to American ingenuity, for we must show the world we have the maturity and vision to make our basic abundance a blessing, rather than a millstone around our economic necks.

Turning now to the more immediate matters of interest, Secretary Udall has pledged the Department of the Interior to a "new look" at the oil import program—the philosophy which underlies it, the machinery by which it operates, and the effectiveness of this machinery in meeting the objectives of the program.

This searching reappraisal for residual fuel oil has been completed. We feel that some of the earlier ineqities have been eliminated and that the residual portion of the program is more firmly based, more responsive to public policy, and more soundly geared to efficient supply and distribution.

We intend to give the crude oil portion of the program equal scrutiny in the weeks ahead. I can announce today that two public hearings have been scheduled—one in Washington on May 10 and 11, the other in Los Angeles on May 4.

We come now to the subject of another review—that of a congressional fuels study, a study of no little controversy in the petroleum industry.

President Kennedy and Secretary Udall have firmly endorsed a balanced, long-range fuels study which uses the test of the public good as its cardinal principle. In Secretary Udall's words, "We cannot in something as important as fuels and energy let policy be set by drift and default." For this reason, the administration is supporting legislation which provides for a thorough study in the national interest.

Let me say this: No one can dispute the right of the Congress of the United States to initiate such a study.

Let me also add this: Unthinking, blind opposition within the petroleum industry to an impartial, long-range study can easily leave the mistaken impression that the interests of the industry are somehow different than the interest of the Nation as a whole.

For these reasons, I am personally gratified that in recent weeks many responsible leaders within the petroleum industry have endorsed a national fuels study.

We have much to gain from a thorough look at where we have been, where we are, and where we are going. I, for one, would like to know the answers to some of the more searching questions, questions such as:

What public policies are necessary to insure an adequate, dependable fuel supply for the Nation in order to achieve a healthy, balanced development of the national economy?

Can our present Federal, State, and local laws and programs promote the public interest in the wise development of our fuel resources?

Finally, how can we define in specific terms what the public interest really is, when confronted with the technical, economic, and international problems entailed in fuel resources development and use?

President Kennedy, in his state of the Union message, cautioned our Nation that we "cannot escape our dangers—neither must we let them drive us into panic or narrow isolation."

He meant not only panic and narrow isolation in the more conventionally understood area of foreign affairs, but also panic and narrow isolation from ourselves and our society.

We are back on the frontier—but this frontier extends into space and time, inward into the scientific core of matter itself, and outward to the friendship and loyalty of all free men. We each have a part to play, a contribution to make to others, and to ourselves in the process. Time will not let us wait, nor can we shirk or avoid our mutual responsibility to a common goal and a common ideal.

This is not the decade—nor the century—for the soft look, or the soft compromise, or the soft way to a shaky security. It is instead a time for determination, for devotion, for daring.

This is the way America is going, and the oil industry will go with it—or be left behind. This industry has always accepted its challenges and performed with honor and credit in national emergency. This vigor, this vitality, must now become the daily watchword of an industry moving forward in the mainstream of American life and American purpose.

I thank you very much.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

Senator Clark Presents Significant Message on Equal Job Opportunity to Second Annual Dinner of Charleston, W. Va., Mayor's Commission on Human Relations—1,000 Citizens in Attendance

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Thursday, April 13, 1961

Mr. RANDOLPH. Mr. President, the second annual dinner of the mayor's Commission on Human Relations of Charleston, W. Va., was held last night in the civil center of that city. It was my privilege to have been a participant in the program over which the Honorable John A. Shanklin, mayor of Charleston, presided as master of ceremonies, very abley assisted by the Honorable L. Leo Kohlbecker, chairman of the commission.

Mayor Shanklin is to be commended for his support of the commission, its dedicated chairman and fellow officers and members. I pay deserved tribute to them and to the churches, civic groups, lodges, labor unions, and organizations, as well as dozens of industrial and commercial firms which are subscribing cosponsors of the commission, the objective of which is "to strive for the elemination of discriminatory practices and policies in our community based solely upon race, creed, or national origin."

Appropriately representing the State of West Virginia at the significant event attended by approximately 1,000 citizens of Charleston interested in the promotion and development of better human relations was the distinguished Governor of West Virginia, the Honorable William Wallace Barron. In his effectively presented remarks, the Governor expressed the appreciation of his administration and West Virginians generally for the vital contribution the commission is making to improve human relations, not only in the State's capital city but over West Virginia as a whole as a consequence of its program, effort, and example.

Although our able colleague, the senior Senator from Pennsylvania, the Honorable JOSEPH S. CLARK, was prevented from being present because of air traffic problems which stemmed from the inclement weather conditions which prevailed, he fulfilled his mission as guest speaker by delivering his address from Washington to his Charleston audience over a closed circuit telephonic connection with the Civic Center amplification system.

Mr. President, I am privileged to report that an understanding and attentive audience received Senator CLARK's forthright message with enthusiasm.

In introductory remarks, I spoke of our esteemed colleague as follows:

Senator CLARK is not one who reserves his concern for human relations for formal commissions and conferences, important as they are. After more than 2 years of serving in close association with him on the Senate Committee on Labor and Public Welfare, I have come to know JOE CLARK as one whose every action is informed with respect for the individual and the desire and determination to eliminate the barriers which separate and divide men. It is this emphasis, as well as the high quality of intellectual discipline which he brings to the task, that earned Senator CLARK—within a single term in the Senate—national renown as a leader in the fields of human relations, civil liberties, and civil rights.

Prior to his service in the Senate, however, JOE CLARK had already made his commitment to human relations problems as mayor of Philadelphia from 1951 to 1956. The leadership and direction which he gave during those years to the mayor's Commission on Human Relations brought new meaning to Philadelphia's honorific title as "The City of Brotherly Love." Despite the complexities of having large and growing ethnic and racial minorities, Philadelphia, under the influence of the then Mayor CLARK, became a model for those cities which were seeking to relieve group tensions and improve the quality of human understanding.

Thus, we are signally honored indeed in having as our speaker one with such wide experience at the municipal as well as the national level. We are fortunate also in having one who represents that rare combination of the thoughtfulness of the scholar and the effectiveness of the practicing politician.

It gives me great pleasure, therefore, to introduce my good friend and our neighbor, a sincere liberal and true exponent of practical idealism and meaningful religion, the senior Senator from Pennsylvania, the Honorable JOSEPH S. CLARK.

And, now, Mr. President, I request unanimous consent to have printed in the Appendix of the RECORD the text of the address entitled "Equal Job Opportunity," prepared by the distinguished senior Senator from Pennsylvania for the occasion.

There being no objection, the text of the address was ordered to be printed in the RECORD, as follows:

EQUAL JOB OPPORTUNITY

(Remarks of Senator JOSEPH S. CLARK, of Pennsylvania, at the second annual banquet of the mayor's commission on human relations, Charleston, W. Va., April 12, 1961)

With my first 6-year term in the U.S. Senate over next year, I resolved at the beginning of this session of Congress not to speak outside Pennsylvania again until after my reelection campaign.

It took the combination of an invitation by my close and irresistible friend, JENNINGS RANDOLPH, to whom I am deeply indebted for many courtesies, and the occasion of the annual dinner of Charleston's Commission on Human Relations to make me break my resolution tonight. I do so with pleasure, honored by your invitation.

I have some familiarity with the essential, but largely thankless, work performed by your commission from my own experience as mayor of Philadelphia with our Commission on Human Relations.

The Philadelphia commission was created by the provisions of the city home rule charter in 1951.

The opening sentence of the charter preamble shows the high obligation felt by the framers to cleanse the city of discriminatory practices: "Grateful to God for the freedoms we enjoy," the preamble reads, "and desirous of establishing a form of improved municipal self-government in which all qualified citizens may participate equally without any distinction base based on race, we, the electors of Philadelphia, hereby adopt this 'Philadelphia home rule charter.' "

The charter provided for appointment of the human relations commission members by the mayor without the necessity for confirmation by city council. I chose the nine commission members, who serve without pay, to reflect as accurately as possible the various racial groups in the city.

On January 7, 1952, the commission assumed the powers and duties of the fair employment practice commission, established 3 years earlier, to administer the fair employment practice ordinance. Subsequently it was empowered to enforce a variety of State and local laws and ordinances concerning discrimination.

Early in 1952 we were extremely fortunate in being able to entice Mr. George Schermer from the Detroit area, who had had valuable experience in human relations work there, to be executive director. He is still serving as director of the commisison today.

The Philadelphia commission performs, as I am sure yours does, a wide variety of assignments. It is the commission's job to promote better racial relations in employment practices, public education and public housing, to organize community human relation councils throughout the city to foster better racial relations, to provide a 24-hour day "tension alert" to guard against and resolve intergroup incidents, to conduct leadership training in human relations, to coach Spanish-speaking minorities in citizenship rights and duties, and to provide public information about the problems of discrimination, segregation, and human relations in the area.

It is the first mentioned of these assignments—the promotion of equal job opportunity—that I will speak tonight: Developments in three different areas—the Philadelphia city government, the Federal executive and legislative branches—may be of interest to you.

Much of the work of the Philadelphia Human Relations Commission, which has a full time staff of 32 employees and a current operating budget of $230,000, has concentrated on fostering equal job opportunity in the firm belief that racial barriers in employment must be broken if the large Negro community in the city (now numbering more than half a million) is to enjoy the most basic rights and advantages of citizenship.

In the last 10 years the commission has investigated more than 2,000 complains of discrimination in employment, substantiated findings of discrimination in more than 500 cases and effected satisfactory adjustments without court action in almost all of the latter cases. Informal hearing procedures to resolve complaints of discrimination in employment have been highly successful.

Eeach year the commission formulates and adopts a specific list of annual program objectives to focus the group's limited resources on a selected number of problems and areas of concern. In a field as complex and indeterminate as intergroup relations, program objectives clearly must be as concrete, feasible and attainable as experience, judgment, money, and manpower will allow. Each year the commission tries to be a little more precise and realistic about what it attempts to accomplish. So far as I know it is the only intergroup agency in the Nation which makes this type of effort to design and specify its annual work plan in advance. If you haven't seen copies of the Philadelphia commission's yearly statement of goals, I hope you will contact Mr. Schermer, the commission's director, to see whether this plan could be usefully employed here.

Perhaps you would be interested in hearing the eight goals stated in the commission's 1961 program relating to fair employment practices:

1. Receive, investigate, and adjust all complaints of discrimination in employment under the Philadelphia city code; such adjustment to include affirmative measure to correct patterns of exclusion whether or not unlawful discrimination has been found.

2. Conduct periodic inspection of "help wanted" advertisements to assure compliance with laws and regulations thereto.

3. Conduct regular inspections of city work contracts to assure compliance under the standard antidiscrimination clause in such contracts.

4. Conduct regular inspections of those firms that are subject to either adjudicative or advisory orders from the commission.

5. Initiate inspections, conduct, and issue advisory findings and recommendations upon not less than 50 employer firms in addition to other investigations.

6. Continue negotiations and such other measures as are necessary to attain affirmative implementation of merit employment in the hotel and restaurant industry.

7. Continue investigations and negotiations of waterfront employment to remedy the alleged patterns of discrimination and segregated job assignments.

8. Initiate negotiations with, or investigation of the banking industry to promote and implement affirmative employment practices.

In these difficult assignments the commission has had the unqualified support of Mayor Richardson Dilworth. Last fall Mayor Dilworth called a meeting of the 80 top industrial leaders of the Philadelphia area and the hierarchy of the local chamber of commerce to urge them to expedite adoption of fair employment practices before commission findings and court adjudications were required. And, indeed, the progress made has been encouraging. Negro salesgirls and managers, seldom seen in the large commercial establishments a few years ago, are now a common and accepted sight in the downtown area.

But it is the city itself that has led the way. The city payroll, pitifully short of Negro employees just 10 years ago although the colored population of the city numbered almost 25 percent, now includes Negroes as department and division heads, assistant office chiefs, and, thanks to an open recruitment drive, personnel at all levels of employment.

Truely Philadelphia has seen a big change for the better in race relations in the last decade, but I am the first to acknowledge the long, long road ahead to attain the goal of equal employment opportunities for all based solely on merit, not on race.

You may have noticed in this morning's papers the story emanating from Philadelphia concerning the commission's report filed yesterday about the city's hotel and restaurant industry discriminating in the hiring and assigning of employees.

Nathan L. Edelstein, chairman of the commission, called the findings of the commission's investigations, which had extended over the last 13 months, "an indictment of an entire industry." "The report," he said, "is the most forceful and vital step we have ever taken."

Accused of discrimination in the report were 19 major hotels, 2 restaurant chains, 3 union locals and an association representing more than 50 restaurants.

It is entirely safe to assume that the Philadelphia Commission on Human Relations and the city government will bring every possible means of pressure on the industry to bring an end to the discriminatory practices found by the commission. In this work I know that the commission will have, as it has had in similar efforts in the past the invaluable assistance of voluntary civic agencies in the city, and particularly the fellowship commission groups who have worked long and hard and without compensation to foster the goal of equal job opportunity in the city of brotherly love.

II

Turning now to the Federal Government, the Nation's biggest employer, I am sure that all of you are aware of the courageous and far-reaching Executive actions to promote fair employment practices taken by the President to date.

By Executive order the President established a Committee on Equal Opportunity to fight racial discrimination in employment practices by the Federal Government and by private employers doing contract work for the Government. As he stated yesterday when he met with the Committee for the first time, the group's assignment is nothing less than "the permanent removal from government employment and work performed for the Government of every trace of discrimination because of race, creed, color or place of national origin. This is not only just in itself, it is one of the purposes for which we stand before the world."

In the sweeping Executive order the President armed the Committee, which started operations on April 5, under the chairmanship of Vice President LYNDON B. JOHNSON, with a broad range of powers to enforce antidiscrimination policies, and designated the Labor Department with all of its widespread branch offices and factfinding facilities, to be the chief investigatory arm of the Committee. The keen interest of the Vice President is evidenced by a story out of Nashville in today's New York Times. Apparently Mr. JOHNSON met last weekend with a group of Negro leaders in Nashville, Tenn., in the presence of the State Governor, a known segregationist, to discuss job discrimination problems in the area. The group which came to the meeting, skeptical of the Vice President's views left with high praise for him.

The President's action will have a direct impact on the lives of thousands and perhaps millions of persons in this country in the days to come.

Every business doing work for the Federal Government either as a prime or a subcontractor will have to submit a statement when bidding for the work certifying that "all qualified applicants will receive consideration for employment without regard to race, creed, color, or national origin."

Labor unions are also affected by the Executive order. Although the Government does no contract business directly with unions and thus there are no direct sanctions applicable to unions provided in the order, the Committee is authorized to publicize union discriminatory practices at hearings and to take other steps to obtain union compliance with fair employment practices.

President Kennedy's directive, unlike the orders under which two antidiscrimination committees operating under the past administration which merely authorized the committees to receive complaints, contains a variety of sanctions. Conciliation discussions are mandatory at the start of each case, but if the employer fails to end an established discriminatory practice, any one of the following steps, among others, can be taken:

(1) Publication of the names of contractors or unions found to be in violation of the rules;

(2) Recommendation of suits by the Justice Department to enforce the nondiscrimination clauses in contracts. (Parenthetically, I might note that the Department has been empowered to bring such suits for the last several years, but has never done so.)

(3) Contracting agencies of the Government are forbidden to give any new business to companies that discriminate unless and until the companies demonstrate that their policies have changed;

(4) And, finally, termination of any contract because of job discrimination either by the Committee's own action or through contracting agencies of the Government.

The commission has already received 110 complaints of job discrimination, which are being processed. One investigation, of Lockheed Aircraft's Marietta, Ga., plant which does a great deal of contract work for the Government, has already been announced. In addition the Committee has asked each Government agency to name a civil rights officer to enforce nondiscriminatory employment practices within the agency. New contract forms are being distributed to the procurement agencies for immediate use.

West Virginia, like Pennsylvania, is not blessed with the abundance of Government contract work that California and Georgia boast. Still, there are contractors who do substantial Federal contract work and some Government agencies in the Charleston area.

I would think that your commission could perform an invaluable service in making President Kennedy's equal job opportunity order known to employers, employees and persons seeking employment in this area, so that the goals which the committee has been set up to serve can be expedited in every way possible. I am sure that the Committee office in Washington can provide the commission with all of the information needed to do this job, or that your congressional delegation can obtain this information for you.

III

But additional legislation is also needed, and the 1960 Democratic platform recognized this fact. It pledged that "the new Democratic administration will support Federal legislation establishing a Fair Employment Practices Commission to secure effectively for everyone the right to equal opportunity for employment."

Last September President Kennedy asked Congressman Celler of New York and me to prepare civil rights legislation, embodying the civil rights commitments of our party's platform for introduction in this session of Congress. We have carried out this assignment and drafted a series of civil rights bills, including an FEPC proposal, with the assistance and advice of the Department of Justice.

The need for Federal FEPC legislation is painfully evident. The 17 States which have such legislation on their books (and Pennsylvania since 1955 is one) are hopelessly hamstrung in obtaining adequate enforcement where interstate commerce is involved, as it is in such a large percentage of commercial employment situations. Thirty-three States with almost 80 million people are outside the coverage of any FEPC legislation today.

With unemployment in the United States at about 7 percent of the total labor force in February, nonwhite unemployment stood at a staggering 15 percent, a rate that would never be tolerated if it applied across the board. But this discrepancy is not limited to recessions. Unemployment among nonwhites runs just about double the rate for whites at all times according to the Bureau of Labor Statistics.

Among the employed, the pattern of discrimination is less apparent, but no less real. In the occupational structure of our society, positions as managers, officials, executives and proprietors are held at 14 percent of all white male workers, but only 2 percent of all Negro male workers. Over 10 percent of all white male workers are in professional and technical occupations; less than 3 percent of all Negro male workers. Over 33 percent of all white female workers are in clerical occupations. Only 8 percent of all Negro female workers have gained access to clerical work.

The difference in wage rates is no less startling. The Department of Commerce reports that in 1957 the average wage or salary of a white person was $3,775; of a nonwhite $1,845. This deficiency in earnings for Negroes as a class is said to total a staggering $12 billion per year. Granting existing differences in educational opportunities and trained skills these statistics still establish a substantial differential based on racial prejudice.

The bill which Congressman Celler and I have drafted would make racial discrimination in hiring, promotion, and firing, an unfair labor practice for which administrative and ultimately judicial sanctions would be available. The proposed law, which would be administered by a 5-man Fair Employment Practices Commission, would apply to all employers, business or labor organizations, who are engaged in interstate commerce or operations affecting such commerce and employ more than 50 persons.

While the roadblocks to such legislation in the Congress under our archaic and undemocratic rules of procedure are substantial, we are hopeful that this bill will pass the 87th Congress before it finally adjourns in 1962. I am confident that these measures will ultimately have the all-out support of the administration. The only question is one of timing.

It was President Kennedy who stated last fall that "Freedom is indivisible, in all its aspects. To provide equal rights for all requires that we respect the liberties of speech and belief and assembly, guaranteed by the Constitution, and these liberties in turn are hollow mockeries unless they are maintained also by a decent economic life. Those who are unemployed, or too poor, uninformed, or too uneducated to enjoy their constitutional freedoms of choice, do not really possess those freedoms."

The unending task to insure the enjoyment of equal rights, including equal job opportunity, by all citizens of the United States is a goal worthy of the best efforts of all of us. If this high goal is to be achieved in our lifetimes or those of our children, the active efforts of all men of good will both in and out of government must be dedicated to the end. The work of your commission is designed to bring that goal closer to reality. I salute you in your all-important assignment and wish you every success.

President Kennedy Rightly Urges Creative Thinking by TVA

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 11, 1961

Mr. EVINS. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD an editorial entitled "President Rightly Urges Creative Thinking by TVA," which appeared in the Nashville Tennessean of March 29, last.

The editorial follows:

PRESIDENT RIGHTLY URGES CREATIVE THINKING BY TVA

If any member of the Tennessee Valley Authority Board of Directors had any doubts concerning what the President of the United States feels this independent agency's role is, Mr. Kennedy's latest letter should have dispelled those doubts.

The President wrote: "The TVA is in the business of resource development and I want to feel that in your future thinking on the continuing problems of the valley region, you will be giving thought to the problems which go beyond the production and sale of power.

"We need much creative thinking in this area and the TVA has stood in the past for original and bold thinking. This vigorous and imaginative momentum must be continued."

This was President Kennedy's reaction to the Board's decision to locate its newest steam plant on the Clinch River in east Tennessee. The President had suggested favorable consideration of a site in southeast Kentucky, a seriously depressed region with idle coal fields.

Never did President Kennedy presume to dictate policy decisions to TVA, an independent agency, and it is in keeping with this approach that he has termed the Board's steam plant decision the proper one. A difference in capital outlay of $30 million he deemed complete justification for selecting the Clinch River site.

Nevertheless, the reminder Mr. Kennedy has given the Board is one which was needed. Since TVA constructed its first steam plant at New Johnsonville, its underlying philosophy has seemed to shift slowly away from the emphasis on "the business of resource development." Its "production and sale of power" role, a legitimate one, has received increasing attention.

This newspaper has called attention to this situation. It has suggested that the slide rule is a magnificent instrument, but that it should not entirely replace TVA's department of vision and farsightedness. When TVA came to this valley it thought in terms of river navigation, flood control, recreation, forest protection, improved agricultural methods, and saving eroding soil, as well as cheap electrical energy.

It dreamed of lifting a region by the intelligent use of all its resources, not by the coldly efficient and economic development of power alone, necessary though this might be.

The regional problems are not the same today, of course. Industrial development has become a major need, and therefore an abundant supply of electrical energy remains a major concern. But recreational and navigational demands have also grown and the possibility of constructing tributary dams to meet these and other needs is worth exploring.

Facts Pave the Way to Truth

EXTENSION OF REMARKS
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 13, 1961

Mr. FARBSTEIN. Mr. Speaker, Mr. John Crosby, columnist of the New York Herald Tribune, recently in one of his articles referred to the fight against the program "The Untouchables" in a manner which was interpreted as maligning persons of Italian origin. Representing as I do the 19th Congressional District in which there are a great number of persons of Italian origin who are contributing to the success of the great city of New York and to the development of our country, I can attest to the contributions made by this segment of our population.

I deplore the references by Mr. Crosby and believe that his statements are divisive. The Americans of Italian origin are aroused by this column, and an indication of the resentment of persons of Italian origin to the unfair references can be gleaned by an article published in the Il Progresso on Sunday, March 26, 1961. The resentment of the Italian-Americans has been manifested against the program "The Untouchables" by pickets, boycotts, and conciliatory conferences. The leading organizations in this fight to eliminate the unfair stereotyping of Americans of Italian origin were the Federation of the Italian-American Democratic Organizations of the State of New York, Inc., the Sons of Italy, the Columbian Association, and the National Italian-American League to Combat Defamation.

The column published by the Il Progresso sets forth the contributions by persons of Italian origin through the years, during the wars and defense of our country, and in the promotion of our economy and our country. This article answers fully any statements made by Mr. Crosby and any unfair inferences which might be derived from a reading of his article. The open letter to Mr. Crosby which was published on Sunday, March 26, 1961, follows. I am certain that the reading public will draw the proper conclusions after reading this open letter:

AN OPEN LETTER TO A COLUMNIST OF THE NEW YORK HERALD TRIBUNE

DEAR JOHN CROSBY: In your column in the New York Herald Tribune, last Wednesday, you deplored the fact that an agreement was reached between the National Italian-American League to Combat Defamation and Desilu which produces "The Untouchables" on the basis of which future episodes of the television series would refrain from using Italian names for its fictional characters of hoodlums and delinquents. And you decry that "one more national group removes itself forcibly from the ranks of villainy." Of course your feelings are completely at variance with those of the great majority of Americans who resent the slurs on whole ethnic segments of the people who have caused "Abie" the merchant, "Paddy" the drunk, the dutchman "Schultz" and "Black Face" to be ban-

ished from the American scene and feel it is high time to do likewise with "Tony" the gangster.

Your statement "that it would be extremely difficult to write a history of organized crime in this country * * * without filling it almost exclusively with Italian names", is more indicative of prejudice than of accuracy. You offer no statistical proof of your wholly gratuitious assertion. Let us offer you the survey of the U.S. Bureau of Prisons, Department of Justice, which indicates that the Federal prison population with Italian names is less than 3 percent. This means that 97 percent of all Federal prisoners are of ethnic origin other than Italian. This despite the fact that Americans of Italian origin constitute about 10 percent of the national population. You describe the use of Italianate names or Sicilianate types in "The Untouchables" as "one of the few admirable things" about it, thus revealing an instinctive approval of the very sore point which Desilu recognized and promised to remove in the interests of better intergroup relations to which you are obviously opposed.

And when finally you reluctantly concede that Italians have produced "Toscanini too" * * * it is apparent that you have not gasped the significance or import of our contribution to the greatness of America in every field of human endeavor since its discovery by Christopher Columbus. Yes, the history of our country, which was named for Americus Vespucci, is replete with Italians like Marco da Nizza, who explored what is Arizona today and Francesco Chino who laid the foundation for the great cattle industry in the Southwest; and Enrico Tonti, who founded the first trading post in Chicago and was one of the founders of the colony of Louisiana. And his brother Alfonso Tonti who helped Cadillac found the city of Detroit and Umberto Beltrami who discovered the sources of the Mississippi. And Filippo Mazzei, physician and counselor to Thomas Jefferson, who incorporated the philosophy of Mazzei in the Declaration of Independence with the immortal words "That all men are created free and equal."

And wasn't it an American patriot of Italian origin who made possible the victory of Gen. George Rogers Clark which enabled him to open up the great Northwest? Yes, it was Col. Francis Vigo who financed the expedition and also furnished the military information which brought about the defeat of the Indians in this crucial period in American history.

And it might interest you to know that in the Capitol in Washington 90 percent of the art work, frescos, paintings, sculptures are the work of Italian artists such as Costantino Brumidi, Joseph Franzoni, John Andrei. And even the silver dollar was designed by the Italian DeFrancisci.

In the field of science, how can we evaluate the contributions to America and the world, of the genius and wizardry of Marconi? What is the impact on history of Dr. Enrico Fermi, who made nuclear fission a reality? And Drs. Ghiorso and Rossi of the University of California who discovered element 100 used in the hydrogen bomb? And Dr. Failla who designed the world's largest radium therapy apparatus?

Great educators like Angelo Patri, considered America's greatest child psychologist; Dr. Rettagliata, president of the Illinois Institute of Technology; Dean Emeritus Cosenza, of Brooklyn College; Dr. Edward Mortola, president of Pace College; Mario Pei, world-renowned philologist, whom George Bernard Shaw cited as a master of the English language; Dr. Francis Verdi, professor of surgery at Yale University, have left an indelible imprint on the minds of American students.

Many great captains of industry contribute to the daily enrichment of the Nation. Men like Giannini, who founded the greatest bank in the world; the Vaccaros of Louisiana, and the DiGiorgios, the fruit kings of America; the Cuneo brothers, operators of the great printing establishment in the world; Amedeo Obici, who founded the Planters peanut empire; Crespi, the cotton king of Waco; Ross Siracusa, head of Admiral television; Martino, president of National Lead Co.; Salvatore Giordano, head of Fedders air conditioning; Riggio, who was president of the board of American Tobacco Co.; our own Pope brothers, of the Colonial Sand & Stone Co., and countless others.

And builders of roads, tunnels, airports, and skyscrapers, engineers and architects * * * men like the Gulls, DiNapoli, Rizzi, Corbetta, DelBalso, Paterno, Petrillo, Lou Perini, et al.

In the field of labor we have such outstanding leaders as Luigi Antonini, first vice president of the International Ladies Garment Workers Union; August Bellanca, vice president of the Amalgamated Clothing Workers of America; Howard Molisani, Vincent LaCapria, George Baldanzi.

And in the entertainment field: theater, movies, television, and night clubs we give you just a few of the outstanding personalities such as Alfred Drake, Don Ameche, Ann Bancroft, Perry Como, Frank Sinatra, Jimmy Durante, Frankie Laine, Dean Martin, Frank Capra, Vincent Minnelli, Anthony Franciosa, Connie Francis, Joni James, Tony Arden, Dennis James, Ernest Borgnine, and Guy Lombardo.

And in baseball men like DiMaggio, Berra, Rizzuto, Colavito. And in boxing the undefeated champion of champions, Rocky Marciano. And the All-America football hero of Navy's gallant squad, Bellino; the great Columbia Coach Lou Little and a host of others.

We have produced outstanding men in other fields: the food industry; vintners, restaurateurs, and politics where space will permit us, in passing, to mention men like Senator Pastore and Governor DiSalle of Ohio; Rosellini of Washington, Volpe of Massachusetts, and Notte of Rhode Island, and the incomparable Fiorello LaGuardia.

But we are proudest of our contribution to the defense of our country in all the wars America has fought. We recall the story of Francis Spinola, who though he denounced Lincoln's fratricidal war which divided the country, nevertheless formed a brigade of volunteers to defend the Republic. He was wounded in battle, leading his men, was given the Congressional Medal of Honor and was promoted to brigadier general by President Lincoln himself. Since then the number of our Medal of Honor winners has become legion.

These are the kind of Americans, Mr. Crosby, who—many millions strong—have made and are making their proud contribution to the greatness of America and who justly denounce discriminatory presentations such as "The Untouchables" for their distortion of the true image of the devoted American of Italian origin.

IL PROGRESSO ITALO-AMERICANO.

The John Birch Society

EXTENSION OF REMARKS
OF
HON. VANCE HARTKE
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, April 13, 1961

Mr. HARTKE. Madam President, much has been written and said recently about the John Birch Society. My good friend, Marsee Cox, the editor of the Terre Haute, Ind., Tribune, made a very candid analysis of the situation, I believe, in a recent editorial entitled "Doctrine of Hatred." I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DOCTRINE OF HATRED

Senator BARRY GOLDWATER, who has become known as the spokesman of Republican conservatism, is of two minds about the controversial John Birch Society. Recently he told newsmen that while he disagrees with its far-right theories he is "impressed by the type of people in it." They are, he thinks, "the kind we need in politics."

They are also either remarkably naive or reactionary in the nth degree. And in fairness it should be noted at once that though GOLDWATER is "impressed" by those attracted to the group he has specifically disavowed some of its more extreme contentions. Among these are the claims that ours is not a fit form of government with which to fight communism, that Communists have influenced Supreme Court decrees, that recent Presidents from Roosevelt through Eisenhower have been Communists or Communist tools, that Chief Justice Warren should be impeached, and so on.

The John Birch Society, founded by a wealthy retired candy maker named Robert Welch, poses a familiar dilemma. GOLDWATER expressed a common attitude when he said, "They are anti-Communist and I don't see how we can be against that." Of course no responsible American can be "against" anticommunism. But the question is: Should not Americans be against communism by being vigorously for the principles which have made this Nation a great citadel of freedom?

We say "Yes." We say being for those principles, and working actively to preserve and strengthen them, is far and away the most effective way to fight communism. That is something the members of the John Birch Society have yet to learn. The society's perverted appeal resorts to tactics of both communism and fascism. Whatever may be said of the people attracted to it, its doctrine of hatred is emphatically not the kind of doctrine we need in American politics.

Visit to Washington by Students and Chaperones From Metairie Park Country Day School, New Orleans, La.

EXTENSION OF REMARKS
OF
HON. RUSSELL B. LONG
OF LOUISIANA
IN THE SENATE OF THE UNITED STATES
Thursday, April 13, 1961

Mr. LONG of Louisiana. Mr. President, on April 12 it was my pleasure to have as my guests the senior class of the Metairie Park Country Day School. This fine institution, which is located in Metairie on the outskirts of New Orleans, has one of the loveliest settings of any school I have ever seen.

The school is dedicated to the pursuit of higher education and to the development of the kind of individual who will become a valuable citizen in this great country.

Every year, the senior class of the Metairie Park Country Day School visits our Nation's Capitol as part of its general educational program. I am particularly proud to have such an outstanding group of young Louisianians come to Washington and I look forward to their visit each year.

I ask unanimous consent to have printed in the Appendix of the RECORD the names of the 27 students and 2 chaperones from the Metairie Park Country Day School in Metairie, La.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

METAIRIE PARK COUNTRY DAY SCHOOL, SENIOR CLASS

Thomas Coleman, Carolyn Coupland, Lynne Farwell, William Forrester, Ann Johnston, Guy Leefe, Karen Ludwig, Robert McClure, William Miller, Michael Norton, Carole Romano, Jane Rosenberg, Claude Schlesinger, Nancy Tousley, Ernst Wootten, David Grimm, Sharon Heath, Jane Henderson, Sherryl Jackson, Edna Miller, Paul Nelson, Suzanne Payzant, Walter Robinson, Donald Siegel, John Simonton, Howard Streiffer, Anne Taylor.

The chaperones: Mrs. James T. Stewart, Mr. George Bensabat.

Anniversary of Birth of John Hanson, President of the Continental Congress From 1781 to 1782

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Thursday, April 13, 1961

Mr. BEALL. Mr. President, today marks the anniversary of the birth of John Hanson who served as President of the Continental Congress from 1781 to 1782. Born in Charles County, Md., in 1715, John Hanson is remembered as one of our country's great patriots.

He served nine terms in the Maryland House of Delegates and then went on to the State senate where he served from 1757–1773.

The Nation best remembers him as a Revolutionary leader, as one of the Founding Fathers of these United States, and as a signer of the Articles of Confederation.

My attention has been directed to an interesting article which appeared in the April 8 issue of the Mason City, Iowa, Globe-Gazette. It recounts the acceptance by the Congress of the bronze statue honoring John Hanson.

I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A NOTED PATRIOT

From Charles Havlena, of Washington, D.C., a former Iowan and student of American history, the Globe-Gazette editor has received a reminder that April is the birthday-month of a great American, John Hanson, a Revolutionary leader and native of Maryland.

Hanson, whose birthday was April 13, hasn't received the recognition he deserves in history books, or at patriotic observances, Havlena maintains.

Hanson held the office of President of the Continental Congress for the 1-year term, 1781–82. As such he was 1 of 14 such Presidents in the period from 1774 to 1788, which included the Revolutionary War and the writing and adopting the Constitution of the United States.

Among these 14 Presidents of Congress the name of Hanson stands out, Havlena points out. His leadership in a critical time and his accomplishments in the face of many frustrations, places him as among America's great, the Washington scholar adds.

It was for this reason that the State of Maryland selected Hanson as one of the two most worthy patriots of that State to be honored with a bronze statue in Statuary Hall of the U.S. Capitol. The other was Charles Carroll.

Iowa has a special interest in this bronze statue. A distinguished Iowa Senator, Jonathan P. Dolliver of Fort Dodge, delivered the address accepting the Hanson statue in behalf of Congress January 31, 1903.

Another point of interest connects Mason City with the Havlenas. Mrs. Havlena will be remembered for her visit to this community last year to install the local club of Pilot International.

Water Resource Development

EXTENSION OF REMARKS
OF
HON. ROBERT S. KERR
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Thursday, April 13, 1961

Mr. KERR. Mr. President, it has been a real treat for the people of Oklahoma to become acquainted with the new Southwestern Division Engineer of the U.S. Army Corps of Engineers, Maj. Gen. Robert Flemming, Jr.

He recently appeared at a reception in his honor at Tulsa, Okla., and gave a "pep talk" which inspired the already enthusiastic Arkansas River Basin developers to even greater efforts. General Flemming said that we must use the full capabilities of the Corps of Engineers in the planning and constructing of the many feasible water development projects in our area. I fully concur in this belief, and I am heartened by the fact that the reaction from General Flemming's remarks has reached the White House. By his actions in recommending increased funds for our projects President Kennedy has shown that he is keenly aware of the need for and the benefits to be gained from complete development of the Arkansas River complex.

On Friday, April 7, 1961, General Flemming was the guest of the Oklahoma City Chamber of Commerce and he again provided the people of Oklahoma with a thought provoking address. Because I feel that his remarks will be of interest to the Members of Congress and others, I am requesting that the address of Major General Flemming be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS OF MAJ. GEN. ROBERT J. FLEMING, JR., DIVISION ENGINEER, U.S. ARMY ENGINEER DIVISION, SOUTHWESTERN, DALLAS, TEX. TO THE OKLAHOMA CITY FRIDAY FORUM, APRIL 7, 1961

In coming up today and talking to this audience on the subject of "Water Resource Development," I very frankly feel somewhat presumptuous. That feeling of presumption is caused by the fact that this is the home State of the greatest evangelist on the subject of water conservation and water resource development that this country and possibly the world has ever known. I refer, of course, to your senior Senator, Senator KERR. He knows infinitely more about this subject than I do. Having him in my audience makes me feel like a duffer playing a round of golf with Ben Hogan.

This afternoon I will not attempt to sell you on the necessity for water resources development in this country. To try to do that in Senator KERR's presence would be certainly overly presumptuous. Instead I am going to restrict my remarks to a very small aspect of the problem, but an aspect which I think is becoming more and more important, and soon, unless something is done about it, will surpass in importance all of the technical aspects of the problem. I refer to some of the brakes which have been placed on the formulation and presentation of public projects. It is my opinion, which I want to share with you today, that some of these brakes which were highly logical when first adopted are now beginning to operate to impede progress. This afternoon I am going to tee off on some phobias of mine which have developed from frustrations of long standing. I never have thought candor was a sin and I have frequently been accused of talking too much and too loud. This lack of vocal control has often led me to making extravagant statements and this afternoon I may make statements equally as extravagant With that introduction I want to emphasize that I am doing the talking, I am not repeating any party line, and I have neither requested no secured clearance on anything I say.

All public projects involve technical, economic, social, and political factors, and in using the word "Political" I am using it with a capital P and not the small p. Whether or not these projects are ever undertaken and carried into execution depends on the interplay of the factors in these four general fields. Of these four aspects, the technical, the economic, the social and the political, the technical and economic are fairly easy to set aside and analyze from a practical and finite viewpoint. The social and political are not capable of such precise and definitive measurement.

Now let's go back and think for just a minute about the two aspects, the technical and economic, which I said were susceptible of practical measurement. Engineering or technical laws or rules have been formulated over a period of years and to all intents and purposes are exact and measurable. In this respect, engineering or technology is a science. The modern theory of economics talks with the language of a science, but it does not meet any of the tests of a science. Its factors or quote laws unquote are not exact but are subject to interpretation and opinion. The point I wish to make to you today is that some of the ground rules of economic analysis which have been expounded to control the formulation and submission of public projects are not so much governed by the quote laws unquote of economics as they are conditioned upon a desire to influence the social and political aspects of the problem. That was a difficult statement to make; it will be more difficult to prove. But what I am trying to say is, that

we have now got things so cluttered up with sophisticated, elevated and evaluated jargon involved in the economic analysis of public projects that we can no longer use any common, ordinary horsesense. We have become so preoccupied with fiscal refinements that we can't properly or adequately evaluate human factors and social factors affecting a better life and a greater opportunity in the present; and, secondly, for the future.

Now what I have said about public projects in general applies particularly to public projects in the water resource development field. Compared to projects for highways, or schools, for example, water resource projects are more remote from the people they affect. Practically everyone drives an automobile now and nearly every family has children. If a highway develops potholes or if the accident rate rises it is fairly easy to show the automobile driver, who incidentally is a voter, of the need for a new highway, and if the schools are put on a double-shift basis it does not take much eloquence to convince the parents that more classrooms are needed. Water projects are a little bit different. It is much more difficult, and that's putting it mildly, to get the average citizen concerned about the dangers of salinity intrusion into fresh water acquifers and it is difficult to dramatize the problem of what we must do now to make water run out of a tap 20 or 25 years hence. All public projects must be carried into execution over opposition from four different sources. First, there is an intelligent and informed opposition which questions the wisdom of the solution and proposes reasonable alternatives. Second, there is an opposition, very vocal, from those whose own personal interests are adversely affected by the public interests involved in the proposed project. Third, there is an opposition which stems from the general apathy of the ignorant portions of the public toward anything outside of their own immediate concern, and fourth, and by far the most dangerous opposition is from the "let's don't do nothing" boys. These are sources of opposition to every public project, but the comparative remoteness of water resources projects as compared to highways and schools greatly increases the effectiveness of the opposition from the third and fourth sources. In other words, the opposition due to the apathy of the ignorant public and the reckless opposition of the "let's don't do nothing" boys are much heavier millstones around the neck of a water resources project than around the neck of other types of public projects. That fact of life is a tremendous occupational hazard to the proponent of water resources projects. The opposition we must overcome is often much more unreasonable and much more fanatical than that faced by our colleague who is trying to build public highways.

The Senate Select Committee on Water Resources, the Kerr committee, has just rendered a report, which has become a best seller, showing that the need for water will greatly outstrip our current pace in the development of resources. I don't think any knowledgeable person would challenge that statement and if he was so stupid as to do so it would be very easy to shoot him down. But now let's take a look at the actualities of the situation. In my Division of the Army Engineers which covers the great Southwest, we have what many people consider a progressive and large program in water resource development. Of the 11 similar divisions in the United States I anticipate that the southwestern division will be spending about a fourth of the money appropriated nationwide to the engineers for this water resource work during the next several years. But the program we now have in the works does not come anywhere near providing for the needs that are predicted. Our present program will do only a fair job of protecting the status quo against an expanding population. In my book, however, preserving the status quo is not being progressive, it does not start catching up with the future, it merely backs eventually into the past.

I said earlier that I thought that "laws of economics" were being used not entirely as a tool of analysis but to a great extent as an excuse for inaction. Having stated this indictment I will now amplify on it. In America we have two basic schools of thought: One progressive, one conservative. We don't have true black and white—there are many shades of grey in between. Basically, America is progressive and the average American seeks progress and change but because of our background in the American heritage and because of folk lores stemming from the era of the rugged individualist and of the pioneer who by his own efforts conquered the West we tend to value highly some basic conservative ideas. Among these is our distrust of big Government. We do not like Government interference and we instinctively distrust it and yet, as our life is becoming more and more complex, our Government is becoming bigger and bigger. That is the paradox. Our collective environment, our collective progress, our collective existence demands governmental action; our individual thought, our individual sentiment resists. It follows, I believe, that the more remote a public project is from its immediate effect on the mass of citizens, the more difficult it is for the proponent to overcome this innate distrust or resistance. Certainly it cannot be denied that this facet of American life, this distrust of Government by each of us, offers a very fertile opportunity for opponents of public projects to jump on them with cries of holy glee. Many projects to answer crying needs have been suspended for years because of this type of opposition. I could prove that statement by citing dramatic examples of terrific flood damages which could have been prevented by projects authorized and designed but never built because of violent opposition from the "let's don't do nothing" boys and apathy of the ignorant public.

My indictment on some of our economic rules which we must follow is that these had been adopted more for the real reason to impede expenditures from the Federal budget than to secure a legitimate economic analysis of the project.

I cannot prove that statement but I'll try to show you what I mean. In doing this I may oversimplify a very complex question. For example, let's consider a multipurpose reservoir project which involves flood control, power, water supply and navigation usages. In analyzing this project, it should be a relatively simple process to add up all the costs and then estimate all the benefits and compare them, but when certain economic ground rules result in costs being arbitrarily increased, and prevent counting obvious benefits, it often becomes difficult to come up with a benefit-cost ratio greater than unity. Let's consider one aspect of the estimate of costs. We figure the life of any multipurpose project as 50 years. This means that we amortize the investment over 50 years, adding the totals of initial cost, interest, operation and maintenance and all the other things, divide by 50 and this is the yearly cost. Also, in this 50-year life business, we must assume that all benefits terminate at the end of 50 years. Under this thesis, Texoma, which was built in the 1940's, will cease being an economic asset in the 1990's.

Now, let's contrast this method of thinking with the way the average person buys a house. He finances it over a period of 20 years. At the end of this period, he either owns the house or he may have refinanced it to extend his payment period, reducing his annual payments by this refinancing. But—he does not figure that all benefits from his ownership of the house cease at the end of his financing period. He figures on living in the house after he gets it paid for or, in other words, he anticipates receiving benefits beyond this period of amortization. This logical approach is denied us in analyzing water resource projects.

Now let's consider some of the benefit computations. Broadly speaking, the figure which can be used as the benefits for flood control purposes must be based upon the damage the project will prevent to existing—and I emphasize existing—property. Yet, every time we defend an area against devastating floods we provide a magnet for accelerated development. Yet—and again broadly speaking, we cannot include benefits for protecting future improvements attracted by the project. Stream flow regulation is another aspect in which our ground rules for assessing benefits are unduly restrictive. With the increase of population and urbanization, low flow regulation as prevention of pollution is becoming increasingly important. Yet the only benefit we can compute for low flow regulation of releases from one of our multi-purpose reservoirs is for the specific purpose of navigation. If the reservoir contributes to a navigation improvement downstream we can assess a navigation benefit. If it has no navigation aspects, but if it does regulate low flows to flush filth away from an urban area, we cannot claim benefits. As an illustration of this use, I can cite the situation in New Orleans several years ago, during a period of extreme drought. The flow down the Mississippi River had been reduced to the point that salt intrusion from the gulf 50 miles away was beginning to adversely affect New Orleans' water supply. This problem was solved and the salt intrusion was stopped by making controlled releases of fresh water from the Fort Peck Reservoir in northern Montana on the Missouri River. That was a great benefit for the people in New Orleans and yet under our economic ground rules it could not be counted as an asset for Fort Peck.

The situation on municipal and industrial water supply in multi-purpose reservoirs is much brighter due to the almost single-handed efforts of Senator KERR in getting this question straightened out and getting legislation passed in the Flood Control Act of 1958. But, when we get into the question of whether to install hydroelectric power the picture again gets most cloudy. The ground rules for economic analysis of power are so complicated that I know I don't understand them and I doubt very much if many others do. America now needs power and will need more power. It seems to me that if we get even close to a justifiable project, we should give it the benefit of the doubt and include the power installation.

At every one of these water resources projects, recreation has become big business. Someone has said we are now developing into a race of "aqua maniacs"; it is a fair statement that recreation is changing some of our habits of living. Yet—it is only recently that we have been able to consider recreation as a beneficial purpose of a project. And even now our ground rules for putting an entry on the asset side of the ledger are far from liberal. We are now building two reservoirs, Eufaula and Keystone, within commuting distance of Oklahoma City. I'll make a sizable bet that even before those reservoirs are completed, the sale of outboard motors, boats, trailers, fishing rods, lures and all the other gadgets that go along with modern recreation are going to reach astronomical heights in Oklahome City, and after they are completed, a sizable part of the population is going to take off by plane, by car and maybe even by foot as often as he can for those reservoirs. Yet, from an "economic analysis"

viewpoint, neither Eufaula nor Keystone have any recreational benefits.

So much for my detailing of the indictment of these ground rules as not presenting a true analysis. And now I would like to answer the question—"So what?" I think the rules should be modified and liberalized.

This opinion is undoubtedly shared by everybody involved in the formulation and defense of these water resource projects and is understandable. Frankly, our present restrictions on the analysis of these projects make any proponent extremely vulnerable to criticism—almost as vulnerable as a duck on the opening day of the season. It would certainly be a relief to feel we were in a protected sanctuary for a change. But much more important than any effect on our ruffled sensibilities, these restrictions are an offense against you. You people are the intelligent public, you eventually decide whether or not these public projects ever reach the execution stage. I submit that it is an offense against your judgment to present to you a picture which is distorted economically on the conservative side. Those of us who are knowledgeable in this water problem know that we must work at a fast pace to keep abreast of the present and that we are really going to have to raise our sights to advance into the future. In view of the tremendous changes we have seen in the last decade, any crystal ball, no matter how cloudy, will picture even more dramatic changes in the near future. To be overly liberal in developing our natural resources might be temporarily extravagant. But to be overly conservative now might be permanently tragic.

Distinguished, Retired Methodist Minister Calls for Support of President Kennedy's Program

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 11, 1961

Mr. EVINS. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD a letter received from the Reverend W. M. Cook, a distinguished, retired minister of Tennessee, a man advanced in years who has seen a lot of life and knows human nature and possesses wisdom. He has written to me an unusually frank and candid letter which I believe my colleagues will find of interest.

The letter follows:

SANTA FE, TENN., *April 11, 1961.*

DEAR JOE: I am Dr. Bill Cook's father and I knew your father well when I was on the Liberty Circuit of the Methodist Church, 1910–14. I am now a retired preacher, but I have not retired from my interest and support politically of what I believe in to advance the welfare of the common man, the farmer, the wage earner, public school education and the medical care of our aged, whose number have increased until the care of them is a national problem and a national responsibility. I know how hard pressed your two bodies of Congress are to bow to the demands of pressure groups. It takes statesmanship and courage of the nth degree to withstand selfish interests that are there to advance their own course—for example, the American Medical Association against care for the aged through the program tied to social security, which is the most sensible and workable plan advanced.

Doctors or rather the American Medical Association that dominates the entire medical fraternity down to the individual doctor and all our hospitals largely built by Federal support. Congress can fix the wages paid to workers but it must keep hands off of what doctors charge for their services, and insurance companies are pressing to advance their medical care policies, but I have not seen a policy issued that did not contain a clause giving the company the privilege to cancel it. Yesterday I was in the Maury County Hospital to visit an aged person, 80 years old, who told me that her company had canceled her policy.

Well, Joe, you may not know me but I am interested in you. Support President Kennedy, he has the goods.

Sincerely yours,

W. M. COOK.

Both New England and West Virginia Conditions Are Problems of the Nation and All Must Work in Unison for Their Solution, Senator Randolph Counsels in Letter to Boston Newspaper Editor

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Thursday, April 13, 1961

Mr. RANDOLPH. Mr. President, it was my privilege to have responded recently to an editorial in the Boston (Mass.) Herald which was entitled, "New England by Courtesy of West Virginia."

The editorial was printed in the CONGRESSIONAL RECORD of March 7, 1961, on motion of the distinguished senior Senator from Massachusetts [Mr. SALTONSTALL]. It had been inspired by an order issued by Secretary of the Interior Udall authorizing an increase of 100,000 barrels of foreign residual oil to be imported into the United States each day, and by certain expressed reactions to that order.

The editor of the Herald was sufficiently considerate of my right to make reply that he published in the March 26 issue of that important New England daily newspaper a substantial portion of the text of my March 10, 1961, letter in reply to his February 22, 1961, editorial.

Mr. President, in order to clarify my position and that of many of my fellow West Virginians, I ask unanimous consent to have printed in the Appendix of the RECORD, the letter to which I have made reference.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

U.S. SENATE,
Washington, D.C., March 10, 1961.

EDITOR, THE BOSTON HERALD,
Boston, Mass.

DEAR SIR: On March 7, 1961, my esteemed colleague, Senator LEVERETT SALTONSTALL, of Massachusetts, had printed in the CONGRESSIONAL RECORD, an editorial from the Boston Herald of February 22, 1961, entitled "New England by Courtesy of West Virginia."

That editorial was inspired by an order issued by Secretary of the Interior Stewart Udall authorizing an increase of 100,000 barrels of foreign residual oil to be imported into the United States each day, and by certain reaction to the order.

I deplore the provincialism and so-called intersectional rivalries which seem to have been engendered by the whole question of importation of residual oil. It is especially disheartening when the discord principally involves two regions of the United States—New England and the Appalachians—which are suffering heavily from persistent and chronic labor surplus.

Writing as a West Virginian and as a U.S. Senator representing that State, I must inform you that I do not concur with the sentence of your editorial which reads: "It seems that what happens to New England is of small concern to West Virginia."

I state with sincerity the belief that the problems of New England and those of West Virginia are problems of the Nation and that we must all work in unison for their solution. In support of this belief, I cite two examples:

In speaking today in the Senate as an advocate of the pending area redevelopment bill, I stated that I concur with the anti-pirating provision of the measure and added:

"Our concern for the proposed legislation is motivated by no desire to benefit the State of West Virginia by the losses of another State or region. Our experience with the ravages of unemployment had been too long and too severe for us to desire any part in extending the problem to others. And I emphatically add, in view of some of the recent unfortunate differences of opinion that have arisen between my section and another, that the assurances I have just expressed are offered with particualr reference to my honored colleagues from New England.

"As Secretary of Commerce Hodges said when he was Governor of North Carolina, 'the country is growing. We want whatever part we deserve of the expansions that you are going to have in this growing economy.'"

Then, too, ever since my election to the Senate in 1958, I have been a vigorous proponent of a national fuels policy—and I emphasize the world "national." It is my view that before a fuels policy national in scope and application can be formulated, there must be a thorough study made of our fuels and energy resources. Accordingly, I have been the principal sponsor of resolutions to create a congressional study committee. A number of Members of the U.S. House of Representatievs have shared these views, as have a majority of the Members of the U.S. Senate.

A few days ago, the House Committee on Rules rejected a resolution for the creation of a joint committee of the Congress, similar to one I had introduced in the Senate on January 9, 1961, with 54 Senators as cosponsors. But the House Rules Committee did report favorably a House resolution to create a House Select Committee on a National Fuels Study.

On March 2, I introduced in the Senate a new resolution which would create a special committee to be known as the Senate Special Committee on a National Fuels Study. Today, 63 Senators of both Parties and from all parts of the United States, are joined as cosponsors, 7 from New England.

That same day, in remarks in the Senate, I said:

"The House resolution does not embrace language which, I am informed, the 10 Senators from New England States, along with the senior Senator from New York [Mr. JAVITS] and junior Senator from Wisconsin [Mr. PROXMIRE], consider to be essential to a national fuels study agenda satisfactory to them. Accordingly, I have introduced the new Senate resolution."

And I stated the following to be a primary reason why I submitted the new resolution:

"A comprehensive national fuels study should embrace the so-called 'New England amendments,' proposed in the Senate by the senior Senator from Rhode Island [Mr. PASTORE] on February 9, 1961, for himself, the nine other Senators of both parties from New England States, the Senator from New York, and the Senator from Wisconsin.

"The new Senate resolution I introduced embraces in full the language proposed by Senator PASTORE and his cosponsors, as properly should be the case. * * * With the so-called 'New England amendments' included, the agenda for the proposed committee is clearly in the national interest and definitely would take into account considerations relating to fuels and energy resource availability, production, and marketing, as well as consumer needs and interests.

"A thorough, factual, equitable, and impartial study of the Nation's fuel and energy resources is essential—and I underscore the admonition that such a study be impartial. I have never entertained any other concept of the mission of a committee entrusted with the responsibility to make a national fuels study."

I believe it is essential that we bring attention to bear upon all of the fuels and energy resource problems of all regions of the United States—including those problems which relate to the consumers.

We must study all fuels and evolve a policy embracing all of them, and of paramount concern must be the question of national defense posture and national security. This aspect is too often overlooked as we engage in day-by-day competitive commercial intercourse.

In the approach to every element of these grave problems, I certainly believe New England interests should be accorded courteous, thorough, and understanding consideration. I would hope that the same would be applied to the Appalachian region, including my home State of West Virginia.

I am optimistic that mutual solutions can be found, and in this connection I answer a question posed by your editorial.

My response is that New England should not be injured to help West Virginia.

But I add that neither should West Virginia be injured to help New England.

All are part of the Union, and in an economically healthy union there is strength.

Respectfully,

JENNINGS RANDOLPH,
U.S. Senator from West Virginia.

Migrant Farm Labor Problems and "Harvest of Shame"—VII

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 11, 1961

Mr. ROGERS of Florida. Mr. Speaker, this is the seventh in a series of articles presented in the public interest by the Palm Beach Post-Times to show the Members some of the progress being made in Florida to solve problems relating to migrant farm labor which were left out of the television presentation "Harvest of Shame." The omissions of all that has been, and is being, done in this field did a great injustice to the Floridians who have given their time and efforts to these problems over the years. It is hoped that by reading these articles and the ones to follow the Members and public will have a better understanding of this important matter:

[From the Palm Beach Post, Feb. 3, 1961]

LEGISLATION TO FORCE MIGRANTS FROM FARM LABOR MARKETS

"They do not have the strength to influence legislation. Perhaps we do."—Harvest of Shame.

Passage by Congress of legislation to regulate migrant labor conditions may mean the loss of work for many migrants.

That's the prediction of Walter Kautz, president of the Everglades Farm Bureau.

In a message to members of his group, Kautz said:

"Should the program 'Harvest of Shame' have the effect desired by its advocates, and farm labor legislation is forced down our necks, there is but one answer for survival—further mechanization of our farms to eliminate the need for as much hand labor as possible."

This will be necessary, Kautz said, because of the financial conditions of many farmers.

"We're not opposed to people being able to better their living conditions; we are opposed to legislation that will put the finishing touches to the cost-price squeeze that already has put many farmers out of business," he said.

The farm family unit already has disintegrated in many areas because of the cost-price squeeze, the president said.

Kautz said proper education—not legislation—is the answer to the troubles faced by migrant laborers.

"No one is opposed to better living conditions for farmworkers, migrating or otherwise," he said. "The proper answer isn't legislation but education."

"'No one is tied to farmwork. As an individual's level of education rises, there is a natural tendency for him to want to better his living conditions, and along with this, his ability to do so increases as he learns. That has been the American way from the very beginning."

Protection of the Freedoms We Cherish

EXTENSION OF REMARKS
OF
HON. VANCE HARTKE
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, April 13, 1961

Mr. HARTKE. Madam President, Indiana's dynamic young Governor, Matthew E. Welsh, warned last week of the dangers to our freedom which exist in the manner in which we protect the very freedoms we cherish. Speaking to the Outstanding Young Man of the Year banquet of the Vincennes Junior Chamber of Commerce in Vincennes, Ind., Governor Welsh identified and described dangerous situations which are timely for our consideration. I ask unanimous consent that excerpts from the Governor's speech be printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

EXCERPTS FROM AN ADDRESS TO BE DELIVERED BY GOV. MATTHEW E. WELSH AT THE OUTSTANDING MAN OF THE YEAR AWARDS BANQUET, SPONSORED BY THE VINCENNES JUNIOR CHAMBER OF COMMERCE AT VINCENNES UNIVERSITY, AT 7 P.M., TUESDAY, APRIL 4, 1961

A wise philosopher once said, "Those who do not remember the past are condemned to relive it." These words constitute a warning to all of us today, for there are forces and ideas abroad, and at home, that would have us trade our freedom for a sense of internal security, and our liberty for peace overseas.

Communism has taken over nation after nation that failed to recognize the danger of the Red conspiracy against freedom in time to protect itself. Apathy and ignorance proved the downfall of the now captive Communist states, far more than the threat of war from the outside or revolution from within.

This is a part of the pattern of the past we should remember or we too will be condemned to relive it.

But other nations fell under regimes equally destructive of individual freedom and equally cruel and barbaric, at least partially under the guise of protecting themselves from communism. Freedom was lost in the name of freedom, for the people did not recognize that the ends can never justify the means.

They failed to realize they could not sacrifice individual freedom to protect it, that they could not substitute fear and terror for justice in the name of security. They forgot that public discussion and freedom of speech cannot be replaced with a forced conformity, and still keep their own freedom.

There are those among us today who preach the dangerous doctrine that any means are just and any are proper that are directed at those they suspect of being Communists. In this too is the trap that has destroyed nations.

America must remain, as it is now, aware of the danger of communism as the major force today threatening the free world and the way of life Americans hold dear.

It is not the name we oppose, but it is the vicious, treacherous conspiracy perpetrated by Communists. It isn't the word we repudiate but what it stands for.

We cannot permit ourselves to become irrational zealots seeing our neighbors as Communists, treating differences of opinion as evidence of treason and conspiracy, and falling victim to fear, distrust, and bigotry that is just as destructive to American freedom.

The sowing of hate, the spreading of distrust, or the setting of group against group within our community or State is also a denial of true freedom and does the very damage to our American way of life that the Communists, for all their efforts, have not been able to achieve.

Those who set themselves as self-appointed judges and juries over their fellow men, those who would deny freedom of speech, freedom of religion, freedom to think and write are the enemies of freedom, whether they are Communists or call themselves something else.

Those who use the accusation of Communist against others with whom they disagree, those who seek to convince by threat and by slander instead of facts and persuasion, are dangerous to freedom and democracy.

America will strengthen its basic rights and freedom when we emphasize what we are for, more than what we are against. We will become stronger when we restore to a greater measure the right to disagree, the

right to discuss and argue, the right to advocate or be different, without the threat of slander.

Freedom is not an anemic and weak principle that must cringe in fear when put to the test. In freedom, in liberty, there is strength, not weakness; pride, not shame; and victory, not defeat. As we struggle against the major threat to freedom in the world, the godless, materialistic, Communist conspiracy, let us not fall victim to fear, suspicion, and denial of real freedom among ourselves.

For if we do, we will have lost the very rights we thought we were defending. If we lose freedom, if we lose liberty, we have lost all. Whether we lose it to a Communist conspiracy directed from abroad, or a conspiracy against freedom at home, the result is the same.

Freedom must be defended constantly from attacks from whatever source they may come.

Congressman Charles O. Porter Points Way to Congress in Latin America

EXTENSION OF REMARKS

OF

HON. MAURINE B. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, April 13, 1961

Mrs. NEUBERGER. Mr. President, with the growing interest and importance of Latin America, I would like to call attention to an excellent recent book on this subject by former Representative Charles O. Porter of Oregon. His book, entitled "The Struggle for Democracy in Latin America," published by MacMillan and coauthored by Robert J. Alexander, has received many prominent and favorable reviews.

The leading article in the March 25 Saturday Review "Challenge In Latin America," describes Representative Porter's book as "excellent within its field and scope," and commends it for its earnestness of purpose, the objective, scientific outlook as well as its discipline in utterance and balance in judgment. This book has also been given favorable reviews by Malcolm Bauer, the able associate editor of the Oregonian, the largest daily newspaper in my State, and by Karl E. Meyer, an editorial writer for the Washington Post, and a recognized authority on Latin America.

I recommend Mr. Porter's book to my colleagues in the Congress, as well as to the general public, and I know that it will stimulate earnest thinking on this vitally important area of the world.

Representative Porter's book is in keeping with the pledge made by President Kennedy in his inaugural message when the President declared:

To our sister republics south of our border, we offer a special pledge—to convert our good words into good deeds, in a new alliance for progress, to assist free men and free governments in casting off the chains of poverty. But this peaceful revolution of hope cannot become the prey of hostile powers. Let all our neighbors know that we shall join with them to oppose aggression or subversion anywhere in the Americas. And let every other power know that this hemisphere intends to remain the master of its own house.

Mr. President, I believe that Representative Porter's book will help light the beacon for real progress in Latin America, and I ask unanimous consent to place in the Appendix of the RECORD the reviews that I have mentioned from the Oregonian, the Washington Post and Times Herald, and the Saturday Review.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Sunday Oregonian, Apr. 2, 1961]

PORTER, COLLABORATOR WRITE OFF CASTRO AS BETRAYER

(By Malcolm Bauer)

Ex-Representative Charles O. Porter, who once looked upon Fidel Castro as a revolutionary hero, has confirmed his thorough disenchantment. The confirmation is in "The Struggle for Democracy in Latin America," (Macmillan, $4.50), in which Mr. Porter collaborated with Robert J. Alexander, an experienced writer on Latin American affairs.

Castro, the Porter-Alexander team charges, is "blowing out Cuba's brains" and has "probably passed the point of no return with respect to his tie-in with the Russian Communists." He is "the man who betrayed a great revolution," and they foresee for him the same fate as that which caught up with the man he overthrew, Batista.

But the burden of this slim book is criticism not of Castro but of U.S. policy in Latin America. The United States, the authors say, has been led by military and business interests to give unwarranted support to Latin American dictatorships, thereby earning the distrust of democratic elements.

"If the situation continues to deteriorate for many more years as it has in the last few," they warn, "it will not be long before any Latin American political leader who dares publicly to express friendship for the United States will be generally regarded by his fellow citizens much as the members of the Petain regime in France were regarded by most patriotic Frenchmen during World War II."

The Porter-Alexander prescription is threefold: "An abandonment of the attitude of taking Latin America for granted; a general position favoring democracy against dictatorship in the New World; and a program of real economic cooperation for the development of the Latin American nations."

Although some readers will believe the conclusions drawn are, in some cases, too extreme, this is a competent journalistic review of the principle events of the past few decades in Latin American affairs, with special emphasis on relationships between the United States and the lands south of the border. There is just one omission: There is no mention of Mr. Porter's considerable activity in United States-Latin American affairs during his service as a Congressman from Oregon.

[From the Washington Post and Times Herald, Mar. 26, 1961]

"THE STRUCTURE FOR DEMOCRACY IN LATIN AMERICA," BY CHARLES O. PORTER AND ROBERT J. ALEXANDER (MACMILLAN, 215 PAGES, $4.50)

(By Karl E. Meyer)

It is not so much our ignorance as lack of interest that irritates Latin Americans in their dealings with the United States. Surely it is only a mild hyperbole to say that until recently even well-informed North Americans were more curious about the Egypt of the early Pharaohs than about events to the south.

Doubtless there have been many reasons for this massive indifference—the feeling that Latin America was a sleepy sideshow; the deadly cliches of Pan-Americanism, so freighted with complacency; the generally dreadful newspaper coverage of everything except earthquakes.

But I would venture that a further reason has been the lack of first-rate, nonscholarly books about the region. The last country-by-country survey with any style or spice was Gunther's "Inside Latin America"—and that was published in 1940.

The present volume is a commendable attempt to provide a primer for the layman. It is both broad in scope and straightforward, if a bit wooden, in style, and it has the added merit of useful surveys of political trends in 10 republics.

In viewpoint, it is what we would expect from former Representative Porter and Robert Alexander, a Rutgers scholar, two men known for their liberal convictions. The authors have some caustic and for the most part deserved criticism of past U.S. policy blunders: the medals for dictators, excessive identification with U.S. business interests and the inadequate, scattershot economic aid programs of years past.

But their central criticism is that in the absence of a real overall policy for Latin America, the State Department has been vulnerable to powerful pressure groups which have put this country into unwise and inconsistent positions.

Despite President Kennedy's fresh start, along lines that the authors would probably applaud, this basic problem remains. Even since the advent of Fidel Castro, there is nothing like an informed popular consensus on what needs to be done in Latin America. It is as if the Marshall plan had been proposed in a country that was only dimly aware that Europe existed.

For this reason, one hopes that more books like the present volume will be written, read and debated by those politicians and editors whose interest in Latin America is so lamentably underdeveloped.

[From the Saturday Review, Mar. 25, 1961]

CHALLENGE IN LATIN AMERICA

(By Salvador de Madariaga)

For a person alive to the dangerous state of world affairs, and therefore to the importance of preserving friendship and respect for the United States, a trip through Latin America is a strange experience. Wherever he goes he will be struck by a widespread and intense anti-American feeling, particularly among students and professors as well as the professional classes. It seems to me that the international situation is the very worst for such a situation to develop at the very doorstep of the United States; for we are witnessing a great movement toward political liberty and national independence on two other continents in circumstances which by no stretch of imagination can be said to contribute to a stable order. At such a time, the world can ill afford to set a third continent in turmoil.

We are everywhere seeing the forms of liberal democracy jeopardized. It is being twisted and tortured by foreign oppression in Communist-dominated countries, as in Eastern Europe, or by a homegrown form of oppression, as in Yugoslavia or in Spain; it is being exposed to the hazards of inexperience and of a more vigorous than intelligent nationalism, as in a number of newborn Asian and African nations. Disorder and confusion are the inevitable dust clouds in the wake of such agitated events, and disorder and confusion are as favorable to communism as they are injurious to liberal democracy.

The affairs of men are ruled by a kind of law of sociological gravity that forces them to fall toward chaos if not held at a certain level of order by an intelligent hand. This intelligent hand is what we call government.

It is plain that in a number of cases too high for the peace of mind of the world the hand that keeps the affairs of men from falling into chaos is neither strong nor intelligent enough to fulfill its task. It follows that in wide areas of the world, circumstances are being created that favor communism, since communism thrives on disorder and confusion while liberal democracy requires calm and the rule of the law.

Such being the general picture, we must look on the considerable progress made by communism in Latin America as a serious threat to our civilization, particularly as such progress is observable mostly among the intellectual classes. In the United States, one gathers the impression tha he intellectual is an oddity, a freak, at times a joke. His opinions are heard with polite deference and soon forgotten. As for his chances of a political career, they simply do not exist. A flavor of intellectuality has barred Adlai Stevenson from access to the White House, and one wonders whether Mr. Kennedy's success may not be due to the keen intelligence he devoted to hide his intellectuality (I am not saying "his intelligence") from his suspicious voters. The situation may be evolving. To be a Harvard professor is no longer a disqualification for becoming a member of the Presidential Cabinet; but to have published a book of poems might still be so.

In Latin America, however, a man may be writing poetry on Friday and become President or Minister of Foreign Affairs the following Sunday. Nor should one suppose that this phenomenon is limited to that form of power which derives from actual political functions. It cannot be doubted, for instance, that the high reputation which Pablo Neruda enjoys as a poet considerably enhances his power over Chilean public opinion as a Communist leader.

No more grievous mistake could therefore be made by the public opinion of the United States than to shrug its shoulders at the pro-Soviet and anti-American wave that is sweeping intellectual circles in Latin America. From the ranks of these pink professors, poets, doctors, and lawyers, the men will be recruited who will actually govern Latin America not merely 10 years hence, but maybe next year, maybe next month. The issue is immediate and urgent; and we must waste no time in facing it.

Two recently published books are relevant to what I am saying. One is entitled "The Struggle for Democracy in Latin America" (Macmillan, $4.50, 215 pp.), and is written by Charles Q. Porter and Robert J. Alexander, two names every well-informed Latin American has learned to trust and respect. The other, "Social Change in Latin America Today: Its Implications for United States Policy" (Carper, $5, 345 pages), is a collection of, six essays by as many distinguished American anthropologists. Each of these books is excellent within its field and scope. Both are examples of the best qualities one expects of serious American works: the bivalent knowledge, both of books and of men; the earnestness of purpose; the objective, scientific outlook; the discipline in utterance; the balance in judgment; the cautiousness in estimating present trends and future developments.

They fortunately differ in their approaches. The Porter-Alexander book is mainly political; the other mainly sociological and anthropological. The conclusions reached by both concerning American policy are, however, practically identical. There has been for years in Washington a regrettable lack of realization of the fundamentals of the situation south of the Mexican frontier.

The two chief failings of American policy, both books tell us, and rightly so, are too much subservience to American private—as distinct from public—interests, and an undeniable tendency to back dictatorships. Much more might perhaps be said on this score, but we should be grateful to the authors of these two books for having said as much. The 11th hour is striking and Mr. Kennedy may have to pack into the 12th much of the good will and intelligence that have been sadly missed for far too long in this field.

Despite the merits of the books, however, one may make a few critical observations. Representative Porter and Professor Alexander may be doing less than justice to the military when they write: "The armed forces (in Latin America) are probably the single, most serious impediment to the development of democracy." They themselves witness to the contrary in relating the fall of dictatorial regimes in Colombia and in Honduras. My own impression is that, in Argentina and Chile at any rate, the armed forces are today (and I stress the word) an efficient brake against any totalitarian stampede. I hope the authors appreciate my objectivity as a Spanish exile whose country is held gagged and chained by what is in fact a military totalitarian dictatorship.

May I also suggest that the Porter-Alexander "definition" of democracy is rather a description than a definition. "Democracy, as we understand it," they write, "consists basically of two things: the right of the majority of the adult population to choose their leaders; and the right of the minority to continue to function legally, to attempt to become a majority." That is a description that I of course accept. But as a definition I prefer one I once heard from the Belgian Socialist Senator de Brouckère: "Government by public opinion."

I do not put forward this alternative out of sheer pedantry, but because it leads me to my third line of criticism, this time covering both works. I refer to their somewhat negative attitude toward Spain and Spanish culture and history. It is too readily assumed that because the Latin American peoples were not ruled in the viceregal days by means of parliaments, there was no democracy then in the King of Spain's American realms. But a glance at the documents shows that the "realms beyond the seas" were ruled by public opinion to a considerable extent, and that a viceroy who tried to govern in defiance of public opinion risked riots and possibly his life.

I mention this fact because, to my deep regret, I find that both books repeat pseudo-facts or half facts which I have tried elsewhere to set right with the help of firsthand documents and, at times, of the works of first-rate American scholars in the field of Spain's history in America, such as Professor Hamilton for financial, and Prof. Irving Leonard for cultural affairs. One still has to read, in the Porter-Alexander book, that "Spain, Portugal, and France never forgot for one moment that the purpose of the colonies was to provide wealth for the mother country" (and similar statements appear in "Social Change"), when the facts are far from supporting such sweeping statements at all. There were no Spanish "colonies" in the New World, but kingdoms with autonomous governments, and the balance between the interests of the European and of the American kingdoms worked at times one way and at times another. How else could Latin America have remained, until the economically disastrous wars of emancipation, a rich congeries of communities whose common currency, solid gold pesos, was sought all over the earth as the world trade currency?

Migrant Farm Labor Problems and "Harvest of Shame"—VIII

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 11, 1961

Mr. ROGERS of Florida. Mr. Speaker, this is the eighth in a series of articles presented in the public interest by the Palm Beach Post-Times to show the Members some of the progress being made in Florida to solve problems relating to migrant farm labor which were left out of the television presentation "Harvest of Shame." The omission of all that has been, and is being done in this field did a great injustice to the Floridians who have given their time and efforts to these problems over the years. It is hoped that by reading these articles and the ones to follow the Members and public will have a better understanding of this important matter:

[From the Palm Beach Post, Feb. 3, 1961]

SANITARY EDUCATION; CAMPS CLEAN, HEALTHY

"In New Jersey, a few miles from Princeton, is this labor camp. There are two water taps and two outhouses. Families live in one room, usually in one bed."—Harvest of Shame.

Palm Beach County maintains a ceaseless war to protect the health of its migrant workers by keeping camp sanitary.

Joseph Alvarez, who heads the migrant sanitation program for the board of health, has the assistance of one other man.

Their biggest problem? The education of migrants to understand the value of keeping homes, persons, and camps clean.

"Many of the migrants lack a sense of responsibility, and the problems at some camps are not necessarily the fault of the camp owners, although they are held responsible," Alvarez said.

Knowing they are here only temporarily, some migrants are careless about throwing garbage and trash around their housing, the sanitation officer said.

"We are concerned with poor environmental health conditions wherever they are found—not just in the migrant camps," Alvarez said. "But our job would be easier if the migrants would help."

There have been cases, he said, of migrants tearing out plumbing equipment and owners knowing nothing about it until it was found by the sanitarians.

The sanitarians try to teach the migrants it will be best for them to look after their own welfare rather than depend on the camp operators and sanitarians, Alvarez said.

The county now has 25 labor camps licensed to operate, Alvarez said, and other housing is under supervision of the Hotel and Restaurant Commission although it must comply with State laws regarding health.

The county has been aware of its problems, Alvarez said, and has set up a program during the last 3 years to evaluate its needs and correct unsatisfactory conditions.

All housing operators now are required to comply with the minimum health rules, he said, including provision for sewerage.

What happens if operators fail to meet regulations?

They are not licensed to operate.

The State places the burden of correcting conditions on the housing operator.

Investigators have found the same defects occurring repeatedly in the same or similar quarters. In each instance, the violation is reported to the owner or operator for correction.

However, both the occupants and the persons held responsible are interviewed in such cases.

State standards permit two to four men to be assigned to a room.

The facilities, however, must provide a central toilet, bath, and laundry. Central messhalls regularly are inspected.

The State reports the area is witnessing a gradual change in new construction from the roominghouse with one- and two-room units, central bath and toilet facilities to buildings with private toilets and baths in the unit.

"It has been observed that the builder who considers the comfort and convenience of his prospective tenants beyond the regulations is more often rewarded with fewer maintenance problems," the State board reported in "Migrant Project 1959."

Minnesota 4–H Radio Speaking Contest

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, April 13, 1961

Mr. HUMPHREY. Mr. President, I ask unanimous consent that the two award-winning talks given by Phillip S. Schneiderman and Neal Nordeling at the Minnesota State 4–H radio speaking contest this year be printed in the Appendix of the RECORD. I commend these excellent speeches to the attention of my colleagues. The contestants Phillip Schneiderman and Neal Nordeling are to be congratulated.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

NINETEEN HUNDRED AND SIXTY-ONE RADIO SPEAKING CONTEST: HOW I CAN HELP PROMOTE WORLD PEACE

(By Phillip Schneiderman, West St. Louis County)

Victor Hugo once said, "There is a force greater than the force of armies. It is the force of an idea that has come into its time." The idea of peace has, after many centuries, come into its time, not as a desired ideal, but as an absolute necessity. I firmly believe this generation must lead the way in creating a structure of peace, built, not overnight, but brick by brick, testing each brick as we climb upward, and at last emerging, far removed from the dark shadows of the destructive forces now terrorizing the world.

My first brick would be laid in the home because the pattern of living with fellow humans must begin in childhood. Teamwork is a concept that must first be learned in the home. In the world of civic affairs men are finding that great accomplishments can come only through united effort. In a world where by virtue of the airplane no nation is more than a few hours' distance from any other, the people of the earth must learn to work together as a cooperative team. By international teamwork we can do much to eliminate man's enemies—hunger, disease, famine, and war. So, the parent who teaches teamwork is doing more than raising a well-adjusted child. He is helping to instill principles which will aid the child in being an intelligent citizen. Political strength, economic growth, and the security of the Nation demand personal development. A citizen who is underdeveloped physically, mentally, and morally is not an energizer, but a burden on society. Good education is a form of national defense. If I use my educational opportunities wisely, I will be taking the first steps toward becoming a developed citizen, and energizer.

My second brick would be a greatly expanded student exchange program. Many more foreign students should see that America is a country living its ideals instead of talking about them. I should like to be a living example of these ideals, and would welcome the opportunity to show a foreign student what my life is like.

A German boy observed in the Reader's Digest article "Let's Trade Teen-Age Citizens." "We usually think of America in terms of skyscrapers, Cadillacs, and gangsters. You can't realize how wrong you are until you see for yourself."

If you and I help, numerous foreign students will see a society in which men and women, families and communities, are realizing the good life—not in slogans, statistics, or propaganda, but actually in everyday living. World understanding is everybody's job and the best chance of obtaining it is through person-to-person association.

To make my ideals ring true, I must be more than aware of the prejudice I meet every day. I must try to gain personal understanding of minority groups and divergent opinions found in my own community. As President Kennedy has said, "We must practice what we preach in the Declaration of Independence, Constitution, and Bill of Rights. The world is watching."

My next brick is based on an observation often made by Henry Cabot Lodge, Jr. "People will not struggle for freedom unless they at least have enough physical strength to their fists up." Therefore, when we help people get rid of sickness, irrigate the deserts, drain the swamps, and increase the food supply, we are taking constructive actions for peace.

Because in the United States we live in a land of plenty, it is hard to visualize conditions elsewhere. So, the third brick is fighting famine, illiteracy, and poverty, and thus, indirectly, communism, which as Castro has said, "travels on empty bellies."

The tide of revolution, by the Castro revolt in Cuba, is part of a worldwide pattern. Because the doctrine of revolutionaries is to fight evil with evil, tyranny with war, fire with fire, and injustice with bloodshed, we must share not only economic and technical knowledge with South America, Asia, and Africa, but intellectual, moral, and spiritual knowledge. We must come together on a deeper basis than the exchange of goods and money To help in this development I can contribute to the Care program which is trying to improve the world's food supply. I can contribute to Radio Free Europe which is trying to win the minds of the people. I can contribute my time and effort as I am doing today to awaken my fellow citizens to the need for sharing rather than giving without thought. I can help further the idea that my privileges and rights are gained honestly only by trying to assume my responsibilities.

All nations now share the same vulnerability to surprise attack. My last brick would be to keep our Nation strong. We must realize that our private lives are interwoven with national interests. We would lose our privileges and liberties—many of us our lives—if this country, denied the strength it needs, lost the race with communism. We must remember that in a democracy sovereignty resides in the individual. You and I are America. You and I must be willing to subordinate our interests to national interests. Our efforts are the mortar that will cement these bricks.

The idea, the force, the direction for Americans in 1961 is found in St. Luke 12: 48—"For unto whomsover much is given, of him shall much be required."

NINETEEN HUNDRED AND SIXTY-ONE RADIO SPEAKING CONTEST: HOW I CAN HELP PROMOTE WORLD PEACE

(By Neal Nordling, Kittson County)

We live in a divided world—divided between East and West, between democracies and dictatorships, divided also between the well fed and the starving, between the educated and the illiterate. But one overriding hope unites all peoples. That is the hope of world peace.

In stunning one-two fashion, science plunged through two of nature's most challenging barriers. First the atom—in 1945 a new and terrifying instrument of death—was harnessed and put to work. Second, the inexorable pull of gravity was overcome, the conquest of space was launched. It began to seem quite plausible that man would himself soon ride free of his planet's gravity. It is unfortunate that despite the dawn of the space age and atomic age, we still have the new frontier of "inner space" to conquer. This is the inner space of our minds and this is the space that leads to world peace and security.

In discussing the conquest of inner space, I would like to consider the following: (1) Self-education, (2) education of our world at large, (3) food for peace, (4) student exchange, and (5) individual understanding and tolerance.

The first step on this ladder toward conquering this "inner space" would be to properly inform ourselves. Former President Eisenhower tells us that our American heritage is threatened as much by our own indifference as it is by the most powerful foreign threat. We've learned that a crisis anywhere in the world is not far from our own home. I can do my part by obtaining a broad education so that I might know how our Government and foreign policy operates. However, I must do more than just learn how it works, if I am to be well informed, I must also be well versed on current affairs.

The second step on this ladder might well find us concerned with the education of all peoples of the world. Statistics show that over 700 million men and women—nearly half the world's adults—cannot read or write any language. To aid the solving of such a problem requires cooperation of individuals everywhere. We can help stimulate political action through the strengthening of such organizations as the United Nations to help educate the world's illiterate people. I, and other individuals like me, can make known our opinions to legislators. I think our country can divert part of its foreign-aid-for-arms money to an aid fund for world education.

The third rung of our ladder indicates the growing need for such things as more food for peace—two-thirds of the world goes to bed hungry each night.

It is said that a drowning man will grasp at a straw. This is the case with many of these depressed peoples. This discontent breeds communism. Yet our bins burst with plenty. I can help share our abundance with our less fortunate brothers by giving my contribution to such organizations as CARE.

There is a much more direct approach and one which you and I can have a helping hand in. The fourth rung of our ladder is the exchange programs. These programs bring us the aspects of better understanding through people-to-people relationships. These are programs which will help break down the barriers between the East and

West and have been declared by former President Eisenhower to be the truest path to peace. Normally we think of other people when we deal in our own country but of foreign policy when we mention other countries. The exchange program seeks to have us deal with foreigners as other people, not by means of foreign policy. For example, when we think of China what do we see? Chiang Kai-shek and Formosa? Mao Tse-Tung and communism? Or 800 million Chinese people as individuals? These programs help foreign people see the real America and us to see the truth about them. As one German boy says, "We usually think of America in terms of skyscrapers, Cadillacs, and gangsters. Americans think of Germany in terms of Hitler and concentration camps. You can't realize how wrong you are until you see for yourself." Jane Addams of the famed Hull House further confirms this policy by her words, "One does good, if at all, with people, not to people." These programs I can help by contributing to a scholarship fund to help finance the exchange program and also I can take a student into my own home and help him learn about the real America. Since students of today are leaders of tomorrow, we must help them to know the truth. If we throw our pebble into the sea of understanding, there is no telling where the last small ripple will end.

The final rung of our ladder is individual understanding and tolerance. We must first give our talents in our own community before we can hope to spread our influence farther. Each of us must realize that hatred and prejudice wound our fellow men. Do I treat others as I would like to be treated in return? When we show respect and tolerance for the colored boy down the street, our brother and sister, our classmate and everybody—then we will be contributing to world peace. This is something everyone can and must do everyday. This takes but a little conscious effort yet how priceless it is.

As we reach the top of this ladder we will attain world peace. We have only stopped on the important rungs. After we become well informed, erase illiteracy, feed our hungry peoples, break down the barriers between the East and West through understanding and have individual understanding and tolerance for our brothers; such things as disarmament will evolve spontaneously because the causes will be removed. Professor Madagarada, political scientist at New York University, says that this hunger, illiteracy, and misunderstanding is the cause of a struggle of wills which results in arms races.

We must remember that we all have something to contribute. None of us is so poor that we do not have some gift and talent which added to the whole will make the sum total of a good world. "You and I." Those words hold the key. You and I, as individuals, are responsible for the successes and failures of our world. What we do, or fail to do, will add up to the strength or weakness of our world. God says: "For unto whomsoever much is given, of him shall be much required." Have we done our share?

The Rewards of Voluntary Community Service

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Thursday, April 13, 1961

Mr. KEATING. Madam President, a constituent of mine, Mr. Arthur Murray Aibinder, of New York City, recently wrote to me describing the very wonderful work which he has done on behalf of children in the pediatric wards of New York City's hospitals. He describes his program as Operation Lollipop. I commend Mr. Aibinder for the fine work which he has done. I am happy today to call attention to a letter which he wrote to the editor of the Christian Science Monitor, urging that others participate in and benefit from volunteer work to help children in need.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the above-referred-to letter from Mr. Aibinder to the editor of the Christian Science Monitor. I hope that his sentiments as expressed in the lines of verse contained in this letter will inspire others to follow his very heartening example.

There being no objection, the letter to the editor was ordered to be printed in the RECORD, as follows:

VOLUNTEERS OF VITAL HELP

To the CHRISTIAN SCIENCE MONITOR:

Permit me to share my happiness with you. During my free time I do volunteer recreation work among shut-in children. With a checkerboard, a few children's riddles, and a smile we spend many hours of priceless enjoyment together. At times I feel it is wise to permit a child to win a game of checkers, at other times I just cannot beat them. By becoming the child's friend he forgets his problems for a while. He will talk of the pleasant dreams all children discuss. Financially, I receive nothing. Spiritually, I feel like a millionaire.

There are many areas where volunteers can serve. They can be of vital help regardless where they are assigned.

A person lives each and every day
Going about in his very own way
He may be dull, he may be smart
Yet, you hear the beating of his heart.

His face might be a very pleasant one
If not, think before you make fun
Keep this thought in mind, of it never depart
This person also has a heart.

He might belong to the majority, he might belong to the few
He might read the Old Testament, or he might read the New
No matter what he may base his religion upon
The heart still goes beating on.

He might be a very cheerful guy
Or he might have reason to cry
Which adds up to one little thing
We are all but a human being.

—ARTHUR MURRAY AIBINDER.

Judge Paul Moss: Texas Fighter for Good Government

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, April 13, 1961

Mr. YARBOROUGH. Mr. President, Judge Paul Moss, of Odessa, Tex., is one of the outstanding citizens of Texas. He has been in the forefront of the fight for good and honest government in Texas for more than 30 years.

His first political service in Texas was as Ector County campaign manager for the late beloved Attorney-General and Governor James V. Allred of Texas.

During the intervening more than 30 years he has continued active in his support of causes for good government in Texas, having served as a State District Judge for a term, in his active life as a successful rancher, lawyer, and civic leader.

Judge Moss, a native of the Great Smoky Mountain region of North Carolina, was one of the most influential Harry Truman leaders in Texas. He is my good friend upon whom I have long relied for advice. He is also a brother-in-law of our own colleague, the distinguished senior Senator from South Carolina, the Honorable OLIN D. JOHNSTON. His charming wife has long been active in the Texas Federation of Music Clubs, is a past State president, and is now an officer of the National Federation of Music Clubs.

Mr. President, on Thursday, March 16, 1961, the Odessa American printed a short sketch about Judge Paul Moss under the caption, "Wandering Ended in Odessa; Moss Chose Friendly Town."

I ask unanimous consent that this article be printed in full in the Appendix of the CONGRESSIONAL RECORD today.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WANDERING ENDED IN ODESSA—MOSS CHOSE FRIENDLY TOWN

(By Tracy Byers)

The country was dusty, the old car was dusty, the riders were dusty, and the faded roadside signpost, "Odessa" was dusty, too.

But after a wandering journey from Wyoming through Colorado, New Mexico and northern Texas, Paul Moss and his young son, William, looked at the sign with interest and Moss wrote in a book later: "One look told me that I had found what I was looking for."

He was 40 years old, an ex-schoolteacher and a lawyer, who had tried life in oilfield towns in Wyoming, in Denver, and still was looking for the promised land that he found in Odessa.

It was 35 years ago in August 1926. Odessa was a village with about 500 residents, but the friendliest people he had ever met. There were windmills everywhere and outside toilets.

"Somehow it seemed as if I had reached the promised land," he wrote later in his book, "Rough and Tumble," published in 1954.

Moss and his son pitched camp the first night in a tent on a vacant lot east of the post office. This began one of the epic tales of the Permian Basin oilfield.

There has been no greater contrast in the life of any citizen, reflected equally in the changes in Odessa during the ensuing 35 years.

Today Mr. and Mrs. Mosses' beautiful ranch home a few miles southwest of the city limits has been the scene of the annual convention of the Texas Federation of Music Clubs, of which Mrs. Moss is a past president. National officers also attended the convention. Mrs. Moss now is one of the national officers. The rambling ranch home of the Mosses' nestles in the center of 31 landscaped acres, reclaimed from once barren mesquite land.

Similarly through the years in Odessa hundreds of miles of paved streets have devel-

oped as the city grew to 80,000 residents; the 2-story red brick schoolhouse has disappeared and 30 schools now serve the city.

During the years Moss was the first city attorney and drew up the first city ordinances; he was president of the school board in 1929 and 1930; was on the board of a bank but later sold his stock; was the first Odessan to serve as judge of the 70th district court, when it served half a dozen nearby counties. He was a charter member of the Rotary Club and the Odessa Country Club.

I have never changed my opinion that Odessa has the friendliest, happiest people on earth," Moss said cheerfully.

"There has been one change through the years that seems important to me. A man used to need to be a jack-of-all-trades to get along well in the world. I think that now we have reached an age of specialization, where a man must follow one business and look after it carefully," Moss said.

Shortly after he arrived here, the first oil boom hit Odessa. "In 1927 I made about $14,000, half of it from my law business and half from commissions on selling oil leases," Moss said.

A few years ago he sold some oil rights on his home ranch to Union Oil Co. for many million dollars, still retaining all surface rights to the land that stretches from the western city limits of Odessa for about 12 miles west along U.S. Highway 80.

These oil rights valued at millions of dollars were on some 7,000 acres of land that he had bought at $9 an acre late in 1939, and also included about 5,000 acres purchased earlier near Duro, just west of Penwell.

In 1949 he bought some 10,000 acres at $9 an acre between U.S. Highway 80 and West 27th Street. He ultimately had some 30,000 acres stretching along both sides of Highway 80, some of it in a continuous strip from Odessa to Penwell.

Moss recalls cheerfully buying of his first home place ranch acreage. "Humble and other firms had drilled on the place to no avail. When I bought the 7,000 acres everyone said there was no oil south of the Texas & Pacific Railway tracks, where my land was located."

Moss found an independent driller and persuaded him to try drilling again and they brought in a gusher about a mile from the Humble dry hole * * * "I've been looking up ever since," Moss said cheerfully. "The oil game is the most fascinating thing I've ever gone into. It's much like a horse race—you never know what's going to come in next."

Most recently Moss figured in international news when some land he bought on the Isle of Pines was "liberated" by the Communist government of Cuba, which also "froze" money he had in the island bank.

"I've just written it all off," Moss said, without giving his personal version of the Castro government. But as an adopted Texan, who has learned to yearn for water, he mourns the loss of "one of the most beautiful springs in the world," which was on his island land.

Sale of approximately 250 oil wells on his home ranch in the Union Oil Co. deal was passed by nonchalantly—and he didn't recall the exact number of wells.

He explained this easily enough. Aside from the wells on his home ranch, he had interests of various kinds in oil development in some 14 other counties, and numbers of individual wells were not so important. He had 10,000 home ranch acres in production spotted at 10, 20 and 40-acre spacings.

It recalled a statement he made to this reporter a few years ago at income tax payment time, when Moss sighed in some surprise as he said, "Imagine a North Carolina farm boy who feels that his tax payments really will be a help to the government." That was at the time when oil production was booming.

When he said "North Carolina farm boy," he really meant it. His father was seriously ill when Paul was between 12 and 14 years of age, and the boy plowed the fields and sowed the crops, helped by his mother.

Moss was born March 27, 1886 in Clay County in the Great Smoky Mountain region of western North Carolina. His mother was from Rabun County in the Blue Ridge Mountain area of north Georgia. His father's people were originally from Virginia, but had settled in North Carolina, and part of the family moved to the beautiful valley of the Tusquitee River, adjoining the Hiawassee River in the high hills of Clay County.

Moss first attended Hiawassee College in north Georgia. He received his law degree from Valparaiso University in Indiana.

He married Tommye Leigh Atkinson of Atlanta, Ga., a native of Spartanburg, S.C. in 1919. She was with him in Greybull, Wyo. and in Denver, before he started his first trip to Odessa. She had gone home from Denver while he and their son, William, traveled around, looking for the ultimate family home.

Mrs. Moss's sister, Gladys, is married to U.S. Senator OLIN D. JOHNSTON of South Carolina, and occasionally visits here. After their arrival in Odessa, a daughter, Betty, was born to Mr. and Mrs. Moss and she now lives in Midland.

Moss's career has included being principal at the age of 20 of the school in Copperhill, Tenn. Then on a wintry night more than half the town, including the school, burned down. That was when he went to Valparaiso University to study law.

After graduating with honors from Valpariso, he headed west, touching in Casper, Wyo. during its oil boom, then going to Greybull, where he became city attorney.

Moss always had a yearning to move on, and he, Mrs. Moss and William left Greybull for Denver, where he stayed several years, before coming to Odessa.

Hearing of good hunting in the mountains of New Mexico, he went to Cloudcroft in 1935 and acquired a summer ranch home near Weed. The elevation of the present ranch house is 7,000 feet above sea level.

It was this summer home in the mountains that finally gave him his final anchor in Odessa. "It took me a long time to decide where to settle, but when I met Odessa and Texas I knew I had found my home," he said.

Visit to the U.S. Capitol by Louisiana High School Pupils

EXTENSION OF REMARKS

OF

HON. RUSSELL B. LONG

OF LOUISIANA

IN THE SENATE OF THE UNITED STATES

Thursday, April 13, 1961

Mr. LONG of Louisiana. Mr. President, it was my pleasure on April 12 to have as my guests the senior class from University High School of Baton Rouge, La. Every year the senior class of this fine institution visits our Nation's Capitol as part of their general educational program.

University High is among the schools which maintain the highest scholastic standards in Louisiana and the chaperons and my two daughters attending school there inform me that the academic standards are higher now than they ever were. University High is part of the Louisiana State University College of Education and these students have the benefit of studying under some of the finest teachers in the State of Louisiana.

I ask unanimous consent to have printed in the Appendix of the RECORD the names of the 57 students and 6 chaperons from University High School in Baton Rouge.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

UNIVERSITY HIGH SCHOOL, BATON ROUGE, LA.

Girls: Aggie Mullins, Peggy Powers, Ann Durrett, Sarah Brown, Lula Mae Hebert, Ree Smith, Ann Butler Bebe Taylor, Jan Hockaday, Merrill Faye Hines, Maggie Gerlicher, Topsy Dougherty, Janie McVea, Jackie Champagne, Mary Myers, Marilyn Pisa, Myra Cox, Caroline Spiller, Carol Guy, Lou Pace, Judy Kuehnle, Maureen Mitchell, Karen Carter, Carol Lynn Lowery, Mary Jo Kowaluzuk, Nancy Knight, Marcelle Martin, Marjorie Cox, Madelene Hubbs, Susan Owen, Lynn Meyer.

Boys: Kester Hawthorne, Richard Mason, Brother Hackett, Conley Juban, Steve Mendelson, Ted McMullan Gary Keyser, Philip Swire, Rudy Beard, McGee Grigsby, Roland Saurauge, Ken Jones, Richard Gill, Steve Carter, Bridger Eglin, Leon Lastrapes.

Chaperones: Mrs. George Cox, Mrs. E. Spiller, Mrs. M. Travis, Mrs. Kowalczuk, Dr. R. Gisby, Mr. Beeson.

Inflationary Trend of the Economy

EXTENSION OF REMARKS

OF

HON. VANCE HARTKE

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Thursday, April 13, 1961

Mr. HARTKE. Madam President, the problem of inflation and prices has long been a concern of our Government. President Kennedy recently made a major statement expressing his concern over the inflationary trend of our economy and pointing out the value and virtue of full employment. The Evansville Courier commented editorially about the President's approach to these significant problems. I ask unanimous consent that these comments may be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ADMINISTRATION TACKLES INFLATION PROBLEM

The Kennedy administration came to grips for the first time last week with a persistent American problem—the question of inflation.

The problem has been with us ever since World War II. Presidents Truman and Eisenhower both pleaded for cooperation in bringing price stability. But as President Kennedy noted, "These exhortations have not had any great effect."

At present, the administration is also contemplating a voluntary program. The President told a manufacturers group last month that Government is "almost totally without direct and enforceable powers over prices

and wages freely set and bargained for. And this is as it should be."

The administration's effort is being made through an Advisory Committee on Labor-Management Policy, convened in Washington last week. The Committee has been charged with a study of a staggering list of topics, including wages, prices, collective bargaining, living standards, productivity, and world trade. The first subjects it will tackle are the effects of inflation on U.S. exports and the problems of automation.

The President has expressed extreme reluctance to intervene directly in wage disputes or industrial pricing policy. Nevertheless, recent statements indicate vigorous approaches on related problems.

One will be an attempt to limit the pressure of consumer demand on prices. In 1957–58, and again in the present recession, it has been startling to see sale of luxury items increasing while the pace of industrial output slackened. The administration hopes to turn more buying power to industrial goods by an income tax credit for investments.

Another will be an intensive effort to stimulate full production. Indiana University's Prof. Robert Turner, now a Kennedy adviser, noted in an Evansville speech some time ago that costs no longer go down when production declines. If output is small, each purchaser must pay a crushing share of plant, executive, and distribution costs. The President, apparently subscribing to this theory, has insisted on several occasions that full production can contribute to price stability.

Kennedy feels that full production can cut costs by modernization of American production machinery. At present, he says, the average age of factory equipment seems to be going up. New machinery can mean greater efficiency and, theoretically, a reduction in price.

He notes that more production will mean a bigger tax take for the Federal Government. In last month's speeech to the manufacturers, he indicated that the increase could amount to as much as $12 billion and declared that even after payment for all administration welfare programs, "this amount of revenue would still leave a substantial surplus—a surplus essential to defend our economy against inflation."

The administration approach to the problem of inflation then will be based on increased output and increased investment. It will also seek to keep labor-management pressures for higher prices and wages within reasonable limits, through continuing talks. The combined undertaking looks gigantic, but the goals are high on the list of virtually every American's hopes.

Angela Parisi

EXTENSION OF REMARKS

OF

HON. EDNA F. KELLY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 12, 1961

Mrs. KELLY. Mr. Speaker, I am saddened by the untimely passing of an outstanding American and Democrat, my good friend Angela R. Parisi. As one who had the pleasure of working closely with Angela Parisi, I can give testimony to the great loss which we have suffered. Angela's life was a tribute to all women as was her devotion to her children and family. The newspaper article which I now insert in the CONGRESSIONAL RECORD is a brief account of Angela Parisi's accomplishments:

ALBANY, March 20.—Angela R. Parisi, member of the workmen's compensation board and a leader in State Democratic Party activities, died of cancer tonight at the Albany Medical Center Hospital. She was 46 years old.

In private life she was the wife of Leo Louison, a New York lawyer. They lived at 811 Avenue R in Brooklyn.

In 1955, Miss Parisi, then vice chairman of the State Democratic Committee and head of its women's division, was appointed by Governor Harriman as chairman of the workmen's compensation board.

During the next 4 years, she presided over many administrative changes designed to meet criticism of the board's operations. She was also a close friend and frequent companion of Mrs. Harriman.

In 1959, Governor Rockefeller appointed Col. S. E. Beechhurst to succeed Miss Parisi as chairman. She continued as a member of the board; her term was to have expired at the end of the year.

Miss Parisi, a native of Brooklyn, attended St. Agnes Seminary, St. John's College in Brooklyn and the Brooklyn Law School. For a time she taught history and government at Marymount College, Tarrytown, N.Y., and in the Brooklyn College adult education program.

Entering the practice of law, she became a member of the firm of Parisi, Nemser & Louison in Brooklyn. She also was an assistant corporation counsel of the city, active both in litigation and in legislative affairs.

CAMPAIGNED FOR O'DWYER

At the same time, she pursued an active career in politics. She headed the Young Democratic Clubs' campaign for the election of William O'Dwyer as mayor in 1945, and was national secretary of the Young Democratic Clubs from 1947 to 1949. She served on the platform committee at the 1952 Democratic National Convention, and was vice chairman of the State committee and head of its women's division from 1949 to 1955.

Interviewed at the convention, she said "women are ostriches if they're not interested in politics."

"While their first interest should be home and the children," she added, "home and the children are not secure unless they can project themselves beyond it."

Miss Parisi served many community civic organizations in various posts, among them the Red Cross, the Italian Board of Guardians of the Brooklyn Catholic Charities, the Girl Scouts and the Diocesan Council of Catholic Women.

She was a past president of the Brooklyn Women's Bar Association and of the New York State Federation of Democratic Women's Clubs. She was also a member of the Women's Trade Union League and the American Committee on Italian Migration, among other organizations.

Besides her husband, she is survived by two sons, Neil and James; a sister, Mrs. Juliet Somma, and a brother, John Parisi.

Freedom of Expression Among Public Servants

EXTENSION OF REMARKS

OF

HON. CLAIBORNE PELL

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

Thursday, April 13, 1961

Mr. PELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an excellent editorial from the Foreign Service Journal, entitled "Daring and Dissent," of the April 1961 issue. It stresses the importance to our national interest and welfare of having foreign service officers who exercise both moral courage and independence of judgment in the writing of their political reports.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DARING AND DISSENT

The Foreign Service has special reason to be thankful for President Kennedy's statement, in his state of the Union message, that the new administration "recognizes the value of daring and dissent" among public servants. For the Department of State and the Foreign Service are, or should be, engaged in a continuous process of reevaluation of our foreign policies, and this process can be stultified if there is no freedom of expression within our organization.

Nobody who has been associated with the recent hammering-out of foreign policies in the Department of State will have come away feeling that there was any kind of enforced conformity. There are, and there should be, opposing viewpoints and sharp debates. But this has not always been the case. We are thinking of a time, for instance, when a dispatch from the field which advanced facts and arguments that did not square with established policy could be withdrawn from circulation within the Department.

There should be no more of this. Even if an officer is wrong, provided he is loyal and keeps his views within the official family, he has a right—indeed, he has a duty—to make his best thinking on a particular problem available to the Department of State. The Department, on its part, should protect the officer against having labels put on him by outsiders who may disagree with his political views. Unless this is done, only orthodox views will be ventilated, and our policy formulation process will suffer. We have seen this happen to the foreign services of other countries. We have reason to believe, for instance, that the rigidity of Stalin's foreign policy was due in no small measure to selective and narrowly doctrinaire reporting from the field and an unwillingness to entertain new ideas about the actual world that surrounded the Soviet Union.

The right to think daring and dissenting thoughts is not a license for foolishness and wrongheadedness, but it is a guarantee that nothing will be taken for granted. In politics, yesterday's truths are often tomorrow's falsehoods. Officers who expressed skepticism about Russia's cooperative intentions during World War II performed an invaluable function in the policy formulation process, even though their views did not coincide with official policy. Officers today who question other assumptions of the day may possibly perform a similarly valuable function.

If an officer is consistently wrong or foolish, that will be reflected in his efficiency reports and he will presumably not advance to positions of responsibility and should, in fact, be selected out. But unpopular ideas are not necessarily foolish, and officers are also rated, and rightly so, for the factor of courage. We must hope that they will be given credit for courage if they give voice to unpopular thoughts, so that there will be no premium on "getting along with others" when that only means conformity and unimaginativeness. The policy formulation process is badly served if only those ideas are entertained that happen to correspond with the prevailing climate of opinion.

Let there be, then, within the limits of loyal service to the United States, a free play of ideas in the Foreign Service. Such

a free play of ideas is only possible, however, if the President and the Secretary of State will actually defend those of their subordinates who may some day, with the benefit of hindsight, prove to have been wrong. In giving our best judgment we cannot always be right, particularly since politics involves constant change, and a judgment made 2 years ago may look foolish today even though it was quite reasonable at the time when it was made.

We are heartened by the President's response in his February 15 press conference to a reporter's question whether "any employee of our State Department was responsible for or had any part in advancing the Communist foothold in Cuba" and, if so, whether he would "take steps to remove them from office." The President replied: "I think that probably miscalculations were made by our country in assessing in Cuba, but I have no evidence that anyone did it out of any other motive but to serve the United States."

The Foreign Service consists not only of geniuses. We are fallible human beings, but we are less likely to give bad advice to those in positions of ultimate responsibility if we are free from inhibitions about the limits of what is "safe" to say. Let this be understood also by Congress, lest there be a new tendency to penalize those who have in good faith advocated the taking of risks. To our readers, we say: Speak up. Let there be "daring and dissent." The President himself has said that he greets healthy controversy as the hallmark of healthy change.

The National Bellamy Award

EXTENSION OF REMARKS
OF
HON. PAGE BELCHER
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 13, 1961

Mr. BELCHER. Mr. Speaker, the National Bellamy Award was established in 1942 under the leadership of Miss Margarette S. Miller, of Portsmouth, Va. It was founded for the twofold purpose of giving recognition to the author of our national pledge of allegiance, Mr. Francis Bellamy, and of providing a stimulus to the teaching of patriotism and good citizenship in our public schools. Selected schools are invited to compete for the award by submitting a folio of materials in evidence of two things: the school's promotion of patriotism and good citizenship, and evidence of outstanding contributions made by the school's alumni. In 1957, Will Rogers High School in Tulsa, Okla., was selected to receive the 16th annual award, and holds the honor for its State for a 50-year period.

I am happy to present the address offered by Jon Miller, Rogers High School SCA president, to the 19th annual Bellamy Award presentation at Cony High School, Augusta, Maine, in 1960:

ADDRESS BY JON MILLER, SCA PRESIDENT, WILL ROGERS HIGH SCHOOL, TULSA, OKLA.

DAVID ELVIN. Now we have Jon Miller, student council president from Will Rogers High School, Tulsa, Okla. His school was given the 16th annual Bellamy Award in 1957. Jon has received the NRA expert rifleman award and is a member of the Will Rogers rifle team; he is secretary of the boys' glee club; a member of the Inter-City Student Council, and was a delegate to the Oklahoma White House Conference on Children and Youth this year.

JON MILLER. I am extremely proud to be in this wonderful school and in this beautiful city representing my State of Oklahoma, the city of Tulsa, and Will Rogers High School.

I am sure most of you have heard of the great American humorist, Will Rogers, for whom my school was named. "I never met a man I didn't like," was Will's most famous epigram. It was this epigram that Will used to melt the hearts of people east and west, causing the twain to meet. Will was not only a great humorist, but a great diplomat. No matter what a man's language, Will's smile had a way to unlock any foreign barrier. He also had a way with words, combined with a fine sense of humor. Once when Will was introduced to President Hoover he walked up to the President, shook his hand and said: "I didn't quite get the name."

As a school we are proud of Will Rogers and proud to have our cornerstone bear his name. We are equally proud of our school. Last week it was announced that 20 Rogers students had qualified as semifinalists for the national merit scholarship. This is quite a record for any school.

Will Rogers High School provides a wide variety of activities, designed to keep the minds of 2,400 students working to maintain the academic achievements which have made Rogers one of America's most highly regarded schools.

As a young State, only 53 years old, Oklahoma has produced many celebrities who have made her proud. Jim Thorpe, Warren Spahn, Mickey Mantle, some of our country's leading athletes; Patti Page, Dale Robertson, star of "Wells Fargo," and Anita Bryant, popular young singing star, a graduate of Will Rogers High School Class of 1958, are a few examples.

Oklahoma is also the home of the Five Civilized Tribes, and we are proud of our Indian lore.

From the city of Tulsa, the oil capitol of the world, and the colorful State of Oklahoma, and your Bellamy Award sister, Will Rogers High School, I present to you at Cony this official, authentic Indian peace pipe as a symbol of our friendship. I also have a copy of our school annual, the 1960 Lariat.

For your warm hospitality and the rewarding experience of being a part of this memorable event, may I express my deep gratitude. We trust that you will cherish the Bellamy Award as we have, and we extend our congratulations to you, the newest member of the Bellamy family.

Protection of President-elect Lincoln on His Journey to Washington in 1861

EXTENSION OF REMARKS
OF
HON. VANCE HARTKE
OF INDIANA
IN THE SENATE OF THE UNITED STATES

Thursday, April 13, 1961

Mr. HARTKE. Madam President, Paul Hillsamer, the editor of the Marion, Ind., News Herald, has written a very interesting article about a little-known historical coincidence. It relates to the courage and determination of a New York City police superintendent, John Kennedy, and his efforts to protect President-elect Lincoln on his journey to Washington in 1861. I am sure the article which describes the exploits of the President's namesake, will be of interest to many persons. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Marion (Ind.) News-Herald, Mar. 31, 1961]

THE EDITOR SAYS

The national columnists all missed a chance for an unusual column about 5 weeks ago.

John Kennedy rode the same train on which Abraham Lincoln, on his way to his First Inauguration, secretly traveled from Philadelphia to Washington, D.C. Kennedy climbed aboard in New York. He was not a casual passenger. His interest was Lincoln's safety.

Lincoln did not know John Kennedy was on the train. John Kennedy did not know that Lincoln was a fellow-passenger.

But both men were on their way to Washington for the same purpose; to prevent the murder of Abraham Lincoln to southern sympathizers in Baltimore.

All of this occurred on the night of Washington's Birthday, February, 22, 1861. Here is the background.

At the time to take the oath of office as President drew near, Lincoln chose to travel from Springfield, Ill. to the Nation's Capital by train—and slowly, his desire was to let the people of various States get a look at him, to confer with the several Governors and to speak, when possible to the State Legislatures. The journey took 12 days. Lincoln's train left Springfield, Ill. on February, 11, 1861, one day before his 52d birthday.

As the Lincoln train zig-zagged around the country, Springfield to Lafayette, Ind., Lafayette to Indianapolis, to Cincinnati, Trenton, N.J., New York City and finally back to Philadelphia, there were persistant rumors that he would be shot in either New York City or Baltimore. The latter city was his last scheduled stop before Washington.

The President-elect discounted these stories and appeared in New York without incident. But when he entered his hotel in Philadelphia on February 21, a young private detective named Allan Pinkerton wrangled admission to his room. (Pinkerton later became quite famous and was never adverse to recalling that it was "he who saved Lincoln's life.")

Pinkerton had information of plots hatched in Baltimore which shook Lincoln and his bodyguard, Hill Lamon, far worse than the tales they had already ignored.

Pinkerton had been to Baltimore and had wormed his way into various traitor's confidence and kept a mighty good record of what they said.

Lincoln called in an Illinois politician named Judd. After long discussion, Lamon, Judd, and Pinkerton urged Lincoln to immediately proceed to Washington in disguise.

No, Lincoln said, that was out of the question. He had promised a speech at Independence Hall and, also, he was to speak to the Pennsylvania Legislature at Harrisburg the next day. He was not going to break those commitments.

The same evening Secretary of State W. H. Seward warned Lincoln of plotting in Baltimore. The Secretary considered the information so private that he sent it to Philadelphia by a courier, his son Fred Seward. Lincoln asked young Seward if he or his father knew of Allan Pinkerton's investigation. Fred Seward answered "No" but, in effect, told Lincoln, "That simply means it is really serious. If Father and Pinkerton obtained this information independently of one another * * *."

Lincoln did not sleep well that long night. Between festivities and appearances on February 22, Lamon, Judd, and Pinkerton were joined by Judge David Davis and A. K. McClure in urging the President-elect to slip secretly through Baltimore. The question of charges of cowardice and public ridicule were considered and rejected. Finally Lincoln said, "I will do it." After further discussion it was decided that Mrs. Lincoln and his sons should remain on the regular train.

Lincoln changed to a different suit and hat and bundled himself up in an old fashioned overcoat. He and Lamon left Harrisburg quietly. Back in Philadelphia, at 10 p.m., Pinkerton met the 2 tall men (6-4 and 6-2) at the Pennsylvania Railroad Station and (in a closed carriage) drove them to the P. W. & B. station. One of Pinkerton's female detectives had reserved two berths in a sleeping car for "her invalid brother and his attendant" and Lincoln and Lamon were installed in these quarters quietly and smoothly. Pinkerton went into the next car, as a casual passenger. Thus they left Philadelphia. The train entered New York swiftly and silently and headed for Baltimore.

At 3:30 p.m. the train entered Baltimore. After a couple routine stops, it finally pulled into Washington at 6 in the morning, February 23. A drunken passenger singing "Dixie" had annoyed Lamon exceedingly. Otherwise the trip had been quiet.

Now, John Kennedy.

This particular John Kennedy was a handsome New York Irishman who never learned the meaning of the word "fear." When he reached 21, he went on the New York police force. By 1861, his sparkling courage and bulldog determination in crisis after crisis had elevated him into an unusual position. He was superintendent of police for Mayor Wood of New York City, not only because of being a Democrat and Irish-Catholic but also strictly on merit.

Kennedy, like all good policemen, not only faced trouble when it came but also looked for trouble brewing. For a solid week he heard lurid tales of what Baltimore's secession-minded citizens intended to do to Abraham Lincoln. Highly intrigued, Kennedy sent a top New York detective named Bookstaver to Baltimore to size up the situation. Bookstaver reported back, "They mean it."

John Kennedy had a problem. Mayor Wood was not a Unionist. He was already talking of New York as a "free city," independent of both North and South. He was certainly not the man in whom to confide.

Superintendent Kennedy had an opinion of all Baltimore politicians and it was not a high one. He joined everyone on both sides in contempt for President Buchanan and his advisers. (For one example why * * * there was a saying, at that time, "Tell it in Washington at noon and it's common knowledge down South before supper time.")

So, Kennedy decided on February 22 to go to Washington himself. He planned to tell Gen. Winfield Scott and a couple Washington police officers whom he trusted that they had better rush some special protection to Baltimore before Lincoln arrived there, as scheduled, the afternoon of the 23d.

John Kennedy caught the Washington train from Philadelphia around midnight on the 22d and laid himself down on a berth. He catnapped with a loaded pistol at his side and a knife in his belt. This courageous Irishman knew very well that a man traveling in behalf of Abe Lincoln that night was in danger of his life. He left the train in Washington at 6 and carried his warnings to the proper people. But by evening he realized that his information was outdated; that not only was Lincoln in Washington, but he had been Kennedy's traveling companion, separated only by two railway cars, all the way from New York.

And, by one of history's quirks, another John Kennedy stood up in Washington, D.C. just 33 days less than 100 years later and took the same oath of office as did Abraham Lincoln on March 4, 1861, 9 days after his train glided into the Washington depot.

This John Kennedy of 1861 (John A. Kennedy) went on in his chosen career and lived and died a brave man. His name is still legendary in New York.

The wisdom of Lincoln's action was indicated on the afternoon of the 23d of February. The regular train, which he was supposed to be on, pulled into Baltimore and was met by a mob of 10,000. If he had any friends in the crowd, their voices were not audible. The Baltimore Sun reported that many men crowded the platform and jumped on the cars "like monkeys" and "as thick as a hive of bees." Most of them, in those free-wheeling days, were armed.

Lincoln was viciously criticized in the papers for "sneaking into Washington." There was one story that he wore a "military cloak," another that he wrapped his head, face and neck in "scotch plaid." The editorial uproar continued for months. Someone wrote a parody of "Yankee Doodle" and it enjoyed temporary popularity, especially in the South and border States.

"They went and got a special train
At midnight's solemn hour,
And in a cloak and scotch plaid shawl
He dodged from the slave-power.
Lanky Lincoln came to town,
In night and wind and rain, Sir!
Wrapped up in a coward's coat,
Upon a special train, Sir!"

Lamon later wrote that "Lincoln regretted the midnight trip." But all evidence is that only a fool would have risked meeting the Baltimore crowd.

An Illinois Congressman named Washburne almost got himself shot or badly beaten when Lincoln, Lamon and Pinkerton left the secret train at Washington. Waiting on the station platform for someone else, Washburne saw the three men and hastened up saying: "Lincoln! You can't play that game on me." Pinkerton reached for his pistol and Lamon doubled up his huge fist. Lincoln hastily intervened, saying, "Don't strike him. It's Washburne."

So, that's the story. To the writer, the great drama at this time is that a man named John Kennedy rode that train—his only object being the welfare of Abraham Lincoln—and just less than a century later another John Kennedy moved into the White House. Bits of irony such as this do not make history but they certainly make history more interesting.

Time for a New Look

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 13, 1961

Mr. HARVEY of Indiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Shelbyville, Ind., News of March 22, 1961:

TIME FOR A NEW LOOK

The United States has spent about $133 billion on foreign aid in the last 20 years.

The program had a two-fold purpose: First, it was to assist both our allies and former enemies in World War II in restoring their economies. The second purpose was to win the peace and stop the growth of communism.

The first part of the program has been successful. So successful, in fact, that today the American economy is in grave danger because of the low-wage competition from these countries that we have helped so much to rebuild with the tax of American wage earners.

With 80 percent of all taxes coming from people with incomes less than $10,000 per year, the American laboring man has borne the brunt of paying for the factories in foreign countries that now are driving him from his job here at home. It should be pointed out here for clarification that most tax revenue comes from those earning less than $10,000 per year simply because such people are in the vast majority. Those earning in higher figures are, of course, taxed even more heavily—but there are far fewer of them.

The total debt of the United States is now more than the combined debt of the rest of the world. Many of the countries whose economies have been rebuilt to a large extent with the tax dollars of Americans are now in a position to help other underdeveloped nations, and there has been some talk about this happening. Unfortunately for the American taxpayer, it has been mostly talk so far, with very little action.

Instead of cutting off the aid program to these countries which are frankly in a much better financial position than we are, our Government continues it year after year.

As to the second purpose of the foreign aid program—that of winning the peace and stopping communism—this appears to have been largely a failure.

For example, we have given India, which is supposed to be neutral, more than two and a quarter billion dollars. Yet India votes rather consistently against the United States in the United Nations. Tito, of Yugoslavia, who has stated frankly, "In any future war, we shall march shoulder to shoulder with Soviet Russia," has received almost the same amount—more than $2 billion.

Poland and Indonesia, both openly communistic, have received another billion and still are receiving yearly hundreds of millions of American tax dollars. Communism, which was supposed to be stopped by this fantastic outpouring of American money, has now extended its borders to within 90 miles of the coast of Florida.

To those critics who say that anyone who is opposed to foreign aid is hard-hearted and unconcerned about the rest of the world, may we pose just one question? If America permits herself to be spent into national bankruptcy—if we do not maintain our fiscal integrity here at home—how long will any nation on earth be able to remain free from communism?

Make no mistake about it—peaceful coexistence to the Communist means a gradual triumph of the worldwide conspiracy to end freedom. Spending America's financial strength to nothingness is the surest way of achieving that goal—all by peaceful means.

We do not say that all foreign aid should be stopped. But we do say that it is time for a new look at the whole foreign aid program—its size and scope, its past cost and its past successes and failures—and time to reduce it drastically to a basis of current realism.

Beneath the Cross

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 11, 1961

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks, I wish to

insert into the RECORD, a poem entitled "Beneath the Cross," which is very timely and thought provoking. I commend it to the attention of all my colleagues and to the public generally.

The author of the poem is Giovanni Giuseppe Longo of Utica, N.Y. He wrote it at the conclusion of World War II, when he was serving in the U.S. Armed Forces. Mr. Longo is a native of Italy, where he was born in 1922 and came to this country at the age of two. The family settled in Utica, where he was raised and obtained his education. He studied at Utica College of Syracuse University until he entered military service in 1942.

From April 1943 to January 1946, Mr. Longo was stationed overseas, mostly on various islands in the Pacific. He was in the Signal Corps as a communications technician. He spent some time in Kobe, Japan, after the conclusion of the war and it was here that he wrote his poem. The tremendous destruction of this largest city of Japan by the constant bombings made such a deep and lasting impression on Longo that he began to set his thoughts down on paper in poetic form.

After he had completed writing the poem he felt that if it could be given wide distribution throughout the Nation, and possibly throughout the world, it might set other people to thinking about war and how to stem the tide of human destruction. Even if it does nothing more than just cause people to stop and think about this matter, the poem by Mr. Longo will have achieved its purpose and will have made a significant contribution to the welfare of humanity. It is for this reason that I am pleased to insert it into the RECORD:

BENEATH THE CROSS

(By Giovanni Giuseppe Longo)

We stand together thousands strong
And hearing, wonder, have we done wrong?
We are the boys who left our homes,
Gave our lives to win a throne.

The Throne of Peace, as it is called
Gave us strength to conquer all.
But now we hear the rumors roar
It's atomic energy which controls the floor.

Nations are ready to strike and fall
Because they fear an atomic war.
The atom's destructive, so they say,
If left unguarded day by day.

Nations unite, we cry below
The sparkling crosses "Row on Row."
Uncounted thousands lie at rest
In hopes we brought you happiness.

We must not feel we fell in vain
And wish that we could rise again;
Leave us here with our memories, gay,
With our job well done, and no dismay.

Instead of power, use your tongues
And let them blend to sound like one.
Bring peace and comfort to our souls
May God bless you as in days of old.

When atomic power is thrust aside
And nations heed each other's cries,
It's then our souls will lie at rest
For they will have found their happiness.

Hear our cries, you nations all,
While atomic energy controls the floor.
Do not forget what should be said
So your departed sons can lie to rest.

Miss Liberty Takes Another Bow

EXTENSION OF REMARKS
OF
HON. SILVIO O. CONTE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 13, 1961

Mr. CONTE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article entitled "Miss Liberty Takes Another Bow," from the Christian Science Monitor dated Tuesday, April 4, 1961:

MISS LIBERTY TAKES ANOTHER BOW—U.S. SWEETHEART HAS 35-FOOT WAISTLINE

(By Kelvin Wallace Coventry)

Happy birthday to America's No. 1 sweetheart.

Old-fashioned? Yes. She's never made a best-dressed list. She gives her age as 75-plus. Her complexion has been described as "harbor green," but she's still the pinup queen for "freedom fighters" the world over.

She's a buxom lass at 450,000 pounds. She has a 35-foot waistline and carries the torch for every new American. She knows what it means to be an immigrant—she was once one herself. She's the Statue of Liberty.

It was 75 years ago that France's gift to the United States chose to disclose her Mona Lisa beauty to the world. The date was October 28, 1886, a raw, wet day for thousands of shivering paraders.

Out in New York Harbor, Miss Liberty stood hidden in mist and the French flag. Flying every banner known to the sea, hundreds of boats, rafts, sailing ships completely surrounded Bedloe's Island, her pedestal.

THE UNVEILING

Some 300 feet above the water, standing in the torch, Auguste Bartholdi pulled the rope to remove the tricolor which shielded the face. As the veil was dropped, Liberty's face shone through the haze.

Then, said the New York Times, "a hundred Fourths of July broke loose." Tugs bellowed, whistles screamed, and naval guns roared. Miss Liberty had taken America by storm.

It was a crowning moment for Mr. Bartholdi, the Alsatian sculptor who had put together the 200 tons of hammered copper and steel. He dedicated more than 10 years of his life to the statue of "Liberty Enlightening the World."

Almost 900,000 visitors a year now take the short ferry trip from New York's Battery Park, nose out into busy harbor traffic, to pay their respects to Miss Liberty.

Suddenly, there she is rising from the sea in the morning sunshine. She towers above you—almost breathing, it seems.

SYMBOLISM EXPLAINED

There is symbolism in the design of the statue. She steps away from the broken shackles of tyranny at her feet. The tablet in the statue's left hand, its sentiments inscribed July 4, 1776, refers to the Declaration of Independence—telling all comers of the American ideal that "all men are created equal."

You enter the statue through the high walls of old Fort Wood. Once inside, visitors then have a choice of either an elevator ride or a 10-story hike up a stairway to the observation balcony. From here it's a tortuous 12-story climb to Miss Liberty's crown.

Looking out through a series of 25 windows, which are the jewels of the crown, you can get a better look at the tablet of law in the left hand. To the north you can see abandoned Ellis Island, gateway for more than 40 million immigrants.

The "welcome mat" Miss Liberty stands on, once known as Bedloe's Island, was also known as Great Oyster, Minissais, and Love. But the name Liberty Island was widely used in the 1880's when funds were being raised for the pedestal of the statue. Five years ago, Liberty Island became the official name again.

At the base of the statue a bronze tablet bears the famous Emma Lazarus sonnet, "The New Colossus," with its uplifting lines: "send these, the homeless, tempest-tost to me; I lift my lamp beside the golden door."

Miss Liberty's last big birthday party, on October 28, 1956, was a whopper. Fort Jay, across the harbor, treated her like royalty with a 21-gun national salute. She was also given the gift of the American Museum of Immigration, still to be built at the base.

Care for the Aged: The Private Way

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 13, 1961

Mr. CURTIS of Missouri. Mr. Speaker, in yesterday morning's Wall Street Journal there appeared an editorial on the subject of health needs of our aged and the advances that have been made in financing them through the medium of private health insurance programs. It also points to a need beyond that which these programs meet, the need to which the Congress should properly address its attention. I should like to put the editorial from the Wall Street Journal of April 12 in the RECORD at this point:

PROGRESS ON A PROBLEM

Caring for the ills and afflictions of the aged has always posed a problem for civilized societies, as it does for ours today. But admitting the existence of the problem is not the same thing as assuming that, unless the Federal Government bestirs itself, the problem will become progressively worse.

On the contrary, there's reason to be optimistic about the private response of our society. As Barron's magazine reports this week, "Perhaps the most notable development in health insurance in the past 5 years has been the extension of coverage to those 65 and over." According to the insurance industry, about 50 percent of Americans over 65 now have some form of health insurance.

Some 290 voluntary health-insuring organizations are now issuing hospital or surgical policies to the elderly, and in an expanding variety of policies available to everyone. Aware of the great potential of this 65-and-over market, aggressive companies are driving down policy costs to unprecedented levels, at least as cheap as any proposed Government insurance plan.

The actual response to voluntary insurance is a long way from the caricature of the elderly as a mass of medical indigents who must look to Washington for succor. And the response should grow as competition to meet their needs quickens.

To be sure, some elderly persons cannot afford any premium, however modest; the community must care for the truly needy as it traditionally has. But the needy few

should not be used as an excuse to throw the blanket of Federal welfare over everyone, especially when so many elderly Americans prefer to stand on their own feet.

Lt. Gen. Emerson C. Itschner

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 13, 1961

Mr. HORAN. Mr. Speaker, last month marked the end of a military career of one of our country's most distinguished military officers, Lt. Gen. Emerson C. Itschner, Chief, Corps of Engineers. For many years, I have known and admired General Itschner and I have been extremely proud to boast that he is one of my constituents, maintaining his residence at Lakeside, Wash.

For nearly 37 years, General Itschner's contributions toward the development of civil and military projects under the jurisdiction of the Corps of Engineers have been numerous and benefiting to our country. He was graduated from the U.S. Military Academy in 1924 and was commissioned as a second lieutenant. His early service consisted of a variety of interesting assignments including his service as a field engineer with the Alaskan Road Commission, a tour of duty as assistant professor of military science at the Missouri School of Mines and various assignments with engineer district offices throughout the Nation.

During the early part of World War I, he headed Air Force construction for the Engineers and had charge of construction supporting the invasion of Europe, including the initial reconstruction of the vital port of Cherbourg.

After World War II, General Itschner was assigned as Chief of Military Construction Operations and, later, served as district engineer in Seattle, Wash. When Korean hostilities broke out, he served overseas as engineer of I Corps, where he took part in the advance of the Yalu River and the subsequent withdrawal. He was awarded the Purple Heart for wounds received in combat in March 1951.

In October 1956 General Itschner was appointed Chief of Engineers—the youngest officer in more than a century to head this important Army branch. Among the numerous civil and military works which he directed during this period were the completion of the U.S. portion of the St. Lawrence Seaway; advancement of the Columbia, Missouri, and Arkansas River Basin developments; modernization of the Ohio River and Great Lakes navigation systems; construction of ICBM launching bases; and building Camp Century, the nuclear-powered research center under the snow on the Greenland Icecap.

The general has now accepted a position as a technical adviser on the Indus River project in Pakistan with a private engineering firm.

I know my colleagues join me in saying "Thanks for a job well done and Godspeed" to Lt. Gen. Emerson C. Itschner, U.S. Army, retired.

Our Struggling Contemporary Composers Need All the Official Backing They Can Get From the White House

EXTENSION OF REMARKS
OF
HON. CARROLL D. KEARNS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 13, 1961

Mr. KEARNS. Mr. Speaker, the current issue of a music trade paper published in Germany, Musikhandel, makes much of the fact that President Kennedy recently failed to list a single composition by an American composer as among his favorites.

Former Vice President Richard Nixon, on the other hand, mentioned at least one American composition out of three as being among his favorites.

This prompted my dear friend Arthur A. Hauser, president of the Theodore Presser Co., of Bryn Mawr, Pa., to comment that—

Your interest in American music prompts me to believe that you share my annoyance at the foregoing statement (from Musikhandel). Richard Nixon mentioned at least one American composition out of three as being among his favorites. President Kennedy, however, mentioned none. International good will might have been served by his choice of music from various foreign countries, but on the other hand our struggling contemporary composers need all the official backing they can get, and if our President had mentioned at least one American composition, I am sure that his statement quoted in foreign countries might have helped our cause.

Perhaps President Kennedy is not familiar with American music. If this is the case, I am sure that our various musical societies will be only too happy to help him learn more about what is being done in America to improve our cultural standing among nations.

I include as part of my remarks the letter I have received from Mr. Hauser:

BRYN MAWR, PA., *April 10, 1961.*

HON. CARROLL D. KEARNS,
House of Representatives,
Washington, D.C.

DEAR CARROLL: In the current issue of Musikhandel, which is a trade paper published in Germany, I noticed the following item:

"Präsident Kennedy erklärte bei einer Rundfrage folgende Werke als seine Lieblingskompositionen: "La Valse" von Ravel, "Der Nachmittag eines Fauns" von Debussy, die Ouverture "Benvenuto Cellini" von Berlioz, die Ballettmusik aus "Gounods Faust" und Szenen aus "Boris Godunow" von Mussorgsky.

"Sein Gegner Richard Nixon gab folgende Lieblingskompositionen an: das Musical "Oklahoma," Tschaikowskys "Schwanensee" und "Mexikanische Volkslieder."

Your interest in American music prompts me to believe that you share my annoyance at the foregoing statement. Richard Nixon mentioned at least one American composition out of three as being among his favorites. President Kennedy, however, mentioned none. International good will might have been served by his choice of music from various foreign countries, but on the other hand our struggling contemporary composers need all the official backing they can get and if our President had mentioned at least one American composition, I am sure that his statement quoted in foreign countries might have helped our cause.

Perhaps President Kennedy is not familiar with American music. If this is the case, I am sure that our various musical societies will be only too happy to help him learn more about what is being done in America to improve our cultural standing among nations.

With very kind personal wishes to you, I am,

Cordially yours,
THEODORE PRESSER CO.,
ARTHUR A. HAUSER,
President.

Neutral Communists?

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 13, 1961

Mr. DERWINSKI. Mr. Speaker, the question of whether or not our position taken in regard to the Laos crisis represents appeasement or firmness and the further question of whether the Communists must be kept at sword's length or embraced with peaceful coexistence is naturally a subject of intense discussion. Chicago's American, in an editorial on Saturday, April 8—entitled "Neutral Communists?"—gave a practical analysis of this complex issue.

The editorial follows:

NEUTRAL COMMUNISTS?

We have an idea the policy agreed on by by President Kennedy and Prime Minister Macmillan will serve its immediate purpose, which is to prevent the low-grade civil war in Laos from blazing up into another Korea, but it is not likely to prevent a Communist takeover in Laos in the fairly near future.

At the Senate luncheon Thursday, Macmillan said he was optimistic that a Lao government in which Communists will be included can be truly neutral.

We can't imagine where Macmillan gets his supply of optimism. He doesn't get it from the history of governments in which Communists have been invited to participate, for these—in Poland, Czechoslovakia, mainland China, and elsewhere—have always evolved rapidly into all-out Communist governments. If Macmillan or Kennedy know any reason why the Russians would be inclined to keep the government in Laos neutral when they never have had any such impulse anywhere else, we would like to hear it.

The agreement between Kennedy and Macmillan means, apparently, that they hope they can find a way later on, through diplomacy, to keep the Communists from absorbing Laos, if they can manage to prevent the Communists from absorbing Laos by force of arms now.

It is a difficult undertaking, because the Communists are in a position to stall, and are stalling. The formula proposed to Russia by Britain, with United States approval, calls for a cease-fire, a truce team represent-

ing three nations to supervise it, and a meeting of 14 nations, including Red China, to shape a political agreement.

Russia has accepted the idea, but is delaying the cease-fire. And in the meanwhile Russia keeps supplying the Communist rebel force while it conquers more Lao territory. It will take a high quality of diplomacy on the western side to pin the Russians down and get the shooting stopped.

Wage Fight, Round 1

EXTENSION OF REMARKS
OF
HON. CHARLES E. GOODELL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 13, 1961

Mr. GOODELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following excellent editorial from the Buffalo Evening News of March 30, 1961, relating to minimum wage legislation. I commend its wisdom and insight to the Members:

WAGE FIGHT, ROUND 1

In his last news conference, President Kennedy did his oversimplifying best to prod the House into passing his minimum wage bill intact. But he failed by 1 vote, 186 to 185. The House then went on to pass a slightly more conservative substitute, the Ayres-Kitchin bill. It was the President's first important defeat in a congressional roll call and the administration, obviously stung, evidently means to fight back in hopes that it can get the Senate to jam the Kennedy bill down the House's throat in conference.

Thus, the issue of Presidential prestige against House independence in some ways has come to overshadow the actual differences between the bill Mr. Kennedy wanted and the one the House passed.

Actually, the fight is over two main points, both of which were far more confused than clarified by the President's news conference remarks. The least significant point is what most of the political shouting is about: The House bill raises the minimum wage from $1 to $1.15 and hour; the Kennedy bill would do the same for this year, but would step it up to $1.25 by 1963. The President, who promised $1.25 all through the campaign and evidently feels that he still has to use that figure in all references to the minimum wage, had urged that Congress not begin at $1.25 but move up toward it only gradually. Most supporters of the $1.15 House bill would not be too upset if, in a final Senate-House compromise, the escalator to $1.25 in later years is added to the House bill.

The issue on which they will fight hardest for the language of the Ayres-Kitchin substitute bill—the real issue of substance between the two—is the yardstick for extending minimum-wage coverage. The Kennedy bill would bring under the Federal net virtually all retailers with a gross sales volume over $1 million a year. The Ayers-Kitchin bill, retaining the historic concept of interstate commerce, would leave purely local businesses to State regulation and cover only firms with five or more outlets in two or more States.

The House bill sponsors, in short, are fighting for a principle of limited Federal Government—although you would never guess it from the way the President characterized the issue in his news conference. "I find it difficult to understand," he said with asperity, "how anybody could object to paying somebody who works in a business which makes over $1 million a year $50 a week."

In the first place, Mr. President, we are not talking about businesses which "make over $1 million a year," but only about businesses with a gross sales volume that might. They may make practically nothing in the way of profits. And in the second place, the question is not whether anybody "objects" to paying a given minimum wage in such establishments. The question, rather, is How far does the long arm of Federal wage-hour authority reach into each community on an issue of this character? We think, and so does the House, that it will go far enough if it sticks only to those enterprises which, by some reasonable pretext, can be considered to be engaged in interstate commerce.

A Capital Budget: Its Meaning and Promise

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 13, 1961

Mrs. GREEN of Oregon. Mr. Speaker, under leave to extend my remarks, I ask that there be printed the following excellent memorandum on the concept of the capital budget. Legislative authorization for such a budget procedure would be provided by a bill introduced by the senior Senator from Oregon [Mr. MORSE], and companion bills which have been introduced in the House by my colleague from Oregon [Mr. ULLMAN] and myself:

A CAPITAL BUDGET: ITS MEANING AND PROMISE

IMPORTANCE OF THE BUDGET

(By Dewey Anderson)

The Government's budget is the most important and pervasive influence in the economic life of the Nation. For 1962 it expects to spend well over $83 billion which it collects or borrows. It is American business' biggest customer. It is likewise the biggest employer of labor. It either makes or stimulates more investment than any other source.

The expenditure of its funds develops more research and produces more innovations than all other efforts combined. Its moneys and programs are grouped under such expressive headings as:

	Fiscal 1962 (revised)	
	Millions	Percent
1. Major national security	$47,472	56.81
2. International affairs and finance	2,826	3.38
3. Commerce, housing, and space technology	3,814	4.56
4. Agriculture and agricultural resources	5,743	6.87
5. Natural resources	2,162	2.58
6. Labor and welfare	6,020	7.20
7. Veterans' services and benefits	5,301	6.34
8. Interest	8,693	10.40
9. General government	2,095	2.50
10. Allowance for contingencies	100	0.11
	84,226	100.75
Deduct interfund transactions	−667	−.75
Total	83,559	100.00

The Federal Government owes more money to more people than anybody. Its budget expects to pay interest totaling $8.7 billion in 1962. Its Treasury activities are the major determinant of the interest rates all borrowers will pay. Its general Government costs of some $2 billion a year provide for the legislative, judicial, and executive functions.

Many of the budget expenditures of the Government are made to render services to special groups or to defray the cost of current operations. These properly are a charge against current income, most of which is derived by taxation.

But there are two other groups of expenditures that have investment characteristics. One such class of expenditures is made to finance research and development, to develop a better trained and skilled labor force, or to increase the health and productivity of workers and efficiency of plant. Some among such expenditures yield a recognized profit and increase in wealth, part or all of which should belong to the Government which is responsible for the investment.

The other class of expenditures is for the purchase or improvement of physical assets such as forests and lands, dams, navigation facilities, parks and recreational centers, housing, urban renewal, water development, etc., whose costs can be determined and whose prospects are good for appreciation in value and profitable return over the period of their life. To budget such expenditures as current costs and chargeable against the taxpayers raises taxes unfairly, loses sight of their investment character and relieves future beneficiaries of their proper obligation to pay a just share of installation and operation.

The economic function of the budget is well expressed in the recent testimony of the present Budget Director before the Joint Economic Committee:

"The expenditures proposed are an important part of a national effort to close the gap between our actual and potential output and to achieve adequate economic growth. This is particularly true of capital expenditures of Government that are needed to reinforce private capital expenditures, and expenditures to improve the quality and productivity of our human resources. These expenditures are as essential to economic growth as are private investment outlays."

BUDGET REFORM

One main purpose of the budget is to give a picture of the costs of providing the services which have been voted by the peoples' representatives. This requires clear itemization of expenditures as related to services. The budget falls far short of telling this story.

Another important purpose of the budget is to give the public a clear picture of the state of the Nation's finances, as over against the needs which the Congress has agreed should be met, indicating what gap there may be between national income and outgo.

A third main purpose of the budget is to set forth in the message of the President, and the figures offered, the administration's conception of the size and character of the budget which it believes will maintain solvency, protect the Nation and insure the growth and development needed to use our manpower and resources effectively both for the short and long run.

Far from being viewed as a national housekeeping account as was true in the era before the World Wars, the budget is now widely accepted as a policymaking instrument. It moves in and out among the public and private transactions of the economy, providing capital, buying and selling goods and services, determining profits and making payments, stipulating by contract minimum wages, health, safety and employment practices, taxation, bookkeeping and reporting,

the renegotiation of excess profits, control of patents, and determination of the flow of raw materials and components. In these many fields, the budget itself acts as a silent partner with other agencies which are the active representatives of the Government.

The budget has become an aid to the President in laying down the levels of expenditure and amount and quality of services which each department or agency can present as its requests for funds from the Congress. In this way, it is actually a major force in determining the amount, kind and quality of Government services which will be allowed. Because of its technical knowledge and oversight, coupled with being a direct instrument of the President, in no small degree the budget is the epitome of Government itself. Every department head knows that his program depends on how convincingly he presents his case to the Bureau of the Budget, and that the Budget Director acts as the extended authority of the President.

How to prepare and present a readable and easily understood budget has long troubled experts in this field. For they are aware of the need to provide a clear and accurate statement of the Government's programs, their costs, the loans and income obtained to defray them. One worthwhile reform that should be initiated is a budget series in which each major section is presented separately in sufficient detail for the reader to know the program being budgeted and the funds required. Then, the overall budget could be expected to remain a summary rather than the dull technical treatise which the tremendous area covered requires it to be.

But the principal reform needed is to separate investment projects and expenditures from current operations.

THE CAPITAL BUDGET—MEANING OF THE DOUBLE BUDGET

There is altogether too easy acceptance among well motivated people inexperienced in budgetary matters of the desirability of a "capital budget." This stems from a well founded notion that investment and spending should be separated by with insufficient awareness of what that entails.

It is relatively easy to separate out such budget items as result in acquiring physical assets which have a measurable life and which may produce measurable results, such as a dam and hydroelectric installation. It is much more difficult to account for long-term investments in such projects as research, scientific training, health improvements, sanitation, etc. For while the expenditures can be measured the outcomes cannot.

It would be a major advance in budget modernization to apply the investment accounting approach to that group of expenditures which can be measured both in cost and return. Transactions on such capital accounts can be distinguished sharply from those which pertain to current revenues and expenses. They could be kept in separate books. Such a "double budget" system is accepted and notably successful in advanced countries like the Scandinavian nations. It is common practice among American business corporations as well.

The present practice is to combine all kinds of budgetary expenditures on one side of the ledger and on the other side all kinds of income. This permits for no true property account, no adequate calculation of depreciation of Government property, no segregation of debt to determine the precise location of Government obligations and the programs to which they relate, no division of Government earnings into sources and their relations to cost. So that present budgetary procedures is ill-suited to assist in the difficult task of formulating a rational long-range program of Government investment.

Probably a third of the present total of Government budget expenditures is for direct loans to farmers, business, public and private agencies, individuals, and foreign governments, and direct investment in Government-owned physical assets. Many of these expenditures are not a true levy on the taxpayer at all, for in time they are recovered and in some instances they yield substantial interest or profit, besides acting to upbuild the economy to produce more and larger taxable resources. The TVA loans are a good example. Reclamation, REA, and housing loans are others. The annual budget should not be loaded with such investment tiems, for they mislead the public and the taxpayers into a belief that they represent nonprofitable costs of Government operations and they unduly swell the budget totals.

If a third of the budget total is investment, and if the double or capital budget system were in force, then instead of a huge over $80 billion annual budget levy on the taxable wealth of the Nation we would be really talking about some $50 billion. Plus over $20 billion of investment made in furtherance of repayable projects which the peoples' representatives had determined were wise, desirable and in the national interest. Such a budget would be more palatable for the average taxpayer to swallow.

If, in addition, we could work out some modern means of financing Government repayable investments, such as revenue bonds probably coupled with a share of earnings, and RFC for governmental capital investments, or an interest rate which repays the cost to the Government of borrowing money, as is done with REA loans, then Government investments would be put on a sound footing and removed from the current operations budget paid for out of current taxation.

Such a method would be equitable. It offers the most promising ehance of a tax reduction of as much as a fourth or more. It should enable us to get on with the sizeable job of extending our national plant and equipment to meet the needs of this and oncoming generations through financing projects such as forest, land, park and recreational developments, flood control, water supply, housing, urban renewal, electric power, fertilizer production, commodity credit and storage, and so forth.

Under such a system we could finance much larger capital investment programs than a tax conscious Congress can afford to risk with their constitutents on any annual appropriation basis. We could obtain much more of the costs from the direct beneficiaries of these investment programs, as we should, for they have no real claim on the Treasury for gifts from the taxpayers.

Finally, there should be ready public acceptance and no real difficulty in getting congressional approval of this capital account procedure, for the business world is quite familiar with it. To bring the accounting practices of the Government more into line with private business would increase public understanding of Government finances. Hence, public participation in the formation of national policy would be materially advanced.

Legislative action would be required to accomplish the fullest beneficial results of a double or capital budget and current expense system. Some have suggested tying the plan to the Council of Economic Advisers, and to any Council of Resources Advisers that might be established. Both have a stake in this system of budgetmaking.

The advisers to the President would evaluate economic and resource conditions. They would determine the amount and character of capital and resources investments the Government should undertake to maintain the output of the Nation at a level which would use its resources wisely and its employable labor force fully and productively.

It would be advisable to have two budget time periods in mind in making up this investment budget of the Government. Namely, the year ahead for which Congress makes appropriations and a period, say of several years for which Congress could be expected to make authorizations. Thus congressional oversight and responsibility would be preserved and its role in making broad policies respecting the future strengthened. But in doing so Congress would have the benefit of sound advice backed up by the detailed studies of the Government agencies directly concerned and screened by the advisers of the President.

Adoption of the capital budget procedure will not perform magic. It will not make available immediately the substantial resources, nor build a solid resources base under the economy. But it will put the budget into truer perspective, showing the taxpayer more correctly what Government is costing him and what it is contributing to his welfare, what it is investing in his future and the future of the Nation. It is a very much needed reform in budgetary practice. It should be adopted in the beginning days of the new administration.

Feed Grain Program Figures

EXTENSION OF REMARKS
OF
HON. LINDLEY BECKWORTH
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 13, 1961

Mr. BECKWORTH. Mr. Speaker, I desire to include in the CONGRESSIONAL RECORD some information I have received in regard to the feed grain program:

DEPARTMENT OF AGRICULTURE,
Washington, D.C., March 22, 1961.

Hon. LINDLEY BECKWORTH
House of Representatives.

Dear CONGRESSMAN BECKWORTH: This is in reply to your letter of March 10, 1961, with enclosure on 1958-crop grain loans of $50,000 or more, in which you requested listings for the 1959 and 1960 crops and other pertinent information.

In response to your request for 1959-crop-year loan data, we have attached schedules entitled as follows: "1959 Crop Corn Price-Support Loans Made of $25,000 or More and Amount Repaid by Producer" and "1959 Crop Price-Support Commodity Loans of $25,000 or More by Producer," which also reflects repaid loans.

Similar information for 1960-crop-year grain loans, exclusive of corn, should be compiled and available for release by the end of May 1961, and information on corn loans by July 15, 1961. Copies of this material will be sent to you just as soon as it becomes available.

The only 1958 crop, individual producer loan repayment data, we deemed necessary to have the field offices compile and submit to Washington is contained in the attached schedule entitled "Ten Largest 1958-crop Price-Support Commodity Loans Made and Amount of Repayments on Feed Grains."

Concerning your inquiry related to storage cost, the producers pay the storage in advance for the first year their grain is under the loan program, usually by deduction from loans made to the producer. The cost to the farmer varies according to location and kind of grain. When grains are forfeited and delivered to Commodity Credit Corporation,

they become a part of CCC's inventory, and no separate computation of loss or gain is made with respect to collateral acquired from an individual loan. The cost of maintaining such an accounting system would be prohibitive.

Sincerely yours,

JAMES T. RALPH.

U.S. DEPARTMENT OF AGRICULTURE,
COMMODITY STABILIZATION SERVICE,
Dallas, Tex., March 28, 1961.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington 25, D.C.

DEAR CONGRESSMAN BECKWORTH: We have your note from Gladewater, dated March 27, enclosing copy of a letter from Mr. A. P. McLachlan, Director, Commodity Stabilization Service, Commodity Office, New Orleans.

We presume your question is with respect to the storage payments made throughout the State of Texas and those specifically at Lufkin, Tex.

No storage or handling charges were paid in the fiscal year 1960 or in the first 6 months in the fiscal year 1961 to any facility located in Lufkin, Tex.

Storage and handling charges paid to facilities located throughout the State of Texas in the fiscal year 1960 and in the current fiscal year 1961 (through December 31, 1960) are as follows:

UGSA:	
1960	$74,324,053.32
1961	33,311,814.16
Rice:	
1960	1,024,367.00
1961	491,193.59
Peanuts:	
1960	236,817.54
1961	77,176.96
Total	109,465,422.67

Very truly yours,
C. H. MOSELEY, *Director.*
By TRUMAN J. CUNNINGHAM,
Acting Director.

Loans made, repaid, and collateral acquired on the 1959 crop of feed grain through Jan. 31, 1961 [1]

Commodity	Loans made				Repaid		Collateral acquired	
	Number of loans	Unit of measure	Quantity	Amount	Quantity	Amount	Quantity	Amount
Corn	273,027	Bushel	485,657,877	$527,370,871.76	68,605,992	$76,144,357.16	297,123,835	$323,646,109.12
Grain sorghum	49,573	Hundredweight	59,854,126	94,067,975.69	6,854,502	10,386,621.58	49,316,708	78,274,456.63
Barley	16,704	Bushel	35,102,469	25,099,588.09	22,168,019	16,279,386.05	4,157,777	2,801,813.14
Oats	4,834	do	7,934,568	3,734,795.67	7,858,599	3,698,970.92	60,317	28,833.83
Rye	823	do	915,902	796,181.02	318,683	273,866.91	597,219	524,310.27
Soybeans	53,900	do	45,320,782	82,135,936.46	41,467,387	75,258,797.93	3,828,703	6,829,106.83

[1] Loans on 1959 feed grain and soybean crops are still outstanding in the following amounts: Corn, $127,580,405.48; grain sorghum, $5,406,897.48; barley, $6,018,388.90; oats, $6,990.92; and soybeans, $48,031.70.

DEPARTMENT OF AGRICULTURE,
OFFICE OF THE SECRETARY,
Washington, D.C., March 1, 1961.

Hon. LINDLEY BECKWORTH,
House of Representatives.

DEAR CONGRESSMAN BECKWORTH: This is in reply to your letter of February 17, asking questions about the emergency feed grain program recommended by the administration.

The administration is recommending this emergency program for two major reasons. These are: (1) the vital importance of the feed-livestock complex to our whole agricultural economy; and (2) the pressing need to bring to a halt the continuing increase in surplus stocks of feed grains which are already at very high levels, and, under existing programs, threaten to continue to increase.

The administration's recommendations constitute an emergency program for 1961. Early action is necessary if the program is to have the desired effect of reducing feed grain production this year. The short length of time available has prevented our giving the serious consideration that we think necessary before we could make a recommendation regarding marketing quotas for feed grains. Marketing quotas for commodities like feed grains where more than half of the production is used on the farm where it is produced present a number of serious problems. We intend to study a number of alternative ideas, including marketing quotas, in developing a longer range program for feed grains to be submitted later.

The number, the quantity, and the dollar amount of loans made on the 1959 crops of corn, grain sorghums, barley, oats, rye, and soybeans are as follows:

Commodity	Number of loans	Unit	Quantity	Amount
Corn	263,042	Bushel	470,377,031	$511,156,415.05
Grain sorghum	49,165	Hundredweight	59,263,436	93,181,912.29
Barley	16,140	Bushel	33,756,600	24,201,013.21
Oats	4,786	do	7,892,478	3,714,630.40
Rye	817	do	913,699	796,146.71
Soybeans	51,473	do	43,390,584	78,629,462.45

The dollar amount of loans made on 1959 crops of feed grains represents the initial outlay on price support for these commodities. Some of these loans were redeemed and the quantity of the commodities acquired by CCC was less than the amounts on which loans were made.

During the fiscal year ending June 30, 1960, the CCC disposed of feed grains and soybeans acquired in previous years' price-support operations. The realized losses on price-support operations and the costs of the commodity export program that were incurred on the feed grains and soybeans disposed of in the fiscal year 1960 were as follows:

Commodity	Realized loss, price support program, fiscal year 1960	Cost of commodity export program, fiscal year 1960
Corn and cornmeal	$181,952,000	$8,088,000
Grain sorghums	17,988,000	3,773,000
Barley	20,938,000	3,742,000
Oats	10,000	2,303,000
Rye	925,000	1,056,000
Soybeans	10,344,000	----------

In addition to the realized losses on commodities disposed of during fiscal year 1960, the Commodity Credit Corporation still had on hand at that time substantial stocks of several of these commodities. It may well be several years before disposition of these stocks is complete. In the meantime, additional charges such as storage and interest will continue to accumulate. Hence, it is quite likely that there will be additional losses incurred when these stocks are disposed of.

According to preliminary reports of the 1959 Census of Agriculture, 1,989,411 farms reported corn harvested for grain; 223,263 reported sorghum harvested for grain; 1,028,847 reported oats harvested; 290,160 reported barley harvested; and 499,143 reported soybeans harvested for beans. Many farms, of course, grow more than one of these commodities, and there is no information available on the extent of the duplication. The information given above on the number of loans made provides the information that is available on the number of farms obtaining price support. Here, again, a farm may obtain price support on more than one commodity, and there is no information available on the extent of the duplication.

We are enclosing a table which will provide you with preliminary information from the 1959 Census of Agriculture on the number of farms producing the various feed grains and soybeans by States. Just as with the United States figures, there is a certain amount of duplication here since some farms produce more than one of the commodities in question.

World supplies of high protein meals and vegetable oils are short, and the higher support price for soybeans will encourage increased production that can be used to meet current and future world needs. In addition, the higher support price for soybeans will encourage diversion of part of the feed grain acreage to soybeans.

The support price for cottonseed is required by law to be at a competitive relationship with soybeans. As in the past, price supports on cottonseed will be available to those producers who wish to take advantage of them.

As we stated in the announcement, the price support level for the 1961 crop of upland cotton was set after long and painstaking study and consultation with all parties concerned. Although the result is not wholly satisfactory to any single group involved, it is, in our judgment, the best decision that could be made in the light of the current legislative and economic conditions and alternatives.

Sincerely yours,

WILLARD W. COCHRANE,
Assistant to the Secretary.

Compiled from Bureau of the Census preliminary State summaries of 1959 Census of Agriculture.

DEPARTMENT OF AGRICULTURE,
Washington, D.C., March 28, 1961.

Hon. LINDLEY BECKWORTH,
House of Representatives.

DEAR CONGRESSMAN BECKWORTH: This is in reply to your letter of March 14, requesting additional information on feed grains.

There are a number of situations in which it would be very helpful if additional statistical information were available; however, such additional information can only be obtained by the expenditure of time and money. In some cases, decisions have been made that the collection of additional statistical data would not justify the cost. It may be that, as new programs developed by this administration become effective, we will find it necessary to develop additional statistical information. Be that as it may, figures that exclude duplications on the number of farms that produce feed grains are not now available. The same comment applies to information on the number of farmers who receive price support loans on more than one commodity.

As you requested, we are enclosing a table giving information on loans made, loans paid, and the amount of the commodity acquired by the Commodity Credit Corporation. The table includes information for the 1959 crops of feed grains and soybeans. The number of loans made is the best information available on the extent of participation in the loan program. Also enclosed is a table which presents information, by States, on the number, quantity, and amount of loans made on the 1959 crops of feed grains and soybeans.

Sincerely yours,

WILLARD W. COCHRANE,
Assistant to the Secretary.

DEPARTMENT OF AGRICULTURE,
Washington, D.C., April 6, 1961.

Hon. LINDLEY BECKWORTH,
House of Representatives.

DEAR CONGRESSMAN BECKWORTH: We received your note dated March 27 on the bottom of a copy of our letter to you dated March 22 regarding information that you had requested.

Enclosed is a table showing the number of loans and purchase agreements made under price supports for 1958, 1959, and 1960 crops of grain and oilseeds in the five States which you mentioned.

You requested the number of farmers who participated in price supports in these States during these years. The figures which we are giving you generally refer to the number of individual farmers, but in some instances price-support is extended through cooperatives or associations of producers. Also, some individual producers obtain more than one loan on a commodity, a separate one for each storage location, for example. Our records are not maintained to show the number of producers who obtain price-support through cooperatives or groups, who obtain more than one loan on a commodity or who obtain loans on more than one commodity. I am sure you recognize also, that farmers who do not directly participate in a price support program obtain benefits to the extent that the support price influences the market price for the commodity he sells.

We regret that we did not interpret your first request correctly and we hope the enclosed tabulation will serve your purpose.

Sincerely yours,

JAMES T. RALPH,
Assistant Secretary.

Number of loans and purchase agreements made under price supports for 1958, 1959, and 1960 crops of grains and oilseeds, in selected States

Migrant Farm Labor Problems and "Harvest of Shame"—IX

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 11, 1961

Mr. ROGERS of Florida. Mr. Speaker, this is the ninth in a series of articles presented in the public interest by the Palm Beach Post-Times to show the Members some of the progress being made in Florida to solve problems relating to migrant farm labor which were left out of the television presentation "Harvest of Shame." The omissions of all that has been, and is being done in this field did a great injustice to the Floridians who have given their time and efforts to these problems over the years. It is hoped that, by reading these articles and the ones to follow, the Members and public will have a better understanding of this important matter.

[From the Palm Beach Post-Times, Feb. 3, 1961]

BELLE GLADE RENTALS NOT AS HIGH AS $15

"The rent is $15 per week per room."—"Harvest of Shame."

There is no migrant housing for $15 per week per room in Belle Glade, according to the chamber of commerce.

An investigation committee organized by the chamber reported: "Most rates for one room do not average over $6 or $7 per week. Cheaper rates are charged for unfurnished rooms."

The rate for two rooms averages $9 or $10 with one-bedroom apartments scaling $11 to $12.50, the committee said, with the owners sometimes paying for electricity, water and garbage collection.

Housing is provided on a competitive basis, the chamber reported, and no instance was found in the community of migrant rooms bringing $15 per week.

The committee found small homes renting for $10 or $12 per week.

A survey last year showed 1,017 units with a value of $2,127,800 were completed during the preceding 5-year period.

This, the chamber said, included 166 buildings and provided 79 new homes, 33 duplex apartments, 20 apartment buildings and 69 rooming houses.

The quality of construction has improved, the chamber said, and contractors now mostly erect concrete-block buildings. Over 20 old buildings have been razed during the 5-year period, the chamber found.

Said the chamber:

"The housing authority, in a survey, identified some 90 former Negro tenants and over 40 white migrant families who have purchased their own homes in this area or nearby communities.

"This could not have been done without encouragement and concern for the migrants by local citizens and authorities. Is this not progress?"

Water Development in the Southwest

EXTENSION OF REMARKS
OF
HON. CARL HAYDEN
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Thursday, April 13, 1961

Mr. HAYDEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by Floyd E. Dominy, the Commissioner of Reclamation, delivered at the convention of the American Society of Civil Engineers, Phoenix, Ariz., April 12, 1961, on the subject of water development in the Southwest.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY FLOYD E. DOMINY, THE COMMISSIONER OF RECLAMATION, AT THE CONVENTION OF THE AMERICAN SOCIETY OF CIVIL ENGINEERS, PHOENIX, ARIZ., APRIL 12, 1961

It is a privilege for me to participate in the spring meeting of the American Society of Civil Engineers. It is also gratifying to see that your well-planned program for this convention reflects a growing national concern about our water resources and the need for research for their future development.

I was in Phoenix just a month ago with Secretary of the Interior Udall for the golden anniversary celebration of the Theodore Roosevelt Dam. This is a key structure of the Salt River project, and one of the first to be undertaken by the Bureau of Reclamation. If anyone should question the worth and indeed the necessity of reclamation development, they have only to look around this prosperous and growing Salt River Valley, for reassurance. Its economy and stability are predicated on the water and power supplied from the Salt River project.

When this convention ends, many of you will be making a tour to see Glen Canyon Dam which is under construction on the Colorado River upstream from the Grand Canyon. This structure will be the key to utilization of water in the four States of the Upper Colorado River Basin, Utah, Wyoming, Colorado, and New Mexico.

There is a startling contrast in the manner in which these two structures are designed and built, as there is in the manner of operation of the Salt River project and the Colorado River storage project and participating irrigation projects. The contrast reflects the changes and progress which have been accomplished in order to meet the demands of the times. But we are not through. We cannot afford to be static in our field.

My personal prediction is that the pressures and demands for an increased water supply in the years ahead will pose such a problem that we will, of necessity, move further and faster than we have ever dreamed of in the past. And what is the key to this future progress?

It is research—research into every phase of water development and use. We must seek constantly for new ideas, new concepts—a new and vigorous approach to the problems that lie ahead.

Need I say that the engineering profession must be out in front in this research if we are to succeed. President Kennedy has challenged us all in these words from his special message to the Congress on natural resources:

"This Nation has been and is now especially fortunate in the blessings (of natural resources) we have inherited. Our entire society rests upon—and is dependent upon—our water, our lands, our forests, and our minerals. Wise investments in a resources program today will return vast dividends tomorrow, and failure to act now may be opportunities lost forever. We cannot now ignore our country's need for future development. Our available water supply must be used to give maximum benefit for all purposes—hydroelectric power, irrigation and reclamation, navigation, recreation, health, home, and industry."

Now I challenge you to pick it up. Don't be afraid or hesitant to get out on cloud 9. Some of our present successfully operating reclamation projects would have been considered pure fantasy 50 years ago. I say plan for the future with vision and imagination, then apply the hard rules of

economics and engineering to turn those dreams into reality.

I note that your program includes technical papers on canal linings, watershed management, erosion and sedimentation, water quality, and many other subjects, all of high importance as we approach the challenges ahead. Discussion of these papers here, and publication by the society, will bring together much of the known information in the civil engineering fields and point the way to plan wisely for the future.

It is proper that a program such as you have developed for this meeting is being presented at this thriving metropolis in the heart of Arizona's Salt River Valley. As I mentioned a moment ago, if there is one spot in the country that dramatically illustrates the vital importance of water-resource engineering and development, it is here in the middle of a great desert area. Reclamation makes desert living a delight. But there is more to it than that. In 1900, Phoenix had a population of 5,544. The phenomenal growth to a flourishing city of about 450,000 has been tied directly to water development. I am proud to represent the Federal agency that has had the major role in water development in Arizona since 1903.

This prosperous area and the tremendous yields in agriculture this valley now harvests from its available water supply, is a source of great satisfaction to all of us. This area affords many people with a delightful place to enjoy their leisure time. However, we must face the hard fact that Arizona is now using all of its readily available surface and ground water supply.

For continued growth of Arizona, as for many other Western States—yes, and of the country as a whole—we must depend upon development of complex projects to deliver new supplies over long distances, upon pumping against higher and higher heads, and upon new and future techniques to assure that every drop of available water is used wisely and well. The success of this effort will depend in a large part upon research in the basic sciences and development of new techniques.

I am well aware of the difficulties involved in securing funds for research. The projects built by us are paid for by those benefiting from their construction. As a result, most of the research we have performed has been in relation to specific engineering and design problems related to specific irrigation projects. Only comparatively small sums have been available for research of a general nature.

Last year, however, for the first time, Congress recognized the far-reaching application of our research efforts and appropriated $300,000 of nonreimbursable funds to the Bureau for this purpose. About one-half of this sum was earmarked for the study of means of reducing reservoir evaporation; of this we have allocated $61,000 to colleges for investigating various phases of this research program.

As many of you know, evaporation takes a toll of 14 million precious acre-feet of water every year from large lakes and reservoirs in our arid 17 Western States. Recent research has demonstrated that a monolayer of the compound, hexadecanol, which spreads over a water surface to a thickness of one molecule, will materially reduce evaporation.

Scientists discovered in the laboratory that hexadecanol will reduce evaporation by as much as 70 percent. But we need much basic research and experimentation to determine whether a monolayer can be applied economically to a large body of water. I am glad to report that progress has been made in this direction in large-scale tests conducted at Lake Hefner, near Oklahoma City, and in tests conducted last summer on Lake Sahuaro, a few miles from us here in Phoenix.

These later tests were made with the help and cooperation of the Salt River Valley Water Users Association, the U.S. Geological Survey, the U.S. Department of Health, and the Arizona State Fish and Game Department. At Lake Hefner, we realized a 9-percent savings in evaporation losses and something more than this at Lake Sahuaro.

It is apparent that we still have a long way to go before we approach anything like the laboratory results. There are many factors which must be scientifically investigated before we will know just how economically and effectively we can reduce evaporation.

The problem of reducing evaporation is only one of many highly complex problems on which more and better engineering information is needed to conserve and economically utilize our water resources. More information on the evaporation studies at Sahuaro Lake will be presented by Quentin L. Florey, of our research laboratory staff, on Thursday morning, at 9 a.m.

Nonbeneficial consumptive use by large areas of phreatophyte growth in several river basins represents a tremendous waste of water and is in many instances encroaching upon dependable water supply for existing irrigation projects as well as threatening future irrigation development. Our usable water supplies can be increased by eradication of phreatophytes, but research is needed in the areas of hydrology, ecology, and in methods of eradication and control.

In your trip to Glen Canyon Dam you will see many rock bolts which have been used to support the rock around the tunnel inlets and in the canyon walls. Also, you will see structural steel shapes used to support the crown of the inclined spillway tunnel. At present the spacing of these rock bolts and supports is determined largely by experience and judgment. There is a need for improved methods of determining the amount of support necessary for safe tunnel excavation and for determining the existing state of pressure in rock.

The Bureau of Reclamation has made its knowledge available to the public on the design of small dams by means of a publication which is proving very popular. We also recognize that there is a need for fundamental information on the behavior of rock foundations of large dams, so that we can design these dams more precisely.

Soils are our most abundant—and one of our most important—engineering materials for dams, canal linings and structure foundations. The science of soils engineering is very young and much fundamental information is needed. While the Bureau can now design earth dams with the assurance that they will be safe and serviceable structures, our scientists report that there is still a great and prompt need for basic research in the engineering and chemical properties of soil.

For example: the surface chemistry of clay particles as related to the minerals of the soil; electrochemical processes of increasing the porosity and improving the drainage of soils; physical properties of soils as affected by absorbed water as well as pore pressure; and better methods for measuring the pore pressures in earth structures.

Lined irrigation canals are expensive. Yet, in unlined canals as much as 50 percent of the water is frequently lost by seepage en route to the farm. We need a soil sealant that could be economically applied either in a dry canal or without unwatering the canal to reduce this seepage. Of course, we are always looking for cheaper ways to line our canals to avoid waste in conveying the water from the reservoir or stream to its destination. P. W. Terrell, of the Bureau of Reclamation, will present a paper on low-cost canal lining on Thursday afternoon, in which he will discuss some of our efforts to develop such linings.

Bureau construction consists principally of moving earth and placing concrete. There is still disagreement among engineers regarding the fundamental concepts used in the design of reinforced concrete. Prof. Phil M. Ferguson, past president of the American Concrete Institute, and one of the recipients of a research award at this luncheon, I am sure could discuss the needs for research in concrete at some length.

On large dams, there appears to be disagreement in both the allowable stresses which can safely be used and in the method of computing these stresses. Research is necessary to reduce the uncertainties, so as to permit lower factors of safety and thereby achieve greater economy in construction. The International Commission on Large Dams is doing a great deal to provide a better understanding of the various practices used throughout the world.

There is a continuing need for improving concrete so that structures can be built cheaper and last longer. As an example we need a concrete that is more resistant to the sulfates often found in high concentrations in soils of our Western States.

Hydraulics is still an inexact science in many ways. Despite a long history of laboratory and field research, we know the coefficients derived from experience and tests of small lined canals cannot be used in the design of large lined canals. Field research is needed on flow in large canals to establish their characteristics and to explain this nonconformity of accepted relationships.

Erosion is a serious problem and basic information is required for a fuller understanding of energy dissipation in closed and open conveyances so that we can build erosion-free structures. Also our hydraulic engineers recognize that little is known of the basic hydromechanics of rotational flow as illustrated by eddy and vortex formations in the intakes of some of our hydraulic structures.

Sediment is still a problem and I speak for both the designers and operators of hydraulic structures. We do not fully understand fundamental principles of turbulence and other factors that may be involved in sediment transport and deposition in meandering streams and artificial channels. We do not know, nor can we always employ the best method for controlling sediment in our structures and reducing sediment in canals. We need to study the improvement in such devices as sluiceways, guidewalls, and vanes and vortex tubes in diversion structures, in order to reduce the maintenance cost of periodic sediment removal. Adequate knowledge of canal shape and alinement influences would permit designs that would provide minimum operational difficulties and reduce erosion of canal banks and formation of sandbars that cut down canal capacity.

Water rights in these western arid and semiarid areas are one of man's most valuable possessions. As our water supplies become more fully developed and the competition for an adequate supply grows, the problem of allocating water according to established rights and equitably distributing it during times of shortage, requires improvement in present water measurement methods and devices, and the development of new ones. More accurate devices are needed to enable better assessment of charges for water and encourage more judicious application by the user. Improvement in the accuracy of measuring devices will make possible wider distribution of the available water for greater crop production and reduce waste.

I have been speaking mainly of the problems with which the civil engineer is concerned. The Bureau of Reclamation's forces consist of an integrated team of engineers, agronomists, economists, etc., and hence we are also concerned with research in other fields which affect the civil engineer, such as the elimination of aquatic weeds which clog our canals and reduce the capacity planned by the designer.

The Bureau is vitally interested in the frugal application and most economic use possible of water in the growing of crops. We are cooperating with the Department of

Agriculture and State colleges on experimental farms in this study. If we are to get the most mileage possible from our irrigation water supplies we must know more about the optimum water requirements of different crops grown in different soils and in different climates.

As one of the principal Federal agencies generating and transmitting the energy generated from water in the West, we are constantly seeking ways and means which will permit more economical generation and transportation of electric power. There is also a wide demand for means of extending the life of the metal gates and conduits on irrigation projects. Research is required in protective coatings and cathodic protection of metals as well as to achieve improvement in construction materials which may extend the life and reduce maintenance costs of project works.

These are some of the areas where we know immediate research would be profitable. There are many more. Activities in the saline water conversion reesarch program, and to establish methods of limiting the pollution of our water and to provide for its reuse are being stepped up by the administration to make full use of these potential sources of supply.

To point up the critical needs for research which could most profitably be pursued and stimulate the interest of foundations and educational institutions, the Bureau of Reclamation is joining with the ASCE and Colorado State University, in sponsoring a research symposium. The first symposium is on basic research in civil engineering fields related to water resources, and will be held June 12–15, at the Colorado State University campus, at Fort Collins.

About 50 leading engineers and scientists will participate in this symposium. I am pleased to note that 2 of these 50, Prof. Phil M. Ferguson and Prof. David K. Todd, are recipients of research award sat this luncheon. Professor Fardum, who is chairman of the society's research committee, will lead one of the panels.

Secretary Udall, who comes from this important reclamation State has lived with the water problem in Arizona and is acutely aware of the importance that water conservation and resource development can have on an area. He has accepted the challenge charted by President Kennedy for resource development. To implement this program, he has directed and urged us all in the Department to take vigorous and aggressive actions toward development of the Nation's physical resources.

Now, we must look to you as engineers to apply your knowledge and all the skills and technical tools available to both extend our knowledge and provide technical leadership in the development of our Nation's water resource.

Again I challenge you to pick up the reins of leadership in this important phase of civil engineering. Working together with vision and imagination, we can meet the needs of the future successfully.

Michigan Halts Showings of Distorted Films

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 13, 1961

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the Record, I include the following:

[From the Washington Post, Apr. 7, 1961]

MICHIGAN HALTS SHOWINGS OF DISTORTED FILMS

LANSING, MICH., April 6.—Public showings of two controversial films by the State police subversive activities squad were ordered discontinued today by Gov. John B. Swainson.

The films, "Operation Abolition" and "Communism on the Map," have been shown to four high schools in the State and a number of private groups by the State police unit.

Swanson said: "The films have been viewed by several members of my staff who confirm criticism that the films are inaccurate and distorted and thus harm, rather than advance, the purpose of an intelligent anti-Communist program."

The controversial "Operation Abolition" movie was prepared for the House Un-American Activities Committee and purports to be an accurate showing of student riots at a committee hearing last year in San Francisco.

"Communism on the Map" was produced by George S. Benson of Harding College, Searcy, Ark.

Soviet Space and Orbit Success on Orbiting Soviet Military Major Recognized as One of World's Greatest Scientific Achievements—President John F. Kennedy Promptly Sends Congratulations

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1961

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I wish to call to your attention, and to the attention of my other distinguished colleagues, a very timely and pertinent editorial appearing in the New York Times on Thursday, April 13, 1961:

KENNEDY PRAISES SOVIET SPACE FEAT—ALSO SAYS UNITED STATES WILL REMAIN BEHIND FOR SOME TIME

(By John W. Finney)

WASHINGTON, April 12.—President Kennedy congratulated the Soviet Union today on its outstanding technical accomplishment in sending the first man into space. He also told Americans that the United States would be behind in space for some time.

The Presidential congratulations were extended in a personal telegram to Soviet Premier Khrushchev and in a separate statement issued by the White House.

And, Mr. Speaker, in connection therewith, I would like to call attention also to a portion of a front page article in the same paper, which article was captioned "Kennedy Praises Soviet Space Feat."

THE FIRST COSMONAUT

The successful launching by Soviet scientists of a man into space and his safe return after orbiting the earth in 89 minutes will be hailed as one of the great advances in the story of man's age-old quest to tame the forces of nature. It marks the crowning achievement so far in space technology, and provides the most dramatic evidence of Soviet leadership in the field of powerful rocket engines.

But the success of Soviet space science must be recognized as much more than the triumph of the scientists of one nation. Viewed from the broad perspective of history, the successful launching of the first man in orbit is a triumph of the human mind and spirit regardless of geographic, political or ethnic boundaries. For the flight of young Yuri Gagarin is the culmination of a long story dating back hundreds of years, to which the minds of many men of many nations have greatly contributed. The modern chapter of the story began with the Englishman, Isaac Newton. Its most recent chaper was the contribution of the American rocket pioneer, Robert Goddard.

Orbiting a man is only a steppingstone toward orbiting a space station as a jumping-off point for trips to the moon and beyond. It marks the opening of the era of interplanetary travel and of discoveries beyond imagining.

These discoveries may provide us answers to fundamental questions man has been asking ever since he learned to think, such questions as how the universe began and whether or not it ever had a beginning; whether or not the laws governing the universe he observes also hold true for the vast as yet unseen universe beyond; whether the laws governing the universe today were the same a billion years ago, or whether they have been changing and are continuing to change.

They also may provide man answers to questions even more intimate to himself, questions about the origin of life, about its future, and its possible ending; whether life as it exists on earth is the only form of life that can possibly exist, or whether other forms of life even superior to ours exist on other planets in the vast cosmic spaces.

For the present, however, the Soviet accomplishment must be regarded as of political and psychological importance in giving the Soviet Union once again the "high ground" in world prestige. From the military point of view, the launching of the cosmonaut once again presents striking evidence that the Soviet Union possesses much more powerful rocket engines than the United States for the launching of intercontinental ballistic missiles.

What the Peace Corps Will Need

EXTENSION OF REMARKS
OF
HON. VANCE HARTKE
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, April 13, 1961

Mr. HARTKE. Mr. President, no proposal of the Government in recent years has so captured the imagination of the Nation as the President's proposal for the establishment of a Peace Corps. The Indianapolis Times editorially pointed out the realities that must be faced by the members. I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Indianapolis Times, Apr. 2, 1961]

WHAT PEACE CORPS WILL NEED

R. Sargent Shriver, director of President Kennedy's embryo Peace Corps, has been overwhelmed with applicants for jobs—which suggests that some have a notion that there will be more glamor than crime in the assignments.

Quite the contrary, as Shriver has been trying to make clear.

The realities of the job now have been pictured by others—speaking from experience.

"You'll get sick" said Warren Schmidt, director of oversea activities for the 4–H Clubs. "You can't avoid health hazards in the villages. You can't, for instance, turn down a friendly cup of tea—no matter how dirty the cup. As you get closer to the grassroots, these dangers increase."

Harry Pollack of the AFL–CIO put the whole idea in perspective:

The Peace Corps, he said, "won't solve our problems in the Congo, Laos, or Cuba. You're not going to replace the American Ambassador where you're sent." The Peace Corps "won't instantly transform all the underdeveloped countries. It is a new technique in international relations, nothing more."

Dan Kurzman, our man in the Congo, told the story of Guy Humphreys, who first went to the Congo to establish a mission in 1948. Humphreys is 44 (all Peace Corps persons need not be youths) and is the only American now resident in Stanleyville.

Humphreys has been arrested a dozen times, threatened at gunpoint, robbed, and his wife has had to go home for treatment of a strange eye disease. Despite all this, he intends to stay the rest of his life, and comments, "things aren't really so bad here."

This man demonstrates the spirit, the savvy and the stay-with-it-ness the Peace Corps will need if it is to be of any use.

He is an example of what many Americans, under private auspices, have been doing in a manner President Kennedy now proposes to do in addition under government auspices.

Foreign Trade Economics and the U.S. Fish Business

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1961

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the CONGRESSIONAL RECORD a reprint from the February 1961 issue of Pacific Fisherman entitled "Foreign Trade Economics and the U.S. Fish Business," by Mr. Richard Kulze, president of the American Seafood Distributors Association:

FOREIGN TRADE ECONOMICS AND THE U.S. FISH BUSINESS

(By Richard Kulze)

I think we can all see that the entire structure of international commerce is in the course of a basic transformation that is likely to produce a new type of trading world within the next 10 to 15 years.

For centures, trade has been conducted between and among national states, each with its independent commercial laws and practices; each exercising control over the movement of goods across its frontiers.

Eight years ago—with the formation of the European Coal and Steel Community—the Western World began a new movement toward regional trade blocs that appears to be picking up momentum almost daily. It has swept over Western Europe and Latin America and is even beginning to penetrate to the newly born African states.

Only two of the world's major industrial nations—the United States and Japan—now stand outside of some sort of actual or proposed regional trade group. This isolation is leading to a reevaluation of trade policy at the business and official levels in both nations. No longer do we have a brotherhood of nations, the familiar brotherly ties. Trade has become and is becoming a series of family affairs between groups of nations.

At present some 25 countries are spinning off from the Old World trade system and clustering into trade groupings. There's EEC (European Economic Community)—or the Common Market—covering 165 million people in France, Germany, Italy, Holland, Belgium, and Luxemburg. There's EFTS (the European Free Trade Association), and its 90 million people of Britain, Sweden, Norway, Denmark, Switzerland, Austria, and Portugal. There is the South American bloc being worked on—108 million people of Argentina, Bolivia, Brazil, Chile, Paraguay, Peru, and Uruguay, and with Mexico's 32 million also taking part.

In Central America, the 10 million people of Guatemala, Honduras, El Salvador, Nicaragua, and Costa Rica are organizing their trade zone.

All of the groups vary in form but they are all built and are building around one principle—a customs union. Each country within a group undertakes gradual elimination of all tariff and trade restrictions from all other members of the same group. At the same time, however, existing tariffs will be maintained on imports from nonmember states. The end result is a free trade zone within which companies can sell to each other freely. Outsiders, including the United States can sell into the zone only over the existing tariff wall. The regional trade bloc idea will give tremendous impetus to economic expansion within the free trade zone. Those standing outside the zone will benefit by the amount of economic expansion which spills over as a result of the additional demand for imports from all over the world.

What touched off this movement toward trade blocs? Many things. There are those who say that exporting countries were disturbed at the reluctance of the United States with its vast market, to join OEC, the administrative arm of the General Agreement on Tariff and Trade; who feared the on-again, off-again trade decisions in our country and the reoccurring tides of protectionism which sweep the United States from time to time.

But the main theme behind the formation of trade blocs must be that industry activity can tap its full potential only if its producing facilities are assured broad markets, such as exists here among our 50 States.

The formation of the varying trade bloc will have effects on U.S. markets, both here and abroad, and on U.S. business and U.S. policy. At the coming 1960–61 GATT conference in Geneva, we—and the other GATT countries—will be negotiating for the first time with the Common Market as an entity and not as separate countries. It will behoove us to obtain the best possible concessions from that group to which the United States has always exported in substantial quantity.

The forming of these blocs comes at a time when the United States is striving to increase its exports, and in order to insure continuing exports to those countries which will be trading freely with their family countries, U.S. exporters must continue to show the ingenuity for which they are famed.

And other nonbloc countries may find themselves losing historic markets and may look harder at the U.S. market. As distributors, we may find that some of our historic suppliers abroad may find it easier to ship to their duty-free neighbors than over our tariff wall, and we may have to look harder for the supplies needed for the American consumer.

This is the irony of our position in the American fishing industry. While we are concerning ourselves with the lack of fishery supplies for the American consumer, bill after bill is pending to limit or otherwise restrict the importation of seafood products—almost every species.

We are still in the midst of the grandiose shrimp tariff-quota investigation, and distributor after distributor has told me of the difficulties in obtaining shrimp supplies. With our ever increasing population, our distributors are, and must be, continually on the lookout for world supplies of fishery products for our consumer.

As the postwar world has recovered, the economies of those countries have improved, and they have become competitors for the world fishery supplies in which we participate, as well as becoming bigger and better markets for U.S. exports. U.S. distributors of lobster tails, as an illustration, have seen examples of being outbid for supplies by European buyers. I think we will see more of this as the world economy progresses, particularly in the now underdeveloped countries. There are 1¼ billion people living in 100 non-Communist underdeveloped countries and territories. These 100 underdeveloped countries are a great new economic frontier. To industrialized countries, like the United States, their economic progress means larger export markets. Gross income in those countries grew 3 percent a year from 1950 to 1959, but with 200 million new mouths to feed in the 10-year span, the net income was about 1 percent. If those countries can lift their per capita incomes by only 1 percent more a year during the coming decade, they can well double their imports from the United States alone. A rising economy in those countries means prosperity, and prosperity anywhere on earth is America's trading opportunity.

To us in the fisheries, exports are a minor part of our trade; but to our country, it is our lifeblood. Our tremendous exports, exceeding imports by $3 billion, constitute the major reason why you and I are in business today. Only because of the role which our exports play in the U.S. economy have we been able to maintain a liberal trade policy in this country. Only because of our exports of cotton and tobacco and machinery—and the jobs and the revenue which those exports produce for our country—have we been able to stem the tide of restrictive import controls on tuna and trout and we hope, shrimp.

But despite the fact that our exports still exceed our imports by a healthy surplus, protectionism continues to exist, and we can expect to have it with us in the time to come. The United States imported more goods last year than ever before in our history—$15.2 billion worth. To those worried about foreign competition, the total is bound to appear ominous, for after all, only 9 years before, in 1950, U.S. imports came to a bare $8.9 billion. The gain seems enormous, but is it?

Imports tend to run in line with our Nation's overall business activity. As incomes rise, people buy more, and as production expands, manufacturers also need more materials.

The U. S. gross national product—this is the total output of goods and services—had increased to approximately $280 billion last year. And imports can logically be expected to go up as gross national production rises. But what is more startling than the uptrend

in imports is that we are buying relatively no more abroad now than we did back in 1950. Imports in both years represented 3.1 percent of our gross national product.

The real significance of recent import figures lies not so much in their absolute amount as in the type of goods coming in. Since the end of the war, there has been a fair shift in imports to finished products. The growing capacity and technological skills abroad have made those countries able to compete here with remarkable success. In 1950, almost 60 percent of our imports consisted of crude and semimanufactured materials. In 1959, that figure had declined to about 45 percent, with more than half of our imports consisting of finished products. We have had this shift to only a limited degree in our fishery imports.

If the trade pattern shifts, more complaints are bound to be voiced about foreign competition. But as I said earlier, prosperity abroad can only be achieved by an increased economy, a better standard of living, and increased industrialization. What else can we reasonably expect the other countries of the world to sell in our marketplace if not the products of their industry? And a significant fact not to be overlooked as the economy of the world progresses—the frequent cliche of low-cost foreign labor—as the standard of living betters abroad, their labor rates comes closer and closer in line with our wages.

I have mentioned some big figures as we discuss U.S. exports of $18 billion and U.S. imports of $15.2 billion. Let's try to relate these figures to our fish industry, in smaller figures and with regard to people. Take the case of shrimp imports and the pending legislation that seeks to restrict imports from over 50 countries. In the case of the major exporter, Mexico, with its 32 million population, every Mexican annually buys $27.30 worth of U.S. goods. Each American buys $2.61 worth of Mexican goods. Each citizen of Ecuador buys $11.67 from the United States, each American spends 32 cents a year on Ecuadorian merchandise. Each Panamanian spends $83.60 on American goods; each American buys 14 cents worth of merchandise from Panama each year. It is the same with the other shrimp exporting countries; each Colombian spends $13.57 a year on U.S. merchandise; our purchase from Colombia is $1.91. Each citizen of El Salvador spends $18.41 for U.S. goods; our purchase is 28 cents a year. Egypt's per capita purchase from the United States is $2.16 compared to our purchase worth 9 cents. Costa Rica, $37.90, compared to our 21 cents. Pakistan, $1.30, compared to our 15 cents. Iran, $4.37, compared to our 25 cents. Israel, $50.81, compared to our 10 cents. Chile, $20.88, compared to 73 cents. Japan, $9.06, compared to $3.87.

And let's look at the countries which export ground fish fillets and blocks to the United States. Canada is the largest exporter, and Canada buys $3½ billion worth of U.S. goods. Canada is our largest customer. Each Canadian buys $196.23 worth of U.S. goods per year; every American buys $15.37 worth of Canadian goods. Every Icelander spends $85.14 on U.S. goods while each American buys 6 cents worth of Icelandic goods. Every Norwegian spends $19.77 for U.S. merchandise compared to our purchase of 29 cents. Every Dane is a $17.31 customer of the United States, compared to our purchase of 48 cents.

And let's look at the countries exporting lobster tails to the United States. Australia, $19.37, compared to our purchase of 57 cents. New Zealand, $18.82, compared to 65 cents. Cuba, $83.61, compared to $2.97. South Africa, $17.23, compared to 54 cents.

Our latest tariff complaint is lodged against Peru because of its fish meal exports to the United States. Every Peruvian buys $16.33 worth of U.S. goods compared to our purchase of 74 cents worth of Peruvian merchandise.

These are figures which bring this matter of balance of trade into better focus for all of us. The $18 billion which we receive in the United States for our exports plays a very vital role in our prosperity. The owner or employee of an American business receiving import competition from abroad finds it hard to appreciate this—and while we disagree with him we can understand his views. This is what makes tariffs and trade such a personal matter. How do you think these large customers of the United States feel when our industries suggest tariff controls on their exports? How would you feel or what would you do if a supplier from whom you bought $15 worth of bread wanted to make it difficult for you to sell him 50 cents worth of milk? With our $3 billion export surplus, however, it is unbelievable that in this country we have proposals to restrict trade in tuna, shrimp, lobster tails, typewriters, textiles, and the myriad of proposals pending in our Congress.

A Meritorious Know Communism Recommendation

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 13, 1961

Mr. PELLY. Mr. Speaker, when I was home in my congressional district during the Easter recess, a new citizens group to promote Americanism was announced. The name of this organization was the Seattle American Leadership Council. Among its organizers were such outstanding men as Wellwood E. Beall, senior vice president of the Boeing Airplane Co.; Chester Ramage, secretary of the King County Labor Council, and James M. Cain, an insurance executive long active in civic affairs. The mayor of Seattle, Gordon S. Clinton, headed the council as honorary chairman.

This was a citywide group dedicated to combating communism in the community, concerning itself with principles and not with individuals. The council program calls for stimulating all individuals in the city to a renewed dedication to principles as set forth in the Declaration of Independence and like it, would seek an understanding of the goals and methods of international communism and to constructive thought and action to defeat the total challenge of the Communist conspiracy.

To carry out its program the group has organized a speakers bureau and I am convinced an effective program of stimulating the people of Seattle toward obtaining knowledge about communism and Communist tactics will result.

I am recommending to the Seattle Leadership Council that it study the recent resolution adopted by the house of delegates of the American Bar Association which urges the legal profession and the public to mobilize public support for teachers and school officials who wish to strengthen their school curriculums in this area.

The American Bar News of March 15, 1961 contained an article telling of the action whereby the house of delegates went on record favoring the Nation's high schools and colleges providing adequate instruction in the techniques and objectives of communism, so young Americans would be better prepared to meet the challenge to our system of freedom under law.

Mr. Speaker, it has seemed to me a citizens group such as The Seattle American Leadership Council, in cooperation with members of the legal profession, can be most effective and avoid the often made charge of witch hunting by following the Bar Association resolution which calls first, for encouragement and support of school and college programs presenting adequate instruction in the history, doctrines, objectives and techniques of Communism, thereby instilling greater appreciation of freedom under law and the will to preserve that freedom; second, to insure the highest quality of instruction, that educational authorities be urged to provide appropriate training of instructors and the production of scholarly textbooks and professionally excellent teaching materials.

I firmly feel the need of a citizens drive to awaken our youth to the privileges of Americanism and the threat of international communism. In this connection I would like to quote from the bar association conference committee's report covering its "know communism" resolution. This report, with which I am 100 percent in agreement, reads as follows:

Public understanding and support for this educational program will be essential. It is to be hoped that our members and the State and local bar associations will assist in developing proper understanding and in mobilizing public support.

This program will be beset with many obstacles. There are even those who deem it treasonable to mention communism in the classroom. Pressures and emotions will be brought to play upon any textbooks and educational aids. There will be those who fear that a well-meaning program may itself become infiltrated or perverted. A great host of patriotic educators, with proper public support, can see that these pitfalls and obstacles are avoided or overcome.

Film Documentary on Riot Withdrawn

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 13, 1961

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Los Angeles Mirror of March 3, 1961, relating why Lockheed missiles and space division has stopped showing the film "Operation Abolition":

FILM DOCUMENTARY ON RIOT WITHDRAWN

SUNNYVALE.—The Lockheed missiles and space division said Thursday it had stopped showing "Operation Abolition" because controversy over the film report of the San Francisco city hall student riot had de-

stroyed its value as a security education tool.

Lockheed had purchased a print of the film and used it in showings primarily intended for section security coordinators to alert them to the activity of identified Communists in the San Francisco area.

John Riffle, public information director, said Lockheed no longer will make available its "Operation Abolition" print to civic groups. Previously Lockheed required for such showings that a panel discussion including criticism be provided.

At employee showings Lockheed security officers advised that Lockheed neither supported nor opposed the House Committee on Un-American Activities. A collection of published criticism also was provided for study.

The 45-minute film was produced from newsreel film subpenaed by the House Committee on Un-American Activities from KRON and KPIX, San Francisco television stations. Fulton Lewis III, former committee staff aid, edited and narrated the film.

Critics of the committee and the film insist the movie gives a distorted picture of the college student protest against the committee's San Francisco hearing.

Committee spokesmen declare the film was edited only to make a cohesive film and eliminate duplication.

The film is marketed privately at $100 a copy by Washington Video Productions, Inc. George Johnson said his firm assembled the film's raw materials at its own expense as a business speculation.

Our Space Program

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 13, 1961

Mr. ANFUSO. Mr. Speaker, the difficulty we face today is that the American people have been kept ignorant on national defense and at times even intentionally deceived.

In a dictatorship the people can be regimented into action. Not so with a democracy where the people will not budge unless they fully understand the facts. Without an enlightened American public, our country and the rest of the world is doomed.

Let us look back a bit. America went into World War II with the P–40 as our best fighter plane. The Jap Zero made mincemeat out of it. The P–40's we sent to England were not even uncrated. Our pilots used the English Spitfires instead. Although we started out wrong we had time to change our position.

In the next war this luxury will be denied to us. The enemy will strike immediately at the heart of our Nation with the devastating weapons they now have at their command. While we still have a retaliatory power in our Strategic Air Command—some experts say—if the Russians strike first, our retaliatory power will only be a postmortem force.

Let us remove the cloak of secrecy from the American people, as President Kennedy tried to do in his inaugural speech.

The facts will not frighten them. They will only make them mad and then we will get the proper action here in Washington. After all we are not fooling anybody—the Russians know more of our defense posture than some of our experts.

In order to properly alert our people, it may be necessary to have a full-scale congressional investigation. Since, however, Mr. James E. Webb, our new NASA Administrator, promised this morning at hearings before the House Science and Astronautics Committee that he will make an independent study of his own, therefore, such an investigation can be postponed—but not for long.

I want to see the country mobilized on a wartime basis, because we are at war. I want to see our schedules cut in half. I want to see what NASA says it is going to do in 10 years be done in 5. I want to see some firsts coming out of NASA such as a landing on the moon, which I know can be done if we go into immediate development of a solid fuel booster. Again I am told by experts that you cannot have such a program with a liquid booster because you cannot properly cloister such a booster to propel the huge payload necessary for such a project.

I was also assured by Mr. Webb that he is not just going to follow a program already established; that he will reexamine the projected 10-year program of NASA with the view of making constructive changes. With this kind of teamwork and with the energy and foresight of the Kennedy administration, I am confident that we can reach new frontiers first.

I want to assure the Members of the Congress that the members of the House Science and Astronautics Committee are alerted to the problem and will watch the program very carefully.

Our Social Security Program Plus Medical Care

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 13, 1961

Mr. MASON. Mr. Speaker, today our social security taxes are 3 percent each upon employer and employee on a wage base of $4,800. Under present law this will increase to 4½ percent upon each by 1969.

The tax costs of a Federal medical care program cannot be estimated exactly. It could equal what the American people now spend voluntarily for medical care; namely, about $18 billion per year. This would make it necessary to double the 4½ percent social security tax now scheduled for 1969. That means both employee and employer would pay 9 percent upon a wage base of $4,800. The social security tax would then be 18 percent of the covered payroll.

Of course, these doubled social security taxes would be in addition to the present personal income taxes of the employee, so the taxload upon the worker would be about double his present taxload. Will this added taxload for a Federal medical care program be the proverbial straw that breaks the overloaded taxpaying camel's back?

In discussing this problem the Wall Street Journal on Monday, February 13, 1961, under the heading "Questions on a Modest Proposal," said:

[From the Wall Street Journal, Feb. 13, 1961]

QUESTIONS ON A MODEST PROPOSAL

When a man comes promising to do good for little children and to ease the sorrows of age, anyone who questions him is bound to sound a little like a skinflint who would take candy from babies and push his grandmother out in the cold.

If you think not so, watch what is going to happen to those in Congress bold enough to raise questions about President Kennedy's proposals to meet the urgent needs of the Nation's children and the haunting fears of old age that beset the rest of us. Against the emotional wind blown by such imagery, reason is a feeble reed.

Yet somebody had better ask the questions. It is not merely that hidden beneath the tinsel there are a good many prickly nettles; the promise itself is not at all what it seems. For that promise is not simply that society will try to improve its way of taking care of its indigent and helpless, with which aim no man would quarrel; but rather that by this program the Government is going to improve the medical care of all the people. That promise, it seems to us, is pure deceit.

It is going to take some very probing questions even to uncover the tangible nettles tucked away in this program. Offhand, we can recall no program of such magnitude ever being submitted to Congress without a single line in the President's message as to what its cost will be, now or ultimately.

There are, to be sure, some figures given on what the Government says it is going to tax the people initially, but even they are not exactly what they seem.

The President speaks of raising social security taxes by only one-quarter of 1 percent and of lifting the base of this tax to the first $5,000 of income, a seemingly trivial price to pay for such wonderful benefits. But this quarter of 1 percent is pyramided; under present law social security taxes are already scheduled to go to 3½ percent for every wage earner in 1963; to 4 percent in 1966; to 4½ percent in 1969. This new proposal is in addition thereto.

And of course in addition to this, there will be an equal amount levied, so the law phrases it, upon the employer, the implication here being that since the employer pays it, it's a gift to the wage earner. But slice this as you will, it means that upon the paycheck of every man affected there will be a payroll tax of more than 9 percent—this 9 percent, mind you, over and above all income taxes, where the lowest rate already is 20 percent.

But if this in itself is no trivial sum, it still offers only a glimpse at the actual cost of this program. It was not without reason that this question was lightly passed over in the President's message. Nobody knows. And the way this program is proposed, nobody can possibly know—neither the President, nor Congress, nor you who are going to pay for it.

Consider: The proposal is that after an initial deduction, which must not be less than $20, the Government will pay "all costs" for up to 90 days in the hospital "for a single spell of illness." Or "all costs" of nursing home facilities for 180 days. "All costs" in excess of $20 for outpatient diagnostic services. With such an unlimited commitment it is no wonder that Government statisticians haven't yet come up with a cost figure.

Not even the administration pretends the cost will be covered by the $1.5 billion which is supposed to be raised by the "extra" social security tax. And whatever that mysterious figure is now, it, too, is only a beginning. Already the age of the proposed beneficiaries has dropped from 68 to 65 in a bare six months; the period of benefits has been extended from earlier proposals; and some new benefits have been added. What would happen to the program, once started, is incalculable.

But if you want to get some idea of the upper reaches of this commitment which the Government would now undertake, you can do a little arithmetic with the President's own figures. He says there are 16 million people over 65. Half of them have medical costs of $700 or more a year. There is a liability here of over $5 billion, just counting the half with major medical problems.

But enough of these nettles. There is no use in even trying to grapple with the limitless cost-increases that lie in future changes in the law, or what this wholesale "send-the-bill-to-the-Government" program will do to future costs. No one can guess at the effect on hospitals from overcrowding when the Government pays most of the bill.

For the costs are not the only things that tarnish the bright promises, although these are staggering sums for the whole country to pay in order to take care of the few truly needy.

The President assures one and all that this "very modest proposal" is not "socialized medicine." It is not being paid for by the general taxpayer, he says; only by employers and employes, as if the taxpayers were somebody else. And it is not, so we are told, going to touch the private medical system of the country.

Yet here is a measure for the Government to take over the responsibility of medical care for all of us in age, indigent, and self-reliant alike. We would have no choice in the matter. So doing, Government takes on the responsibility to see that the money is spent as public funds; it cannot in duty pay out public funds to just any doctor or to just any hospital. Nor will it; the medical facilities for which Government pays Government funds must meet Government standards, and those standards may be medical, financial, social, or whatever the Government would make them.

To pretend that this will not alter, in a deep and fundamental way, the health, and medical system of the country is specious. We have no doubt that the few and needy will get better medical care than before. But the price of providing for the needy in this way is not to be measured only in billions of dollars, however many of them there may be, but in what the great apparatus of Government will do to the medical care of all the rest of the people in a country which has achieved—without Government—the highest medical standards of any country in the world.

If this is not socialized medicine, it is nothing. And the President himself promises that this modest program for old people is not an end but a beginning—a "foundation on which to build."

Somebody had better ask questions about what it is that is being built.

Threat of Too Much Government

EXTENSION OF REMARKS
OF

HON. DURWARD G. HALL

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 13, 1961

Mr. HALL. Mr. Speaker, under leave to extend my remarks I would like to insert in the RECORD the following editorial printed in the April 3, 1961, issue of Life Lines:

THREAT OF TOO MUCH GOVERNMENT

Government affects all of us in our daily lives, and we affect government, too—or we can if we will. The institutions of government are made by man, and man must bear the responsibility for what happens to those institutions. And today patriots throughout the land are gravely concerned about what has been happening to our American heritage of good government.

For the first 150 years of our existence as a nation, the American people, a free people under God, honored the universal truths embedded in our Constitution and built the most powerful, the most prosperous, the most freedom-conscious Nation on earth.

But then something happened. We began to abandon these truths. The old checks and balances so carefully woven into our Constitution were disregarded in the interest of expediency. Federal authority was extended far beyond the limits originally outlined in the Constitution. This process led to a preemption of the powers of the States and, in many cases, a preemption of the rights of the individual.

The original conception of a division of powers among Federal, State, and local government has corroded. Massive concentration of Federal powers has cancelled out the division of authority on which freedom historically has depended.

Centralization of government has taken government farther and farther away from the people. Government has become so remote that the American people no longer feel they own it—that government is their servant. This lessening of a sense of participation on the part of the people presents an open invitation to extravagance and waste, corruption and inefficiency.

We have seen how this invitation has been accepted.

Centralized government has reinforced itself by creating a vast network of commissions, bureaus, and agencies endowed with an unhealthy combination of legislative, executive, and judicial powers. These bureaucratic creations are manned by appointed officials, persons who have never been elected to their positions of power but who nevertheless can and do act as judge, jury, and prosecuting attorney in matters of great import. This is not only in violation of the principle of separate powers as set down in the Constitution, but it is also contrary to the basic principle that government should be only by consent of the governed.

The concentration of government has led to an unhealthy battle for power among the various branches of the Federal Government. Worst of all, the removal of government from the direct contact of the citizen gives rise to apathy, discouragement, disgust, and confusion among the people.

This has created a dangerous climate in America—a climate in which the antifreedom propaganda of the mistaken flourishes.

As government has grown to colossal proportions and as it has become remote, the American people have begun to lose interest in it. They have begun to give up hope of influencing a creation so large and powerful. They are not sufficiently interested to acquire the knowledge they need if they wish to hold government accountable.

Too many Americans are losing their self-reliance. They look to the all-powerful Federal Government as a source of solution for all their problems, and the more they ask, the more the perverters of our constitutional government respond with still bigger government. The road on which we travel is the road laid down for us by the mistaken. It is high time that we turn around and retrace our steps or else we shall be lost. The turnaround can come only through the informed efforts of patriots.

THE MISTAKEN KEEP PUSHING

The people in America who are in a position to know have warned repeatedly that Communist infiltration in the United States is increasing. They continue to warn that there are more Communist spies in the world today than ever before. Yet many Americans who are loyal to our country continue to be used by the mistaken.

We can be quite sure that the mistaken conspiracy has given its full support to efforts to cripple the House Committee on Un-American Activities and the Senate Internal Security Subcommittee. These are the only two congressional groups which constantly expose to public view the conspiracy's operations within the United States. Thus they are a main target for the mistaken.

These groups have performed an especially valuable service in turning the spotlight on Communist agitation among young Americans. The danger to our young people is very real. Some of them on the west coast were led—or misled—into rioting against a hearing of the House committee in San Francisco last May. Riot charges against the demonstrators were dismissed by a local judge for what he called "practical reasons," but he has made it clear since then that his action did not mean he condoned what happened in San Francisco.

The judge said: "I very definitely agree with the view of FBI Director Hoover that the city hall riot on May 13 was instigated by Communist subversives."

They were out to ruin our young people and to ruin America as well. A national party leader recently commented that Communist youth must find common ground with church youth groups—not, of course, for religious reasons but for the use of their facilities.

Unfortunately some Americans "pooh-pooh" the menace of communism within our own country, pointing out that it is simply a "belief" or the dogma of a political party which happens to differ with our two big political parties. That idea is both naive and dangerous.

Communism is a worldwide conspiracy against human freedom and the dignity of man. The members of this conspiracy in the United States constitute a deadly danger to our future. To dismiss lightly the existence of the subversive threat to the United States is to deliberately commit national suicide.

We must face honestly the gravity of the situation. We must give it top priority in our thinking and in our actions. The basic foundation of our opposition to the mistaken doctrine is an informed public opinion and a dedicated public character. Time is growing short. In another few years the anti-freedom forces will take charge of the world unless they are stopped. We are going to have to stop them. And the first step is to gain as complete knowledge as can be had

of the nature of the conspiracy. This is the challenge faced today by every patriotic American.

If you were a member of a conspiracy set upon destroying America from within, what plan of action would you follow?

The most obvious answer in view of the nature of the problem, would be first of all to lull the people, the lawmakers, and the courts of this country into the belief that there is no serious subversive threat to freedom in our Nation and therefore no cause for worry or concern. Since the numerical strength of the conspiracy in the United States is comparatively small, the strategy would be to induce patriots to look the other way while the conspirators plotted their destruction. That is exactly the strategy being followed by those who seek to end freedom for all Americans.

Patriots must not be deceived. They must remember that the attack on freedom takes many guises. It is well for us to give our attention to some of the things that happen when personal rights come into conflict with what the mistaken call the public welfare. When individual freedom is lost to any man, the freedom of all men is threatened.

How can patriots work to maintain freedom in America?

First of all, we must march straight down the road of personal enterprise. We must have faith in a man's reliance upon himself. If we fall victim to the Federal Government's "free" this and "free" that, we cannot escape weakening ourselves in character—and the only end is serfdom and slavery.

It is important and necessary for patriots to keep steadfastly in mind the truth that the growth of big Federal Government must be checked if we are to survive as a nation of free individuals. It is important and necessary for every American to refuse to allow government at any level to do for him what he can and should do for himself. It is important and necessary that the power of the government not be centered in Washington, but instead be returned to the State capitals, the county seats, and the city halls of America and most of all to the individual American citizen.

It is not too late to save freedom if patriots will act with knowledge, with decisiveness, with firmness. There is work for all men and women who love freedom and who feel a deep-seated loyalty to America and all that America means.

There is work for you to do. You can encourage patriotism wherever you find it in evidence. You can join with other patriots to bring about the widest possible participation in public affairs. If you are the president of a corporation or the head of a business, you can poll your stockholders and associates to determine how many of them would be willing to participate fully and actively in public affairs.

You can further education in freedom's cause through your patriotic letters to newspapers. You can check to see that patriotic radio and television programs are being correctly carried in the newspaper time schedules. You can speak your praise to sponsors of such programs. You can help secure loyal Americans as speakers for luncheon clubs. You can work for a revival of patriotic songs and you can encourage the frequent and proper display of the American flag.

Never forget that the mistaken are on the job constantly. Patriots must be no less diligent. Our freedom is at stake. Western civilization is at stake. Our Christian way of life itself is at stake.

This is a time to sound the cry—"Patriots, unite."

We must arm ourselves with knowledge, we must regather our strength, and as united patriots we must draw near to the eternal truths on which our freedom is founded.

Guidelines for the Minimum Wage—Statement of Prof. Gottfried Haberler to the Senate Subcommittee on Labor

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 13, 1961

Mr. CURTIS of Missouri. Mr. Speaker, one of the important issues that has been raised in this House in recent weeks is that of the minimum wage. I participated in the debate on this matter and, in connection with earlier discussion of it in the 86th Congress, testified before the House subcommittee studying it. At these time I tried to give a framework within which this body could view the minimum wage, keeping an economic perspective.

In the Senate subcommittee hearings on the minimum wage a similar statement has been made by Prof. Gottfried Haberler, Galen L. Stone, professor of international trade at Harvard University. Because of the importance of this economic framework in understanding the minimum wage and its effect in the society, I should like to place Professor Haberler's statement in the RECORD at this point:

GUIDELINES FOR THE MINIMUM WAGE

INTRODUCTION

I have been asked to submit a statement on the proposed minimum wage legislation to the Senate Subcommittee on Labor and am happy to comply with one reservation: I am not in a position to make quantitative-statistical analysis of the probable magnitude of the impact of the proposed increase in the minimum wage. But I am convinced that it is possible to reach definite conclusions concerning the direction of changes to be expected from an increase in minimum wages and hence on the advisability of the proposed legislation—conclusions which are solidly based on general considerations and broad economic facts and principles which are widely if not universally accepted by economists of different schools.

A RISE IN MINIMUM WAGES IS AN INFLATIONARY MEASURE

There can be no doubt, in my opinion, that a rise in minimum wages by 15 or 25 percent is a highly inflationary move. In industries and firms covered or proposed to be covered by the legislation, wages which are at the minimum level will be immediately raised by 15 percent or 25 percent. In the great majority of cases, this will either lead to price rises or to a reduction in employment.

Wages that are only a little higher than the present minimum will likewise go up with the same result on prices and/or employment, because employees will insist on the existing differentials between actual and minimum wages being maintained and employers will find it necessary to accede for the purpose of maintaining morale.

I understand that there exist a number of wage contracts which stipulate the preservation of existing differentials.

But even where no such explicit contractual obligations exist and where present wage rates are much higher than the legal minimum, there will be a natural tendency on the part of the unions to strive for the preservation of the existing wage differentials. We can therefore expect that a substantial rise in minimum wages will exert a strong upward pressure on the whole wage structure. This expectation, no doubt, is one of the most important reasons why unions so strongly endorse a rise in the legal minimum wage.

There may be isolated cases where employers will be able to improve productivity and thus to absorb part of the increase in cost caused by higher wages without raising prices in full proportion. It should be observed, however, that such improvements are going on all the time anyway. To assume that it should be possible to speed up the process of gradual improvement in productivity with the stroke of the pen by raising money wages so that a sharp wage rise need entail neither a rise in prices nor a fall in employment—such an assumption is entirely unrealistic; it is wishful thinking of the most dangerous and irresponsible kind.

WAGE INFLATION DOES NOT RAISE THE LEVEL OF REAL WAGES

It cannot be emphasized too strongly that a general rise in money wages and the resulting price rise cannot raise the general level of real wages, except to the minute extent to which it is possible to squeeze something out of the real income of fixed income receivers. This does not exclude that certain segments of employees where money wages for any reason whatever are adjusted more quickly than that of the great mass of the population can get a temporary benefit at the expense of the rest of the people before the general wage and price level has been fully adjusted. But it certainly is true for wage and salary earners in general that their real income cannot be increased by inflation.

THE DOUBLE DANGER OF INFLATION

A. The balance of payments

It should be commonplace to observe that at the present time any inflationary move is especially dangerous in view of the precarious position of our balance of payments.

It is often said that our inflation during the last 5 or 6 years had nothing to do with the deterioration in our balance of payments since 1958. It is true that our inflation during these years has not been very severe by historical standards or by comparison with inflation in many or most (not all) other countries. But the plain fact is that our "little" inflation has been too much for our balance in view of the fact that our industry is now subject to increased competition at home and abroad from the industrial countries in Western Europe and Japan, which with massive American assistance and aided by sound financial policies have staged a surprisingly quick and sustained recovery from the destructions of the war.

I cannot discuss here the whole complicated story of the balance of payments deficit and how we got into it. In lieu of such a discussion, I attach a copy of a paper of mine on "The Economics of International Markets" where the international payments problem is analyzed as well as the question of remedies.

B. Wage inflation, recovery from the recession and economic growth

The inflationary push resulting from the jacking up of money wages induced by the proposed rise in minimum wages would endanger not only our external balance but would also be a drag on and danger to the internal economic recovery and growth.

The American economy finds itself at present in a recession—in the last stage, it is hoped, of the fourth postwar recession. All sorts of measures have been taken or are under active consideration for the purpose of increasing overall expenditure and effective demand. It is to be expected that the

economy will soon resume its expansion which was interrupted by the recession around the middle of last year.

In view of the numerous programs of increased public expenditures on defense, health and welfare, education, urban renewal, etc., that are underway or under active consideration, there is no danger that the coming expansion will peter out at an early stage. The real danger is that it will again produce inflationary price rises. It should be remembered that the last business cycle upswing, which lasted from April 1958 to about June 1960, was damped down and shortened by measures that had to be taken to check inflationary psychology and price rises which had made their appearance early during the upswing.

It is often objected that the inflation was mild by historical standards and therefore did not warrant strong anti-inflationary financial measures.[1] The inflation issue cannot be fully discussed here. Let me simply say this: It is true the inflation was not severe by comparison with earlier peacetime business cycle upswings before or after the war. But what should not be overlooked is that the economy has become much more sensitive to inflation than it used to be for the simple reason that we have had chronic, though intermittent inflation for the last 27 years or so with no interruption of falling prices.

This heightened sensitivity to inflationary price rises still exists and we can be sure that inflationary psychology would be quickly revived if prices started to go up again at a somewhat accelerated rate. If we want a long and healthy period of expansion, we must avoid any unnecessary inflationary measures.

It is acknowledged also by modern Keynesian economists that sharp wage-rate changes in periods of economic expansion must adversely affect employment.

This is well brought out in the following passage in Prof. Alvin H. Hansen's authoritative book "A Guide to Keynes" (economic handbook series, edited by Prof. Seymour E. Harris, New York, 1953, p. 193):

"Money wage rates (wage units) tend to rise before full employment is reached owing to pressure from labor groups whenever profits rise. Such wage-rate changes are liable to be discontinuous—a succession of semicritical points. To the extent that this occurs the increase in aggregate demand is unnecessarily dissipated on higher prices with correspondingly less effect on output and employment. Insofar as marginal cost rises as output increases, some part of the increase in demand must be dissipated in higher prices. But if in addition money wage rates also rise, employment suffers as a result of the higher wages of the already employed workers."

Hansen speaks of wage rises due to pressure from labor groups. The same, of course, holds of wage increases decreed by law such as increases in legal minimum wages.

INCREASE IN LEVEL OF REAL WAGES NOT AFFECTED

I should like to emphasize once more as strongly as I can that nothing that is said in this statement or the attached paper contends or implies, or is meant to contend or imply, that the gradual rise in the level of real wage rates, which is going on in our economy over the years, has to be slowed down. All that is said is that money wage rates should not be pushed too fast. If that can be achieved, the balance-of-payments deficit will disappear and the coming expansion of the economy will be put on a healthy and more enduring basis. As a result, real hourly earnings and overall real national income will rise faster than if inflationary developments were permitted.

I conclude that the proposed rise in minimum wages is economically and socially unsound and Congress should reject it in the true interest of labor itself and of the economy as a whole.

[1] Another objection to anti-inflationary monetary and credit policy was to the effect that inflation was of a kind—cost push inflation—which allegedly makes it incurable by financial policies. But whatever its merits—I have serious objection to this line of reasoning which I need not elaborate at this point—this argument does not apply to the present problem, because the proposed hike of minimum wages does precisely constitute a cost push.

Reed College Student Council Resolution

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 13, 1961

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

REED COLLEGE STUDENT COUNCIL RESOLUTION ON THE HOUSE COMMITTEE ON UN-AMERICAN ACTIVITIES

We, the Student Council of Reed College, call for the abolition of the House Committee on Un-American Activities because of the vagueness of its authorizing resolution and because of its reprehensible activities: i.e., because of its means of investigation and its use of propaganda, and because the committee's investigations have destroyed numerous individuals and groups.

The Supreme Court of the United States has declared that a standing committee of the House or Senate of the Congress of the United States whose area of investigation is not clearly defined is unconstitutional (see *Watkins* v. *United States*). According to Mr. Justice Black of the Supreme Court, the House Committee on Un-American Activities' authorizing resolution, which defines its area of investigation, is ambiguous, and unclear (see dissent in *Barenblatt* v. *United States*). Therefore, in his opinion, the committee is unconstitutional.

The House Committee on Un-American Activities does not allow constitutional safeguards to witnesses. These safeguards are: (1) being informed in advance of the charges leveled against them; (2) being confronted with witnesses who testify against them, and subjecting them to cross examination; (3) the compulsory process of obtaining witnesses in their favor, and the right to be represented by counsel; (4) testifying at the hearings in their own defense.

The House Committee on Un-American Activities has endorsed the preparation of falsifications. For example, the committee has publicly endorsed the movie "Operation Abolition" which deals with the San Francisco hearings and surrounding events in May 1960. People present at the San Francisco hearings in May 1960, writers and journalists have branded the film as a gross distortion of the truth. Mr. William Wheeler, chief west coast investigator for the committee, has admitted in public debate that the film contains distortions.

Witnesses who have attempted to protect their constitutional rights before the House Committee on Un-American Activities have suffered disastrous consequences. Such people have lost their jobs. Some have been barred from social, recreational, and religious organizations. In the case of lawyers, professional reputations have been seriously damaged. The reputations of lawyers have often been impugned with those of their clients, when their clients were uncooperative witnesses before the committee.

The preceding resolution was approved by 89 percent of students voting in referendum in the Reed College student body.

When the Earthquakes Struck Chile

EXTENSION OF REMARKS
OF
HON. TORBERT H. MACDONALD
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 13, 1961

Mr. MACDONALD. Mr. Speaker, a few months ago one of our sister republics in South America, the Republic of Chile, was struck by a natural disaster of appalling magnitude. A horrifying combination of earthquakes, tidal waves, volcanic eruptions, and landslides desolated an area almost as large as the whole of Great Britain. The response of the United States to the news of plight of the Chilean people ravaged by this catastrophe was immediate and unstinted, on both the private and public levels. A massive airlift was organized in a matter of hours, and within a few days over 1,000 tons of emergency supplies and more than 800 doctors, nurses, and other personnel were funneled into the disaster area.

The spontaneous sympathy of the United States for the stricken people, and the willingness and ability to translate it with remarkable speed into terms of concrete assistance, did much to repair and advance our friendly relations with Chile and with all of Latin America. The story of this effort and its results is one from which several lessons and a good deal of wisdom may be drawn to aid us in the development of our relations with our Latin American neighbors. It has been told with graphic detail and telling effect by James Winchester in a recent article in Latin American Report, condensed in the Reader's Digest. In the belief that this article will be of vital interest and great value to many of my colleagues, I have asked that it be printed here for their convenience:

WHEN THE EARTHQUAKES STRUCK CHILE
(By James H. Winchester)

Last Fourth of July, thousands of citizens of Valdivia, in southern Chile, stood in the raw, bone-chilling winter wind as the flags of the United States and Chile flew side by side and a Chilean army band played "The Star-Spangled Banner." Valdivia's mayor then addressed the city's guests of honor: four dungaree-clad soldiers of the U.S. Army. "We can never begin to show our appreciation to you and the people of the United States," he said. "You have moved into our hearts forever."

On the same day, at the U.S. Embassy in Santiago, Ambassador Walter Howe received a penciled letter which read simply: "Thanks. May God bless your country." Behind these expressions of good will and gratitude is a remarkable record of international humanitarianism and generosity.

It began before dawn in southern Chile on Saturday, May 21, 1960. A series of intense earthquakes, followed by tidal waves 24 feet high, volcanic eruptions and landslides, convulsed 90,000 square miles of the land, bringing death and ruin to an area almost as large as all of Great Britain. Within 4 days, the cities of Valdivia, Puerto Montt, Osorno and Concepción were ravaged. In the beautiful Chilean lake country, mountains crumbled, new lakes were formed; one 25-mile stretch of high ground dropped 1,000 feet. On the coast, many small communities were engulfed by the heaving ocean, and entire fishing fleets were lost with their crews. In the village of Castro, as the first tidal wave came in, the fishermen got into their boats with their families and put out to sea. The tremendous undertow pulled them to their deaths. At Ancud, people ran to higher ground to escape the tidal waves, only to be swept back into the ocean by landslides.

There was horror everywhere. At Puerto Montt a 6-year-old boy was buried in debris up to his neck. When he was dug out, rescuers found he was holding the bodies of two smaller brothers he had been trying to protect. In all, 2,000 died, 5,000 were injured, more than 50,000 homes were destroyed. A quarter of Chile's population of 7,500,000 was left suffering in cold and hunger. Property damage reached half a billion dollars.

As news of the disaster spread, international aid began to flow toward the stricken nation. First to arrive were the Argentines, with planes and trains loaded with clothing, food, medicines, doctors and nurses. Every other Latin-American country was close behind. Canada's extensive aid, sent by air, included a fully staffed field hospital. Through the Red Cross, 33 other nations dispatched planes, technicians, supplies and money. Private organizations, too, rallied to Chile's relief.

The United States responded with a massive effort. From May 26 to June 1, the U.S. Air Force sent 74 four-engine cargo planes to Chile, carrying 1,000 tons of emergency goods and 800 doctors, nurses and technicians. Included were two 400-bed Army field hospitals, a dozen jet helicopters, portable radio stations and water-purification units, tents, blankets, clothing, and rations. Beyond this, $4,500,000 in nongovernment aid came from the United States. President Eisenhower's emergency funds provided a quick, no-strings-attached $20 million relief loan.

The U.S. response was impressively swift. On Sunday evening, May 22, even as the quakes continued, Roberto Vergara, then Chile's Minister of Finance, Economy and Mines, had called on Ambassador Howe to ask, "Can you help us?" By Friday morning the first Military Air Transport Service Globemaster had unloaded its cargo of tents, blankets and emergency rations at hard-hit Puerto Montt, 500 miles south of Santiago. On its return flight to the capital, the plane evacuated 103 of the earthquake's injured. Only then, after 50 hours without sleep, did the crew go to bed.

A steady stream of cargo planes funneled into Chile from half a dozen U.S. bases, their crews and passengers gathered, for the most part, on 2 hours' notice or less. Capt. Tom Duff of Pittsburgh, Pa., a pilot, walked into the orderly room of MATS' 20th Air Transport Squadron at Dover, Del., to check out for a 2-week leave—and left for Chile 1½ hours later. "I was reading in bed when I was called," says Maj. Helen McCormick, an Army nurse with Fort Belvoir's 7th Field Hospital. "The same time the next night I was in Santiago, more than 5,000 miles away."

Puerto Montt had only a single, poorly paved unlighted 6,000-foot runway, and the radio in a DC–3 parked at one end of the strip served as the only navigational or landing aid in the area. But the huge Globemasters flew in the Army's 15th Field Hospital from Fort Bragg, N.C. The 7th Field Hospital had to go by train and truck from Santiago to Valdivia, a tortuous 72-hour trip. Two hours after arrival it was erected and operating. Where they hadn't brought along what was needed, Army personnel improvised. At Valdivia, a male nurse fashioned an incubator out of wire splints and plastic bags to save a premature baby.

Most welcome of the U.S. supplies were the two mobile water-purification units, each capable of handling 30,000 gallons a day. Their GI operators had them working within 4 hours after arriving at Puerto Montt and Valdivia.

The fact that the Americans pitched in to work was widely commented on by Chilean newspapers, radio, and TV. "You sent people, not just supplies," the Chileans said. They noted, too, the absence of any patronizing or offensively nationalistic attitude. A leading Valparaiso newsman, not always friendly to the United States in the past, marveled that the field hospital in Valdivia had no sign anywhere reading "U.S. Army." Chileans were amazed to see Negro and white medical troops living and working together in harmony. They were impressed, too, by the fact that U.S. officers and enlisted men worked shoulder-to-shoulder at every task.

Chile's man and woman in the street made clear how they felt. Taxicab drivers, shoeshine boys and storekeepers refused to let the visitors pay for anything. "It was 2 a.m. when we left Santiago to return home," says T. Sgt. Norman Hoffman, a MATS crewman from Dover, Del. "But the kitchenmen at our hotel insisted on getting up to cook us a hot breakfast. Neither they nor the hotel would take any money from us. And at the airport over 5,000 people came to see us off." On a train from the south, the passengers made up a collection to buy flowers for a group of U.S. medical technicians going back to Santiago.

The North Americans returned home with unqualified admiration for the Chileans—and their resourcefulness. "Señora Kathy Bulgarin de Lisboa, a schoolteacher, attached herself to our unit the day we arrived in Valdivia," reports Capt. Dale Wagoner, executive officer of the 7th Field Hospital. "She translated; she got us fuel; she wangled transportation. Her husband, a road engineer, came in with his men and built us roads. We couldn't have operated efficiently without her."

The four soldiers honored on the Fourth of July at Valdivia were the last U.S. personnel to depart. The hospitals, supplies and equipment were left behind as gifts.

Letters of thanks continue to pour into the U.S. Embassy in Santiago. "We've been criticized for the fact that though we always profess friendship for our Latin American neighbors, we've never been too quick to show it in concrete terms," say Ambassador Howe. "The airlift, and the caliber and attitude of those who accompanied it, have done more to cement United States-Chilean relations than anything we have ever done here."

"In many years of official visits and propaganda, the Americans didn't succeed in doing what they have now done in a few days," editorialized Santiago's La Libertad. Newspapers in many Latin American countries published enthusiastic reports and editorials.

The United States' ability, and spontaneous willingness, to respond quickly in this emergency was not lost on Latin American politicians, either. They had the opportunity to compare the U.S. action vividly with what Soviet Russia did. A week after the quakes struck, and after the U.S. Globemasters were arriving daily by the dozens, Russia announced that it, too, would send a relief plane from Moscow. One week after that the lone Russian plane finally arrived.

The United States has not yet got itself squared away "south of the border." But the Chilean airlift was a step in the right direction. The feeling is growing that the United States can be counted on to help its friends when the going is tough.

Soil Conservation in Wisconsin

EXTENSION OF REMARKS
OF
HON. VERNON W. THOMSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 13, 1961

Mr. THOMSON of Wisconsin. Mr. Speaker, I just received a communication from M. F. Schweers, State conservationist for the U.S. Soil Conservation Service in Wisconsin, to which was attached a copy of a letter he sent to the State's 360 soil conservation district supervisors acknowledging their 1960 annual reports.

Soil and water conservation is near and dear to my heart. One of the first soil conservation experiment stations in the country was established in my congressional district back in 1931. It is located on a picturesque bluff overlooking the city of La Crosse and the Mississippi River.

In June of 1933 a number of CCC camps were assigned to soil conservation work in southwestern Wisconsin. A majority of these were located in my congressional district.

In October, 1933, the Nation's first large scale soil and water conservation demonstration project was undertaken in the 92,000-acre Coon Creek watershed located southeast of La Crosse.

Wisconsin was one of the first States to pass a soil conservation district law. That was in 1937. Every county has since been created as a soil conservation district.

In 1942, I became a cooperator with the Richland County Soil Conservation District, shortly after the county became a district. We planned for and carried out a contour strip cropping system, including the needed fertility and rotation programs. We also did pasture renovation.

The first and only pilot flood control project in Wisconsin was located in my congressional district in 1953.

With the passage of Public Law 566, the Watershed Protection and Flood Prevention Act, in 1954, the Mill Creek watershed in my home soil conservation district was the first in the State to submit an application for planning assistance.

Conservationwise, we have a lot of firsts in my congressional district. I am proud of my record made by my constituents and I am equally proud of the advancement of the soil and water conservation program in the State as a whole.

Accordingly, I believe the letter Mr. Schweers sent to the supervisors detailing conservation progress and plans in

Wisconsin warrants inclusion in the RECORD.

The letter follows:

U.S. DEPARTMENT OF AGRICULTURE,
SOIL CONSERVATION SERVICE,
Madison, Wis., March 30, 1961.

To: Soil conservation district supervisors.
From: M. F. Schweers, State conservationist.
Subject: Acknowledgment of your 1960 SCD annual reports.

The 1960 annual reports for your and the 70 other countywide soil conservation districts (SCD) of Wisconsin are the best ever. They are all very readable, readily understandable, and interestingly phrased. And, they were all in our office by March 15, a new record. Congratulations on both scores.

I enjoyed reviewing each and every one of these documents. It provided me with a nice résumé of accomplishments, problems and effected or proposed solutions, and plans for the future.

Each year your material is bound in eye-appealing covers and increased numbers of pictures are being employed to real advantage.

A BIT OF PHILOSOPHY

Quite a number of your reports contained some interesting quotes, some personal philosophies. So, it seems fitting to reproduce a few of these to set the stage for the remainder of this epistle.

"Being a hunter and fisherman and a lover of wildlife, I am interested in the preservation of God's handiwork in its natural state as He created it. One of the first steps is the conservation of soil and water and related resources. This can be done and has been done in our district by the people living on our farms who have participated in the soil conservation program and noted the benefits they, their neighbors, and friends have received."—Walter Diercks, chairman, Langlade County SCD governing body.

"We all love this great country of ours. We are proud of the freedom that it provides. Its greatness and strength are the envy of many nations. However, we must realize that only through the efforts of each one of us can we maintain that heritage. The farmer is important in food production. He has done a very efficient job in his field. In order to continue to provide all these nourishing elements, we must see that we have a soil that is well protected. Thus we have a great job. The Barron County soil conservation district is proud of its record in watching over the soil within its boundaries. We pledge the same effort in years to come."—George Webb, chairman.

"In simplest terms, there are two principal ways you measure progress of districts—first, by the effectiveness with which districts and their governing bodies function as responsible units of local, self-government and, second, by the measurable, physical accomplishments in applying soil, water, timber, and related practices and structures in the watersheds and on the lands of the country."—Statement by Wm. E. Richards, NASCD president, taken from the Door County SCD report.

ACCOMPLISHMENTS

To a large degree we can measure the success of soil conservation districts by the amounts of conservation work planned for and applied on the land. We must never forget that it is our fine farm families who made all this possible, for they make the planning decisions and install the needed practices. What has been done is a tribute to their wisdom, foresight, and cooperativeness.

"Proud" is the word most of you used in expressing opinions on attainments made in your district during the past calendar year. And, these achievements were made in the face of inclement weather and unfavorable soil conditions. We wholeheartedly agree with your appraisals.

The following table shows 1960 and total conservation accomplishments made by Wisconsin farm families, with technical assistance from the Soil Conservation Service unless otherwise noted.

	Unit	1960 accomplishments	Total to date
NORMAL SOIL CONSERVATION DISTRICT OPERATIONS			
District cooperators	Number	2,215	40,062.0
Basic conservation plans	do	2,178	25,865.0
Revision of basic plans	do	[1] 466	
Soil surveys	Acre	[1] 644,220	14,067,676.0
Contour stripcropping	do	52,324	1,023,161.0
Contour farming	do	[1] 51,180	521,071.0
Field stripcropping	do	368	5,010.0
Wind stripcropping	do	3,693	37,495.0
Plow planting	do	[1] 1,148	2,548.0
Diversion construction	Mile	152	2,166.0
Terracing	do	120	4,106.0
Grassed waterways	Acre	1,253	15,042.0
Surface field ditches on existing cropland	Mile	458	7,112.0
Land smoothing	Acre	[1] 2,791	14,640.0
Tile drains in existing cropland	Mile	409	4,945.0
Bedding	Acre	49	1,775.0
Land clearing	do	1,429	13,752.0
Pasture renovation	do	29,390	313,287.0
Field windbreaks	Mile	63	967.0
Woodland protection	Acre	[1] 33,522	599,175.0
Tree planting [2]	do	[1] 16,860	90,572.0
Woodland improvement [2]	do	[1] 7,812	116,175.0
Fishpond treatment	Number	[1] 37	91.0
Hedgerow planting	Rod	18,301	194,831.0
Wetland development for wildlife	Acre	[1] 609	1,368.0
Wildlife area treatment	do	1,024	21,665.0
Wildlife area protection	do	[1] 6,461	45,671.0
Streambank protection	Mile	14	97.0
Erosion control structures	Number	[1] 348	1,652.0
Floodwater retarding structures	do	[1] 101	195.0
Pond construction	do	310	1,553.0
Stockwater development	do	[1] 146	431.0
Drainage structures	do	[1] 259	1,748.0
PUBLIC LAW 566 ACTIVITIES			
Planning:			
Applications received	do	[1] 11	28.0
Applications approved by State soil conservation committee	do	[1] 13	28.0
Work plans prepared	do	3	8.0
Operations:			
Approved for operations	do	3	8.0
Floodwater retarding structures	do	[3] 3	7.0
Grade stabilization structures	do	[4] 0	0
Channel improvement	Mile	0	1.4

[1] Items for which new records were established during the past year.
[2] The Wisconsin Conservation Department provided technical assistance on these measures.
[3] 3 other installations are about 90 percent complete.
[4] 6 structures merely require "finishing touches."

Yes, in reviewing the above table we will have to agree that 1960 production was very godd. In fact, last year might be considered as the best one we have ever had in the history of soil conservation district operations here in Wisconsin.

INTERAGENCY COOPERATION

Just about every one of your annual reports had something to say about the fine interagency cooperation that exists in your respective soil conservation districts. That is swell, that is the way it should be. In fact, without it the enviable production record established here in Wisconsin would not have been possible.

As a reminder of the specific responsibilities of the several contributing agencies, we refer to those you mentioned with their respective assignments as they pertain to SCD and related programs.

The Extension Service has the responsibility for educational activities. The State soil conservation committee approves Public Law 566 watershed applications for planning assistance and provides guidance to SCD governing bodies. The Soil Conservation Service gives technical help to soil conservation district cooperators in the development and application of farm conservation plans, and has the leadership for planning and installing Public Law 566 works of improvements.

The Wisconsin Conservation Department assists farmers on woodland and wildlife management. County agricultural stabilization and conservation committees provide cost sharing through the agricultural conservation program to accelerate the installation of soil and water conservation measures. The SCS fulfills specified technical responsibilities under this program. The Farmers Home Administration is a source of credit.

County ASC committees transferred more than $278,700 to the SCS in 1960 under ACP-SCS 5 percent agreements. Of this amount, the Service earned $236,500. This money was used to employ additional aids to take care of the increased workload resulting from this program.

OTHER COOPERATION

Most of your reports mention other sources of assistance to your district. Evidently the newspapers and radio and TV stations are cooperating exceedingly well. Teachers are doing a commendable job on youth education in soil and water conservation. County highway committees and commissioners are cited for their fine help. Many county boards are making appropriations to soil conservation districts.

Vocational agriculture instructors are interesting youngsters and farmers in the values of becoming SCD cooperators. Bankers' associations, civic and sportsmen's clubs, industry, are among the other groups contributing to your program, according to your reports.

SPECIAL PROJECTS AND EVENTS

During the past year every soil conservation district in Wisconsin completed a conservation needs inventory. These reports show present land use and the changes expected by 1975. They also point up the kinds and amounts of needed conservation practices.

Seven reports were printed in 1960. Most soil conservation districts plan a publication in 1961.

Seven 1-day area workships on conservation needs and zoning were sponsored throughout the State by the State soil conservation committee during late November and early December. These meetings were very much appreciated, so your reports indicate. As a result of these sessions and the availability of conservation needs information, several counties have started to develop land use plans.

Soil Stewardship Week was given a lot of special attention during 1960, so you state.

Sixteen soil conservation districts entered the 1959–60 Goodyear Awards program. The Marathon County SCD won first place in last year's event, with Waupaca coming in a close second.

Attendance at the 1960 version of Farm Progress Days was very good. Last year's affair was held at Marshfield, with land smoothing and forage harvesting being highlighted.

Some activity has been started on the dealer-district program. Farm equipment dealers are ready, willing, and able to help you supervisors. All they want is an invitation to one of your meetings to learn what you are doing and how they can help. Give it a try, won't you?

Last, and by no means least, is the State conservation speaking contest. Nearly 1,600 contestants participated in this activity last year. The entrants get better year by year, so it seems.

New agricultural buildings were constructed in the Polk and Green County soil conservation districts last year. These house all the agricultural agencies and provide a real convenience to the farmer.

STATE ASSOCIATION

Your 1960 annual meeting at Stevens Point was well attended and very interesting, according to your comments. We fully agree with your appraisal.

As a result of resolutions adopted at this session your president has been invited to attend all meetings of the State soil conservation committee and the Wisconsin Conservation Commission. Two bills have been introduced in the legislature. One has to do with adding the words "and water" after "soil" in the designation of soil conservation districts and State soil conservation committee. The other recommended a State appropriation for direct assistance to soil conservation districts.

I have had the pleasure of being one of four agency consultants who participate in meetings of the board of directors of your State association. I can't say enough nice things about this fine group of supervisors regarding their interest, their sincerity, their friendliness, and their enthusiasm in wanting to do everything possible to make Wisconsin's soil conservation district programs click. It's unfortunate that more supervisors can't see this group in action. It's stimulating, I assure you.

LOOKING FORWARD

Anticipating increased production in 1961 is the outlook expressed in most of your reports. We, too, are optimistic. Given the right kind of weather, the current calendar year could well surpass the best of the past.

We have letters from a number of districts asking for additional personnel to take care of expanding workloads. Under present circumstances we are able to satisfy only a limited number of requests. In analyzing total manpower needs against the amount available, you will have to make some decisions on a first-things-first basis. Like most any operation, you seemingly won't have time to accomplish everything you want to see done. Being a farmowner, I can speak with some authority on this subject.

As mentioned in previous years, having too much work is better than not enough. A situation like this presents a challenge and taxes our ingenuity to the utmost.

Thank you.

Our administrator, Don A. Williams, and my SCS associates here in Wisconsin join with me in expressing sincere appreciation for the many courtesies and favors you and your fellow supervisors have extended to us.

Sincerely yours,

MARV SCHWEERS,
State Conservationist.

Unemployment and the Impact of Automation

EXTENSION OF REMARKS
OF

HON. ELMER J. HOLLAND

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 11, 1961

Mr. HOLLAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the the following report:

UNEMPLOYMENT AND THE IMPACT OF AUTOMATION

(The following report is the result of a survey made by Congressman ELMER J. HOLLAND, Democrat of Pennsylvania, on the subject of Unemployment and the Impact of Automation, as requested in November 1960, by Congressman ADAM C. POWELL, chairman of the Committee on Education and Labor, of which Congressman HOLLAND is a member.)

As someone so aptly stated it just recently—"the only growth that can be noticed in America in the recent months, is the ever-increasing list of unemployed."

Our latest unofficial figures estimate approximately 6 million people out of work, and many more if we count workers on part time and those in jobs below their capacities.

We have been informed that during this decade—from 1960 to 1970—there will be an average of 1½ to 2 million graduating from high school each year and in 1965 this number will jump to about 3 million. Some, of course, will continue their education, but we know that over two-thirds of them cannot afford to atend our colleges and universities and will be seeking employment.

There are already 500,000 fewer full-time jobs in America today than there were 3 years ago—and fewer man-hours of work are being provided in the private sector of the economy than there were 8 years ago, although the labor force has increased 5½ million during this period.

By 1970 there will be 87 million Americans willing and able to work and, as President Kennedy said during his recent campaign, this means that we must create almost 30,000 new jobs every week for 10 years just to keep pace with this growth. Without a sharper rise in jobs, our unemployment problem could easily become a nightmare.

Fortune magazine, in its January 1961 issue, notes that "the vital task ahead is one of job creation, and the vital energizing currents here are national—not regional—in scope."

Every effort must be exerted to secure full employment and make full use of our talents and skills if we want to have full production and maintain an expanding economy.

In brief, then, Government participation and aid are essential if we are to find solutions to our unemployment problems, and find them we must if we want our way of life to continue and our free enterprise economy to survive.

Since 1953, each peak of the business cycle has found unemployment a little higher than at the previous peak. With each recession, there are more unemployed than in the previous one and our unemployment is widespread among those workers considered the most employable people in the labor force * * * experienced, non-casual-workers, between the ages of 25 and 55.

As a result of the research done on this subject, I have come to the conclusion that we need long-term planning if we do not want to continue periodic recurrences of the present situation.

Automation has entered our lives—and it is here to stay.

It is already remolding our economy as well as many of our institutions and whole new concepts and systems of management are going to have to be initiated if we are to cope with it.

The second half of the 20th century could—through the advance of technology—witness the creation of an economic paradise on earth, or, if not handled correctly, we could see the violent end to all civilization because of it.

With rational planning for a balanced economic and social growth I feel the challenges raised by automation can be met successfully.

In many cases it is quite difficult to pinpoint elimination of jobs due to automation. We have found that in numerous industries, the permanent reduction of the work force—due to technological changes—are apparently postponed until a general downturn permits layoffs which can then be blamed on national or international conditions. However, when recovery occurs, many are not called back to work.

When new mechanical or electronic devices are installed, assurances are given workers in many industries that they will not be hurt or fired. However, when they leave—due to retirement or resignation—no one is hired to deplace them.

It seems that one of the greatest problems with automation is not the worker who is fired, but the worker who is not hired.

Automation is already here in—

Steel: 250,000 workers today are doing the work of 500,000 of 12 years ago and, last June, General Electric announced that a pushbutton steel mill was on its way.

Autos: In a Ford plant in Cleveland, one unit does more than 500 different operations. Within 1 hour it turns out 100 engine blocks.

Coal: 400,000 coal miners of 10 years ago have been replaced by machinery and now 200,000 miners—who work only part time—produce sufficient coal.

Oil: A small group of men run a $40-million plant by remote control from a panel board.

Radio: Where 200 men were required to assemble 1,000 radios a day, the job can now be done by 2 men.

Telephone: At one New York City hotel, where automatic phone equipment was installed, 60 telephone operators lost their jobs.

Textile: One man—who used to operate 4 looms—today operates 30 looms.

Sheet-metal work: Today 4,400 workers produce the same amount it took 45,000 to produce in 1939.

Stores: Automatic devices take orders and fills them, reads cash register tapes at day's end, records that which is sold, the money taken in, the stock that needs to be replaced, takes paper money and makes change.

Banks: Automatic devices sort checks, debits and credits depositors' accounts and makes out monthly statements.

Government: Automatic devices audit 125 million social security accounts, scans in-

come tax returns for errors and unusually large deductions, aims and fires missiles, tracks space satellites, plays war games to lay out new strategies, sorts and handles mail, plots the course of storms, sends out weather maps over the Nation.

Airlines: Makes reservations, guides planes in blind takeoffs and in landings, keeps accounts.

Railroads: Controls the movement of trains, schedules freight and keeps accounts for railroads.

Cities: Turns lights on and off as needed, with electronic eyes that react to darkness, whether due to nightfall, early twilight, storms or other causes.

Manufacturing: Guides, with punched tape, tools that turn out parts for autos, planes, missiles, and other things at a fraction of the former cost; runs, by computer, steel rolling mills, oil refinery systems.

And, here are a few of the miracles of tomorrow that are due to come and for which we must prepare ourselves:

Help, by computer analysis, in the diagnosis of illness.

Provide pushbutton telephone service that will include home extensions for intercom systems.

Operate a pushbutton steel plant that will be completely automated—from taking the customers' orders to delivering the finished product (probably the one referred to by GE in the above statement).

Transmit written messages over great distances in a few seconds' time, through the U.S. postal service.

Operate fully automatic trains.

Translate foreign language conversations, or written works in a flash (some of this work is being done now, but one man is still needed to edit the translations; they expect to do away with the one-man job).

Whole plant automation is expected * * * a system of computers to automate the entire manufacturing process was demonstrated by IBM last June. The machine monitors all the basic functions of manufacturing—sales forecasting, materials planning, inventory management, plant scheduling and work dispatching, and evaluating the results.

A machine that types directly from dictation.

The economic, social, and political problems arising from our great technological developments in the days ahead will be even more difficult and complex than we now are experiencing.

Today we have on the average of 150,000 unemployed each month losing their unemployment compensation benefits and the only outlook at the moment is possibly an extension of these benefits for 13 more weeks * * * then they will have to go on the rolls of the public assistance departments of the various States.

When men and women—who are the sole support of their families lose their jobs and are told—at the age of 40—they are too old to be considered by other industries, the future is bleak; not only for them, but for their families. We must remember that the children of these families today must be prepared to be the leaders of our Nation tomorrow—and, if they are to be raised as wards of the State, their concept of our system of government and our economy will not be too enthusiastic.

These problems are of our own making. We must find answers to them. We must find ways to retrain these men, if necessary, so that they can support and educate their families and return to work as they want to do.

We are in a new world, with new challenges, and we need new thinking. We cannot afford to waste any more time.

This report, I know, merely scratches the surface of the present conditions and indicates why we are in our state of decline.

Much more can, and should, be divulged by holding public hearings and securing accurate figures of our unemployed and their prospects for the future.

This will be the job of the Holland Subcommittee on Unemployment and the Impact of Automation which will be in full operation very shortly.

Special articles in New York Times, Washington Post, labor periodicals, management periodicals, innumerable magazines, and syndicated columnists in various newspapers.

RÉSUMÉ OF REPORTS SUBMITTED BY VARIOUS UNIONS ON THE SUBJECT OF UNEMPLOYMENT AND THE IMPACT OF AUTOMATION

Auto workers: 1947–60—production increased 50 percent, employment decreased 2.9 percent, sales increased 93.4 percent, production payroll increased 21.6 percent.

The first half of 1957 and 1960—employment decreased 3.2 percent, production increased 14.9 percent.

An estimated 160,000 unemployed auto workers in Detroit will never return to automobile factories due to automation.

Boilermakers, iron shipbuilders, blacksmiths, forgers, helpers: 1958–60—6½ percent unemployed. Construction Industry, man hours worked, down 41.2 percent. Boiler manufacturing and plate fabrication, man hours worked, down 41.2 percent. Forging industry, working only 27 percent. Railroad maintenance, employment down 49.5 percent.

Majority of any of these plants are working only 3-day week.

Brewery workers (flour, cereal, soft drink, and distillery): 1950–60, Employment decreased 25 percent due to mechanization and automation in the following industries: (a) Breweries, (b) Malt beverages (beer), (c) Distilled liquor, (d) Soft drinks, (e) Malt processing, (f) Yeast processing, (g) Cigar making.

Building and construction workers: 1959–60—Unemployed, 8 percent November 1960—16 percent December 1960.

(NOTE: Automation effect has not been calculated in figures as yet, however, prefabrication is being felt considerably in construction industry.)

Building services: 1945–60—Automatic elevators replaced 40,000 elevator operators. Commercial recreation: Bowling alleys automated eliminating pinball boys. Vending machines have replaced sales clerks.

Custodial work: Cleaning machines have replaced janitors and charwomen; dishwashing machines have replaced workers in hospitals, schools, institutions, hotels, etc.

(NOTE.—This report is from New York City only. National figures are being tabulated.

Chemical workers: 1953–60—Production increased 80 percent. Employment decreased by 13,000.

Clothing workers: Unemployment in this industry is seasonal. Cutting work is automated to some extent.

Communication workers: 1955–60—Telephone business increased 25 percent. Employment decreased 5.5 percent—33,000 jobs.

(NOTE.—Telephone calls increased 60 percent from 1946 to 1960.)

Electrical workers (IUE): Electrical machinery industry: 1953–60—Production and related worker employment is down 80,000 jobs. Production output is up 20 percent.

Electric lamp industry: 1950–59—Employment down 1,500 jobs; production up by 42 percent; productivity of worker up 52 percent.

(NOTE.—Westinghouse Electric Corp. makes a completely automated lampmaking machine—output is 32 million incandescent bulbs per year, raw material fed to machine and 100 feet later completed bulbs emerge. Machine inspects, rejects imperfect products, packs bulbs, boxes in cartons, conveys to trucks and boxcars for shipment.)

Radio and television industry: 1950–60—Wiring, soldering, and component assembly automated, with the result that 50,000 jobs eliminated.

Electrical workers (IBEW): Radio: 1953–60—Federal Communications Commission authorized 1,300 stations to operate automatically. Result, 3,900 jobs eliminated as each station has approximately three jobs per station.

Television: 1958–60—Loss of 25 percent of jobs due to automation.

Telephone industry: 1959–60—Elimination of 2,122 jobs.

Electric utilities industry: 1927–60—Annual kilowatt-hour output increased 850 percent; employment increased only 11 percent.

(NOTE.—Utility plants now double size and output with no increase in employment.)

Electronics: 1947–56—Output in United States increased 325 percent; employment increased 50 percent.

Longshoremen: Negotiated contract with provisions to set up mechanization and modernization fund, $5 million a year for 5½ years to be put into fund for retraining, relocating, providing severance pay for those replaced by machines or mechanization.

Mineworkers: Bituminous coal: 1950–60—production per miner increased 100 percent. 1937–57—45 million tons more coal produced annually with 50 percent less workers. Anthracite coal: 1930–60—Elimination of 80,000 jobs.

Oilworkers: 1947–57—Operating capacity increased from 5.3 to 8.4 million barrels daily; production workers eliminated from jobs, 10,000.

Office workers: 1955–60—25 percent of jobs eliminated due to electronic machines. NOTE.—It is estimated that within the next 5 years, 4 million more office and clerical jobs will be eliminated by automation.

Post office clerks: Automation entering this field—however, those now employed have been assured their jobs will not be eliminated but they will be "frozen" and upon their departure or resignation the jobs will not be filled by others.

Railway and steamship clerks: 1946–60—37.1 percent reduction in work force due to automation. Jobs were not filled when vacated by workers retiring or resigning.

Railroad workers: 1940–60—1,000,000 jobs eliminated. NOTE.—Southern Railroad example: Operates 6,200 miles of line. Has completely dieselized; has four automatic freight yards; has centralized traffic control system; has mechanization maintenance work; has smallest repair shops use technology; has office automation—programs accounting and statistical work on electronic computer. Saved $850,000 in first year.

1946–56—Increased gross business 6 percent; efficiency up 116 percent; profits rose from $19.5 to $40.5 million, 100 percent; employment dropped from 40,000 to 22,000, 45 percent.

Retail clerks: 1947–60—Output rose 150.8 percent; employment is practically all part-time, but not by preference. NOTE.—Automation has been felt here—wrapping and packing devices, meat cutting, vending machines, etc. Serve yourself supermarkets, 35 employees in warehouse replace 150 clerks. Elimination of independent stores.

Rubber workers (tire and tube): 1947–58—Produced 100 million tires yearly; employment reduced 30 percent—31,000 jobs, work hours reduced 29 percent.

Years 1958–59—Employment remained level, production increased 22 percent.

Seafarers (Maritime workers): 1952–60—Employment down 27,500; larger and faster ships with smaller crews. NOTE.—American owned or controlled vessels registered under foreign flags—purpose of this is to avoid American wages and working conditions, American taxes and safety standards.

Year 1946—65 percent of total cargo carried in U.S. ships.

Year 1959—9.1 percent of total cargo carried in U.S. ships.

Steelworkers: 1937–59—Employment down 18.5 percent, elimination of 95,000 jobs; productivity up 121.1 percent; ingot production increased 65 percent; steel shipments increased 80.9 percent.

In 1941, 20 men were required to produce 1 ton of steel.

In 1960, 12 men were required to produce 1 ton of steel.

(NOTE.—Today we have 125,000 steelworkers unemployed; those still working have averaged this year a 34-hour workweek.

Teamsters: Trucking: Due to the increased weight and size of the trucks, the productivity per driver has increased as larger loads can be carried and fewer trucks are used. Practice of "piggybacking" is cutting into employment of truck drivers for long-haul assignments. Outlook is for business to increase but additional jobs will not result from this increase.

Terminals: This section of industry is largely automated today in loading and unloading due to conveyors, hoisting devices, inclined tracks, preloaded carts, closed circuit TV, etc. Automated and electronic data processing is being used to handle billing and related activities, including inventory data. Payroll processing, maintenance of personnel records, maintenance and operating cost and control, preparation of various reports, etc.

Dairy: Automated machinery being used to large extent in all sized dairies. Ice cream plants, milk processing plants, frozen food, from raw products to finished boxing or bottling. Even automatic cleaning of pipelines at conclusion of operations.

Canning: Extensive use of automation in this industry. 1947–58—Output per manhour increased 40 percent; employment was decreased 12 percent.

(NOTE.—Actual figures have been difficult to obtain for this report as records have not been prepared as yet.)

Textile workers: 1947–59—Production jobs decreased 38 percent; production output increased 5 percent; productivity per manhour increased almost 70 percent.

United Electrical workers: 1953–60—Electrical manufacturing industry as a whole; employment down 10 percent; production up 20 percent.

1956–60—General Electric: Jobs lost, 40,566; sales increased $259.5 million.

Lamp division: Value of shipments increased 24 percent; hourly employment decreased 1,200.

Steam turbine generator parts division: Hourly employment decreased 16,802.

CCC 1961

EXTENSION OF REMARKS
OF
HON. SILVIO O. CONTE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 13, 1961

Mr. CONTE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Christian Science Monitor of March 22, 1961, entitled "CCC 1961":

CCC 1961

If it is carefully limited to sawing away at the backlog of conservation projects now existing in the United States, the administration's proposed domestic youth corps program merits enactment this year.

Like the quite different new oversea Peace Corps, this revival of the 1930's Civilian Conservation Corps should be started on a modest scale. Its usefulness should be tested on such existing programs as soil and water conservation surveys and the Park Service's project 66 for improving national park facilities.

The approach proposed by the administration is—again like the Peace Corps—modeled directly on a bill submitted last year by Senator HUBERT HUMPHREY, the upper chamber's fountain of youthful ideas.

It's aim is twofold: both to speed conservation of national resources and to attack delinquency among jobless teenagers. Young boys from 17 to 19, mainly school dropouts, would be enlisted in the neo-CCC to serve for a year for token expense money, room and board. They would dig ditches, construct watercourse retaining walls, plant tree seedlings, assist in soil conservation efforts, and aid engineers and surveyors—instead of falling into gangs or dabbling in drugs and disillusion.

The value of what used to be called honest labor in the open air should never be underestimated. Cynics on this subject consist mainly of those who have never tried the outdoor life. Probably no better preventive of delinquency caused by sheer big-city boredom could be contrived.

The lawmakers will, of course, wish to make sure that provisions for an eventual 150,000-man corps are sufficiently flexible to permit decreases, preventing empire building and make-work projects in future years.

Tomorrow's Challenge in Water Pollution Control

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 10, 1961

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the CONGRESSIONAL RECORD an address entitled "Tomorrow's Challenge in Water Pollution Control," delivered before the 14th Purdue Industrial Wastes Conference held in Lafayette, Ind., on May 5, 1959, by Gordon E. McCallum, the distinguished and able Chief of the Division of Water Supply and Pollution Control, U.S. Public Health Service.

The rapid rate of urbanization in our modern society adds to existing problems and creates new ones in water pollution control. The last basic waste treatment process was developed in 1916, 45 years ago. What was considered as "complete" sewage treatment can hardly be so classed today when great quantities of foamy detergents and complex chemicals are daily spewed into our water supplies. Research is faced with a great and immediate challenge to provide the answers in this field.

On February 9, 1961, I joined Representative JOHN BLATNIK in introducing legislation which, if enacted, will help to overcome the 45-year lethargy of research and bring it into the struggle to clean up and conserve our water resources.

Mr. McCallum's address testifies to the long-range concern of the officials most immediately concerned with the administration of the water pollution control program. I congratulate him on the frankness of his appraisal, a characteristic which I find very refreshing and increasingly rare, and I commend his address to the consideration of my colleagues.

The address follows:

TOMORROW'S CHALLENGE IN WATER POLLUTION CONTROL

(By G. E. McCallum, Chief, Division of Water Pollution Control, Bureau of State Services, Public Health Service, U.S. Department of Health, Education, and Welfare, Washington, D.C.)

I am grateful for the privilege of being with you today. It is always an honor to participate in the Purdue Industrial Wastes Conference and to have the opportunity of sharing our views with you and having yours in return. Today I am to discuss "Tomorrow's Challenge in Water Pollution."

My prognosis does not stem from experience as a researcher. Rather, it is a belief now voiced by some of our most experienced water pollution control administrators—men who have studied or witnessed the anachronistic development of water pollution control practices.

On every hand we see planning to meet tomorrow's needs. Business, welfare agencies, and government combine their capabilities for such things as supermarkets, superhighways, revamped schools, and modern hospitals. Such forward-looking philosophy has been expressed by one corporation's slogan, "Progress Is Our Most Important Product."

I wish I could look ahead to this conference some 20 years hence and hear some successor appraise the accuracy with which we predict tomorrow's challenge. Past experiences, right or wrong, may point the way.

Until perhaps about World War II we were largely concerned with pollution that caused public nuisances and waterborne diseases. We were also concerned with taste and odor problems in drinking water and with the destruction of fish by toxic substances and by oxygen depletion. Dilution often generously helped solve our problems—or at least allowed more time in which to develop solutions.

A review of the early progress in research and investigations of stream pollution reveals that the work was motivated by the need to find answers to immediate or anticipated problems. That great milestone reached in 1887 in the founding of the Lawrence Experiment Station, in which Mills and his coworkers, Drown, Hazen, and Sedgwick, demonstrated the biological nature of sewage treatment, is an outstanding example of an effort to meet a need. In the years that followed progress was rapid in the understanding of biological oxidation of wastes and their effects on receiving waters. The need for those studies was amply demonstrated by the speed with which their findings were put in practice.

Other needs resulted in more milestones. We might include among them the trickling filter and separate sludge digestion. Interestingly, perhaps, the last basic sewage treatment process to be developed was activated sludge in 1916.

Thus for 43 years no fundamentally new sewage treatment processes have been developed. Although many refinements in the art have been made and the effectiveness and capacity of treatment increased, the fundamental principles have remained the

same. We cannot deny that they have served, and served well, the purpose for which they were intended—treatment of municipal wastes of that era.

In the meantime we are being confronted by municipal wastes of a changing character and increasing amounts which are closing in on our dilution reserves.

Respecting the past as prologue, we find that many conditions which faced those early investigators were quite different from those of today. In 1900 only about one-third of the 75 million persons of this country lived in urban areas. Water use and production of wastes were corrsepondingly less. The character of municipal wastes was quite well understood and found to be amenable to the treatment developed. Most important, however, was the advantage of a favorable dilution factor which we are gradually losing. Significant to ponder is the realization that our municipal waste treatment processes are not necessarily devised to cope with all conditions today. What will an appraisal of their suitability reveal in 1980? Is it presumptuous to hope for a new breakthrough of the significance achieved by Mills, et al.

We all recognize that this need of a new milestone stems from the inevitable reuse of water. The reuse of waters in such rivers as the Ohio and the Miami is reported to be in excess of three times dependable low flow. Will our waste treatment practices be adequate to meet the high rate of turnover by 1980 when predicated total water use will exceed available supply by 100 billion gallons per day, and when a six-time reuse of many streams is projected?

The task of collecting, treating, and disposing of the wastes from today's metropolitan areas is already taxing the limits of our present knowledge. Problems of tomorrow's supercities stagger the imagination. Troublesome conditions prevail in waters below a growing number of our cities, even though "complete" treatment is employed. Chicago, Indianapolis, Columbus, and Dayton are reported to have experienced trouble.

It has been noted that under sustained conditions of low stream flow, the dilution factor available to these cities varied from 0.14 cubic feet per second per 1,000 population in Columbus, Ohio on the Scioto River, to 0.65 cubic feet per second per 1,000 population in Dayton on the Miami River. Population increases of 2 percent annually in these cities, as predicted, will further reduce dilution by 35–40 percent by 1980. Compare these dilution factors with the 4 cubic feet per second per 1,000 population often considered necessary for assimilation of primary effluent, or 0.6 cubic feet per second per 1,000 population for "completely" treated sewage whose B.O.D. has been reduced by 90 percent. Admittedly, this rule-of-thumb criterion is crude—but the warning it gives is ominous.

The Chicago Sanitary District, whose sewage system has been cited by the American Society of Civil Engineers as one of the seven wonders of modern engineering, is gravely concerned with the effects of its highly treated wastes. The effluents discharged to the Illinois waterway have a population equivalent of 1 million persons. Testimony has been presented before congressional committees that not only nuisance conditions, but health hazards, exist in the Illinois Waterway.

Each recent session of Congress has acted upon bills authorizing increased diversion of waters from Lake Michigan to the Illinois Waterway. H.R. 1 in the present Congress is the latest. Proponents of these bills contend that additional diversion is needed for dilution of Chicago's treated wastes. Several Great Lakes States are opposing diversion, even on a temporary basis for study purposes. They maintain that increased diversion would adversely affect shipping, hydroelectric power generation, and property values throughout the entire Great Lakes area.

Litigation on this issue is now pending in the U.S. Supreme Court.

This is but one example of like problems confronting water pollution control administrators. I select it simply because it is a situation with which I am somewhat familiar, not as a research man, but because of my position as a water pollution control administartor. Possibly I should apologize for using a personal experience, but personal experiences are those which have the most impact upon us. Each year my staff and I must do a great deal of work as technical consultants and witnesses at congressional hearings on legislation pertaining to this problem. Furthermore, we must collaborate with the Justice Department on the litigation in the Supreme Court.

What must be done about Chicago's treated sewage? Is more diversion to the Illinois Waterway the answer when so many witnesses contend this would be detrimental to other uses of the Great Lakes? Is dispersion of Chicago's treated sewage into Lake Michigan feasible, as has been proposed to both the Congress and the Supreme Court? What effect would this have on present water uses of Lake Michigan?

The Chicago situation is a classic example of the profound social, legal, technical and environmental difficulties which have evolved from a metropolitan waste disposal problem. We find ourselves indirectly involved not only in an interstate controversy, but one involving international relations, because of a difficult pollution problem. If we cannot treat wastes sufficiently to avoid nuisance conditions under our best, most modern practices today, how shall we meet the water needs of future generations?

I don't profess to have the answer to these problems. But, limiting our concern to tomorrow's municipal wastes, could we agree that one of our great challenges is the development of practical—and perhaps novel—methods of attaining higher degrees of waste purifications?

Perhaps we would do well to pause here for a moment to consider what we accomplish by today's complete sewage treatment and, possibly more revealing, what we do not accomplish. I would like to show a few slides based on information furnished the Public Health Service by the city of Chicago and the Metropolitan Sanitary District of Greater Chicago. It is recognized that some of the material added to the water by municipal use and which is not removed by treatment, is not necessarily significant in the alleged pollution of the Illinois Waterway. Again, I should like to emphasize that this case is being used only as an example of what I consider to be a very great research need. Similar situations, of an even more serious nature, exist throughout the country.

I would like to point out just how good a job we are doing in our modern sewage treatment processes.

On the slides showing effectiveness of complete sewage treatment, the bar on the left (slide 1) and the one at the top (slides 3, 4, 5, 6, and 8) represent raw Lake Michigan water. The middle bars show raw sewage, and the third bar on each slide shows the treated effluent.

You will notice that several of the slides show figures in tons per day. We have been requested by congressional committees and other Federal agencies to present data on the Chicago problem in this manner. The flow on which these data are based is about 1.25 BGD, or 1,900 cubic feet per second.

SLIDE 1: DEGRADATION OF WATER QUALITY AFTER ONE MUNICIPAL USE EVEN AFTER COMPLETE SEWAGE TREATMENT

You will observe that one usage increases the solids from 170 to 654 parts per million—136 parts per million of which are removed by treatment—leaving 348 parts per million, or 1,787 tons of added impurities in the form of dissolved organic matter and minerals.

Sixty percent of the added solids is in the form of dissolved minerals—40 percent in the form of dissolved organic matter.

SLIDE 2: EFFECT OF MUNICIPAL USE OF WATER QUALITY—TOTAL SOLIDS

In one use, total solids are increased from 170 to 500 parts per million, which is the maximum recommended concentration in the Public Health Service drinking water standards.

SLIDE 3: NUTRIENTS REMAINING AFTER COMPLETE TREATMENT

Nutrients are increased by municipal water use from 0.35 parts per million to 7 parts per million and reduced to 5 parts per million by sewage treatment.

Thus, 2 to 30 tons a day of nitrates and phosphates are discharged in the effluent. These are reported to be a cause of trouble in this case.

One can only speculate what effects these amounts of nutrients would have if discharged to Lake Michigan.

SLIDE 4: ORGANICS REMAINING AFTER COMPLETE TREATMENT

Organic matter is increase from 0.5 part per million in the lake water to 223 parts per million in the treated sewage.

Of special interest is the high proportion of dissolved organic matter which is not removed by complete treatment. This represents an addition of more than 1,000 tons a day of pollutants to the receiving stream.

SLIDE 5: DETERGENTS REMAINING AFTER COMPLETE TREATMENT

Of the 223 parts per million of organic matter left in the treated sewage, we have been able to identify only 7 parts per million which are the detergents shown on this slide. This adds up to about 35 tons a day in the effluent.

SLIDE 6: MINERAL SALTS REMAINING AFTER COMPLETE TREATMENT

This slide shows that none of the dissolved mineral salts added to municipal water by use is removed by conventional sewage treatment. Two hundred and eighty-three parts per million, or 1,400 tons a day of mineral salts are discharged in the effluent.

SLIDE 7: EFFECT OF MUNICIPAL USE ON WATER QUALITY—CHLORIDES

Chlorides are increased from 6 to 90 parts per million by one municipal water use. This is of interest because three uses of this type would result in the 250 parts per million maximum concentration recommended in the Public Health Service drinking water standards.

SLIDE 8: BOD REMAINING AFTER "COMPLETE" TREATMENT

The BOD is increased from 1 parts per million to 125 parts per million through one municipal use, and is reduced by treatment to 18 parts per million. Thus some 100 tons per day of BOD are discharged in the effluent.

This 85 to 90 percent removal of BOD looks good when compared with what is accomplished with dissolved organic matter of dissolved minerals by treatment. And, this relatively high removal should look good because one of the major jobs a modern sewage treatment plant is designed to do is remove BOD. Nevertheless, according to testimony presented to the Congress, it is the BOD remaining in the effluent that is the primary cause of trouble in the Chicago situation.

The solution to the problem at Chicago is being sought through legislation and litigation. Would it not be solved better, however, by research to develop practical methods of attaining higher degrees of waste purifications?

Here in this room are represented the technical skills that must meet tomorrow's challenge in this field. The mysteries confronting us must be unraveled. This is not a responsibility to be taken lightly. It will require the best efforts of each of us.

Tax Deferment for Self-Employed Retirement Plans

EXTENSION OF REMARKS
OF
HON. HERMAN T. SCHNEEBELI
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 13, 1961

Mr. SCHNEEBELI. Mr. Speaker, it is my intention and purpose to support H.R. 10, a bill which is designed to enable our fellow citizens who are self-employed to establish voluntary retirement plans. This legislation is designed to give the millions of citizens who work for themselves equal tax treatment with that enjoyed by the many millions of workers benefited by tax deferment on their pension plans.

This bill is not new in its purpose, although it incorporates several new features. For more than a decade similar legislation has been introduced and on two occasions has passed this House. Simply stated, the bill would permit the self-employed farmers, barbers, plumbers, druggists, and all the other types of small businessmen, to postpone the payment of income taxes on certain amounts set aside for retirement until they start drawing their pensions. Thus the self-employed worker would regain equal status with the some 20 million employees of corporations who today enjoy this tax advantage.

In addition to eliminating the unfair discrimination against the self-employed, the bill would greatly encourage the establishment of private pension funds which would supplement the Social Security program. At the very time this Nation considers proposals to aid retired people through medical care and increased social security benefits—requiring greatly increased expenditures of taxpayers' funds—this bill would offer an alternative or supplemental aid to the retired self-employed requiring no expenditure of Federal funds.

Mr. Speaker, many have written that the strength of our great country has its foundation on the solid American middleclass. The millions of citizens who are self-employed for the most part belong to this group and possess the qualities of courage, enterprise, and initiative so essential to the survival of our way of life. Today there are distinct indications of a tendency for individuals to seek government or corporate employment rather than small business or professional positions, often largely because of the retirement benefits not available to self-employed persons. I, therefore urge that this Congress act swiftly to remove this inequitable and discriminatory feature of our tax structure and encourage individual thrift and initiative.

Better Answers to Communism

EXTENSION OF REMARKS
OF
HON. SILVIO O. CONTE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 13, 1961

Mr. CONTE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the editorial section of the Christian Science Monitor, titled "Better Answers to Communism," dated April 4, 1961:

BETTER ANSWERS TO COMMUNISM

It is understandable that many individuals desire a more active, personal part in combating world communism. But current demands for congressional investigation of an organization whose leader has charged three American Presidents with being Red tools underscore again the pitfalls which beset the anti-Communist path.

J. Edgar Hoover, who probably knows as much as any American about fighting communism, recently stated that the "job of curtailing and containing communism is one for legally constituted authorities with the steadfast cooperation of every loyal citizen." The FBI chief does not deny the individual a role but he warns against reckless charges and vigilante action.

The FBI has made good use of citizens who as undercover agents under its specific directions infiltrated and exposed Communist groups. But Mr. Hoover knows how the work of professionals can be hampered by reckless charges. False tips can divert the trackers, and continued mistaken "wolf, wolf" alarms create apathy.

Alertness is urgently required. Too few Americans are awake to the real nature of this evil. But excessive fear breeds a rejection of democratic processes. It leads decent, honorable citizens to use dishonorable and authoritarian means to combat the evils they fear.

It too often fosters a totalitarian attitude which attacks everyone who will not fight communism in one prescribed way. It induces a self-defeating, self-righteous distrust and tearing down of men who lead freedom's cause in key sectors.

Indeed it would be easy to conclude that such damage to a healthy America was planned in Moscow. And some thoughtful moderates will contend that this radicalism of the right splits, discredits, and weakens the very forces in America which should be most effective in combating the opposite extreme—that which in the name of "liberalism" often appears to be "greasing the Communist skids" by moving toward submergence of individual and local interests in a paternalistic superstate.

But of course the best answer to either tendency will not be found in suspicion and hate. It lies rather in a greater understanding of and devotion to the religious ideals and constitutional concepts which give vitality to free societies. Exposure of mistakes is in order. But new negative denunciations are no cure for old.

The core of totalitarianism is disregard for the individual. The core of free societies is concern for the individual. This has its roots in religious teachings that man is the son of God. Persons who keep this distinction clear in their thought and action can indeed have an active and wisely effective part in combating communism.

Positive trust in divine guidance and protection should displace a conspiratorial distrust. Positive rededication to a religious sense of brotherhood should lessen concern with divisive organizational "fronts." More positive reliance on the spiritual force of truth, justice, and freedom (when exemplified) should ease obsessive fears of subversion.

Study of and appreciation for precious civil liberties and individual rights should be a more positive answer than either the maligning or misinterpretation of them. Active efforts to set up noble goals and to provide the equality of opportunity which will permit every individual to achieve his full potential is a more positive answer than any anticommunism which adopts totalitarian methods to fight totalitarianism.

James R. Hoffa Mounts a National Drive Against the Railroads

EXTENSION OF REMARKS
OF
HON. CARROLL D. KEARNS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 13, 1961

Mr. KEARNS. Mr. Speaker, the Meadville (Pa.)—where the main shops of the Erie Railroad are located—Tribune of April 10, 1961 carried an Associated Press report on the latest activities of James R. Hoffa who has urged his "1,700,000 union members to pepper their Congressmen with demands for support of legislation pending in the Senate that Hoffa said would stop the Interstate Commerce Commission from allowing special low rail rates to haul freight in competition with trucks."

According to Mr. Hoffa the ICC is allowing railroads to charge excessive rates for freight handled solely by the trains and then to put rates into effect in competition with trucking that are below the actual cost of operation.

The Associated Press reports that—

Hoffa urged Teamsters members to threaten Members of Congress with loss of political support if they oppose the pending legislation, and to form women's auxiliaries, enlist support of businessmen, carry on house-to-house campaigning, and be ready to make a march on Washington.

Mr. Hoffa is now concentrating a large part of his efforts in an attack against piggyback transportation, and Members of Congress. I am ready for him, and I think other Members should get ready, too, to repel this attack.

Bills have been introduced in the Congress which, if they become law, would result in the railroads being unable to compete for the transportation business, and thus assure the supremacy of those competing forms of transportation which have been so powerfully assisted by the Federal Government.

If these bills are adopted, the railroads will be left with only that part of the transportation business which other forms of transportation—such as the trucking industry now dominated by Mr. Hoffa—find unprofitable.

Clair M. Roddewig, president, Association of Western Railways, has pointed out that—

These newer modes of transportation are engaged in a campaign to force Congress to restore the competitive shelter which they have enjoyed since their birth.

Meanwhile they are continuing their efforts to intimidate the Interstate Commerce Commission, which has been extremely hesitant about loosening the competitive restraints on railroad transportation as clearly intended by the Transportation Act of 1958.

They have the support, too, of powerful allies who are the special beneficiaries of these newer forms of transportation, or whose selfish interests are otherwise identified with them. James Hoffa and his powerful Teamsters Union are in the front ranks.

It would appear that the competitors of the railroads have a great deal of confidence in their political strength, demanding, as they do, that Congress rescind a long and carefully considered policy that it adopted only a couple of years before.

The Federal Government is in the transportation business up to its neck, according to Mr. Roddewig who has said that—

Government owns the highways—a public investment of $150 billion in these transportation facilities.

Government owns the inland waterways—a public investment of more than $5 billion in these transportation facilities.

With Canada, the U.S. Government owns the St. Lawrence Seaway—an investment by this country, to date, of $131 million in this transportation facility.

Government owns the airports—a public investment of about $5 billion in these transportation facilities.

And this list could be extended considerably. It would include the Panama Canal; navigation aids for air and water transportation; harbor improvements; and so on.

How much money is involved: Who knows? Whatever the total, it is many times more than the investment of private capital in railroad rights-of-way, tracks, bridges, tunnels, signals, and the other roadway facilities of the railroads.

These roadway facilities used by railroad trains are comparable to—indeed, are the counterparts of—the roadway facilities owned by government at various levels, and used by the motor vehicles, barges, ships, and airplanes which are owned and operated by private interests in competition with the railroads.

The railroads and the privately owned pipelines are the only forms of transportation whose roadway facilities are not owned by the Government.

And it should be reasonably clear that unless the Government takes its feet off the necks of the railroads, it won't be long before the Government will own them too.

Mr. Roddewig makes out a convincing case for the railroads, and there is a very real danger that, unless a more realistic approach is taken to the problems of the railroads, they will, indeed, soon be owned by the Government.

Some wag has pointed out that one way for the Government to solve the railroad problem would be to turn their management over to James R. Hoffa.

If Hoffa were in the driver's seat, perhaps he and his friends and allies would change their views about the railroads being an outmoded form of transportation.

Perhaps Mr. Hoffa could even persuade the Federal Government to take the necessary steps to keep the railroad industry in this Nation alive.

Another proposal would be to lease the railroads to some European country and then to help that country out with mutual security funds.

In any event, and all levity aside, the railroad industry will not long survive with both James Hoffa and the Federal Government competing with each other to do this great industry in.

Mr. Speaker, the railroads are indispensable. They are the only form of transportation that can move anything anywhere, at anytime. They require less manpower and fuel per ton of freight moved than any other form of land transportation, and the unit costs go down as the volume of freight moved goes up.

This ability to reduce costs through volume, and to obtain volume through reduced charges, is to the advantage of both consumers and industry. Everyone will be deprived of these advantages by unwise regulations which tie the hands of the railroad industry and which prevent the railroad industry from competing with other forms of mass transportation.

I include as part of my remarks an article by Victor Riesel which was published in the Erie Morning News of April 10, 1961. It gives an important insight into the mind and activities of James Hoffa:

JIMMIE HOFFA MUST BE KNOWN BY THE COMPANY HE KEEPS

(By Victor Riesel)

WASHINGTON.—Jimmie Hoffa, who despite certain rumors is as mortal as the rest of us, should be known by the company he keeps, like the rest of us. For some years now his union has been going steady with the Pacific longshoremen led by Mr. Harry Bridges, who numbers among his friends and associates many of the Soviet's U.S.-hating global labor leaders. And that's an understatement.

Thus it is of intense interest to our citizenry that Harry Bridges, president of the West Coast Longshoremen's Union, flew from San Francisco to his convention in Honolulu on March 30—and just about the same time Teamsters' President Hoffa dispatched two of his own union's representatives to the Hawaiian convention of this union, long friendly to the Sino-Soviet bloc.

If the two representatives of Hoffa's union do their duty at the leftwing longshoremen's convention and return with official reports of the parley the small print should make interesting reading to Brother Hoffa.

It is, for example, the belief of Bridges and his high command that the Cuban revolution has increased that island's agricultural output, reduced unemployment and raised wages. Bridges & Co., also feel that if through the efforts of the United States the Cuban revolution fails, it will be a blow to the Cuban people.

It is Mr. Bridges' privilege to be sweet on Castro, golfer and revolutionist. But Mr. Hoffa has publicly in the past few years asked Bridges and the Pacific Coast longshoremen to be his partners in a national transportation federation—and a federation all of whose union contracts would expire on the same day. Is it therefore unreasonable to expect some comment from Hoffa on his friend's attitude towards Cuba? No compulsion mind you, just sort of a moral issue now.

Furthermore, Harry Bridges and his union officially are for trade with Peiping China—which is not exactly a benign growth in the troubled underbelly of Asia. What is Mr. Hoffa's attitude on that pro-China trade position taken by this union with which he is linked on the west coast?

Hoffa should look as closely at what happened during the weeklong convention there, not too far from Pearl Harbor, as he does at an employer's offer. The Teamsters chief would then observe that the Bridges leadership believes that U.S. economic and military aid to some of our Asiatic friends will create explosions in South Vietnam and South Korea. Likewise Hoffa will note mighty little criticism of Communist forces where the Sino-Soviet bloc is brinking close to global war.

What thinks Mr. Hoffa of all this?

And though there can be noted no harshness towards the Iron Curtain bloc, there was warning that the civil liberties of the United States are endangered by the actions of congressional leaders.

Of course there is no insinuation here that silence on Hoffa's part means conformity with his colleague in the Teamster-sponsored Conference of Transportation Unity. It is just that constant silence on Harry Bridges' political opinions and the editorial stands of Bridges' newspaper, The Dispatcher, appears to put Hoffa in an awkward position. There was, for example, not too long ago a double-page spread in the longshoremen's publication, which appeared to speak highly of present-day Hungary.

Hoffa might send right down to his expert research department. He will be told that on February 24, 1961, The Dispatcher ran a feature called "ILWU Members Take a Look at Hungary." This is a firsthand report of a group which arrived in Budapest August 6, 1960—some 6 months before the big feature was printed. There are many hard-working American truckdrivers who are of Hungarian descent. They might like to hear what Hoffa thinks of such a report which makes all things seem so peaceful in the land occupied by Chairman Khrushchev's tank divisions.

Public Education

EXTENSION OF REMARKS

OF

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 13, 1961

Mr. ULLMAN. Mr. Speaker, as the sponsor of legislation to expand and develop the public junior colleges, I was pleased to note that the American Association of School Administrators meeting in San Francisco, Calif., St. Louis, Mo., and Philadelphia, Pa., adopted, among others, a resolution urging the expansion and rapid development of 2-year public junior colleges. Under unanimous consent, I include this resolution in the Appendix of the RECORD.

RESOLUTION EXTENDING PUBLIC EDUCATION

As the economic, social, and technical aspects of our civilization become broader, deeper, and more complex, it becomes increasingly imperative that we both intensify the preparation of all citizens and extend the opportunities for additional education to increasing proportions of our total population. Recognizing the growing need for opportunities to pursue higher education and recognizing that universities and colleges may be relieved greatly by the community college, the American Association of School Administrators urges the continued expansion and rapid development of 2-year public junior colleges, community colleges, vocational and technical schools, or other similar public post-high-school educational opportunities, and further recommends that vigorous measures be taken to continue to improve the quality of existing programs.

Rural Areas Development Program

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 13, 1961

Mr. NATCHER. Mr. Speaker, in 1955 a request was made for an appropriation of $15 million to be used in the rural development program. Under the rural development program submitted the main objectives were an increase of income for small farmers with efforts to be made in making the land provide a higher level of living. In addition, better management of timber resources on our farms was to be considered and the credit needs for small farmers was to receive immediate attention. Under the vocational training program plans were to be made for the acceleration of vocational training of our young people on the farms and better health services with improved nutrition was to be given every consideration. Pilot counties were designated in many States and the objectives of the program were fully carried out.

Every dollar expended in the rural development program under the original appropriation and in the small additional amounts which have been used in the Extension Service each year has produced untold benefits for our farmers. No State in our Union has received more benefits from this program than has the State of Kentucky. One of the low income counties in the Second Congressional District in Kentucky was selected as one of the three pilot counties for Kentucky. This county is Butler County and the impact of the rural development program is directly responsible for many improvements in this particular county. Accomplishments such as a new health unit, an increase in local employment, erection of three modern buildings on the main street of the county seat town, a new Post Office building, construction of new homes and business houses, improvement of roads and schools, erection of a building for use as a meeting place for the rural development group and improvements generally in living conditions on the farms in Butler County are tangible examples of the effectiveness of this program. The people of this county are convinced that the rural development program is the soundest approach yet devised to gaining long range economic development and growth in our rural towns and communities. These people understand that the program's effectiveness depends upon their continued interest. The success of the rural development program in this county is recognized throughout the State of Kentucky and, Mr. Speaker, the same could be said of many low income counties throughout our country today if we decided to continue the rural development program as originally planned.

Mr. Speaker, recently our new Secretary of Agriculture, the Honorable Orville L. Freeman, established a Board for rural areas development and, at the same time, issued Memorandum No. 1448 which pertains to the rural areas development program.

As pointed out by the Secretary in his announcement, the rural areas development program, in order to be successful, must stimulate local initiative to develop more jobs, more efficient family farms, new skills for willing hands, and greater opportunity for the youth who must soon decide whether to stay in his home community or seek a job elsewhere. The rural development program was a successful program and this program, together with other programs, such as the small watershed projects and the FFA program have been successfully operated, and the experience gained from same should now give us the necessary incentive to operate a rural areas development program successfully.

I know that every Member of the House will be interested in reading the announcement and the memorandum incorporated herein.

Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herewith the announcement and memorandum referred to above:

SECRETARY FREEMAN ESTABLISHES BOARD FOR RURAL AREAS DEVELOPMENT

U.S. DEPARTMENT OF AGRICULTURE,
Washington, D.C., March 21, 1961.

Secretary of Agriculture Orville L. Freeman moved today to begin mobilizing the U.S. Department of Agriculture for maximum assistance to State and local groups in a broad program of rural area development.

He established a Rural Areas Development Board with membership from 11 departmental agencies and named John A. Baker, Director of Agricultural Credit Services, as chairman.

A Rural Areas Development staff was also created to serve the Board. It will be headed by John M. Lovorn, formerly of the Farmers Home Administration.

The Secretary said the new Board will be responsible for redirecting the programs of the Department so that they will be of greater help to farming communities and small towns attempting to develop means to earn more diversified income.

Major responsibilities of the new Rural Areas Development staff will include: Recommending areas for priority attention; reviewing departmental programs to assure that they are providing maximum help to local groups; maintaining liaison with other Federal Departments on the program; preparing inventories of service provided by the Department of Agriculture in program areas.

Secretary Freeman emphasized that, while the Board will initiate and coordinate the supporting programs of the Department, State and local leaders will be primarily responsible for initiating and carrying forward area programs and individual development projects to stimulate economic growth in rural areas.

"Through this program, the full resources of the Department will be directed toward the provision of tools for use of local development efforts to eliminate underemployment and the blight of chronic poverty in rural America," he said.

"We know that a program of this type will help promote new industries in areas where a factory is the breath of life to a whole county. It can mean developing a new market for old products and it can mean development of new products for new markets.

"But where today we have a few good examples of rural development we want a thousand success stories tomorrow. The Department will supply substantially expanded leadership and support to help farmers and small town residents and their organizations and local and State government units to convert desire into ambition, and hope into action.

"To be successful, this program should stimulate local initiative to develop more jobs, more efficient family farms, new skills for willing hands, and greater opportunity for the youth who must soon decide whether to stay in his home community or seek a job elsewhere.

"We intend to build this effort on the base of experience gained in such programs as rural electrification, development of cooperatives, farm credit, extension, FFA, small watershed projects, rural development, and other programs in soil, water, and forest improvement and conservation of natural and human resources."

The 11 agencies represented on the Rural Areas Development Board are: Agricultural Marketing Service, Agricultural Research Service, Commodity Stabilization Service, Economic Research Service, Farmers Home Administration, Farmer Cooperative Service, Federal Extension Service, Forest Service, Rural Electrification Administration, Soil Conservation Service, and Statistical Reporting Service.

RURAL AREAS DEVELOPMENT PROGRAM

Memorandum No. 1448.

U.S. DEPARTMENT OF AGRICULTURE,
Washington, D.C., March 21, 1961.

1. Objective: Underemployment in rural America is a serious problem. More than 35 percent of the farm families had incomes under $2,000 in 1959. The full resources of the Department of Agriculture must be directed toward the elimination of this serious low-income underemployment problem State and local authorities throughout the Nation are aware of this situation and are attempting to stimulate economic growth and income opportunities in areas of underemployment. All Department of Agriculture agencies must commit their resources toward the support of the State and local authorities in this work. The Department expects, through the means established in this memorandum, to assure needed assistance to local initiative, leadership and coordinated action in meeting the economic needs of rural areas, in keeping with the broad responsibilities of the Department.

2. Direction of rural areas development program: The Director of Agricultural Credit Services is hereby designated to supervise and direct the rural areas development program and to coordinate and focus the resources of the departmental agencies in their assistance to the State, local, private, community, Statewide organizations, farm organizations and interested individuals working toward the improvement of underemployed areas.

3. Rural areas development staff: In order to provide for effective departmental participation in this effort, a rural areas development staff is hereby established, under the general supervision and direction of the Director of Agricultural Credit Services. The duties of the rural areas development staff will be to—

(a) Recommend the delineation of development areas, on the basis of the economic subregional grouping of rural counties, for use by the Secretary in formally designating such areas.

(b) Maintain a continuous study to determine how programs of the Department can be (1) brought to bear on the particular problems in each designated rural development area, (2) assure that program agencies are giving effective technical assistance to private groups and local and State governments in formulating a comprehensive development program and are making their full resources available in supporting project plans for each designated area.

(c) Prepare for each designated development area a departmental rural area de-

velopment program inventory, consisting of an itemization of the services and programs, and proposed improvements thereof, currently provided by the Department. The inventory for each designated area shall be periodically revised as required by changing conditions.

(d) Maintain continuous liaison with appropriate departments and agencies of the executive branch to assure coordination of effort and utilization of all available resources in the total program.

(e) Prepare and publish current reports on local achievement and progress in formulating and implementing rural development programs in designated areas.

4. Rural Areas Development Board: There is hereby established, within the Department, a Rural Areas Development Board, whose function shall be to provide advisory aid to the Secretary and the Rural Areas Development staff in appraising and determining program needs, and to provide liaison with Department agencies in planning and carrying out a fully coordinated action program. Establishment of the Board is designed to assure effective participation by appropriate agencies and offices of the Department and application of all Departmental resources to implementation of the program. The Board will consist of representatives of the following agencies: Agricultural Marketing Service, Agricultural Research Service, Commodity Stabilization Service, Economic Research Service, Farmers Home Administration, Farmer Cooperative Service, Federal Extension Service, Forest Service, Rural Electrification Administration, Soil Conservation Service, and Statistical Reporting Service.

The head of each designated agency shall designate a responsible permanent representative to serve on the Rural Areas Development Board who will represent the interest and activity of his agency in the rural areas development program.

The Director of Agricultural Credit Services shall be the Chairman of the Board; the Director of the Rural Areas Development staff shall be the executive secretary.

Each agency represented on the Board shall develop operating policies and procedures for effectuating its part in providing services and technical assistance to private groups and State and local governmental agencies in moving ahead rapidly with the Rural Areas Development program. Agency plans for implementing their responsibilities in the program shall be presented to the Chairman of the Rural Areas Development Board for review and approval.

5. Agency and staff office cooperation: The Rural Area Development Board and staff shall draw upon other departmental agencies and staff offices for information and assistance needed in carrying out their responsibilities.

6. Local participation: Priority attention shall be given to requiring that initiation of activities under the Rural Areas Development program and maximum participation therein shall rest with citizens and organizations and groups of citizens and State and local governments and instrumentalities thereof in rural areas.

ORVILLE L. FREEMAN,
Secretary.

The Padre of the Americas

EXTENSION OF REMARKS
OF
HON. CHARLES McC. MATHIAS, JR.
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 13, 1961

Mr. MATHIAS. Mr. Speaker, the House today was led in prayer by one who has justly earned the honor of being called "the padre of the Americas." The Reverened Dr. Joseph F. Thorning is the pastor of St. Joseph's-on-Carrollton Manor, a historic church in the Sixth Congressional District of Maryland. But Father Thorning ministers to a congregation that extends far beyond the geographical boundaries of his parish. His intimate knowledge of our Latin American neighbors has justified the respect in which he is held by his friends in both the Americas. It explains his presence in the House today in anticipation of Pan American Day.

Father Thorning's humanitarian interest in the welfare of our good neighbors reflects Thomas Jefferson's attitude toward Latin America when, as Secretary of State, he said:

Nor are we acting for ourselves, alone, but for the whole human race.

And I know that Father Thorning's interest in the affairs of Latin America is a reflection of his concern for the future of all mankind.

It is not often that a Member of this House can welcome a constituent of such distinction to participation in the proceedings of this body. I take a particular pride in extending that welcome to Father Thorning today, and thank him for the prayer that he has offered.

Military Survivors, Inc.

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 13, 1961

Mr. WILSON of California. Mr. Speaker, the State Legislature of California on March 23 adopted House Resolution 174, relative to an organization known as Military Survivors, Inc. The resolution which was introduced by Assemblymen Luckel, Schrade, Hegland, and Mills pays tribute to Military Survivors, Inc., and under unanimous consent I include the resolution as a portion of my remarks:

HOUSE RESOLUTION 174

Resolution relative to commending Military Survivors, Inc.

Whereas Military Survivors, Inc., is a nonprofit organization devoted to assisting the surviving dependents of U.S. Armed Forces personnel throughout the United States and in some outlying areas; and

Whereas the membership of Military Survivors, Inc., is composed of widows, retired service personnel, and other survivors of service personnel with a keen awareness of the problems and hardships confronting persons who have lost loved ones in military service; and

Whereas since its formation in August of 1955, Military Survivors, Inc., has by mail, telephone, and personal contacts helped hundreds of survivors of servicemen in all branches of the uniformed services; and

Whereas the organization has contributed to the passage of legislation substantially benefiting thousands of military survivors: Now, therefore, be it

Resolved by the Assembly of the State of California, That Military Survivors Inc., is hereby commended for its fine work and accomplishments; and be it further

Resolved, That the members of this assembly pay tribute to the founders and members of Military Survivors, Inc., for their inspiring devotion to so worthy a cause; and be it further

Resolved, That the chief clerk of the assembly prepare and transmit a suitably prepared copy of this resolution to Military Survivors, Inc.

Secretary McNamara Shows Leadership

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 13, 1961

Mr. McCORMACK. Mr. Speaker, with permission to revise and extend my remarks I am placing in the CONGRESSIONAL RECORD an excellent article entitled "McNamara Speeding Many Inquiries, Using Answers at Once To Strengthen Defenses." This article was written by Brig. Gen. Thomas R. Phillips, U.S. Army, retired, who is the military analyst of the Post-Dispatch in St. Louis. The article indicates that Secretary McNamara has an understanding of management techniques and is proceeding in a courageous way to bring about necessary improvements toward reorganization of the sprawling activities in the Department of Defense.

This is one of the most encouraging developments in recent years, since it must be apparent to everyone concerned that there must be a firm hand at the helm of the Department of Defense if we are to take the lead in the race with the Soviets upon which depends not only our security and safety but the solvency of our economy. I am particularly pleased that Secretary McNamara is using the authority at his disposal in eliminating unnecessary duplication and waste in supply and service functions in the defense agencies. . I congratulate him on his efforts and suggest that he be given full encouragement in his important work.

The article follows:

MCNAMARA SPEEDING MANY INQUIRIES, USING ANSWERS AT ONCE TO STRENGTHEN DEFENSES—ONE HUNDRED AND SIX QUESTIONS ALREADY SHOW RESULTS IN MISSILE SPEEDUP, INCREASED BOMBER ALERT, CENTRALIZED SPACE ACTIVITY, CLOSING OF EXCESS BASES

(By Brig. Gen. Thomas R. Phillips, U.S. Army, retired)

The 106 questions (there may be more by now) to which Secretary of Defense Robert S. McNamara has demanded answers with various close deadlines have the Pentagon staffs working nights to a degree not known since the Korean war.

Some of the answers have already been made public in the President's message on the defense budget. These come under the headings of "strengthening and protecting our startegic deterrent and defense, strengthening our ability to deter or confine limited war," and "savings made possible by progress."

Among the decisions were the acceleration of Polaris, Minuteman and Skybolt missile programs, provision for increased ground alert by bombers and the provisions of ad-

ditional funds for important existing satellite programs.

Hard questions and difficult decisions had to be made in the answers that resulted in the cancellation of two Titan squadrons in favor of more Minuteman missiles, the accelerated phaseout of the B–47 medium bomber, the elimination of the Snark missile, the cutback of the B–70 program to four prototypes and the cancellation of the nuclear-powered aircraft program.

Another answer to one of McNamara's questions was the directive issued March 6, placing almost full responsibility on the Air Force for military space activities. This had been the intent of a directive issued in September 1959 by former Secretary of Defense Neil H. McElroy, but his intent was being eroded by the Army and Navy efforts to develop their own often-competing space programs.

The controls prescribed by McElroy were inadequate. Now McNamara has tight control; no new space program can be funded unless it has been approved by the Director of Defense Research and Engineering and by either McNamara or his Under Secretary, Roswell L. Gilpatric.

The manner in which all services were letting their imaginations soar over space programs that were far beyond the state of the booster art, and many of which never could have succeeded under any circumstances, fully justified the tighter control prescribed in this answer to one of McNamara's questions. The savings that will be effected from this question and answer will amount to hundreds of millions of dollars.

Another answer, only the beginning of the answer to this question, resulted in the closing, announced March 30, of 52 excess defense installations in the United States and 21 overseas. Other announcements of this nature will follow as the investigation of the need for all of the 6,700 defense installations proceeds.

The monetary savings from the actions announced thus far are expected to amount to $220 million annually. Even more important, 21,000 military personnel will be released from these operations and will be made available for other duties. This was the reason that it was possible for the President to ask for an increase in military personnel of only 13,000 men.

McNamara hopes by further actions of this nature, and through combination of functions now performed in duplicate by the three services, to make it unnecessary to call for an increase in personnel strength of the armed services. He is confident, he remarked, that the United States can fulfill its military commitments with the 2,500,000 men in uniform it now maintains, if they are used effectively.

In answer to another question, the announcement was made March 31 that responsibility for military construction would be consolidated in 17 of 42 Army Engineer districts. Military construction is now being carried on by 31 engineer districts.

The reassignment of work loads is expected to result in the reduction of about 1,700 of the Corps of Engineers' 40,900 employees. At the same time all missile-site construction has been consolidated in one office under an Army engineer brigadier general who has been made subordinate to the Air Force.

The most recent answer to another of McNamara's questions was made with the announcement that the Department of the Army will be responsible for the establishment and management of a single geodetic and mapping program. For mapping and geodetic measurements by satellite, the Air Force will provide the launch vehicle and recover the payloads.

The Army will process the data and make the basic maps. From the basic maps the Air Force will make its aeronautical charts and the Navy will make its hydrographic charts insofar as these include land areas.

The Air Force will also be responsible for conduct of aerial mapping and geodetic systems requiring the service of manned high-performance aircraft. But these operations will be conducted in accordance with a schedule provided by the Army, which will process the raw data and photographs.

This directive will centralize under the Army all the processing and computation of raw data and photographs into maps. Some of the equipment used is extremely expensive. The directive will prevent the duplication of such facilities and the manpower that would be used if each service were to proceed to do the whole task by itself.

These decisions are arrived at in different ways. The directive giving the Air Force control of most military space operations was worked out outside the Joint Chiefs of Staff. The draft directive was supplied to the chairman and the three service secretaries for comment within 6 days.

The Navy objected violently to the directive, since it had started a large space program. The Navy program duplicated other Air Force, Army and National Aeronautics and Space Administration programs to some degree. And there was complaint that the chairman of the Joint Chiefs of Staff and the service secretaries did not have enough time for study.

The answer to this complaint given by many observers in the Pentagon is that, if the many problems requiring solution in which there are service differences were given to the Joint Chiefs of Staff, they never would be solved.

If McNamara is going to accomplish anything to improve the efficiency of the Defense Department and the unified operation of services, these observers say, he is going about it in the only way possible. During the last 13 years, every previous secretary has been frustrated by one of the other services in attempting to carry out the idea of the unification legislation.

In the case of the assignment of mapping and geodetic responsibility to the Army, the problem was given to the Joint Chiefs of Staff, rather than a civilian committee, to find the answer. The directive issued is substantially as recommended by the Joint Chiefs. The Air Force objected strongly, but was overruled.

McNamara's 106 questions are the product of 2 lists of problems in the Pentagon that McNamara and Gilpatric believed needed corrective action or, at least, investigation.

Gilpatric calls the method a management tool. By formation of expert committees, or reference to the Joint Chiefs of Staff as a committee, he poses a problem that requires a solution. He sets a deadline for a reply and the reply must include a directive to put the answer into effect.

Dissents are given a hearing. All concerned have a chance to object or comment, but this process is not permitted to go on indefinitely. The discussions and changes are agreed on in a limited time.

The speed of action that McNamara insists on has the Pentagon gasping. There is little time for the plots and stratagem that individual services have used in the past to frustrate previous secretaries.

In organizational matters, a special management planning group under Solis Horowitz in the office of Defense Counsel Cyrus Vance is responsible. He has three not-too-senior officers, one from each service, each of whom is an expert in the organization of his service.

McNamara refers organization weaknesses to Vance for investigation. One of Horowitz's officers is assigned as action officer. He gathers information and makes a study. From this a report is prepared in collaboration with his colleagues.

This goes to McNamara for review. If he decides a change is indicated, the management group prepares the draft of a directive. This is the basis for obtaining the comments and criticism of the Chiefs of Staff, the Secretaries, and other agencies involved. After all this is reviewed by McNamara, and after further discussion by him with his military and civil advisers, the directive is issued, possibly after it has been modified in response to objections, as was the case with the military space order.

The Secretary of Defense has vast powers in the organization and operation of the Department of Defense. These were greatly increased by the Reorganization Act of 1958. McNamara is the first Secretary of Defense with the courage to use these powers to cut through the objections of special service interests and their allies in Congress.

In particular, the so-called McCormack-Curtis amendment is a grant of great authority. After many efforts in Congress to attempt to force the Defense Department to proceed with a reorganization of the supply and service functions that were overlapping had been frustrated, House Majority Leader JOHN W. MCCORMACK, Democrat, of Massachusetts, and Representative THOMAS B. CURTIS, Republican, of Webster Groves, proposed legislation, which was adopted, that gave the Secretary of Defense an almost free hand in reorganizing supply and service activities.

The amendment seems rather innocuous on first reading, and that is the reason that it was accepted by Chairman CARL VINSON of the Armed Services Committee.

It reads, in part: "Whenever the Secretary of Defense determines that it will be advantageous to the Government in terms of effectiveness, economy, or efficiency, he shall provide for the carrying out of any supply or service activity common to more than one military department by a single agency or such other organizational entities as he deems appropriate."

According to an authentic Pentagon source, no major reorganizational changes are planned at present in the Defense Department. These large and difficult problems will be put off until late this year when the new Defense officials will be sure enough of their ground to make more far-reaching moves than those now in process. They will be the result of thorough study, will improve efficiency and effectiveness of the operations and will save money and personnel.

Jewish Women of Maryland Favor Kennedy Proposal for Federal Aid to Public Schools Only

EXTENSION OF REMARKS
OF
HON. EDWARD A. GARMATZ
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 13, 1961

Mr. GARMATZ. Mr. Speaker, in view of the nationwide interest in the request of President Kennedy for Federal aid for public schools, I believe that the resolution adopted by the Federation of Jewish Women's Organizations of Maryland will be of interest to all Members.

Therefore, under permission to extend my remarks, I am inserting in the Appendix a copy of this resolution, endorsing the administration's recommendations and opposing Federal aid to other than public schools:

RESOLUTION ON FEDERAL AID FOR EDUCATION

Whereas one of the basic principles upon which our democracy was founded is the separation of church and state; and

Whereas Federal aid to other than public education is a direct violation of that principle and can lead only to the detriment of the welfare of our country: Now, therefore, be it

Resolved, That the Federation of Jewish Women's Organizations of Maryland, consisting of 71 constituent organizations and representing 30,000 women in convention assembled on Thursday, March 23, 1961, urges that the Members of the House of Representatives from the State of Maryland vote for the passages of H.R. 4970 and H.R. 5266; and be it

Resolved, That copies of this resolution be sent to the President of the United States, the Members of the House of Representatives from the State of Maryland, and the Senators from the State of Maryland.

Education Without Federal Aid

EXTENSION OF REMARKS

OF

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 13, 1961

Mr. WILSON of California. Mr. Speaker, at a recent Freedom Forum held in San Diego on January 20, 1961, one of the speakers was the distinguished president of Pepperdine College at Los Angeles, Mr. M. Norvel Young. Mr. Young's comments as an educator and patriot will be of great interest to my colleagues and I urge their thoughtful consideration of his remarks.

Under unanimous consent I include Mr. Young's speech as a portion of my remarks:

EDUCATION WITHOUT FEDERAL AID

(Remarks of Mr. M. Norvel Young, president, Pepperdine College, Los Angeles, to the Freedom Forum, San Diego, Calif., January 20, 1961)

What will education be profited if it gains billions of dollars in Federal aid and loses its own freedom? What should a teacher or a school give in exchange for its freedom? The history of 19 out of 21 notable civilizations studied by Arnold Toynbee points out that "they died from within and not by conquest from without." Great republics like those of Greece and Rome gradually exchanged their local freedom and its responibilities for more and more centralized control and its promised protection and aid. They became less and less free and finally they lost both freedom and aid.

Of course, this is not to minimize the tremendous needs of higher education and of education at the secondary and elementary levels. But must we take our educational problems to Washington for solution?

Here are some specific reasons why we believe in improving our educational process without Federal aid:

1. Basically Federal aid always means Federal control. As Justice Jackson stated in a Supreme Court decision regarding controls in agriculture: "It is hardly lack of due process for the Government to regulate that which it subsidizes."

There are, for example, 12 direct controls under the National Defense Education Act of 1958 and this is but a drop in the bucket of the amount of money and of the extent of controls which will be forthcoming in the decades ahead if we do not reverse the present trend. The National Defense Education Act definitely affects the curriculum and the emphasis of the schools which are aided. Moreover, the granting or withholding of large amounts of money has a way of influencing the thinking of the most resolute and independent administrator.

2. Federal aid is objectionable because it will reduce local and private responsibility for the education of our children and our young men and women at the college and university level. There is a kind of Parkinson's law that "interest diminishes as responsibility is removed." The primary responsibility for the education of our youth is upon the home. The family is still the basic unit of our society. The closer the education of our youth can be kept to the home, the longer we will preserve our freedom. The trend has already developed for the average American parent to take little or no responsibility for the normal education of his children. This, the average parent has come to believe, is instead a job solely for the "professionals." More responsibility is ultimately being transferred from the local school board and placed in the hands of the State. Ultimately, this trends toward removing responsibility from the State and placing it upon the Federal Government.

3. The prospect of Federal aid also undermines and deactivates interest in solving the problem at the local level. The White House Conference on Education in 1955 found that "no State represented has a demonstrated financial incapacity to build the schools it will need during the next 5 years." Approximately 230 of the more than 42,000 school districts in America have reached their bonded limit. Our citizens are taking responsibility at the local level and would do more with the proper public promotional effort and if the prospect of the Federal Government stepping in to assume these responsibilities were not an inducement to inaction at the local level. Between 1949–50 and 1959–60 there was an increase of 38 percent in school population and an increase of 124 percent in revenues raised for schools. Let us stimulate and encourage local and private responsibility rather than discourage it by saying to those citizens who are willing to sacrifice for their children's education: "You are foolish. Why don't you relax and let the Federal Government do this for you."

4. The last objection which I will mention, although certainly these are not the only ones which could be listed, is this: Federal aid will tend to break down our historic separation of public and privately supported education or it will further increase the disparity between the support of the two systems. I believe in the values of our dual system of education. We need the tax-supported and the voluntarily supported schools and colleges. They complement each other and serves as a check upon each other and help to assure our continuing freedom of speech, of religion, of education. The wide variety of educational opportunities possible under our dual system is calculated to serve us well in the changing world we face.

Federal aid which is restricted only to tax-supported schools will increase on individuals and corporations which are now voluntarily supporting both tax-supported and voluntarily supported schools. Private education needs more voluntary support and such support is growing. In 1960, corporate aid to education topped $150 million and it is growing rapidly. If this aid is restricted to tax-supported institutions it will add impetus to the present trend for more and more education to rely upon tax support.

The economic pressure upon private schools and colleges is tremendous today. What will it be in the decades ahead if Federal aid is granted in billions of dollars to those institutions which are willing to submit to Federal control?

Now let us turn to a few suggestions as to what can be done to help solve our problems in education without Federal aid.

1. Parents can become more concerned about the needs of schools in their own districts and take more interest in school board elections, in PTA work, in support of local or State bond issues. Businessmen need to be alerted to the importance of more support for teachers and proper housing for an expanding army of students.

School revenues have increased three times as fast as school population in the last decade and we have not begun to exert the influence which can be exerted to do a better job at the local level. If the same amount of time and effort were expended to stir up concern at the local level as has been spent to stir up pressure for Federal aid we would be showing much greater progress.

2. Much more voluntary support needs to be given by individuals and corporations and foundations. Irving S. Olds has expressed the growing conviction of more and more businessmen: "Unless American business recognizes and meets its obligation to higher education, it is not properly protecting the long-range interest of its stockholders, its employees and its customers." More and more corporations are recognizing the enlightened self-interest of voluntary corporate support of higher education.

The council for financial aid to education has done an outstanding job of stimulating concern for voluntary support to education. This type of activity could be multiplied with the wholehearted cooperation of teachers, parents, and professional leaders labor leaders as well as leaders in industry. There is more money in the stewardship of foundations than ever before. Bequests for education are at an alltime high. Surely we can step up this voluntary support. If any action is undertaken at the national level, why not let it be the encouragement of voluntary support by giving tax credit or tax exemption for larger gifts by corporations and for tuition paid by individuals.

3. If there are, as contended by some, those school districts that are too poor to do an adequate job of education, may we suggest that aid be given by a concerted effort on the part of foundations and corporations and possibly even by direct aid from wealthy districts or States. This may sound unrealistic, but Americans are spending millions for causes that are no more worthy. The proper promotion of an aid to underprivileged school districts could result in millions of dollars in support without Federal control. Many of the school districts which are not giving adequate support would take a searching new look if they realized that their needs were the concern of others. Many of them could do better if they would.

The best of educational opportunities for our American youth can be provided without sacrificing local control and responsibility, if we approach the challenge courageously and with dedication and determination.

Recently Pepperdine College rejected Federal loans available for the financing of dormitory construction and chose to meet the needs of the increased student body through the issuance of bonds sold through private channels. It did so because it hoped to encourage others to rely on their own resources and initiative rather than resort to the sometimes easier but infinitely more potentially hazardous route of Federal subsidization. Only such action directed toward the traditional American cause of self-reliance and independence can halt the present trend toward the proliferation of Federal control and supervision and pass intact our free institutions to succeeding generations.

The New Peril

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 13, 1961

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Pine Bluff (Ark.) Commercial of April 1, 1961:

THE NEW PERIL

We have been trying to work up a proper degree of concern and indignation about the John Birch Society, and have not so far made the grade.

The society may well be the menace it is being painted to be. We remember a fellow who laughed at Joe McCarthy.

But the Republic has stood off the Soviet Union since 1945 and, with considerable help, whipped two sets of Fascists plus Mussolini's legions more or less simultaneously in the period immediately preceding.

It lived through the Know-Nothings, the Klan, the Silver Shirts, and the aforementioned McCarthy, and will, from all indications, also survive the Citizens Councils.

We are experienced, as a Nation, with crackpots and authoritarians. If the John Birch Society is not about the nearest to impotent of the lot, we are, as a newspaper, a good way wide of the mark.

It has been alleged that the John Birch Society is a hate group; hence dangerous. Certainly it is made up of people who know how to hate, and who enjoy the sport. But they are also, and more profoundly, people shaken to their being by fear.

Whether the founder (who girded for his present large responsibilities in his brother's candy factory) knows it or not, the John Birch Society is built upon the proposition that mankind is doomed, and that there is now time only for a desperate rearguard action.

The society is convinced that all forces of change are exclusively in the service of the Kremlin, and that they threaten the civilized world at every point of contact.

What we have here is a fellowship of fear. In its articles of faith, the society resembles nothing so much as one of those sects which have from time to time taken to the basement and sealed up the cracks around the door in the conviction that the world would end at 5:27 a.m. a week from Thursday.

Consider the men and things which the John Birchers or their founder have already conceded to the Communists: They include the President and his predecessor, the Supreme Court, the Nation's city managers, the urban renewal advocates, the proponents of fluoridation, the United Nations.

These people don't need condemnation. They need help.

They need, each of them, a quick course in American history, a heart-to-heart talk with a trustworthy friend and then, perhaps, a good, long rest.

The evidence is that John Birchism is incurable, but we can try.

Nor does John Birchism seem to us to be contagious. The presumption on which the organization has been viewed so generally with alarm is that it is a virus likely to infect innocent people.

All of the evidence we've seen indicates that the people already had the virus, and have simply gotten together to share its miseries.

We suppose that there may be people in meaningful numbers willing to take the oath of allegiance to an outfit which is willing to forfeit the American system of government for something the John Birchers call, quite gratuitously, the American way of life.

But we doubt that there are many men of sound mind willing to accept the collateral dictum that Dwight Eisenhower is a Communist.

To the extent that they have done anything, except to each other and themselves, the John Birchers seem to us to have performed a substantial public service.

They have alerted their fellow Americans to the existence on the far, far right of the political spectrum of people every bit as confused, troubled, and willing to be led around by the nose as their opposite numbers on the far, far left.

The society also has provided an interesting litmus test for some of our noisier politicians.

Senator EASTLAND, for example, has just spoken well of them.

Until they move beyond their present activities, which appear to consist pretty exclusively of whipping up each others' hysteria and of occasionally slandering men so eminent as to be substantially invulnerable to such attacks, we think the John Birchers more a nuisance than a peril.

If we must have people willing to believe in the things the society stands for, we may as well have the society.

The existence of such a group is bound to cut down on the number of Birchists running around unencumbered by the label, and thus likely to be mistaken for responsible citizens.

Peter Hofstra

EXTENSION OF REMARKS
OF
HON. CHARLES S. JOELSON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 13, 1961

Mr. JOELSON. Mr. Speaker, it is my sad duty to report that the Holland-American community of New Jersey has lost a renowned leader. On Easter Sunday night, Peter Hofstra, a vice consul of the Netherlands, succumbed in his 75th year.

Migrating with his parents to the Paterson area, where he held successive jobs in his youth as a sweeper, delivery boy, and butcher boy, Mr. Hofstra studied law at New York Law School and was admitted to practice in 1915. In the span of almost one-half of a century, Attorney Hofstra built one of the most widely respected law firms in the State. Hofstra & Hofstra has represented several municipalities in Passaic and Bergen Counties and is counsel for many area banking institutions.

As vice consul of the Netherlands, Mr. Hofstra had served as official escort in New Jersey for Queen Wilhelmina and later Queen Juliana on their visits to the United States. In December of last year, Queen Juliana appointed Mr. Hofstra a member of the Order of Orange-Nassau for his dedicated service to the Netherlands.

Tall and erect, a veritable giant among men, Peter Hofstra is mourned by all who ever had the pleasure of making his acquaintance. He leaves surviving his devoted wife, the former Cora De Lazier; and two children, Peter R., like his father a member of the New Jersey bar; and Mrs. Alfred Fauver, who resides in Quincy, Mass.

The Role of SAC in the Aerospace Age

EXTENSION OF REMARKS
OF
HON. DALE ALFORD
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 13, 1961

Mr. ALFORD. Mr. Speaker, on March 16 I had the great good fortune to attend a luncheon given by the civic and business leaders of Little Rock and Pulaski County, Ark., marking the 15th anniversary of the Strategic Air Command. The principal speaker on this occasion was Lt. Gen. J. P. McConnell, commander of the Second Air Force, Barksdale AFB, La., and himself a native Arkansan.

General McConnell delivered an outstanding address, and under leave to extend my remarks, I would like to include a copy of this address in the RECORD:

THE ROLE OF SAC IN THE AEROSPACE AGE

It is always a pleasure for me to come back to my native State. And I was happy that I could accept the invitation to speak here today. The wild blue yonder I once dreamed about as an Arkansas youngster has expanded into the limitless reaches of space. That is why a new term was needed to properly designate the indivisible expanse embracing both the earth's atmosphere and the vast space beyond.

This new term is aerospace, and is readily understandable to you who are so close to Little Rock Air Force Base where preparations for the coming of the intercontinental Titan II ballistic missile are being made.

Since SAC's inventory of weapons includes both manned bombers and intercontinental missiles, it is today an aerospace force with a twofold mission. Although I'm sure you know what SAC's mission is, I want to state it briefly and simply so it can be easily kept in mind as we explore the complexities of its significance. In peacetime, our mission is to maintain an aerospace counterforce capable of deterring Communist aggression, and if this fails and war comes, to mount simultaneously nuclear retaliatory attacks against the enemy's war-making capability to the extent that he no longer has the capacity or even the will to wage war.

Although we state SAC's mission in two parts, it is in reality indivisible—indivisible in the same sense that air and space are indivisible and that the present and the future are indivisible.

SAC's mission cannot actually be partitioned into segments because if we did not possess the aerospace-nuclear capability of instant retaliation, stating a peacetime mission would be meaningless. Moreover, SAC's mission is an integral part of the overall United States Air Force mission, underlying which is the overriding purpose of helping to preserve world peace.

Since the most serious and immediate military threat to world peace is the Soviet's powerful aerospace capability, SAC's role as the long-range global aerospace force of this Nation assumes an ever-increasing significance.

I am sure that you who live so close to our personnel at Little Rock Air Force Base realize that SAC people are dedicated people. Our professional specialists, airmen and officers alike, are well aware of the grave responsibility entrusted to them.

Sometimes, unfortunately, some people misinterpret SAC's dedication. Indeed, some segments of public opinion believe that SAC promotes the manned bomber at the expense of the missile and the spectacular space vehicles that are yet to be.

More than anything else, I want to emphasize that SAC is dedicated to only one thing—its mission, not the manned bomber or any weapon.

The reason for this is clear when it is understood that weapon systems are tailored to the mission; the mission is not tailored to weapon systems.

As a matter of fact, SAC's mission has remained realtively unchanged since the command was established in 1946. During that time weapon systems have changed drastically because of the rapid technological progress that has marked the past decade or so. Our business was and is to prevent war from starting by maintaining a capability to mount nuclear retaliatory attacks that would destroy the enemy's war-making capability.

Modernizing our strike force has been a continuing function in the past and today we are integrating intercontinental ballistic missiles and airborne missiles into our inventory as rapidly as they become available to us.

A considerable portion of the SAC effort today is concerned with plans for the future when new types of aerospace hardware will augment the proven and reliable weapon systems, and replace some of those that will become obsolete.

However, in the understandable excitement over future possibilities, too many people seem to lose track of the fact that what we are going to have in the future does not contribute to today's deterrent force. This does not imply that there's no need to be concerned about the future, but it does point up the fact that today SAC's manned bombers—the B–47, B–52, and B–58—constitute the principal war-deterring weapon systems in the free world's arsenal. This doesn't mean that SAC's manned bombers are the only deterrent to a Soviet attack, but, in the words of Gen. Thomas S. Power, SAC's Commander in Chief, "There can be no doubt that, for the immediate future, they (SAC's manned bombers) will continue to contribute the major share to our deterrent posture. In fact, over 90 percent of the total firepower in the free world, as measured in TNT equivalents, is being carried in SAC bomb bays today."

This fact helps explain why we are so concerned with the protection of SAC's manned bomber strength. Whatever the future may bring, the survivability of SAC's deterrent strength must be one of our major concerns. In view of the Soviet's giant strides in modernizing its aerospace force, it is imperative to understand that a modern war would have to be fought with the force remaining after the first attack. If an enemy should succeed in knocking out the bulk of this Nation's military strength with a surprise attack, the best we could achieve would be only a token response in the way of retaliation.

Therefore, the key to maintaining an effective deterrent is survivability. So long as the would-be aggressor knows that he cannot possibly knock out our retaliatory punch with one sudden blow, he is likely to be deterred from starting a general war, or for that matter, even a limited war.

Another fact often overlooked by those who forecast the demise of aircraft is that just because today's aircraft will someday certainly be obsolete does not mean that tomorrow's aircraft will be obsolete tomorrow. For instance, plans for the future include providing some piloted aircraft which will reach altitudes called "space equivalent," as well as lower altitudes, that is traveling at altitudes from 10,000 feet to hundreds of miles beyond the earth's surface. Some will be, in effect, piloted recoverable missiles. Others will be manned bombers carrying air-launched ballistic missiles.

Thus, while the aircraft is no longer the only aerospace weapon system, radically advanced versions of it will be with us as far into the future as any military aerospace expert can see today.

The point I am making here is that the advent of missiles did not make the manned systems obsolete, either for the free world or the Communist world. The advent of missiles did indicate, however, the coming of the day when the emphasis will shift temporarily from manned to unmanned systems. For instance, the day is not too far distant when the missile badge will be as familiar sight in these parts as the pilot's wings are today. The construction work now going on in this part of Arkansas to support two Titan missiles squadrons is similar to that either started or scheduled to start at 19 other SAC localities.

Meanwhile, even though we are still in the early stages of phasing in the first generation of ballistic missiles, SAC and the Air Research and Development Command are well along in the program of developing a second generation missile, the Minuteman. A solid-propellent-type ballistic missile with intercontinental range, the Minuteman will give us a flexibility in our missile force that we do not now possess. Some of these missiles will be positioned in hardened underground sites scattered throughout the country while others will be mounted on specially built railroad cars which will move freely and continuously around rail networks. You'll probably recall that the Minuteman was successfully launched on its initial test at Cape Canaveral, Fla., a little more than a month ago. This was the first time that a U.S. missile had been tested as a complete structure on the initial full-scale launching. The success of this full-scale Minuteman launching was one of the most encouraging tests ever conducted by the Air Force.

Looking beyond the missile and advanced versions of manned aircraft, SAC's plans include a time when control of space may well mean a superior military position here on earth in a future war. In this connection, Gen. Thomas D. White, Air Force Chief of Staff, recently said: "Lacking specific guarantee that the benefits of space science and technology will be used solely for peaceful purposes, it is essential that we consider the application of this knowledge to our military capabilities. There is no dividing line between air and space and they must be considered as one medium—aerospace.

"Advancing technology will inevitably carry with it the opportunity for improved aerospace capabilities. Therefore, we must move steadily toward operations in space—not merely because it is there challenging us, but because it is vital to our Nation's security to do so."

Along this same line, General Power has said: "The conquest of space is more than a race for scientific firsts and national prestige. Whether we like it or not, it still is primarily a question of survival."

In my terms, this simply amplifies the age-old saying that the future belongs to those who prepare for it. Our future doesn't just happen; it is built on the foundations of today's efforts.

This country's military and civilian planners today are busily engaged in work on plans and programs for the future. All the military services, including the Air Force, are interested in vehicles that would give us better communications systems, better reconnaissance systems, and better navigational aids.

But whatever the future vehicles are made available to us, SAC, as a combat-ready organization today, must base its activities on what we have available to us today.

For example, how do we get our warning time today to insure that enough of our counterforce would survive an initial attack? In the case of a surprise attack by intercontinental missiles, we would have precious little, if any, warning time since they can travel 6,300 miles in about 30 minutes.

Against aircraft, however, this country and Canada have in operation an effective air defense system comprised of a network of radar equipment and facilities stationed in three lines across the North American Continent.

The first is the DEW, or Distant Early Warning line that extends from Alaska across the northern Canadian territory to Greenland. The second runs from ocean to ocean across mid-Canada. The third roughly coincides with the United States-Canadian border.

Tied in with an electronic computing system called SAGE for semiautomatic ground environment, this warning system is under the joint control of United States and Canadian forces. This joint command is the North American Air Defense organization which is more commonly known as Norad. Headquarters for Norad are at Ent AFB near Colorado Springs, Colo. It is comprised of American Air Force and Army units and Canadian military personnel. A closed television circuit as well as communication lines connect SAC and Norad headquarters.

This whole system is predicated on the indication that if the Soviets launched a surprise attack on us today, it would be primarily a manned bomber attack. Since SAC's global support facilities and centralized organization more than match the Soviet's manned strike capability, the assurance that Norad could give us sufficient warning time practically guarantees that SAC could get its alert force airborne before it could be attacked on the ground.

Thus we have reasonable assurance that a significant portion of SAC's strike force would survive a surprise attack. Moreover, the fact that portions of our force are maintained both on an around-the-clock 15 minute ground alert and on airborne alert is as well known to the Soviet Bloc as it is to you people here. All of this constitutes an effective deterrent for it assures survival of much of our manned bomber force.

As defense against the growing Soviet missile capability, this country has under construction today a warning system that will alert us of a Soviet attack by ballistic missiles. This system is called BMEWS—B-M-E-W-S—which is derived from its name, Ballistic Missile Early Warning System. It will give us the 15-minute warning time to which we are geared today with our ground-alert operation.

The first BMEWS station, located near Thule in Greenland, is now operational. A second station is programed for completion this year in Alaska, and the third and final one in England is expected to be ready sometime next year.

The BMEWS long-range radar warning station in Greenland was completed first because it covers the area that includes the most direct missile route from Soviet territory to this country.

But what are we doing now in the face of the possibility of a missile attack over the unprotected sides of the vast Arctic region? After thoroughly testing the airborne alert tactic, we recently got the go-ahead order to incorporate it in our daily, routine training exercises.

This means that we are now keeping a portion of our bombers in the air where they are invulnerable to a surprise attack. Gen-

eral Power recommended that the airborne alert be put into effect because a military commander always must assume he will have to operate under the worst possible conditions.

Airborne alert aircraft stay in the air until their replacements, other combat-ready bombers, are in a designated flight pattern. The bombers are refueled in the air by KC–135 tankers as often as necessary to insure the needed range and endurance. Ordinarily airborne alert missions last about 24 hours.

Flight plans have been worked out to provide maximum coverage of potential enemy targets. Each bomber on an airborne alert training mission flies a preplanned in-and-out pattern, dictated by fuel and range considerations. Today, airborne alert missions are part of the regular crew training program conducted by all SAC B–52 units such as the one stationed at Blytheville Air Force Base. These missions are flown under the most realistic simulated combat conditions.

Airborne bombers equipped with air-to-ground missiles will greatly enhance the value of our airborne alert. I refer here to the Hound Dog, a supersonic guided jet missile that is now coming into our inventory. The Hound Dog's carrier initially is the advanced B–52G that has demonstrated a capability to fly more than 9,000 miles without refueling.

And, sometime this year a still further advanced version, the B–52H, is scheduled to be delivered to SAC. Earlier models of the B–52 can be modified to carry the Hound Dog.

A B–52 carrying a pair of Hound Dogs with nuclear weapons in their warheads can fire the missiles many miles away from their targets. The Hound Dog has a jam-proof inertial navigation system which guides it with unerring accuracy. It is not a ballistic missile, its power source being an air-breathing jet engine. The missile-carrying B–52's will also have their full nuclear payload in their bomb bays. Thus, this bomber-missile combination might well use the Hound Dogs to destroy the enemy's defenses and then proceed on to drop additional bombs on other targets. Or, the bomber might use both the Hound Dogs and its internal bomb load on targets deep in enemy territory.

The evolution of the manned vehicle into an airborne missile-launching platform has other important considerations. We have in the early stages of development an air-launched ballistic missile called the Sky Bolt, which is in the 1,000-mile range class. Moreover, a few months ago SAC activated its first B–58 wing at Carswell Air Force Base in Fort Worth, Tex. This base is a 2d Air Force installation as will be the second base to get the B–58, Bunker Hill Air Force Base in Indiana.

The B–58 Hustler is the free world's first supersonic bomber. It can operate at twice the speed of sound at altitudes well above 50,000 feet. It can be refueled in flight and carries its nuclear payload in a pod suspended beneath the fuselage. In January this year, the B–58 set two new world speed records of 1,284 miles per hour, on a run of slightly over 621 statute miles and the other of 1,061 miles per hour on a run of over 1,242 miles.

Also, the Air Force has under development for SAC the B–70 bomber. This aircraft is designed to fly some 2,000 miles per hour. It will be capable of aerial refueling, will operate at altitudes above 70,000 feet, and in spite of its speed and size is being developed to use the runways that can accomodate today's B–52s. The B–70 will enhance our capabilities under our air-launched ballistic missile program.

I am sure that by now you have a better idea why SAC seems to be emphasizing the manned vehicle. In addition to the implications of the foregoing, I'd like to point out that manned aerospace vehicles can perform functions that missiles can't, such as seeking out and destroying moving targets; conducting surveillance, and making reconnaissance runs to assess the results or our bombing.

The emphasis we place on manned vehicles stems from these facts: They are the overwhelming bulk of the force today; they can do the job today; and in vastly improved forms, augmented by air-to-ground missiles, they will be an essential part of the force for as far ahead as we can see.

Let me say again: SAC is not wedded to its bombers. It is wedded to its mission; SAC will have manned bombers only so long as they are necessary to accomplish the mission. SAC has learned well the lessons of the past. We will be the first to discard the outmoded and adopt the new. But the bomber is not like the horse. The horse was used in war for thousands of years, and its capabilities did not change from start to finish. The bomber has been used in war for only about 44 years, and its capabilities are still improving fantastically. To discard it would be foolhardy.

And thus, dedication to mission will continue to be the driving and motivating force in the lives of SAC people. This is the force from which our motto, "Peace is our Profession," was derived. That motto will be valid just as long as SAC's mission is valid. And SAC's mission will be valid just as long as there are dedicated Communists running nations that possess aerospace capabilities on a par with that of the free world.

In my opinion, it behooves every American to stop and consider the grip that the communistic philosophy has on those who subscribe to it.

In this connection, I'll refer to a statement made recently by Congressman WALTER H. JUDD, of Minnesota. Speaking at the National War College, Mr. JUDD stated that ever since he had left China after serving as a missionary medical doctor before and during the early ascendency of Communism in that country, he has been a salesman for but one idea: Communists act like Communists. Explaining further, he said:

"The Chinese Communists do not act like Chinese. They were born Chinese * * * they speak Chinese * * * they look like Chinese * * * but they are not Chinese. They have rejected every value and principle of Chinese culture and thought. It is not possible to be a Communist and have any respect for the basic virtues and values of the Chinese civilization.

"Chinese Communists act like Communists. They are not Chinese patriots * * * they are part of a world revolution."

Having gained some first-hand experience among Chinese during and after World War II, I have been deeply concerned over the way communism has destroyed the basic virtues of Chinese civilization that I had known.

We must always keep in mind that the Communist objective, regardless of any easing of world tensions now and then, remains the same—conquest of the world. World domination is the goal of communism and because its adherents continue to proclaim it, the free world has had, I believe, ample strategic warning that its very survival is at stake as much in cold war as in a hot one.

So, while diplomats and statesmen struggle in the front lines of the cold war, the military might of this Nation must remain a true deterrent to a shooting war. SAC's role in this aerospace age is to maintain the strength that represents the bulk of the free world's deterrent against aggression.

In the light of this background, compare our Nation's policy of nonaggression with that of Communist nations. The United States has clearly stated its national policy—we will never strike the first blow in any war. On the other hand, the Soviets have an equally clearly announced policy of aggressive expansionist strategy. Moreover, both the Soviets and Communist China have announced to the world that their combined goal is the destruction of capitalism, or more specifically, the United States. And, of course, we know they are producing and developing aerospace weapons to support their ambitions.

Thus, a powerful aerospace military force with a high survivability factor becomes a vital instrument of U.S. national policy for deterring war, and at the same time allows us to speak from a posture of strength in world affairs.

The Air Force, in common with all our Armed Forces, is in being for only one purpose: to help preserve peace and guarantee the future of this country. SAC's role as the principal deterrent to general war is being performed by people who are dedicated to its mission, not to any one type of weapon. SAC has met and is meeting its responsibilities.

And I am confident that with the understanding and support of you and all who are neighbors in our other base communities, the Strategic Air Command together with our other Armed Forces will continue to fulfill the overall defense mission of this country.

House Resolution 211—Special Committee on Captive Nations

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 13, 1961

Mr. FLOOD. Mr. Speaker, on March 8, 1961, I introduced a measure calling for the establishment of a Special Committee on Captive Nations in the House of Representatives. This measure is now House Resolution 211. There are not sufficient words to express my profound gratitude and personal delight to the more than 20 Members of the House who joined with me in that most stimulating and very enlightening discussion which took place then on the subject of the captive nations—CONGRESSIONAL RECORD, March 8, 1961, Russian Colonialism and the Necessity of a Special Captive Nations Committee, pages 3286–3311.

The popular response to House Resolution 211 has been so enthusiastic and impressive that I feel duty-bound to disclose the thoughts and feelings of many Americans who have taken the time to write me on this subject. These citizens are cognizant of the basic reasons underlying the necessity of the proposed committee. They understand clearly the vital contribution that such a committee could make to our national security interests. In many cases, they know that no public or private body is in existence today which is devoted to the task of studying continuously, systematically, and objectively all of the captive nations, those in Eastern Europe and Asia, including the numerous captive nations in the Soviet Union itself.

Because their thoughts and sentiments are expressive and valuable, I have re-

quested that the following responses of our citizens to House Resolution 211 be printed in the Appendix of today's RECORD:

RIVERSIDE, R.I., *April 5, 1961.*
The Honorable DANIEL J. FLOOD,
House of Representatives,
Washington, D.C.

DEAR MR. FLOOD: It has been the policy of the American people to rally to the cause. This has been especially true when an aggressor nation has tried to subjugate other nations. This has happened many times in our present century and once again Russia is attempting (and accomplishing I might add) to subjugate practically all the Near and Middle East nations.

Before a third world war begins, not to mention countless revolutions, I think that something must be done to aid these subjugated nations. I believe that your Committee for Captive Nations (H. Res. 211) is just the thing. Only the Committee will rally to the cause in a peaceful manner. Let's not shed any blood where it is not necessary. Russia can be conquered without a war and I believe that the Committee for Captive Nations can contribute to it.

Very truly yours,
ELLEN ANN WHITAKER.

UKRAINIAN NATIONAL ASSOCIATION, INC.,
Jersey City, N.J., March 27, 1961.
The Honorable DANIEL J. FLOOD,
New House Office Building,
Washington, D.C.

DEAR CONGRESSMAN FLOOD: Our 75,000 members have been informed in our official organ the "Svoboda" and our English language "The Ukrainian Weekly" of your introduction on March 8 of the resolution calling for the establishment of a permanent Committee on Captive Nations in the House of Representatives. We wish to congratulate you on this stalwart action.

We Ukrainians have long advocated the recognition by the United States of the fact that captive nations behind the Iron Curtain are our potential allies in the cold war with the Kremlin. A Committee established to gather information concerning these captive nations would be advantageous to our Government in formulating policies and it would be a morale builder for all peoples behind the Iron Curtain who are struggling for their independence.

Our members were also heartened to learn of the support of various other Congressmen of your resolution and are currently urging their own Congressmen to lend you their support.

We, the executive committee of the Ukrainian National Association, wish you the heartiest success in your courageous undertaking.

Yours respectfully,
JOSEPH LESAWYER,
Vice President.
JAROSLAW PADOCH,
Secretary.
ROMAN SLOBODIAN,
Treasurer.

SHARON HILL, PA., *April 3, 1961.*
HON. DANIEL J. FLOOD,
Congress of the United States,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN FLOOD: My personal friend Mr. Isakjan I. Narzikul, president of the Turkestanian-American Association, has informed me that you are sponsoring a resolution establishing a committee on the captive nations. Presumably this committee will develop facts regarding Soviet imperialism of the last 40 years. Armed with facts such a committee should be able to recommend courses of action for our legislative and administrative bodies.

It is my hope that such action will be to (1) maintain hope in the freedom-loving peoples who are today Soviet colonials and to (2) present to the entire world the facts of Soviet colonial-imperialist policy.

Many of us feel that our country has too long been on the defensive vis-a-vis the Communist world conspiracy. An intelligent well-planned offensive is desperately needed. Your resolution may be a first step in this direction.

Very truly yours,
JOHN M. MCLARNMON, Jr.

TURKESTANIAN-AMERICAN
ASSOCIATION, INC.,
Collingdale, Pa., April 3, 1961.
HON. DANIEL J. FLOOD,
Congress of the United States,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN FLOOD: It has been my experience that many of my fellow U.S. citizens know nothing of Turkestan, its people or its potential as a force on the side of the freedom-loving peoples of the West.

Prior to its conquest in 1922 by the Communist imperialists, Turkestan was a free country. It is located in south central Asia, north of Afghanistan, extending roughly from the Caspian Sea to east of the Aral Sea. It was a country of approximately 16 million people of Turkic origin and devout Moslems in religious practice.

Since its conquest the Communists have conducted a relentless campaign to destroy Turkestan's literature, its cultural uniqueness and its strong love of freedom. The country has been partitioned into five Soviet Republics, many of its people have been driven to other parts of the Soviet Union and many Russians imported into it. It has been deprived by the Communists of almost all contact with the outside world.

One of the few avenues of contact that Turkestan did have was the Voice of America programs beamed to it. This was a regular channel of information from 1951 to 1953, and again from 1955 to 1958. Since 1958 the Communists have enjoyed an uncontested propaganda advantage in this large politically important country.

Many of us in the Turkestanian-American Association know that the Voice of America was listened to in Turkestan and we are convinced that broadcasts should be resumed. The United States will defeat the Communist conspiracy by taking the initiative at every point of weakness in the Soviet colonial empire. Turkestan is such a point.

The Turkestanian-American Association represents all Turkestanians in the United States. We are very pleased to see you introduce a resolution establishing a special committee on the captive nations. We support it wholeheartedly and hope you will persevere.

Sincerely yours,
ISAKJAN I. NARZIKUL,
President.

THE BALTIC NATIONS COMMITTEE
OF DETROIT, INC.,
Highland Park, Mich., March 28, 1961.
The Honorable DANIEL J. FLOOD,
House of Representatives,
Washington, D.C.

DEAR SIR: On behalf of the Baltic Nations Committee of Detroit, I would like to express to you my deep appreciation and gratitude for introducing the bill H.R. 211 to create a Special House Committee on Captive Nations.

We certainly hope that this bill will be passed by the House of Representatives in the near future.

Sincerely yours,
SIGURDS RUDZITIS,
Chairman.

Automation

EXTENSION OF REMARKS
OF
HON. ELMER J. HOLLAND
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 11, 1961

Mr. HOLLAND. Mr. Speaker, the Machinist, newspaper of the International Association of Machinists, recently published a question and answer feature on automation. Entitled "Automation: The Revolution in Your Life," the article brings out many of the facets of automation which have been least understood by the public. The answers are based on studies by the IAM Research Department and IAM officers.

As chairman of the Subcommittee on Unemployment and the Impact of Automation, I think the article is most timely, and should like to call the attention of all the members to the article which follows:

AUTOMATION: THE REVOLUTION IN YOUR LIFE

(These answers are based on studies by the research department of the International Association of Machinists and on the report of grand lodge officers to the 1960 IAM convention.)

Question. Why all this talk about automation? Isn't it just another step in the mechanization of our lives?

Answer. Automation is creating a revolution in our lives. The invention of machinery added power to our tools. In mechanized plants, machines replaced hand labor. The machines still needed operators. Automation, a word unknown less than 15 years ago, is the mechanization of thought. In an automated plant, machines operate the machines. Mechanization increased production a hundredfold over hand labor; automation increases production a thousandfold over mechanized labor.

Question. Does this mean push-button factories?

Answer. It can mean factories operating only with maintenance crews. There already are a few. More often automation means a big reduction in the need for machine operators. In some instances, automation also reduces the need for more highly skilled workers.

Question. Isn't automation most practical in the big plants?

Answer. Not necessarily. The great majority of all metalworking firms in the United States produce fewer than 25 items in each production run. Now, with the introduction of tape-controlled multi-purpose machine tools, these small shops can switch quickly from one run to another by simply switching tapes. One automated machine tool is the Milwaukee-Matic. According to its manufacturer, it "can interchange 31 different cutting tools and perform hundreds of operations in sequence without a touch from a machinist."

Question. What kind of operations can be automated?

Answer. Automated machinery can do bookkeeping, control inventory, make up payrolls and do other office work. There are machines now that see, hear, and feel. There are machiness that adjust to variable production conditions. There are machines that have memory units. There are automated machines that inspect the product they are turning out, reject substandard units and correct the errors they make. There are machines that change their own parts when they break down or wear out and lubricate

themselves. The U.S. Air Force has an electronic computer which is the key part of a machine which translates Russian printing into English. By the end of 1961, its capacity is expected to reach 2,400 words a minute.

Question. Aren't these machines too expensive to be practical?

Answer. Automated equipment soon pays for itself by the amount of manpower it replaces. Automated machines have reduced labor costs by as much as 75 to 90 percent. On one part, for example, the Boeing Airplane Co. reduced machine time from 25 hours to 1½ hours by automation.

Question. Does this mean a lot of layoffs?

Answer. It frequently means layoffs. In some cases it means that the employees will be transferred to other jobs, to other departments or to other plants. In other cases, it means layoffs in plants not automated that are unable to compete with automated plants. Usually, it means the loss of job opportunities for younger workers when employees are not replaced after they quit or retire.

Question. But, doesn't automation create more jobs?

Answer. Automation makes it possible to produce more with fewer employees. Between 1950 and 1960, factory production in the United States increased 43 percent; yet there were actually fewer production workers in factories in 1960 than 10 years earlier. In mining, production increased 26 percent; yet the number of employees declined 25 percent. On the railroads, employment declined 36 percent while rail traffic dropped only 5 percent. Unless demand for goods and services rises much more than it has, the jobs created by the introduction of automation will not make up for the jobs eliminated by automation.

Question. Are labor unions trying to block automation?

Answer. No. Most union members know that there cannot be a moratorium on technological change. Labor knows that there are tremendous needs in America. There are millions of families living on an un-American standard of living. Our country needs schools, hospitals, slum clearance, housing, and modern roads. And, we must maintain our military strength at a level that will deter aggression by the Soviet Union or any other world power. Labor does not seek to block automation; it does insist that management cannot be allowed to forget community problems and the personal hardships being created by rapid technological change.

Question. How can unions protect their members?

Answer. Through negotiations with management, unions can make sure that some of the savings on manpower are shared with employees through legitimate wage increases, shorter hours of work, and longer vacations. Many union contracts require management to give advance notice before the installation of new equipment so that changes in jobs and work schedules can be negotiated. Many union contracts give employees transfer rights, moving allowances, and retraining opportunities during working hours.

Question. But suppose a man is laid off?

Answer. Union contracts help to cushion the shock of unemployment by providing for severance pay, supplementary unemployment benefits, early retirement, and other provisions.

Question. Would a shorter workweek help?

Answer. Yes. Automation means greatly increased output per man-hour. We want and need this increased output. But we can't afford to have millions without jobs. A shorter workweek makes more sense than continued high unemployment. In many industries, the 32- or 35-hour workweek will have to come through national negotiations or national legislation. Any piecemeal approach will encourage some employers to run away, to move their plants out of the area or out of the country.

Question. Can't anything else be done?

Answer. The basic answer to the problems created by automation lies in the prosperity of our country. When business is booming, displaced men can find other jobs, and so can hundreds of thousands of young workers who are coming out of the schools every year. If we can get our economy moving ahead, automation will still create problems, but they will be more manageable.

Inez Lovelace Earns Title as "State Woman of the Year"

EXTENSION OF REMARKS

OF

HON. ROBERT A. EVERETT

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 12, 1961

Mr. EVERETT. Mr. Speaker, there appeared on Sunday, March 26, in the Knoxville News-Sentinel a wonderful article about Miss Inez Lovelace, a native of my hometown of Union City, Tenn.

She has made such an outstanding record I feel that I should bring it to the attention of the Members of the Congress.

The article follows:

INEZ LOVELACE EARNS TITLE AS "STATE WOMAN OF THE YEAR"

(By Mary Anna Winegar)

Inez Lovelace is a lady who helped lead the entire State in progress in home economics.

Miss Lovelace, housing and home furnishings specialist for the Tennessee Agricultural Extension Service, was recently named State Woman of the Year by Progressive Farmer magazine. She's an expert in her field, and she understands fully the possibilities and needs of present-day home economics.

Miss Lovelace has been interested in home economics all her life. She was born in Union City, studied home economics at West Tennessee State College in Memphis, and earned her bachelor's and master's degrees in home economics at the University of Tennessee. She taught home economics at Union City High School and at Lincoln Memorial University in Harrogate.

COUNTY AGENT IN 1926

In 1926 she began her career in State home economics, when she was named Knox County's home demonstration agent. She became agent for Washington County in 1940, then came back to Knoxville in 1943 and was named home management specialist for the extension service.

A quick look at records of home economics progress in the State will prove Miss Lovelace's ability as a leader. During her first year as Knox County's home demonstration agent, the number of leaders used in girls' 4–H work tripled, the girls' 4–H enrollment increased from 100 girls in 18 clubs to 1,342 girls in 47 clubs and the number of home demonstration clubs doubled. She increased the number of activities of the home demonstration clubs and initiated the better homes tour. Knox County won national awards for 3 years under her leadership.

Washington County's record is similar.

SHE'S SEEN PROGRESS

As a homemaking specialist, Miss Lovelace has traveled throughout Tennessee about 3 weeks of each month, encouraging leaders, telling of improved homemaking techniques, conducting training schools and workshops, and helping the State's homemakers improve their homes.

She's a member of countless home economics associations. She spends much of her spare time in home economics activities: She likes to sew, makes hats, likes gardening, manages a house here and in Gatlinburg, refinishes furniture and works with crafts. She's active in her church, Cumberland Presbyterian, and has been vice president of the Altrusa class there. During vacations she travels; she's been through most of the United States and to Hawaii and Europe.

"I stay busy most of the time," she said.

Her career has been particularly satisfying, Miss Lovelace said. "I've stayed with this thing long enough to see people develop. I've seen 4–H girls grow into community leaders."

Here's home economics as Miss Lovelace sees it, its present and its future:

Home economics training, as always, is double-barreled: it trains for careers and for homemaking. The demand for trained home economists is increasing, too. Specialists are needed in many areas.

And training is needed more and more by the homemaker. She has to be so many things now—a manager, a child psychologist, a nutritionist, even an engineer, with her new appliances. There's just so much more to homemaking now than cooking and sewing.

BUSY AS GRANDMOTHER

Despite help from modern appliances, the housewife is just as busy as her grandmother was. She's a community leader. She has more leisure time, in which she is getting acquainted with her family. Homemaking isn't all drudgery now. The housewife has more choice in how she'll spend her time.

And of course, so many housewives are working. This calls for more managerial ability: She has to hold down a job and not let her family suffer.

The average homemaker today comes nearer being a partner with her husband. She understands the money situation and the whole family process of management. And she keeps up with what's going on in the world.

Modern canning and freezing methods and new appliances relieve the housewife of much of the cooking duties her mother had; but the art of cooking won't fade. I think women essentially like to work with food, experiment with recipes, cook for their families.

REQUIRED COURSE URGED

Faced with this many-sided role as housewife, girls in high school and college would do well to take some home economic courses, not matter what they're majoring in. "There are foods, textiles, interior decorating, sewing, child psychology. Probably every girl—and every boy, too—should take a little of it. It might be well to require a certain amount of it in school curriculums."

For the future, change is evident everywhere. Home economists are concentrating in these three areas:

1. Serving more individuals effectively: The extension service works well here, of course. Home economists are trying to reach people they haven't reached before. They're going to work with those people who aren't in an organized group (such as a home demonstration club): young homemakers, women who work, senior citizens.

Next year, for instance, they want to reach factory women. Rather than have meetings with them, the extension service will put up displays on homemaking. The displays will be in the factories where the women work and in beauty parlors and other places they frequent.

2. Research: There are, of course, many new products coming on the market. Research is being done on homemaking for handicapped persons—kitchens, clothing, appliances for handicapped homemakers. Under consideration is a national consumers' research department which would try to help the homemaker learn what products are available and which ones are best.

3. Strengthening education: Home economists want to make home economics education meet coming needs. Ways of family living are changing, and home economic training must change, too.

Bethesda Mailboxes Draw Attention

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 13, 1961

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an article taken from the Rock Hill (S.C.) Evening Herald on a project undertaken by the Bethesda community to improve their community by painting and repairing rural mailboxes. Mr. Jim Parker, of Rock Hill, S.C., the rural carrier in that area, has been working on this project for several years and I congratulate both the community leaders and Mr. Parker for their service:

BETHESDA MAILBOXES DRAW ATTENTION

(By Dean Wohlgemuth)

Chances are, a person driving down any road just about anywhere in the Nation, won't pay a bit of attention to any of the hundreds or even thousands of rural mailboxes he may pass.

That is, unless he happens to drive through York County, Bethesda community.

He still may not notice the mailboxes at first, but soon he will realize there is something different about mailboxes there. He starts to look closer, then begins to realize what it is—every mailbox is neatly painted, with red posts, white boxes, and blue lettering.

This contrasts with any other mailboxes he may have seen, which were unpainted, dilapidated, unsightly. Instead of hanging haphazardly atop a post which itself is an overexaggeration of the Leaning Tower of Pisa, Bethesda mailboxes are all in good repair, perched erect on a straight, sturdy post.

All this didn't just happen. The idea was born several months ago, when rural Mail Carrier Jim Parker, who delivers mail on Rock Hill, route 5, through Bethesda community, took a trip to the west coast.

Parker said he noticed that everywhere across the Nation, mailboxes were the same as those in York County, and on his own route. They needed an overhauling, for appearance sake.

Parker wrote to the Post Office Department district office in Atlanta, asking if something could be done about it. The office replied that improving the appearance of mailboxes was a good idea, if Parker could get a community or civic group to take it over as a project. They set forth only one condition—that the boxes themselves be painted white.

Parker went to work. He got the Bethesda Community Club interested, and they took over the project. They made arrangements with the State highway department to do the actual painting, and the club furnished the paint.

The job began about the first of the year. Now, of the approximately 135 mailboxes in the community, about 95 have already been painted. The remaining 35 will be done as soon as possible.

Members of the community club said that whenever necessary, the highway department is replacing posts.

The idea is now catching on in other areas. Parker says mailbox painting has begun to crop up along at least two other rural routes in the area, one a Rock Hill route, and one York route.

The Navy and Outer Space

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 13, 1961

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks, I want to insert into the RECORD a thought-provoking article by Spencer M. Beresford, entitled "Preface to Naval Strategy in Outer Space." The article was published in the March 1961 issue of U.S. Naval Institute Proceedings.

Mr. Beresford is counsel for the House Committee on Science and Astronautics, and is well-known to all members of the committee and to many other Members of Congress. He is a graduate of Harvard College and Harvard Law School and has served in the Navy during World War II. He was also a member of the faculty of the Naval Intelligence School at Anacostia, and is to this day a member of the Naval Reserve. Mr. Beresford is an authority on space law and is the author of many articles on this subject. As a member of the Science and Astronautics Committee I have found him extremely helpful and cooperative at all times.

His article reads as follows:

PREFACE TO NAVAL STRATEGY IN OUTER SPACE

(By Spencer M. Beresford)

The unresting progress of mankind causes continual change in the weapons; and with that must come a continual change in the manner of fighting."—ALFRED T. MAHAN.

Technology proceeds independently of international politics. It is the policy of the United States that "activities in space should be devoted to peaceful purposes." In the United Nations and elsewhere, the U.S. Government and many individual Americans have pressed for an international agreement on the legal control of outer space. Nevertheless, it must be recognized that these efforts may fail. Technology moves relentlessly forward. Prudence requires us, therefore, to plan and prepare for the possibility of space warfare.

Concern is intensified by the thought, which has occurred to many, that military space systems could tilt the balance in favor of offensive as against defensive operations. While it harbors no desires for foreign conquest, the United States is nevertheless interested in maintaining effective deterrent power and in being able to wage limited wars of defense. Will the emergence of military space systems impair our national abilities in either of these respects?

In the perspective of national strategy, space power can contribute greatly both to waging limited wars and to the deterrence of general war. It may seem surprising to speak of using space weapons in limited wars. In all probability, however, space warfare can be limited more readily than warfare on the surface, since it need not involve extensive casualties or property damage. Space power can also make important contributions to the strategy of deterrence. Its very diversity will complicate an adversary's decision to attack, by adding to his problems of intelligence, coordination and targeting. Thus a substantial capability for space warfare may tend to stabilize the strategic balance.

In the cold war, demonstrations of space capabilities will continue to influence world opinion and thereby the international position of the United States.

THE ROLE OF THE NAVY IN OUTER SPACE

From a technological standpoint, the age of space warfare is almost at hand.

What part will the Navy play in this new field? What advantages can it exploit? What problems must it face?

Space is recognized as a medium that holds great promise, and at the same time, great danger for the United States and the free world. The Navy has unparalleled capabilities, some actual and some potential, for exploiting this promise and for guarding against attendant dangers.

In the first place, it is generally understood that the military significance of space activities, at least for a long time to come, will depend on their relation to the earth's surface. For example, missiles and space vehicles must be launched, observed, controlled, and recovered by surface facilities and equipment. In addition, any military objective of space activities necessarily relates to the earth's surface (e.g., for observation, location, communication, or attack).

The Navy can control from and operate on about 72 percent of the earth's surface. That is the extent of the world's oceans and seas. In contrast, Soviet territory covers less than 5 percent of the earth's surface, and U.S. territory less than 2 percent. Naval operations over this vast area can continue for long periods without support. It is also the mission and function of the Navy to control and operate in the airspace above the oceans and seas.

On the high seas, including their depths and airspace, all nations enjoy complete freedom of passage. Elsewhere, foreign ships, aircraft, and missiles are not usually free to pass except by specific permission of the territorial state. For this reason, among others, test firings of long-range missiles, flights of manned space vehicles and the like are and doubtless will be conducted over international waters. In particular, operations at sea are necessary for search and recovery, as in Project Mercury, and for the observation of missiles and space vehicles, as by instrumentation ships of the Atlantic and Pacific Missile Ranges.

In the future, an increasing proportion of missiles and space vehicles will be launched at sea, for reasons of safety, security, reduced costs, easier logistics, and greater choice of launching site and direction. For example, sea launches of nuclear rockets will minimize surface contamination.

Other advantages result from scientific, technical, and operating experience found only in the Navy. For example, an artificial space environment most closely resembles a submarine environment. Naval experience in submarine operations and techniques can contribute substantially to the

development and use of manned space vehicles.

In wartime operations, an even more significant naval advantage than extensive coverage of the earth's surface would be the capability of naval forces for mobility and concealment. This advantage manifests itself most clearly in undersea operations. Surface forces also present targets of uncertain and changeable location, and can concentrate and launch attacks with missiles at unexpected times and places.

At the same time, naval astronautics must face a number of problems: the difficulty of launching missiles from moving platforms; the limitations (as to space, weight, and other factors) imposed by a seagoing environment; and the special requirements of antisubmarine and amphibious warfare.

On balance, however, it seems clear not only that space techniques can enable the Navy to carry out its present missions more effectively, but that the Navy enjoys important advantages for the conduct of operations in outer space. In time, the new naval capabilities that outer space accords may lead to new naval missions.

THE NATURE OF SPACE WARFARE

At the outbreak of World War II, the rocket as a weapon had been largely forgotten for more than a 100 years. It was used in that war, however, for many purposes. The infantry used it against tanks and aircraft. The Navy used it for barrage fire on landing beaches. Both Army and Navy air forces used it to attack ships and other aircraft. It was used most memorably by the Germans in the form of the V–2 for long-range strategic bombardment.

Since World War II, the accuracy of rocket fire—formerly its greatest weakness—has been radically improved, while its destructive power has increased many times. Internal and external guidance systems and the means of stabilization in flight have now been developed to the point where even ballistic missiles—which are guided at least in the sense of being pointed by their launching apparatus—are accurate enough for many military purposes. However, the technological development that has added most to the military value of the missile is the nuclear warhead. Missiles are fast becoming the principal means of delivering nuclear weapons.

It would be hazardous to say how soon we will find ourselves technologically in the age of space warfare. A reasonable guess is 5 to 10 years. For example, Lt. Gen. James M. Gavin, U.S. Army (retired), has written that "By 1965, missiles and satellites will have shrunk the world to such an extent that militarily the earth itself will be a [single] tactical theater." Still later, in 10 to 20 or 25 years, "true" space weapons will be in the hands of the armed services, bases will be established in outer space, and manned, maneuverable space vehicles will be able to cruise the cosmos.

Considering the time required for the evolution of new strategic and tactical doctrines, it is not too soon to examine the probable capabilities and limitations of space weapons and the general outlines of space strategy.

From a military point of view, the chief characteristics of space vehicles are high speed and altitude and long range and flight time. The immediate use of these characteristics is reconnaissance. High speed and altitude would facilitate surprise attack. Long range and flight time would lend themselves to freedom from support, including support by land and sea power.

The wartime use of outer space would probably differ from other forms of warfare in its objectives, its weapons, and its medium of operations. For some time to come, at least, its objectives would be more limited than those of land, naval, or even air warfare. At first, space systems would merely assist or complement armies, fleets, and air forces. Space weapons themselves, of course, would far surpass all other weapon of war in speed and range. In maneuverability, assuming an adequate source of energy, they would compare quite favorably with aircraft. In fact, they would enjoy all the military advantages of aircraft without some of their principal limitations (e.g., susceptibility to turbulent weather, low visibility, and icing). For example, controllable attack satellites would share the advantages now held by aircraft over ballistic missiles—particularly the ability to be recalled from their targets at the last moment. Orbiting spacecraft have no counterpart, moreover, other than forts on land, for endurance and self-sufficiency. Lastly, the medium of space operations—"the heavens' pathless way"—is even more uniform, featureless, and free from natural obstacles than are the oceans or the air. At certain altitudes, barriers such as the Van Allen radiation belts indeed exist; but these can probably be overcome without undue difficulty or loss of effectiveness.

Given such military characteristics, space weapons and techniques bid fair to convert into fact the prophecy of Gen. Thomas S. Power, U.S. Air Force, that "the present concept of three-dimensional warfare will eventually expand into what may be termed warfare in four dimensions, warfare in which the operational relationship between space and time will become the most critical factor."

SPACE POWER

In a paper on naval strategy, space power might be described as "the space arm of seapower." Historically, the tools by which the sea is controlled have varied greatly. They now include aircraft as well as ships. Why not satellites as well as submarines? On the other hand, in order to analyze how space power may affect campaigns at sea, space power must be considered partly in contradistinction to landpower and seapower. Giving it a new name may help us discern its strengths and limitations.

Seapower is traditionally defined as the ability of a nation to control transportation over the seas in wartime. It is certainly possible that space power, in like manner, may someday enable a nation to control wartime transportation in space itself. That day, however, is probably far distant. The transportation of cargoes and personnel through outer space is, and will probably remain for some time, too costly for general adoption. In the foreseeable future, outer space is likely to be important for military purposes, first, because of its effect on surface activities (including transport and communications) and, secondly, as an avenue of attack. In this respect, as in others, spacepower stands in much the same relation to airpower as airpower does to seapower.

The use of outer space as an avenue of attack may be compared to air strikes or the bombardment of land objectives from the sea. There is, however, an essential difference. Naval bombardment is only an incidental and relatively minor use of seapower. On the other hand, air strikes are a major function of airpower, and it seems almost certain that attacks on land or sea objectives will become a major function of spacepower.

At this point, it is well to recall that air power depends in large part on land and sea power. An airplane in a position to bomb a target is only the final link in a long chain of causation. Advanced airbases are often seized by armies. In turn, the armies may have been landed from ships. The planes themselves, their fuel, cargoes, crews, and supplies are often brought by ship to the forward areas. True, the dependence of air power on land and sea power, already much less than in the past, will doubtless be further lessened by the longer range and greater endurance of aircraft (e.g., those powered by nuclear engines). Yet the heavy expense of flying aircraft over great distances, compared with the cost of ocean transportation, is likely to ensure that local air superiority will still derive, in many cases, from land operations or command of the sea.

Space power, however, may prove to be more independent than air power. Even missiles of intermediate range reach a top speed of some 10,000 miles an hour. The maximum speed of long-range missiles (ICBM's) is 15,000 miles an hour or more. These speeds are of the same order of magnitude as orbital velocities at similar altitudes (about 18,000 miles an hour), which would permit a missile to strike any point on earth. The difference in cost between short and long ranges is thus far less for spacecraft than for aircraft, and the incentive to move missiles by land or sea into forward areas, rather than fire them the full distance, under their own power, is correspondingly reduced.

One advantage of very-long-range missiles is that they greatly increase the choice of launching sites and flight paths. A missile with a range of 9,000 nautical miles or so reaches near-orbital velocity; it can hit any point on earth from any other point, and (with the use of mobile launching sites) from any direction. The difficulty of defending against such a missile can be seen by considering the problem of detection. At present, each radar installation designed to detect ballistic missiles scans a rather narrow fixed sector in the direction of known or suspected launching sites. Missiles of very long range, if launched along suitable flight paths, could avoid detection by such installations.

Nevertheless, the savings to be made by launching missiles from advanced bases would be substantial, and would doubtless induce belligerent nations to transport some of the tools of space power by sea. In addition, distance will still be a major factor in strategy. The shorter the range, the more effective (and the cheaper) an attack from outer space would tend to be. At shorter ranges, missiles could be fired more accurately, and would allow less reaction time for detection and defensive action.

CONTROL OF OUTER SPACE

As a strategic concept, "control of space" refers to the ability to use outer space for one's own purposes and to deny its use to the enemy.

The concept of control has long been a commonplace of land warfare ("take the high ground and hold it"). Its extension to sea warfare by the British Navy brought about a revolution in naval strategy. The classic example is the command of the seas exercised by the British Grand Fleet in World War I. In air warfare, the concept of control has had a limited but still significant application. Local air superiority is recognized as essential to many kinds of military operations, and was a tenet of the German blitzkrieg doctrine. The air operations conducted out of Henderson Field on Guadalcanal provide an example from American experience.

What, then, is the application of the concept to space warfare? Presumably, it will be more limited to space warfare than it is to air warfare—if only because outer space is boundless, while airspace, although significantly three dimensional, ends at a relatively low altitude. The medium of outer space, or even that portion of it which lies immediately around the earth, is naturally less subject to military control than the land, the sea, or air.

At best, however, control of any medium is an ideal, a limit, a strategic working con-

cept. In practice, it is never fully attained—never complete in degree, nor unbounded in space or time. For example, commerce raiding and undersea warfare have usually been possible to an inferior naval power, such as Germany in both World Wars, however great the maritime control exercised by the dominant sea power.

Yet the temporary use of a limited portion of land or ocean surface has often been of great strategic or tactical value. The temporary use of airspace, in particular, is relatively valuable and easy to acquire. An example is the bombing of Tokyo by 16 Mitchell bombers from the carrier *Hornet* in April 1942, when the surrounding oceans and airspace were dominated by Japan. By extrapolation, it seems likely that the temporary use of portions of outer space (e.g., by the launching of long-range missiles) would be (1) still easier to acquire and (2) all that may be needed to inflict a damaging and perhaps decisive low.

On the other hand, in the present and immediately foreseeable state of space technology, the control of large portions of outer space, in the sense of denying their use to an enemy, may not be feasible at all. Because of their range, their altitude, and above all their speed, spacecraft will be very difficult indeed to detect and intercept. The fact that exclusive control of outer space may consequently not be feasible, even to a limited and temporary degree, calls for a rethinking of strategic concepts.

At present, all that can be done is to suggest approaches to the problem. Not only space technology but operational concepts themselves must be imagined and projected into the future.

The first step is to concentrate upon the critical portion of outer space. Initially, this is likely to be geocentric space—the space immediately around the earth, out to a distance of, say, one earth-radius from the surface. Geocentric space is that portion from which it would be most important to exclude an enemy. At present and for some time to come, as we have seen, the military value of space operations will depend upon the extent to which they can affect our own and enemy capabilities on the surface. Geocentric space is also that portion of outer space from which exclusion of an enemy would be practical.

Secondly, the history of naval warfare suggests that we should consider the value of bases and the possibility of controlling points and areas (or, rather, volumes) of convergence in outer space (e.g., along lines from the launching points to the probable targets of long-range missiles). Focal areas and terminal areas provide the parallel in naval strategy. Because they could not completely control all the seas, the British found it advantageous to establish bases and advanced positions, as, for example, at Gibraltar or with the concentration of the fleet at Scapa Flow during World War II.

The necessity of bases for the control of outer space was stated by Gen. Thomas D. White, U.S. Air Force, as follows: " * * * to control space we must not only be able to go through it with vehicles that travel from point to point, but we must be able to stay in space with human beings who can carry out jobs efficiently."

The military advantages of bases in outer space seem bound to attract the strategic planner. Operations at such a base would be virtually free from the difficulties presented by the earth's atmosphere (especially the reentry problem), weather, and gravitational field. From such a base, the earth could be kept under constant surveillance. Relatively little energy would be required to fire a missile earthward.

Artificial space bases (space stations) could serve many useful purposes, but might prove highly vulnerable unless equipped to detect and evade attack. They could be used, for example, as storage depots, staging or transfer points, and reconnaissance and missile-launching sites. On the other hand, they might prove at least as vulnerable as aircraft, since they would not be difficult to detect, and their positions in orbit could be determined accurately in advance. Manned spacecraft seem especially vulnerable if hit, although better able to take evasive action. It would be premature, however, to pass judgment now on the vulnerability of spacecraft or even satellites. Neither the physical conditions of outer space nor the future techniques of space flight are well enough known for anyone to say with certainty how vulnerable an artificial space base would be.

In contrast, large natural space bases such as the moon seem virtually indestructible, mainly because of their size. The military advantages of a moon base were elaborated by Brig. Gen. Homer Boushey, U.S. Air Force (then the Director of Advanced Technology), in a speech to the Aero Club of Washington, D.C., in January 1958. General Boushey concluded that the moon "represents the age-old military advantage of 'high ground.'" While this argument has since been questioned, criticism of its logic largely relates to the general or offensive use of a moon base and not to its value for defense (retaliation). There seems good reason to agree that exclusive possession of a moon base would increase the strategic deterrent by making it virtually impossible for a foreign country to destroy American retaliatory capacity by surprise attack. The point is emphasized by the fact that, in the near future, space weapons will probably add more to offensive than to defensive capabilities.

Thirdly, no more than a very partial and temporary control of outer space is necessary for reconnaissance—which has been called the first and most obvious military use of outer space. Like the moon base, reconnaissance from outer space could help correct the balance between offensive and defensive capabilities. It provides better means of defense against ballistic missiles and other space weapons. Later, it could itself become part of offensive weapon systems.

Space reconnaissance can be conducted by a variety of means—optical, photographic, radar, infrared, and electronic intercept. It seems impossible to specify any maximum altitude at which military photography could be carried out. Nevertheless, with available photographic equipment at satellite altitudes (more than 100 miles), about all that can be seen and identified are lines of communication, urban areas, large airfields, naval facilities, and industrial installations. Detailed target analysis is not yet practicable from photographs taken at such altitudes, nor is the detection of small military installations, such as missile sites. Missile firings, however, could be detected and located from even greater altitudes by nonphotographic means.

As a means of reconnaissance, space power could be viewed as merely an operational extension (though an important one) of land, sea, and air power. On the other hand, reconnaissance from outer space can cover incomparably greater areas of the earth's surface, and be maintained for longer periods, than any form of reconnaissance previously known. Satellite reconnaissance in particular permits the frequent repetition of the same view, providing verification and revealing movement and other changes.

In the future, space reconnaissance may be as easy and as useful for tactical as for strategic purposes. For example, the commander of an army or a fleet could launch reconnaissance satellites whenever the tactical situation required quick and accurate information on enemy forces and targets over a large area.

Many other military uses of outer space have been suggested, including navigation, communication, weather, and mapping satellites and interceptor spacecraft. All these will doubtless be developed in the fairly near future. It may be noted that none of them is apparently subject to such stringent altitude limitations as reconnaissance spacecraft.

Perhaps a word should be said about bombing from outerspace. It is hardly possible to approach the subject without plunging into controversy. Here again, however, final judgment would be premature.

Unlike the airplane, the spaceship cannot rely on gravity alone as a propellant for its bombs. Bombing from outerspace would involve imparting velocity to the bomb or missile (which would otherwise continue in orbit for example, along with its parent satellite). In comparison with alternative methods such as surface-to-surface or airborne delivery, therefore, large amounts of propellant may be needed, adding to the weight of the spacecraft and the cost of bombarding the target.

Nevertheless, it has been concluded on the basis of careful study that bombing from satellites and other spacecraft is technically feasible. If a fairly flat trajectory is allowed for descent, it is said, the propulsion requirements become quite acceptable. Many other questions must await a weapon system analysis and actual experiment—for example, vulnerability and reliability, costs (not only of the bombing satellites but of the whole supporting system), recoverability and the use of decoys and other means of cover and deception.

Whether bombing from spacecraft will be, in the future, either effective or available at reasonable cost will evidently depend upon the development of space technology.

The formidable military advantages of space power will be partly offset by new and perplexing problems. For example, the problem of distinguishing military spacecraft from scientific satellites, meteors, and other objects in outer space will give rise to a need for some means of investigation and identification. Such difficulties emphasize the value of vigorous research, development, and operational planning.

CONCLUSION

Historical precedent and strategic principle point to the wisdom of combining all arms of sea power—air and spacecraft as well as ships and submarines. The prospects and dangers of space warfare call for the constant development of new techniques and for a proper balance of forces. In the event of future wars, there is reason to believe, control of the seas and consequently final victory itself may fall to the nation that best combines space power with the older tools of war.

Port of Los Angeles: Long Beach Customhouse Should Be at the Harbor, Saving Amount of All Federal Taxes Payable by 10,000 Taxpayers

EXTENSION OF REMARKS

OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 13, 1961

Mr. HOSMER. Mr. Speaker, it takes 10,000 U.S. taxpayers who each pay $200 of their scant earnings in taxes to accumulate $2 million. Yet the U.S. Government now proposes to waste and

squander more than this amount of money by persisting in a stupid error in judgment. I am not advising that many taxpayers to go on strike, but I take this means of again pointing out to the Bureau of Customs and the General Services Administration a burden just plain sanity, let alone fiscal responsibility, places upon them. It is to place the customhouse for the twin ports of Los Angeles and Long Beach in the harbor area where it should be, not 22 miles inland where it should not be. The present plan is to include this facility in a Federal office building to be constructed in downtown Los Angeles at a cost in excess of $30 a square foot. Over $2 million of that cost will be incurred for appraisers warehouse space which could be built in the harbor area at an estimated cost of $5 a square foot. This and other wastes of taxpayers' money by reason of the misguided intentions of these mentioned Government agencies are detailed in the following editorial appearing in the Long Beach Independent-Press-Telegram on March 27:

HARBOR CUSTOMS HEADQUARTERS WOULD SAVE MAN-HOURS AND MONEY

We commend to the attention of the U.S. Bureau of Customs the action taken last week by its sister Federal agency, the Bureau of Land Management.

The Interior Department announced it was moving the Los Angeles office of the Bureau of Land Management to Riverside.

Bureau of Land Management Director Karl S. Landstrom said the move will place the Bureau's southern California headquarters on the doorstep of the lands and resources it administers. The decision to move, he said, was based on findings that the downtown Los Angeles location had created many hardships on both the public and the Bureau.

We suggest this action warrants serious attention by the new U.S. Commissioner of Customs, Philip Nichols, Jr., and by the Los Angeles District Collector of Customs due to be named shortly.

The Los Angeles customs headquarters are located in downtown Los Angeles. More than 90 percent of its revenues comes from goods entering through the ports of Long Beach and of Los Angeles. The customs headquarters is located 22 miles away from those ports.

Each year, the Bureau of Customs spends $50,000 to transport merchandise samples the 22 miles from the piers to the appraiser's store in downtown Los Angeles.

Every day, the customs dispatches eight examiners from downtown Los Angeles to the harbor area to examine merchandise that is too fragile or too bulky to be transported to the appraiser's store. The customs allows 1 hour travel time for these employees to reach the harbor area and another hour to return. Thus each of the eight employees loses 2 hours a day in transportation. This totals 16 manhours or 2 man-days each day lost in transportation.

The Los Angeles custom house is the only one in the Nation not located adjacent to the harbor area it serves.

Yet, the Bureau of Customs has proposed the Government spend more than $4 million to provide new customs quarters in a Federal building in the civic center.

Most of this customs space would be warehousing facilities for the appraiser's stores. Good warehouses have been built in the harbor area for $5 a square foot. But the customs proposes to construct a warehouse in the traffic-choked Los Angeles civic center at a cost in excess of $30 a square foot.

We propose that the new officials of the Bureau of Customs restudy this absurd scheme. We urge them to follow the splendid example of the Bureau of Land Management and to relocate the customhouse in the harbor where it belongs.

Sure it will cost some money to chop the customs facilities out of the federal building plans. The General Services Administration estimates it will cost about $150,000 to redraft the designs to eliminate customs from the federal building. But at a difference of, say, even $20 a square foot in construction costs between a harbor customs and a downtown customs, that $150,000 would save in excess of $2 million in taxpayers' money.

It may be an inconvenience for some customs employees and customhouse brokers to drive a little farther to work each morning—down to the harbor rather than to downtown Los Angeles. However, this inconvenience will be tempered by lighter traffic and ample parking space available in the harbor.

Some of these people may even want to relocate their families in the harbor area and get out of the Los Angeles smog.

In any event, the savings to the taxpayer and added convenience to the general public will more than compensate for any temporary inconvenience to a relatively few individuals.

Kill the Offensive Student Affidavit

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 13, 1961

Mr. LINDSAY. Mr. Speaker, I have long been distressed by the provision of the National Defense Education Act which requires applicants for student loans to sign a sweeping disclaimer of any affiliation or belief in movements to overthrow the Government of the United States. The affidavit of nonbelief singles out American college students in general, and those in need of financial support in particular, as special objects of official suspicion. The affidavit constitutes a gross insult and offense to many thousands of patriotic young Americans by capriciously bringing them under suspicion of disloyalty to the United States.

I have recently introduced a bill to eliminate the disclaimer affidavit, to which I hope the Congress will give prompt and favorable consideration.

Mr. Speaker, under leave to extend my remarks in the RECORD, I include a thoughtful and well-conceived editorial on this matter which appeared in the New York Herald Tribune on April 11, 1961. The editorial entitled "Kill the Offensive Student Affidavit," follows:

KILL THE OFFENSIVE STUDENT AFFIDAVIT

That hotly debated affidavit requirement in the Federal student loan program more or less dropped out of the news last year, as the Nation's attention was claimed by two gentlemen named Nixon and Kennedy—one of whom, Mr. Kennedy, himself sponsored a Senate bill to eliminate it. But the requirement is still there (the Kennedy bill passed the Senate, then died in the House), and it remains as offensive as ever.

The present law requires an applicant for a student loan not only to swear allegiance to the United States, but also to sign a sweeping declaration that "he does not believe in, and is not a member of and does not support any organization that believes in or teaches, the overthrow of the U.S. Government by force or violence or by any illegal or unconstitutional means."

As a statement of pure belief, this goes far beyond a mere declaration of nonmembership in the Communist Party. It becomes a coercive intrusion by Government on the individual conscience.

The dispute has not been over the oath of allegiance, which most readily accept, but rather over the affidavit of nonbelief. From all the recipients of Federal aid, this singles out needy students as special objects of official suspicion. By extension, it reflects distrust on all the youth of America—though even J. Edgar Hoover would have trouble producing a 1961 documentary, "I Was a Teenage Communist."

More fundamentally, though the Federal Government is rightly concerned with its citizens' actions it has no business demanding to know their purely private beliefs as a condition of receiving Federal benefits. And it ought to keep its doctrinal fingers out of the academic pot.

The affidavit is silly and futile anyway, of course, because a real Communist would hardly balk at the mere signing of a false oath.

New York's Congressman JOHN V. LINDSAY has introduced a new bill to eliminate the requirement. The time for action is now, before another year's rush of applications brings another crisis of conscience to students and colleges alike. (More than 70 colleges and universities have protested the affidavit; many, including Yale, Harvard, and Princeton, have flatly refused to participate in the loan program because of it.)

The affidavit insults a whole generation. It invades the privacy of the mind in that one area—the college—which should be its supreme sanctuary. It grossly offends the Nation's educators. And it accomplishes nothing.

It's high time to throw it out, unmourned.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

Appendix

Apportionment of Seats in the House of Representatives

EXTENSION OF REMARKS
OF
HON. JOHN TABER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 13, 1961

Mr. TABER. Mr. Speaker, I herewith submit a copy of a letter by Prof. Walter F. Willcox, with reference to the apportionment of seats in the House of Representatives. This letter is addressed to the chairman of a subcommittee of the Judiciary Committee of the House, and to my mind, is an important item to be considered:

ITHACA, N.Y., *March 27, 1961.*

Hon. JOHN TABER,
House of Representatives,
Washington, D.C.

DEAR MR. TABER: I enclose a copy of a letter which I have just written to the chairman of the subcommittee of the House Committee on the Judiciary, with the request that you will have it printed in the CONGRESSIONAL RECORD and send me two copies of the issue containing it.

Yours respectfully,

W. F. WILLCOX.

MARCH 27, 1961.

Hon. THOMAS J. LANE,
House of Representatives,
Washington, D.C.

DEAR MR. LANE: Since 1900 Congress has used one or the other of two methods of apportioning seats in the House of Representatives among the States after a census; the method of major fractions was used after the censuses of 1910 and 1930 (after 1920 Congress for the only time in history did not apportion) and the method of equal proportions after the censuses of 1940 and 1950. The results of these methods differ usually by only one seat.

I write to you to give my reasons for thinking that, after the census of 1940, a seat was apportioned to Arkansas which should have gone to Michigan; after that of 1950, one was apportioned to Kansas which should have gone to California, and after that of 1960, the prospect is that Congress will apportion to New Hampshire a seat which, if the following argument is accepted, should go to Massachusetts.

The figures below give the evidence on which I base my conclusion:

Date of censuses	States involved	Seats involved	Population distribution	
1940	Arkansas and Michigan	24	6.471	12.529
1950	Kansas and California	36	5.491	30.509
1960	New Hamsphire and Massachusetts	14	1.476	12.524

Under the 1960 figures, either method would give New Hampshire and Massachusetts together 14 seats, but if their combined population, 5,755,499, is divided by 14 and the quotient, 411,107, divided into the population of each, the results are for New Hampshire 1.476 and for Massachusetts 12.524.

Do not these figures indicate that after the 1940 census, Michigan with a quotient of 12.529 had a stronger claim to the doubtful seat than Arkansas which had a quotient of only 6.471?

In the same way, after the 1950 census, it is my claim that California with a quotient of 30.509 should have received 31 seats instead of 30 and Kansas with a quotient of 5.491 should have received only 5 seats instead of the 6 allotted to it.

So, too, under the 1960 figures, Massachusetts is likely to receive only 12 seats, although its quotient of 12.524 would entitle it to 13, and New Hampshire with a quotient of 1.476 should receive only 1 instead of the 2 now likely to go to it.

Yours sincerely,

WALTER F. WILLCOX.

Welfare of the Domestic Textile Industry

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES

Friday, April 14, 1961

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial column by Col. W. D. Workman of Columbia, S.C., a highly influential and respected newspaper columnist and author. The article entitled, "Industry in United States Hurt by Overseas Friends," has been printed in a number of newspapers in the Southeast, including the April 7, 1961, issue of the Greenville News of Greenville, S.C. Colonel Workman presents some important facts to show that something must be done—and very soon—to protect the welfare of our domestic textile industry and its many employees.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

INDUSTRY IN UNITED STATES HURT BY OVERSEA FRIENDS

(By W. D. Workman)

The United States today faces an American dilemma as formidable and as nearly insoluble as the dilemma of race relations which concerned Gunnar Myrdal in the 1940's.

The current problem arises out of the Nation's free trade policies. International affairs, now more important than ever, require that the United States maintain cordial trade relations with the friendly and neutral nations of the world. But those relations are becoming strained in the light of the undeniable damage being done to the Nation's domestic economy by foreign imports.

The damage is widespread, and is increasing. Hardly a day passes that Congress is not importuned by some State legislature or trade association to stop the inflow of foreign-made commodities ranging over such diverse fields as baseball gloves, bicycles, optics, musical recordings, barbed wire, nails, plywood, and a host of others.

Atop the list of aggrieved industries is textiles, which holds the No. 1 position for several reasons. In the first place, the Nation's textile industry stands among the top three nationally, in terms of numbers of workers employed and of total impact on our economy. Furthermore, according to a special Senate subcommittee report of 1959, the Department of Defense has ranked the textile industry second only to steel in terms of military essentiality.

The industry is active in 43 States, and employs more than 900,000 persons even after continued job losses in recent years. Its companion industry, apparel manufacturing, employs more than a million workers. If the two are regarded in combination, they give employment to one out of every eight factory workers in the land. Obviously, what hurts these industries must hurt the Nation.

And the industry is hurting—through no fault of its own. Technology has been a handmaiden to the textile industry, and no other manufacturing process in the country is more scientifically advanced or automatically operated. Research has been continuous and effective, and sales promotion has been equally stimulated.

Yet, despite everyy laborsaving device, research development, or new product use, large segments of the textile industry are now being driven to the wall. The villains of the piece are foreign imports, which are flooding into the United States in vast and growing numbers. These imported goods, manufactured at a fraction of the cost of American-made products, can undersell domestic production in every instance.

And, to make matters worse, many of the imports are of good quality and workmanship, thanks to America's postwar handouts of both money and know-how to foreign nations.

To cite just one example of the problem, a large finishing plant in the southeast is offered unfinished "gray goods" from Japan, delivered at the mill for an appreciable savings over the same grade of cotton textiles manufactured in an American mill only a dozen miles away from the finishing plant.

The difference lies in the fact that Japanese goods are manufactured at meager wage rates which are illegal in this country, and are made out of cotton (probably American) which can be bought by Japan on the world market at 8 cents a pound less than the same cotton would cost an American manufacturer.

The problem is further complicated by the fact that textile manufacturing is becoming universal throughout the world. Where once Japan posed the greatest threat to the United States, imports now are flooding in from such widely separated points as Hong Kong, Portugal, Pakistan, Egypt, France, India, and Spain. And since there are wide differentials of cost and price among these countries, it becomes virtually impossible to raise a tariff wall high enough to protect the domestic industry without shutting off all trade with many longtime friends of the United States.

Relief is now being sought by the textile industry—the fixing of quotas by country and by category of goods. Textile manufacturers realize the Nation's stake in world commerce, and they are willing to pay their share of the costs involved. What they do ask is a better set of rules for competition—along with an understanding of the close relation between the Nation's economic welfare and the national security.

The most hopeful note that textile men have gotten from the new administration actually came before the election. Back in August of last year, John F. Kennedy had this word of encouragement in a letter to South Carolina's Governor, Ernest F. Hollings, a spokesman for the industry:

"Imports of textile products, including apparel, should be within limits which will not endanger our own existing textile capacity and employment, and which will permit growth of the industry in reasonable relationship to the expansion of our overall economy."

The textile men hope these words have not been forgotten.

Proposal To Equalize Tax and Benefits in the Social Security System

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 13, 1961

Mr. CURTIS of Missouri. Mr. Speaker, Mr. Frank Dickinson of Bronxville, N.Y., has offered a proposal which would attempt to cure the present imbalance of tax burdens and benefits in the social security system. He points out that presently America's young taxpayers are footing the bill for social security recipients whose payments, in relation to benefits received, are minimal and urges that there be a graduated social security tax to help even out the amount of tax paid and benefits received. This proposal was the subject of a recent editorial in the New York Sunday News of April 2, 1961. I would like at this point to insert the Sunday News editorial on this subject in the RECORD at this point:

REJIGGERING SOCIAL SECURITY

If the Kennedy administration has its way, the current Congress will increase and extend assorted benefits under social security, particularly with regard to higher payments to widows of insured workers, optional earlier retirement for male workers, and easier qualifications for retirement.

The President wants to do this by small, across the board increases in the premiums paid by employers and employees. Those premiums now come to 3 percent paid by the employer and 3 percent by the worker on the first $4,800 of income.

These increased benefits may be advisable; we don't know. But an interesting article in a recent issue of the Journal of Insurance, by Frank G. Dickinson, questions the wisdom of charging all age groups the same premiums for their social security.

It doesn't seem fair, for one thing, to assess a man who enters the social security system at age 20 the same or increasing percentages for 45 years, while a worker at, say, age 60 will have to pay the flat premium for only 5 more years before he starts collecting.

This unfairness, Dickinson believes, will dawn on the younger age group sooner or later, and may trigger a serious tax rebellion which could wreck the social security system.

Why not, then, Dickinson suggests, rejigger the premium rates so that the under-32 group would pay less, the 32–49 group the same as now, and the group aged 50 and over a good deal more?

Under the Dickinson plan, the younger age group's rate would be cut to 1½ percent, the middle rate would stay at 3 percent, and the premiums paid by older persons would go up to 4½ percent. Further increases, contemplated by the social security law since it first took effect in 1937, would be made proportionately as time went on.

The effect, as Dickinson sees it, would be to bring social security closer to the principles on which sound insurance businesses operate, and to cut down the danger that benefits due under social security may sometime become so huge as to ruin or seriously impair the whole setup.

Without going overboard for the Dickinson proposals, we'll say we do think they should be carefully considered by everybody—particularly Members of Congress—interested in improving the social security system.

The Case for the B–70 in an Age of Missiles

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Friday, April 14, 1961

Mr. BEALL. Mr. President, in this crucial cold war, it is extremely encouraging to see the intense interest which has been given to President Kennedy's defense budget. Such extraordinary attention to our military preparedness should surely result in a program which will keep our Nation strong and secure, and it is my hope that all of our citizens, whether in the military or in civilian life, will continue to study and discuss the proposals which have been presented.

One of the most important items in President Kennedy's defense message concerns the future of the B–70 supersonic jet bomber.

An extremely thought-provoking and informative article on this subject was included in the April 17 issue of Newsweek magazine and I ask unanimous consent that this item, which was written by Gen. Carl Spaatz, former Air Force Chief of Staff, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE CASE FOR THE B–70 IN AN AGE OF MISSILES

(One controversial economy of the Kennedy defense budget was a sharp cutback in the B–70 superbomber program. Newsweek's contributing editor on military affairs, Gen. Carl Spatz, former Air Force Chief of Staff, here states the risks he sees in this decision—and argues the case for the jet bombers.)

The revised military budget, as explained to a Senate committee last week by Secretary McNamara, is generally sensible and reassuring. However, it contains one serious flaw. This derives from the new administration's hesitancy about developing the B–70 supersonic jet bomber.

Chairman RICHARD RUSSELL of the Armed Services Committee, after listening to McNamara's defense of a small experimental appropriation for the B–70, expressed the opinion that the project should be dropped altogether or be brought to the production stage as soon as feasible. He indicated that he personally favored the latter course and thought that the committee would agree.

McNamara had argued that missiles would be capable of filling the Nation's need for strategic air strength by the time the B–70 could get into production. He had agreed that the scientific breakthroughs exploited by the B–70 should be developed experimentally but that quantity production of a new manned bomber should await further refinements.

In the meantime, he suggested, the present B–52, equipped with Skybolt missiles, would supplement the Nation's arsenal of missiles adequately.

This will doubtless be true if the Soviet Union is considerate enough to desist from developing and producing a B–70 of its own. But if the Russians should develop a 2,000-mile-an-hour plane with the characteristics of the B–70, our B–52's would be swept from the skies in any intercontinental war. And our missiles might or might not do the job. It is for this reason that the administration's course is so risky. If, on the other hand, the Soviet Union places sole reliance on guided missiles and we include the B–70 in our arsenal, we shall have an incalculable advantage. The thinking machine never will be invented that can substitute for the human mind in maneuvering an air vehicle. The Minuteman and the Polaris, much as we need them, can never be wholly satisfactory substitutes for manned aircraft.

The best missile will be next to useless without the up-to-the-minute reconnaissance only a manned plane can still supply today. Reconnaissance satellites can do only part of the job, at best, and will be vulnerable to attack by countersatellites in any war of the future.

As a bomber, too, the B–70 would have advantages over ballistic missiles. It could strike more rapidly because it could cruise the fringes of enemy territory and release its rockets a thousand miles or more from its targets. It could be recalled in flight and thus would have a safety factor missiles lack. It would be less vulnerable than any missile, even the Polaris, because it could maneuver in the limitless oceans of the air.

It would be as useful in nonatomic as well as atomic war. It could carry large payloads of conventional explosives. Missiles, by contrast, are next to useless unless armed with atomic warheads. Any investment we might make in the B–70 would not be wasted in the event of nuclear disarmament agreements.

The kind of slow and cautious development McNamara seems to have in mind will not be sufficient to give the B–70 a thorough test or to permit its full exploitation as an important component of our weapons system.

Back in 1937, the U.S. military command considered abolishing from its budget all funds for the development of the B–17. Fortunately, they decided against it. Without the B–17, the Second World War certainly would have been prolonged at a heavy cost in lives and treasure and might have been lost. We can only hope that the B–70 decision also will be reconsidered before it is too late.

Advertising Never Sold Them Anything

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 13, 1961

Mr. WILSON of California. Mr. Speaker, a few leading economists, in-

cluding Presidential adviser J. Kenneth Galbraith, have suggested that our standard of living is too high, and that we would be better off leading a simpler life. Galbraith in his book "The Affluent Society," is extremely critical of advertising and declares that it creates a bias in the mind of consumers in favor of private spending and against public spending.

An eloquent argument against this point of view appeared recently in an advertisement, prepared by Erwin Wasey, Ruthrauff & Ryan, Inc., advertising agency of Philadelphia.

It was published as a public service by the Philadelphia Daily News.

I ask unanimous consent to include this important and timely message in the Appendix of the CONGRESSIONAL RECORD as a portion of my remarks:

HERE'S A FAMILY WHO CAN HONESTLY SAY: ADVERTISING NEVER SOLD THEM ANYTHING

The family lives in Russia. We are using them to illustrate a point.

Unlike most Americans, these people seldom see or hear any advertising. Only a few posters and handbills, random announcements in newspapers and magazines and, lately, some commercials on the government-run radio and television.

So, these people can honestly say advertising never sold them anything.

Advertising never "sold" them an automobile.

Advertising never "sold" them a telephone.

Advertising never "sold" them a dream house, color television, an FM radio, a hi-fi record player, frozen lobster, packaged soups, modern furniture, an electric mixer, power mower, air conditioning, automatic defrosting, home permanents, outboard motor, spinet piano, home workshop.

Some people might point out that life is much simpler in Russia than America. It is. And no wonder.

There are not nearly so many choices to make. Not nearly so many new things presented to people by manufacturers trying to serve them. Not nearly so many new things for people to want, because advertising helps show them how a product can make life easier, pleasanter, more worthwhile. Yes, and more dignified.

No automatic dishwasher ads tell human dishwashers how to get out of the kitchen faster.

No travel ads tell families they, too, can go South for the winter sun.

No cake mix ads. No ice cream ads. No automobile ads. No ads to rub it in that they haven't got much cake—or ice cream—or a car.

Now, let's imagine that suddenly all this is changed.

Let's imagine that advertising as Americans know it begins to urge Russian families to light their homes more efficiently, or join book clubs to read Plato or best sellers, or grow greener lawns or bigger chrysanthemums, or lay the tile on their own patios, or deep-wax their cars, or eat more delicious and healthful breakfasts, or have wine with dinner, or vote the Democratic ticket, or vote the Republican ticket, or dress smarter, or sleep under an electric blanket, or look prettier if you're a woman, or handsomer if you're a man, or sit down at the piano and surprise your friends, or drive across your country just for the fun of it.

We wonder if these people and the millions like them would say "No thanks. We prefer the simple life."

We'd like to suggest that the next time you read an ad or see a commercial you think of the Russian families to whom advertising has never sold a thing.

And that you look at that ad as an advertiser offering you a choice to do what you want with your dollars to satisfy your wants in your pattern of living.

It's as simple—and honest—as that.

Death of Louis P. Marciante

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Friday, April 14, 1961

Mr. WILLIAMS of New Jersey. Mr. President, the death of Louis P. Marciante in New Jersey last week has saddened his friends throughout the Nation. As president of the State federation of labor, Mr. Marciante made many lasting contributions to the labor movement in his home State and in the Nation. He worked during the long, difficult years when labor was first finding a foothold in our society. Later, he helped to develop new concepts and new responsibilities for labor.

An editorial in the Newark News of March 31 pays tribute to Mr. Marciante and sums up the reasons for his accomplishments to New Jersey and to labor. The editorial carefully points out that Mr. Marciante was often a critic, even of labor itself. But his criticism was the kind that brings growth and accomplishment. Mr. President, I ask unanimous consent to have the editorial reprinted in the CONGRESSIONAL RECORD.

An editorial in the Trentonian, Trenton, N.J., of the same date also pays tribute to Mr. Marciante. It makes specific notice of his service to his community, including his work on the Trenton Board of Education. Mr. President, I ask unanimous consent to have this editorial printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Newark News, Mar. 31, 1961]

LOUIS P. MARCIANTE

It was Louis Marciante's destiny to lead the State federation of labor through a tempestuous era and all who knew him will agree he was the man for the job. In that quarter century labor's role grew more complex, just as industry and government grew more complex, and where other labor leaders of his generation were lost in the eddies, Mr. Marciante stayed in the main current of the labor movement.

His contribution to New Jersey's industrial growth was considerable. For behind his outspoken manner and aggressive championing of labor's cause in all areas, there was a moderation that gave balance to the federation's program and brought it closer to its goals.

Those who follow Louis Marciante as leaders of labor will do well to examine the course he steered. For as bluntly as he criticized legislatures, Governors and industrialists, he criticized labor itself. And when it came from him, labor listened—and benefited—as the record of that quarter century suggests.

[From the Trentonian, Trenton, N.J.]

LOUIS P. MARCIANTE

Louis P. Marciante was a labor leader of the old school but at the same time he was one who was blessed with the enlightened attitude that in order for labor to make progress, its leaders had to share the responsibilities of civic leadership.

Mr. Marciante, whose death occurred Thursday at age 62, was unrelenting in his effort to win the best that was attainable for members of organized labor, but his policies were not so unyielding that they failed to take into consideration the fact that labor relations is a two-way street. Thus he was consistently conscious of management's problems as well as labor's.

As he made his way up from the ranks to the highest positions of labor leadership and eventually the presidency of the New Jersey American Federation of Labor, Mr. Marciante also rose to prominence in civic and national affairs. He served Trenton for 12 years as a member of the board of education, and Presidents and Governors called upon him to carry out demanding assignments.

In all his activities, he was a rugged individualist who was motivated by strong and unswerving convictions. He was an outstanding pioneer in his chosen field, and as such organized labor owes a lot to him.

Rev. Thomas J. Tierney, of Quincy, Mass.

EXTENSION OF REMARKS
OF
HON. JAMES A. BURKE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 13, 1961

Mr. BURKE of Massachusetts. Mr. Speaker, last Sunday evening it was my privilege to attend a testimonial dinner in honor of Father Thomas J. Tierney, St. John's Church, Quincy, Mass. Father Tom, as he is affectionately known in Massachusetts, has dedicated his life to his fellowman. I will not try to elaborate at this time his many, many accomplishments. I would like to include in the RECORD a few of the highlights of his activities mentioned at the dinner by Chief Justice Paul C. Reardon, Massachusetts Superior Court, and the text of a citation presented to Father Tierney by Mr. Henry Bosworth, well-known newspaperman and writer for the Boston Traveler. An editorial that appeared in the Quincy Patriot Ledger is also included.

The fine example set by Father Thomas J. Tierney in his combination of religious teaching, civic action, and love for neighbor has made our community richer. I was proud to be present at this dinner and to be associated with the Right Reverend Stephen F. Moran, pastor of St. John's Church, Rabbi Jacob Mann, Beth Israel Synagogue, Rev. Chester A. Porteus, rector, Christ Episcopal Church, civic leaders, public officials and citizens from all walks of life who were in attendance.

The material mentioned follows:

TESTIMONIAL DINNER TENDERED TO REV. THOMAS J. TIERNEY, APRIL 9, 1961, SURF BALLROOM, NANTASKET

PROFILE OF REV. FATHER THOMAS J. TIERNEY, PRIEST, PATRIOT, HERO, HUMANITARIAN, LEADER—FRIEND

Born: Lowell, Mass., June 9, 1903, son of beloved John and Elizabeth McLaughlin Tierney.

Boyhood: Loved to chase fire engines.

Schools: Lowell High School, Boston College, St. John's Seminary.

Ordained: Holy Cross Cathedral, June 5, 1931, by William Cardinal O'Connell.

Assignment: Blessed Sacrament Church, Cambridge, June 1931.

Sideline: Chasing fire enignes.

Appointment: First archdiocesan fire department chaplain by Cardinal O'Connell, serving with Cambridge fire department.

Heroism: Rescued two children over aerial ladder from third floor burning building on Brookline Street, Cambridge, in 1941.

Gave conditional absolution and final rites to over 100 victims of Cocoanut Grove holocaust, 1942. Also directed and assisted in smashing windows and battering down interior partitions of ill-fated night club to provide more exits for trapped patrons. His action saved many lives.

Attempted to rescue six members of a family from blazing Brewster Street, Cambridge, home, 1948. All six members perished. Father Tierney helped recover bodies, was overcome from smoke inhalation and taken to hospital.

Patriotism: Presented special citation by President Franklin D. Roosevelt for bond selling rallies during World War II.

More recognition: Presented Kate Smith Award in 1948 for his heroic actions at the Cocoanut Grove and Cambridge fires.

Transfer: Assigned to St. John's Parish, Quincy, April 24, 1950. Cambridge's loss—Quincy's gain. A big gain.

Patient: Spent 6 weeks at Quincy City Hospital as patient shortly after his arrival in Quincy. During this time he became friends with doctors, nurses, attendants, and patients. Since then he has returned to the hospital every single day to visit and cheer patients of all races and creeds.

Sideline: Still chases fire engines. Appointed chaplain of Quincy fire and police departments.

More work: In 1952 became city parade director. First Christmas parade attracted only 5,000. Now draws over 100,000 each year.

Nonsectarian fire service: Rescued the Blessed Sacrament when fire gutted interior of Blessed Sacrament Church, Houghs Neck, July 29, 1955.

Manned hose with firefighters to stop flames in blaze at First Baptist Church, Wollaston, June 26, 1956.

Carried out sacred Jewish book Torah from Temple when fire broke out and threatened Quincy Jewish Community Center, April 27, 1959.

His day: Mayor Amelio Della Chiesa proclaimed October 3, 1960, "Father Tierney Day" in tribute to his "love for his fellowman."

His night: First Quincy Citizens Award presented him for outstanding public service, April 9, 1961.

His future: Continuing helping others—regardless of race, color, or creed.

(And, chasing fire engines.)

PROGRAM

Toastmaster: Frank E. Remick.

Invocation: Rabbi Jacob Mann, Beth Israel Synagogue.

Welcoming address: Raymond C. Warmington, general chairman.

Head table: Paul J. Cifrino, president, Quincy-South Shore Chamber of Commerce; Hon. Edward A. Crane, mayor, city of Cambridge; Dr. Joseph P. Leone, director, Quincy City Hosiptal; Chief William Ferrazzi, Quincy Police Department; Chief Thomas F. Gorman, Quincy Fire Department; Rt. Rev. Stephen F. Moran, pastor, St. John's Church; Hon. Paul C. Reardon, chief justice, Massachusetts Superior Court; Hon. James A. Burke, Congressman, 13th Congressional District.

Presentations: Col. Walter C. Fuller, commander, Quincy Veterans' Council; David Alexander, mayor; Amelio Della Chiesa; Henry Bosworth.

Benediction: Rev. Chester A. Porteus, rector, Christ Episcopal Church.

Committee: General chairman, Raymond C. Warmington; cochairmen, Larry Antonelli and Lester H. Glasser.

Steering committee: David G. Alexander, John Allegrini, Henry Bosworth, Lawrence S. Butler, Joseph Burke, Thomas R. Burke, Peter Cooke, Daniel V. Cremins, Robert Leo Eng, Walter C. Fuller, John M. Gillis, John A. Golden, Jr., Paul A.M. Hunt, Edward T. Lewis, John M. Lyons, Dr. Alfred V. Mahoney, James S. McCormack, James R. McIntyre, James J. Mullin, John T. Rohde, Dennis F. Ryan, Alexander Smith, John C. Walker, and John F. Wipfler.

Honorary chairmen: Rt. Rev. Stephen F. Moran, Rabbi Jacob Mann, Rev. Chester A. Porteus.

General committee: Gary Aluisy, Carl W. Anderson, George R. Andrews, Francis F. Anselmo, James D. Asher, Frank L. Avery, Hyman Asnes, Joseph C. Avitabile, Vincent Banco, Nicholas Barbadoro, Raymond F. Barrett, George S. Bennett, Francis X Bellotti, Fulvio L. Berini, Melville S. Berman, Fred Bergfors, Luigi Bolea, Everett J. Bracchi, Joseph E. Brett, Leslie M. Brierley, John H. Brownell, Vincent Buonfiglio, Arthur I. Burgess, Thomas S. Burgin, George G. Burke, James A. Burke, J. Clarence Canniff, Sidney S. Canter, Paul S. Carosi, Gordon D. Carr, Joseph P. Carroll, Richard Carroll, Walter H. Carroll, Louis S. Cassani, Thomas J. Cavanaugh, Robert Cherubini, Henry H. Chmielinski, Jr., Paul J. Cifrino, Ralph Chiminiello, John A. Chisholm, Clarence P. Churchill, Joseph S. Cipolla, Frank D. Coffman, Paul Coleman, Paul A. Coletti, James Collins, Adolph J. Concheri, J. C. Coppleman, Robert A. Curry, Matthew Cushing, Allan Curtis, Maurice J. Daley, William Daley, Leo Darr, Amelio A. Della Chiesa, William DeLargy, Arthur DePetro, Frank A. DeSilva, James Y. Deupree, Robert M. Deware, A. George DiAngelo, Russell L. DiMattio, Daniel Donaher, Henry Donaher, Jr., Jeremiah Donovan, Joseph Duffy, Ambrose Duggan, Francis Duggan, William C. Ellis, Kenneth P. Fallon, Jr., George C. Fay, William A. Ferrazzi, Arthur L. Fitzgerald, John P. Flavin, Herb Fontaine, Alfred L. Fontana, James F. Fostello, Harry Freeman, James T. Gartland, Gerald S. Gherardi, Umberto Giarrusso, Irvin B. Gifford, Everett Goodhue, Thomas F. Gorman, Dr. Paul A. Gossard, Joseph Goulding, Dominic A. Grazio, Joseph B. Grossman, Rubin A. Grossman, John F. Hallisey, Charles W. Hedges, John A. Hediund, Lawrence G. Henley, John R. Herbert, Paul Hurley, James D. Hutchinson, John E. Johnson, J. Henry Johnson, Lloyd C. Johnson, Stephen T. Keefe, Jr., J. Walter Kemp, Cornelius V. Keohane, George J. Kilduff, Delcevare King, Richard J. Koch, Edwin J. LaCroix, William B. Lamprey, Myron N. Lane, Percy N. Lane, Joseph J. LaRaia, Edward S. MacDonald, Robert L. Macomber, Thomas F. Maloney, Thomas M. Maloney, Dr. Edward S. Mann, L. Paul Marini, William J. Martin, Walter E. Martinson, Lawrence H. Mattie, Vincent A. McCabe, Francis X. McCauley, George B. McDonald, Joseph P. McDonough, James F. McCormick, Jr., James F. McConnigal, George A. McIntire, David S. McIntosh, Frank McKenzie, Paul A. McLaughlin, William H. McNeill, Ernest J. Montillio, John Morley, Thomas V. Morrissey, Judge James A. Mulhall, Joseph Nassano, John D. Noonan, Edward J. O'Brien, George E. O'Brien, Albert Oliverio, Henry F. Paquin, William A. Palmer, Jr., Harry Pavan, Nicholas A. Pepe, John J. Quinn, John J. Quinn, Joseph G. Ray, George Reardon, Judge Paul C. Reardon, Frank E. Remick, James F. Reynolds, Jr., Charles W. Riley, Russell S. Riley, J. Everett Robbie, Charles N. Ross, Leroy L. Rounseville, William Russell, Aldo M. Saluti, A. Mario Salvatore, Augustus E. Settimelli, Charles L. Shea, William J. Shea, Morris Silverman, Louis Simons, Harold H. Slate, John D. Smith, Walter L. Smith, John J. Sullivan, Joseph A. Sullivan, Heslip E. Sutherland, Martin C. Sweeney, Richard T. Sweeney, Olin A. Taylor, Dr. Charles H. Thorner, Gordon S. Troupe, Anthony J. Venna, William L. Villone, Michael T. Walsh, Alexander E. Warmington, Paul A. Waters, Chester J. Weeden, Alrick Weidman, Milton B. Wiggin, Edward Whittaker, George A. Yarrington, Daniel L. Young, James Zavatone.

RESOLUTIONS OF THE COMMONWEALTH OF MASSACHSETTS COMMENDING AND CONGRATULATING REV. THOMAS J. TIERNEY, CURATE OF ST. JOHN'S CHURCH IN THE CITY OF QUINCY

Whereas Rev. Thomas J. Tierney, curate of St. John's Church in the city of Quincy, has played a prominent and active part in the organizing civic parades and activities in the city of Quincy; and

Whereas in addition to his many and exacting duties as a curate, he has served with distinction as chaplain of the Quincy Fire Department and the Quincy City Hospital; and

Whereas he has exerted an inspiring influence in the community by his devoted and dedicated service to the city of Quincy and its inhabitants, far above and beyond the call of duty; and

Whereas in grateful recognition of his unselfish devotion to their welfare, his many friends, from all faiths and walks of life, are tendering him a public testimonial on the 9th day of April, 1961: Therefore be it

Resolved, That the Massachusetts House of Representatives hereby commends Rev. Thomas J. Tierney for his good works and extends its congratulations to him on the occasion of his testimonial and its best wishes for continued health, success and happiness; and be it further

Resolved, That copies of these resolutions be forwarded by the secretary to the commonwealth to Rev. Thomas J. Tierney.

Adopted.

LAWRENCE R. GROVE,
Clerk.

The above resolve was introduced by State Representative Joseph E. Brett, of Quincy, and passed unanimously by the Massachusetts House of Representatives.

DON'T QUIT

I

When things go wrong, as they sometimes will,
When the road you're trudging seems all uphill,
When the funds are low and the debts are high,
And you want to smile, but you have to sigh,
When care is pressing you down a bit—
Rest if you must, but don't you quit.

II

Life is queer with its twists and turns,
As every one of us sometimes learns,
And many a fellow turns about
When he might have won had he stuck it out.
Don't give up though the pace seems slow—
You may succeed with another blow.

III

Often the goal is nearer than
It seems to a faint and faltering man;
Often the struggler has given up
When he might have captured the victor's cup;
And he learned too late when the night came down,
How close he was to the golden crown.

IV

Success is failure turned inside out—
The silver tint of the clouds of doubt,
And you never can tell how close you are,
It may be near when it seems afar;
So stick to the fight when you're hardest hit,—
It's when things seem worst that you mustn't quit.

REMARKS OF CHIEF JUSTICE PAUL C. REARDON AT TESTIMONIAL DINNER TO THE REVEREND THOMAS J. TIERNEY AT NANTASKET, MASS., APRIL 9, 1961

It is indeed a long time since Father William Halley came to St. John's as its first priest in 1852 and since 1853 when Bishop Fitzpatrick dedicated the new church in the presence of Josiah Quincy, mayor of Boston, Charles Francis Adams, Minister to England during the Civil War, and George Tyler Bigelow, later chief justice of the Massachusetts Supreme Judicial Court, among others. It is also many years since 1872 when the church was enlarged and took on its present proportions. It is well for us who are its parishioners to remember that on all three occasions members of the community of the town of Quincy which was then, of course, largely non-Catholic, contributed money and assistance in other ways to the end that the new church and congregation might be off to a good beginning. We remember those contributions with gratitude and we like to think that over the years they have in a sense been repaid by the good works which our priests have performed in Quincy. Those who are older here may recall, for instance, Father Ambrose Roche, who served for a time on the Quincy School Committee. There were others in the long line of curates at St. John's who have earned the respect and affection not only of its people but also of the people of Quincy generally. But as I think back over my own time in the parish I can bring to mind beyond Father Tierney no curate who has so returned to the city and all its citizens regardless of their belief and in such full measure the kindness which was made manifest to the young church in its early days. I was born two doors from St. John's. I attended its parochial school, as have all of our children, and I have lived my entire life in the parish. In voicing my own pride in what Father Tierney has given I simply reflect those sentiments which I am certain all the parishioners of St. John's, whom I have the privilege to represent here, would want me to express in their behalf to you. You know him for his large contributions to Quincy in various ways. We know him and we love him as the diligent priest, the around-the-clock worker in our particular vineyard, the humane and wise counselor whose sermons ring with good sense carrying hope and cheer to the depressed, the assiduous visitor, to those who are housebound or bedridden, in truth the "comforter of the afflicted" and the "health of the sick." We admire him for what he is and what he has done and we are happy beyond words that you rather like him too. What better life can a man possibly lead and what riches can compare with that type of wealth which generates this evening's tribute?

In a prayer for generosity Ignatius Loyola wrote:

"Teach us, good Lord, to serve Thee as Thou deservest,
To give and not to count the cost,
To fight and not to heed the wounds,
To toil and not to seek for rest,
To labour and not ask for any reward
Save that of knowing that we do Thy will."

This is a touching expression of the motive which governs Father Tierney's life, and, aware of this, the people of St. John's desire through me to add their voice in saying to a beloved priest in the poet's words:

"When God go with you, priest of God,
For all is well, and shall be well."

TEXT OF CITATION PRESENTED BY HENRY BOSWORTH—CITATION IS A COMPANION AWARD WITH PLAQUE AND EXPLAINS THE PLAQUE

QUINCY CITIZENS AWARD TO REV. THOMAS J. TIERNEY, ST. JOHN'S CHURCH

In recognition of his many contributions to the many from all religions, fields of endeavor, and walks of life.

Since his ordination in 1931 as a humble and devoted servant of God, Father Tierney has given the one precious gift that all men possess but few men give: himself.

This gift he has given freely, unselfishly, and happily to one and all—all and one—regardless of race, color, or creed.

Since coming to Quincy April 24, 1950, he has made this historically, industrially, commercially, and residentially proud community humanely and civically wealthy by his presence.

He has spent countless hours of his own time comforting and cheering the sick at Quincy City Hospital in their hour of spiritual need.

As chaplain of the Quincy Police and Fire Departments he has suffered the ordeal of men battling cruel flames in bitter cold. He has aided those who fell in the line of duty and performed heroically himself in those challenging moments when a man is called upon to be a man.

As city parade director, many more hours have gone to spreading the fame of Quincy by bringing thousands and thousands of visitors to the city.

As parade director he has been a strong and true friend of the veteran. The fluttering flags, marching feet, blaring trumpets, and rolling drums serve as a stirring but solemn reminder of the sacrifices these men made for their country.

These are but a few of his deeds. He has done many more quietly and privately. Only he, God, and those many he has helped in many ways, share that knowledge.

Therefore, be it known that on this 9th day of April 1961, a Quincy Citizens Committee from all faiths and walks of life proudly presents to Rev. Thomas J. Tierney this award for outstanding public service.

But—perhaps the finest citation of all to exemplify this man are seven borrowed words—his favorite words:

"I must be about My Father's business."

[From the Quincy Patriot Ledger, Apr. 10, 1961]

FRUITFUL LABORS

The Reverend Thomas J. Tierney, of St. John's Church in Quincy has given sympathy, understanding, counsel, and good cheer to Quincy citizens of all denominations. As Congressman JAMES A. BURKE declared Sunday night, Father Tierney's goal has been to bring people closer together; what better evidence could there be of his success than the gathering of 1,100 people of all creeds and from all walks of life to honor him?

Another particularly appropriate comment came from Superior Court Chief Justice Paul C. Reardon, himself a parishioner of St. John's. Father Tierney, he pointed out, has been outstanding in his combination of religious teaching with effective civic action.

Many a Quincy City Hospital patient has been grateful for Father Tierney's visits. It is fitting, therefore, that the chief gift at Sunday night's testimonial should have been the furnishing in the hospital of a chaplain's room for all faiths.

Father Tierney has given freely of himself and has reaped abundant gratitude. We wish him many more years of fruitful labor.

Tribute to Senator Henry Dworshak of Idaho

EXTENSION OF REMARKS
OF
HON. WALLACE F. BENNETT
OF UTAH
IN THE SENATE OF THE UNITED STATES

Friday, April 14, 1961

Mr. BENNETT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published in the Twin Falls, Idaho, Times-News of March 23, 1961, commenting on the record of our colleague the senior Senator from Idaho [Mr. DWORSHAK].

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GOOD DEAL OF MERIT

When Idaho's Senator HENRY DWORSHAK told the Appropriations Committee "it's time to face our own problems" he echoed the sentiments of many people across the Nation. He referred to the Federal Government's concern over foreign economic conditions, adding, "I think it is time that we wonder what is happening to the United States."

Senator DWORSHAK said he was sympathetic with needs of Africa, Asia, and Europe. Certainly in this atomic space age no one would suggest ignoring the world's problems to the extent of building some sort of maginot line along the seacoast. That would be foolhardy if not impossible during what amounts to a global conflict with communism.

The Idaho Senator pointed out, "We send hundreds of Americans abroad to devote months of time in devising ways to cut our tariffs, to give competitive advantage to people everywhere in the world and to create more problems at home." He added that unemployment, the plight of agriculture and the inability of American business to compete in world markets should be considered. "Still we are asked to provide more funds for activities devoted to further jeopardizing our markets."

Senator DWORSHAK has a point and a big one at that. Many people question the value of billions of dollars in foreign aid when one of the "rewards" of such generosity is the nickname of "Uncle Shylock." Americans aren't likely to forget soon the reception accorded Vice President Richard Nixon and his wife in South America when they were literally doused with spit from a Communist-inspired crowd.

Anti-American riots in Japan a few months ago forced cancellation of a visit by President Eisenhower. Signs reading "Go home Yankee" have been commonplace around the world. There are dozens of examples.

Communist inspired? Certainly. But what has happened to all the good will and gratitude that should be expected of billions and billions of dollars in U.S. aid poured into virtually every country on the face of the globe? Is it asking too much to expect a little appreciation in return? Perhaps it is, and maybe there is no greater truth than "You can't buy friends."

In that event, Senator DWORSHAK's statement is more impressive than ever. There is no doubt "it's time to face our own problems."

Senator DWORSHAK made one more statement that taxpayers everywhere should repeat time after time until it is burned into all minds.

"Regardless of false impression some people try to create, the U.S. Government has no bottomless money barrel. The Federal Government cannot spend one penny that it does not take from taxpayers."

Yes, that foreign aid and any domestic Federal aid comes right out of your pocket.

Reducing Its Punch

EXTENSION OF REMARKS
OF
HON. ROBERT A. EVERETT
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 12, 1961

Mr. EVERETT. Mr. Speaker, on numerous occasions we hear the critics of the Corps of Engineers talk long and loud relative to public works projects.

I enclose an editorial from the daily State Gazette, of Dyersburg, Tenn., relative to the wonderful project which the Congress approved and relative to the value and benefit of the Dyer County levee.

It is such a fine editorial I wanted to place it in the RECORD so others may have a change to read it.

The article follows:

REDUCING ITS PUNCH

In the first sizable test since its construction, Dyer Countians in the Mississippi River bottom area have learned the value of the levee.

During the recent rise the county had considerable floodwaters, but nothing compared to that which visited on the rich farming western section of the county of many years ago.

Stages reached on the U.S. Weather Bureau gage at Cairo several days ago would have meant many thousands of acres of land underwater and hundreds of residents of the flooded area evacuated in bygone days.

Most persons refer only to the disastrous 1937 flood in this area, but there have been many floods in Dyer County in other years when the crest at Cairo was considerably below that of 1937.

In the latter part of the 1920's long before the historical flood of 1937 and at other times prior to the "big flood," waters repeatedly covered the river bottom area in both early spring and June floods.

It was not unusual then for sizable boats to dock at Big Boy Junction, just beyond Finley, and for all routes to the Mississippi River to be closed. Apparently the levee has made such instances events which belong to the past.

Every sizable rise in the Mississippi at Cairo, with the water subsequently to pass this way, no longer means the inundation of thousands of acres of land and the evacuation of residents to be looked after by the Red Cross and other local agencies.

Even at Cairo the level of Mississippi River rises can be controlled to a great extent by dams on the tributaries which feed it. The Cumberland empties into the Tennessee, the Tennessee into the Ohio and the Ohio disgorges its floodwaters into the Mississippi at Cairo.

However, during high water situations these waters destined for the Mississippi eventually the gulf, passing along the Dyer County reach, controls by dams, straightening of channels of tributaries and levees have resulted in harnessing of the waters to an appreciable extent and floods which once had to be contended with no longer pack the destructive punch they once did.

Protest Against Certain Tax Increases

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Friday, April 14, 1961

Mr. CARLSON. Mr. President, the Kansas Turnpike Authority is an agency created by the Legislature of Kansas to construct and finance a turnpike consisting of 236 miles of highway. The Federal Government has designated a large portion of this highway as a part of our Interstate Federal System and its operation is dependent on revenues received from traffic. It is important that no action be taken by the Congress that will reduce travel or revenues received therefrom.

The Kansas Turnpike Authority adopted a resolution opposed to increased taxes that might reduce travel.

I ask unanimous consent that the resolution be printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION, KANSAS TURNPIKE AUTHORITY

Whereas the Kansas Turnpike Authority is an agency created by the Legislature of the State of Kansas, and

Whereas said authority, pursuant to legislative authorization has constructed a turnpike extending 236 miles through the State of Kansas, and is now operating same, and

Whereas the construction of said turnpike was financed through the issuance of revenue bonds, the interest and principal to be paid from tolls received from operation of said turnpike, and

Whereas there is now issued an outstanding $155,968,000 of revenue bonds issued for the construction of said turnpike, and

Whereas a substantial portion of the revenues received from the operation of the turnpike must come from commercial traffic including the operation of trucks, buses, and other similar transportation agencies: Now, therefore, be it

Resolved by the Kansas Turnpike Authority, duly assembled in its regular meeting on the 27th day of March 1961, That said authority go on record as protesting any tax increases recommended to Congress to be imposed on diesel fuel, heavy trucks, tires, innertubes and tread rubber; be it further

Resolved, That the Kansas Turnpike Authority states that such increased taxes would materially reduce commercial traffic upon the Kansas Turnpike and any reduction in revenues would prejudice the interests of the revenue bondholders and the payment of interest and principal on said bond; be it further

Resolved, That the Kansas Turnpike Authority does hereby direct that a copy of this resolution be furnished to the appropriate congressional committees and does further direct that State Senator Donald S. Hults and the authority general manager, John Kirchner, appear in person before such committees to oppose such increase in taxation.

Approved this 27th day of March 1961.

KANSAS TURNPIKE AUTHORITY.

The Fabulous Miracle Mile: Los Angeles, Calif.

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 13, 1961

Mr. McDONOUGH. Mr. Speaker, in Los Angeles, Calif., there is a fabulous section known as the Miracle Mile. Thirty years ago Wilshire Boulevard along which the Miracle Mile was built was a narrow dirt road surrounded by open fields. Today this 1-mile area on Wilshire Boulevard is known throughout the world as a business and shopping center second to none. It is surrounded by the largest buying power on the west coast with 70,000 people within walking distance alone. And annual retail sales in this Fifth Avenue of the West exceed $239 million annually.

The fantastic development of the Miracle Mile in the short period of its history matches the unbelievable growth and expansion of Los Angeles itself.

The phenomenal development and expansion of the Miracle Mile and Wilshire Boulevard can be illustrated from a personal experience I had many years ago.

I recall on a beautiful sunny Sunday afternoon, Mrs. McDonough and I were driving out Wilshire Boulevard till we came to that part of the boulevard that had not yet been paved. It was just a narrow dirt road, and I stopped at a small lean-to real estate office to inquire about the cost of a lot fronting on Wilshire Boulevard. This was in the area of the Miracle Mile and the real estate agent showed me a lot with 100-foot front on Wilshire Boulevard priced at $1,750. If I had bought it, that lot would be worth more than $300,000 today.

There is perhaps no place in the world where the most unexpected and unanticipated things have occurred which have increased land values and made successful many business ventures that otherwise appeared to be total losses than in southern California.

There is no place in the world today where more people are trying to get to than Los Angeles, Calif. At the rate of 250,000 each year, people from all over the world are pouring into Los Angeles—uprooting themselves from old home surroundings to find a new way of life in a vibrant new community throbbing with industry and enthusiasm. New homes, new jobs, new recreation, and greater hope in the future.

Los Angeles is very conscious of its responsibilities to all these new residents and is providing all the necessary requirements to make life and living more pleasant and abundant for them. Yes, the thing about Los Angeles is that Los Angeles knows what it is about.

In his book "Fabulous Boulevard," Ralph Hancock describes the phenomenal development of Wilshire Boulevard and the Miracle Mile as follows:

Thirty years ago Wilshire Boulevard west of La Brea was a meandering dirt road flanked by barbed wire and barley fields. La Brea Avenue crossing at right angles was another dirt road, little more than a service road for the oil wells in the neighborhood. One could have bought either corner at this intersection for the price of an automobile today. The vast barren acreage of the Hancock ranch, the last of the old Rancho La Brea, spread north of Wilshire to the hills. The land lying to the south of the future boulevard was part of two old ranchos, Rodeo de las Aguas and Las Cienegas. There was not a residence or a building, except for an occasional ramshackle farmhouse, within a mile and the principal structure on Wilshire was a billboard with this advertisement on it: "Wilshire Boulevard Center—A. W. Ross, Development."

Today this same section of Wilshire is the busiest portion of the boulevard and known from coast to coast as the Miracle Mile.

Destiny—has picked Los Angeles to do a gargantuan job. Whether one ponders over the memories of the past or marvels at the wonders of the present, here, one realizes, moves the course of empire, its cross section a boulevard, its climax 1 mile in with a man-made miracle has occurred.

A. W. Ross was the original developer of the area known as the Miracle Mile, and originally sold the land in this area to investors as commercial property. In the late twenties, the campaign began to bring big merchants to the Miracle Mile, and soon leading merchants from downtown Los Angeles opened branch stores beginning with Desmond's, Silverwood's, and others which now include Phelphs-Terkel, Mullen & Bluett, the May Co., and Coulters, the oldest department store in Los Angeles.

The Miracle Mile expanded rapidly, and to again quote from Mr. Hancock's vivid account:

In 1948 came Ohrbach's, the Prudential Insurance Co., Carnation Milk, and others to build still larger buildings. The Prudential-Ohrbach building is one of the most extraordinary structures.

Today both sides of Wilshire Boulevard, from La Brea to Fairfax, a measured mile, are nearly solid with substantial brick, stone, and stucco buildings tenanted by modern shops, stores, and markets. Among the tenants and owners are practically all the national chains, marketing consumer goods—drugs, foods, variety items, women's wear, men's furnishings, shoes, specialties—as well as some of Los Angeles' largest department stores, Coulter's May Co., Ohrbach's.

This, then, is the Miracle Mile of Wilshire Boulevard, a section of the boulevard that is 6 miles west of the older downtown district and extending from La Brea to Fairfax Avenue. It was here that the decentralization of business started in Los Angeles. It is the geographical center of the purchasing power of Los Angeles; most of the oldest and best established stores in Los Angeles have chosen it, and the two largest financial institutions in the world have selected it also, the Metropolitan Life Insurance Co. for its Parklabrea housing development and the Prudential Insurance Co. of America for its western home office. Thirty years ago it was a barren field. Twenty years ago the first big stores opened and the mile began to take on the air of a busy community. They call it the miracle of the Miracle Mile.

On March 23, the Miracle Mile became the site of a new landmark in the history of the progress of Los Angeles when the new Lee Tower Skyscraper, the tallest commercial building in Los Angeles and the city's first 22-story office building, was dedicated and formally opened.

I had the pleasure of attending the formal opening of the Lee Tower as principal speaker at this important event which was attended by most of the outstanding businessmen and community leaders in the southern California area.

The Lee Tower is an ultra-modern, blue-colored skyscraper of steel, concrete and glass with a helistop on the roof, a sky-view restaurant on the 22d floor, a rooftop recreation area for employees, and the most modern design throughout. It has been designated as the West's most outstanding commercial building, and was designed and built by the owners, W. Douglas Lee and D. Everett Lee.

This is the beginning of the skyscraper era in Los Angeles, and the Lee Tower is but the forerunner of many as Los Angeles grows toward the sky. Unlike New York, the skyscrapers of Los Angeles will not form dark canyons of stone and steel, but will be carefully planned and spaced so that the natural beauty of the city will be enhanced.

The fabulous development of the Miracle Mile is but a reflection of the fabulous and fantastic growth of Los Angeles itself. In Los Angeles we have passed through the cycles of primitive agriculture to the highest type of food production, the whole cycle of the motion picture production era to TV production, from the early exploration and production of petroleum to the highest type of gasoline refining, from modest production of metals to the massive production of iron, steel, and aluminum, from some of the early experiments in aircraft to the Nation's center of supersonic—B–70 and X–15—aircraft, and beyond this to the production of missiles and rockets including the F–1 million and a half pound thrust single rocket engine. Most of this has occurred and been accomplished within the past 40 years.

Los Angeles is a city of the future with its past only a brief preview of its future. No prediction for the future growth of Los Angeles can be too fantastic, no prophecy too difficult to fulfill. This city set like a jewel against a backdrop of lofty mountains with the blue waters of the Pacific as its western boundary will fulfill its destiny as one of the world's most important and enchanting cities.

There is nothing new to the new frontier. Los Angeles has been the new frontier of the Nation for the past 50 years.

The Eavesdropping and Wiretapping Problem Demands Attention

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Friday, April 14, 1961

Mr. KEATING. Mr. President, New York State has led the Nation in its treatment of the ever-growing problem of electronic eavesdropping. Much of the progress which has been made in my State in dealing with this subject is the result of the work of the New York States Joint Legislative Committee on Privacy of Communications under the chairmanship of Assemblyman Anthony P. Savarese, Jr.

In a recent report this committee has again emphasized the importance of Federal legislation in the field of eavesdropping and wiretapping. The report contains an excellent analysis of the legal problems involved in this field and makes it clear that only Congress can remedy the present confused and illogical situation.

I was delighted to learn yesterday that the Subcommittee on Constitutional Rights of the Senate Committee on the Judiciary is to hold hearings on the subject of eavesdropping and wiretapping during the month of May. I know that when the conditions which now exist are thoroughly studied, there will be widespread agreement as to the necessity for prompt congressional action. At the present time literally hundreds of cases are in limbo as a result of the uncertain status of the law on wiretapping.

In anticipation of the hearings by the Subcommittee on Constitutional Rights, I believe it would be helpful to all Members of the Senate to have available the analysis of the New York State Joint Legislative Committee on the eavesdropping and wiretapping problem. I therefore ask unanimous consent that the relevant portion of the joint legislative committee's report be printed in the Appendix of the RECORD.

There being no objection, the analysis was ordered to be printed in the RECORD, as follows:

PART I: EAVESDROPPING-WIRETAPPING

Many criminal offenders have gone unprosecuted in New York State as a result of the Federal determination that it is a crime to present wiretap evidence, as authorized by New York law. We cannot now determine how many, but the number is substantial.

In our 1960 report we noted that two major cases had come before the U.S. circuit court of appeals, in which the defendants sought injunctions against the admission of wiretap evidence obtained under authority of New York law. The injunctions were denied; but this decision was accompanied by

stern dicta. Circuit Judge Sterry R. Waterman said it would be "presumptuous to assume that any New York trial judge will acquiesce to the commission of a crime against the United States in his presence in his courtroom by a witness testifying under oath;" but he admonished the U.S. attorneys of New York that it would be "a most extraordinary affront to this court" if such a crime were committed and remained unprosecuted.

Consequently, the Nassau County court—reversing the standard New York practice—refused to receive wiretap testimony and directed acquittal, for lack of evidence, in the pending trial of John O'Rourke, vice president of the International Brotherhood of Teamsters, that union's most powerful leader in the East. This was a major racket prosecution. O'Rourke, with 14 others, was accused of using a fake union local to extort money from jukebox operators. He went free, but though much of the case was wrecked, five defendants were convicted and given substantial sentences.

The other wiretapping case before the circuit court was also unusual. Burton N. Pugach, a Bronx attorney, was accused of having conspired with three others to throw acid upon a young woman who had rejected him as a suitor. She was partially blinded and severely scarred. When arrested, Pugach was found in possession of an unauthorized gun. After successfully contesting a finding that he was insane, Pugach was tried for the gun offense and sent to jail for a year. While he was in custody, his attorney carried his wiretapping plea to the Supreme Court.

The Pugach plea was based on the finding of the Supreme Court, in the 1957 Benanti case, that New York's law enforcement wiretapping was in violation of Federal law. Pugach asked the Federal courts to forbid introduction of wiretap evidence against him, since it would cause him irreparable injury. Though he was granted a stay, his petition was denied.

The 7 to 2 majority opinion of the Supreme Court, rendered on February 27, 1961, was a single sentence affirming the decision of the courts below, and citing two cases of a decade ago. One, *Stefanelli* v. *Menard*, refused to enjoin the introduction of illegally obtained evidence because such interference with State trial procedures would result in "insupportable disruption." In the second case, *Schwartz* v. *Texas*, the Supreme Court had refused to reverse a conviction based on wiretapping evidence, since Texas then operated under the common law rule that competent evidence was admissible, even though illegally obtained. (It is under this doctrine that many New York convictions, based on wiretapping evidence, have been sustained.)

In a minority opinion Justice William O. Douglas, with the concurrence of Chief Justice Earl Warren, said the court should now overrule the Schwartz case and construe the Federal law against wiretapping evidence (sec. 605 of the Federal Communications Act) to bar use of wiretap evidence in State trials. He maintained it was illogical to permit such use when the disclosure of wiretapping had been construed as a crime. He cited a book which told of widespread police wiretapping in New York and criticized what he called "an avid taste for violating the law" on the part of New York police.

While voting with the majority to refuse the pretrial injunction sought by Pugach, Justice William J. Brennan, Jr., objected to the citation of the Schwartz case, indicating that he too was ready to overrule this doctrine, upon which rests much of the independence of our State judiciary. This disposition of three Supreme Court Justices makes very clear the pertinence of this committee's study of evidence rules, to be discussed in part I–A of this report.

"Wiretaps for State Trials Upheld by Supreme Court" was the newspaper headline on the Pugach decision, but it is apparent that this was oversimplification. Actually the decision did nothing to soften the spot on which Judge Waterman's dictum placed New York's judges and prosecutors. Of course, we cannot predict exactly what will happen at Pugach's imminent trial.

The bad situation as to New York wiretapping procedure, to which the foregoing litigation is incident, is something which can be really remedied only by action in the Congress, as this committee has emphasized before. Concerned as we have been, in this committee and this legislature, with protection of privacy and civil rights, we have always supported strongly the detection of crime through eavesdropping methods under proper regulation of the courts. We do not consider it necessary at this time to detail again our strong criticism of the vague inadequacy of the 31-word clause in the Federal Communications Act, which is the sole basis for the Federal court decisions. But we do reiterate our plea to Congress for definitive action.

Senator KENNETH B. KEATING of New York and our district attorneys have properly taken the leadership in seeking action in Congress. The State commission of investigation and this committee have emphasized the need.

Senator KEATING's bill was reported by the Senate Judiciary Committee in 1960, but died on the calendar. During the election year it was clearly impossible to obtain legislation, but it is not too much to hope that the new Congress will eventually take cognizance of New York's law enforcement plight. The new Attorney General's record is not one of hostility to wiretapping as carried on in New York under court authority. The contrary is true. We may hope that he will be more influential with Congress than previous Attorneys General have been.

We understand that Senator KEATING has become a member of the Senate Judiciary Subcommittee on Constitutional Rights and is pressing for action there on the Celler-Keating bill, which would validate New York procedure. This subcommittee, plagued by the incapacitating illness and death of previous chairmen, is now headed by Senator SAM J. ERVIN, JR., of North Carolina, and he has promised to give attention to this subject. This legislative committee can only hope for action, and stand ready to give its utmost support, as occasion may arise.

Because of this committee's continued concern with electronic eavesdropping, other than wiretapping, and our legislation requiring court orders for the law enforcement use of secret microphones, we note with interest another U.S. Supreme Court decision, rendered March 6, 1961, in the case of *Silverman* v. *U.S.*

In this the Court unanimously reversed a gambling conviction which had been obtained through an ingenious electronic eavesdropping device. District of Columbia police had inserted a metal spike into the wall of a row house used as a betting office; the spike made contact with a heating duct, which in effect became a huge microphone. The Court held that this physical intrusion, without a warrant, constituted a violation of the fourth amendment's guarantee against unreasonable search and seizure.

The Court had been asked to reconsider the entire subject of the constitutionality of electronic eavesdropping, but found it unnecessary to weigh such "large questions" now. Nor did it modify the Goldman decision of 1942, which held that it was not a violation of the fourth amendment to put a microphone against the wall of a house. The lower courts held that the intrusion of the spike, by perhaps five-sixteenths of an inch, was too trifling to establish a difference from the Goldman case.. The Supreme Court disagreed.

Justice Potter Stewart, for the unanimous Court, said that in previous cases "eavesdropping had not been accomplished by means of an unauthorized physical encroachment" but in this case the police had usurped part of the house, the heating system.

"This court has never held that a Federal officer may without warrant and without consent physically entrench into a man's office or home, there secretly observe or listen, and relate at the man's subsequent criminal trial what was seen and heard," wrote Justice Stewart.

"We find no occasion to reexamine Goldman here," he added, "but we decline to go beyond it, by even a fraction of an inch."

This decision may be of great importance in the piecemeal, inch-by-inch definition of our civil liberties which is gradually accomplished by judicial review.

The broad questions here involved have been given the utmost consideration by this committee and the legislature, in the passage of our New York laws prohibiting private eavesdropping and requiring a court order (i.e. warrant) for police use of electronic eavesdropping. This case gives new emphasis to our previous assertions that Congress, in this entire area, has abdicated its power and abandoned its duties to the courts.

New York State has pioneered in protecting its people from eavesdropping, whether by wiretap or secret microphone, and the Silverman case serves to emphasize that Congress has neglected its duty in this area. Comprehensive Federal legislation is much needed as to all electronic eavesdropping. This cannot be adequately dealt with by fraction-of-an-inch Supreme Court decisions.

Providing Home Loans for Veterans in Housing Credit Shortage Areas

SPEECH
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 13, 1961

Mr. SMITH of California. Mr. Speaker, I yield 5 minutes to the gentleman from Pennsylvania [Mr. SAYLOR].

(Mr. SAYLOR asked and was given permission to revise and extend his remarks.)

Mr. SAYLOR. Mr. Speaker, no one has more admiration for the gentleman from Virginia, the chairman of the House Committee on Rules, than I, or for any member of the Committee on Appropriations than I, but I have this admiration for them not because of their committee position but because they are duly elected Members of the House of Representatives of the United States, the greatest deliberative body in the world.

Now you can take the Constitution of the United States and read it from cover to cover and you cannot find anywhere that the Founding Fathers said there should be an Appropriations Committee, as the debate on this rule would lead you to believe here. The Constitution tells how laws should be made and how money should be appropriated. Let us look at what the Constitution says. Article I, section 7, states:

All bills for raising revenue shall originate in the House of Representatives; but the Senate may propose or concur with amendments as on other bills.

That is what the Constitution says. The House shall originate the revenue measures, not any committee of the House.

How about money to be drawn from the Treasury? Section I, article 9 provides:

No money shall be drawn from the Treasury, but in consequence of appropriations made by law.

Note that the appropriations are to be made by law, not by the Appropriations Committee.

Who shall make the laws? Article VI of the Constitution states:

This Constitution, and the laws of the United States which shall be made in pursuance thereof * * * shall be the supreme law of the land.

Every bill that has been referred to by those who talk about back-door spending has been passed by the Congress, the duly elected representatives of the people. A part of that Congress are the members of the House Committee on Appropriations. If they do not like any bill that is being presented it is their prerogative and duty to stand here in the well of the House to oppose it and by their vote show their disapproval.

Congress in its wisdom decided that for good management we should have various committees in the House, but there is no committee of the House that is superior to the Congress itself. When Congress decides that there shall be a call upon the Treasury, that is the supreme law of the land. There is no veto power placed in any committee of the House or Senate. That is what the Founding Fathers said. If we want to change it, it is within our prerogatives, but until that times comes this bill is perfectly legitimate. There is nothing in it that is illegal. There is no back-door spending. It is spending by Congress as authorized by Congress, and should be approved.

The Economics of Hospital Care

EXTENSION OF REMARKS

OF

HON. CLINTON P. ANDERSON

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Friday, April 14, 1961

Mr. ANDERSON. Mr. President, the April edition of the Progressive carries an article by a highly regarded writer on medical problems, Selig Greenberg, of the Providence, R.I., Journal and Evening Bulletin. It is an exceptionally clear presentation of the economics of hospital care. Mr. Greenberg expresses a view with which many of us in Congress have long been in sympathy, which is that what happens in medicine affects each and every American; therefore the business of medicine is the public's business.

I commend this article to everyone interested in a concise analysis of a rather complex problem, and ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CRISIS IN THE HOSPITALS

(By Selig Greenberg)

The Nation's hospitals—the outposts of our phenomenal medical progress—are now confronted with a profound crisis, at the very time they are advancing toward ever greater miracles of healing and lifesaving. Soaring hospital costs and hospitalization insurance rates have brought a rising tide of public concern, expressed in demands for greater efficiency in hospital operation, and for reforms in the prevailing patterns of health insurance. Across the country labor unions, business firms, citizens' groups, and public officials are calling for controls on skyrocketing costs, curbs on services which are either wholly unnecessary or could be furnished less expensively, and a more rational and coherent system that will get the most out of the medical care dollar. Increasingly, warnings are heard from responsible sources that the squeeze of spiraling costs may price voluntary insurance out of the market and force full Government control of our whole complex of health services.

There is probably no more explosive issue in the entire controversial field of medical economics than that of hospital costs. For it is here, more than in any other area of medical care, that the problems of the technological revolution in medicine are rapidly coming to a head.

Hospital services now not only account for the largest single portion of the Nation's health care bill, but they are at the heart of our system of medical practice. As medicine grows more intricate and its tools more elaborate, the trend inevitably is toward increasing concentration of medical services within the hospital. And it is the very triumphs of medicine which are catapulting costs. Nowhere is this more evident than in the hospitals, which have become a large-scale and complex business requiring the coordination of a great array of professional skills and huge capital investment in expensive facilities and equipment.

Basically, the crisis of hospital function and financing stems from the fact that we are both the beneficiaries and the victims of the remarkable progress of medicine which has brought us better health and longer life but also has enormously complicated the rendering of medical services and raised their costs. The resolution in medicine is far from over, and hospitals have yet to fulfill their growing potential. Further scientific advances will unavoidably mean still costlier diagnostic and treatment procedures, more elaborate, and expensive equipment, and an even greater need for technical personnel. A continued rise in hospital costs thus appears inescapable. So it is all the more vital to eliminate the waste, duplication, and lack of integrated planning now common in the hospital field. If there are ways of operating hospitals more efficiently and economically—as many authorities believe there are—the public certainly has the right to insist on getting full value at the lowest possible price consistent with high quality.

Good hospital care clearly cannot be produced cheaply. But if costs are to be kept within acceptable bounds and quality improved, we will need a much higher degree of self-discipline by the medical profession and a far greater readiness on the part of hospitals to yield some of the privileges of their cherished autonomy than have so far been evident. It is no exaggeration to say that the future of the organization of medical care and practice in the United States depends on the extent to which the doctors and the hospitals can be prevailed upon to recognize that their business is the public's business.

The statistics of rising hospital costs and utilization are instructive and sobering.

For a number of years, hospital room charges have been advancing at a much faster rate than any other item in the United States Department of Labor's consumer price index. The overall index, which is pegged at 100 for the 1947–49 period, had risen to 124.6 by the end of 1959. At that time the index for all medical care services put together stood at 150.8. But for hospital room rates it was 208.9.

In 1946, the average cost per patient-day in voluntary hospitals was $9.39. By 1959, it had jumped to $30.19, an increase of more than 220 percent. Nor is the end of the spiral anywhere in sight. Experts are generally agreed that hospital costs will continue to rise at the rate of 5 to 10 percent a year. A spokesman for the American Hospital Association has predicted that the average cost per patient-day may reach $50 by 1968.

Of equal importance in contributing to the steady climb of the Nation's hospital bill is the striking increase in the rate of hospitalization. Thirty years ago, 37 out of every 1,000 Americans were admitted to general hospitals in the course of a year. Since then the ratio of hospital admissions has zoomed to 124. A variety of factors has figured in this upward trend. For one thing, hospitals can do much more for the sick than they could two or three decades ago. Widespread insurance coverage has removed much of the economic deterrent to hospital care for those in the middle- and low-income groups. In the Nation's population there has been a steady increase in the numbers and in the proportion of older people, who have a higher incidence of chronic diseases requiring more frequent hospitalization. Many conditions of modern city living make for significantly higher hospital use than in rural areas. The large proportion of working wives means that often there is no one at home to take care of a sick husband or child. The high price of household or nursing help to care for the sick at home and the limited size of city apartments also force up the hospitalization rate.

The net effect of higher costs of hospital care and its much greater frequency has been a tripling of expenditures for hospital services in the United States in the past 15 years. Out of a total private medical care outlay of $18.3 billion in 1959, payments to hospitals were $5.5 billion, the biggest single share, and $500 million more than the amount paid to physicians. The latest available breakdown shows that 30 cents out of every medical care dollar now goes to hospitals, 27 cents to doctors, 26 cents for drugs and appliances, 11 cents to dentists, and the remaining 6 cents for other professional services.

There are many sound reasons for the continued rise in hospital operating costs. A U.S. Public Health Service official has summed them up with the cogent observation that "when we talk about the cost of medical care today as compared to the past, we're talking about the price of an electric washer-dryer compared to a washtub."

There is no ready solution for the costliness of new and more effective medical procedures, more elaborate surgery, and more potent drugs. Such dramatic advances as open-heart surgery, artificial kidneys, heart pacemaker units, cobalt radiation treatment, and radioisotopes to pinpoint internal abnormalities are restoring patients to health sooner and more completely, and, frequently,

are saving lives which otherwise would be lost. But some of these miraculous procedures are enormously expensive, requiring dozens of physicians and technicians for a single patient.

As productivity has gone up, industry has been able to shorten its work week. But hospitals cannot shorten their week. They must remain open 168 hours a week, 52 weeks a year. To keep pace with the standard 40-hour week in the community, hospitals have been forced to hire many new employees to fill each around-the-clock job. They also have been obliged to bring their lagging wage scales closer to those of private industry. While raising its wage level, industry has often managed to cut its labor costs through automation. But hospitals cannot substitute machines for people. On the contrary, as available life-saving services proliferate and newly developed equipment is constantly added, more rather than fewer people are required to operate them. In 1946 voluntary hospitals in the United States had, on the average, 156 employees for every 100 patients. By now the ratio of employees for each 100 patients has risen to 225. Whereas in the automobile industry wages currently account for only about one-third of production costs, payroll expenditures have shot up to 70 percent of hospital budgets.

New medical sophistication has made hospital care an accepted component of the average American's standard of living. The public learns quickly these days of new medical discoveries through the press, radio, and television. The more people learn about medical progress, the more they are likely to go to the hospital, where the latest advances can be most effectively applied. The rising standard of living also has brought a demand for more attractive hospital facilities. Hospitals are expected to match the comforts of motels by way of air conditioning, piped-in radio, perhaps television, and certainly window draperies. The new standards also call for a telephone at the bedside and some choice of menu. While the effect of these niceties on the patient's recovery is debatable, their effect on the hospital's unit costs is obvious.

Another element in the picture has been the sharp increase in new hospital construction throughout the country. This expansion has been, in general, a laudable development. Antiquated buildings have in many places been replaced, and additional bed space has been provided to keep pace with the forward march of medical science. But we have lagged in developing more economical facilities such as hospital outpatient clinics and adequate nursing and convalescent homes for chronic patients. Concentration upon the expansion of costly hospital bed capacity designed primarily for the acutely ill is wasteful. Competent opinion is that the more hospital beds are available, the greater is the tendency toward admissions for relatively trivial ailments and for longer-than-necessary stays, particularly when such abuse is encouraged by the benefit structure of hospitalization insurance.

The fact that patients now go home much sooner than they used to—the average length of hospital stay has been cut in the past 30 years from 15.3 to 7.8 days—is in itself far from an unmixed blessing.

The shorter stay means that more intensive treatment is concentrated within a shorter period of time, so that daily costs are higher. An additional cost factor in more rapid patient turnover is that chances are greater there will be vacant beds which have to be staffed but produce no income. One of the paradoxes of the hospital cost problem is that it is the result of both overuse and insufficient use of facilities. On the one hand, hospital beds are sometimes used needlessly for patients who could just as well be taken care of elsewhere at much lower cost. On the other hand, hospital facilities are not utilized as efficiently as they should be, with the result that about one bed out of four is usually empty, and in some institutions the average occupancy rate is even lower. Lower occupancy means a correspondingly heavier proportion of overhead in daily per-patient costs.

Much wider use of hospital services and their greater costliness have been reflected, inevitably, in steadily climbing hospitalization insurance rates. As Blue Cross and other plans throughout the country have repeatedly been forced to seek premium hikes, growing attention has been focused on the urgent need for eliminating hospital inefficiencies and needless use of expensive facilities. An important point to bear in mind is that hospital costs are no longer solely the concern of patients and their families. With the phenomenal spread of health insurance, which now covers more than two out of every three Americans, the hospital bill is being underwritten by the healthy as well as the sick. This means that the public is more and more looking upon hospital costs not only in terms of charges for services rendered but also in terms of the monthly cost of insurance.

Rate hearings before State insurance commissioners have increasingly provided a platform for the critics of hospital efficiency and of the effect which the present health insurance system has upon it.

Such hearings in New York, Pennsylvania, and a number of other States have produced charges that the prevailing insurance approach lays too much emphasis on hospitalization, ignoring possibilities for more economical treatment of many conditions in the doctor's office or in outpatient clinics; that Blue Cross—and Blue Shield, its companion surgical-medical insurance program—have builtin incentives for getting between hospital sheets merely to take advantage of insurance benefits; that hospitals could do considerably more than they have been doing to keep down their operating costs; that because of the general lack of overall community planning and integration in the hospital field there is duplication and overlapping of personnel, equipment, and services; that much of the present organization of hospital services, revolving around the doctor as a private entrepreneur, has become inefficient in the context of the growing complexity of medicine and must be drastically revamped to take advantage of opportunities for greater productivity and lower costs; and that the public is not adequately represented in the management of the voluntary hospitals and the insurance plans.

The adverse effect of health insurance, which now provides the greatest share of hospital income, in relaxing many of the pressures for economy in hospital operations is emphasized in the report of the commission on financing of hospital care. The commission, sponsored by the American Hospital Association and made up of a distinguished group of authorities, concluded after a lengthy study that the emergence of insurance as a major factor in medical economics has to some degree reduced, if not removed, incentives that would otherwise operate to encourage maintenance of hospital operating costs at the lowest level practicable.

The commission's report points out that prior to the extensive use of insurance, when people were required to pay the full bill directly to the hospital, there were natural economic restraints on costs and lower cost institutions providing services of equally good quality enjoyed a competitive advantage in attracting more patients. But with the introduction through insurance of a new element in the relationship between cost and use of services, the report says Blue Cross, as the intermediary between the purchaser of hospital care and the hospital, must inevitably assume some functions previously the direct responsibility of patient or hospital.

One of those holding that genuine economies can be made by hospitals without lessening quality of service, and that Blue Cross should insist on such economies instead of merely acting as a collection agency for the hospitals, is Francis R. Smith, Pennsylvania's dynamic State insurance commissioner.

Smith, who feels that his authority to pass on Blue Cross premium rates goes much further than the checking of actuarial tables and extends to the things which pyramid costs, has for several years been preaching the doctrine that neither the hospitals nor Blue Cross have done all they can and should to control such abuses as unnecessary admissions and excessively protracted stays and to put into effect other efficiency measures. And the commissioner has used his legal powers to enforce his views. In a series of trail-blazing decisions, he has ordered Blue Cross and the hospitals in Philadelphia and other cities to adopt certain economy measures before any further insurance rate boosts would be granted. Among the economy possibilities he has advocated are wider use of opportunities for outpatient diagnosis and treatment, tighter controls on the scheduling of admissions and discharges and on length of stay, better scheduling of medical procedures to avoid needless delays, more effective use of technicians and nurses, sharing of specialized equipment among hospitals, and greater standardization of supplies along with joint purchasing.

Considerable progress has been achieved in Philadelphia, Pittsburgh, and other Pennsylvania communities under Smith's prodding during the past 2 years. Blue Cross plans have developed medical review teams to ferret out abuse of insurance contracts. They have expanded their coverage of diagnostic services and home nursing visits, in order to cut down hospitalization. Hospitals have organized medical utilization committees to check on needless admissions and excessive stays. They also are moving to achieve greater management efficiencies and to coordinate expansion through joint planning.

While hospitals are a big enterprise but not a business in the ordinary sense of that term, Smith said in a recent speech, "This does not mean that hospitals cannot be businesslike. More needs to be done in applying commonsense business practices and methods to hospitals—wherever they will apply."

Birch Society Must Be Exposed

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 12, 1961

Mr. REUSS. Mr. Speaker, in the recent controversy over the John Birch Society those who oppose its noxious doctrines have split into two camps. Those who favor exposing and opposing it vigorously instead of laughing at it have support from the Madison Capital Times. I include in the RECORD their recent editorial on the subject:

SHOULD THE BIRCH CULT BE IGNORED OR EXPOSED?

Attorney General Robert Kennedy recently said of the John Birch Society:

"I don't think anybody should really pay too much attention to them. I think they make no contribution to the fight against communism here in the United States and, in fact, I think if anything they are a hindrance. It seems to me it is an organization in the area of the humorous and I don't think so much attention should be taken."

We can agree that they make no contribution to the fight against communism. But we cannot agree that they should be ignored.

These people need to be exposed because they weaken our democratic fabric when it is in mortal combat with communism and, in that respect, they serve the cause of communism. They breed distrust of democracy.

They have members who are men of great wealth and influence in the country. Three former heads of the National Association of Manufacturers are members. A former head of the Internal Revenue Service is a member. Their governing council includes prominent industrialists across the country.

Their founder, Robert Welch, is a successful businessman, whose public speaking appearances are attracting capacity audiences. The membership of this organization has grown rapidly in the few years of its existence.

Its methods of operation—anonymous telephone calls and mail to public officials—are calculated to frighten timid officeholders with being smeared with the Communist label.

They are masters at exploiting the deep-rooted fear of communism among our people. Fear-ridden people believe a lot of ridiculous things. They might even believe that our last three Presidents were part of the Communist conspiracy, particularly if the charges are ignored. Remember what Hitler said about the "big lie."

There is only one way to deal with people like this—make them prove their charges. McCarthy was finished when he went before the country to try and prove his charges against the Army.

Recent Developments in Antitrust Enforcement

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, April 14, 1961

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of the speech delivered by Lee Loevinger, Assistant Attorney General in charge of the Antitrust Division, U.S. Department of Justice, before the American Bar Association at Washington on April 7, 1961.

I am sure that all Senators will find the speech very informative. Mr. Loevinger is considered to be an outstanding authority in the field of antitrust law.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

RECENT DEVELOPMENTS IN ANTITRUST ENFORCEMENT

(Speech by Lee Loevinger to Antitrust Section, American Bar Association, Washington, D.C., April 7, 1961)

One year ago I appeared before this distinguished and elite group to deliver what was then expected to be a "swan song" with relation to my active antitrust participation. The curious surprises that fate has in store for us and the verity of Bobby Burns' sage observation on the plans of men and the lower animals could not be better illustrated than by the events that have happened to me since then. Indeed, the circumstances that have thus drastically affected my own life may well be relevant to the assigned topic of this speech which is "Recent Developments in Antitrust Enforcement."

The conventional approach to this topic is to review carefully and in detail the decisions of appellate courts that have been rendered since the last such discussion. This seems unnecessary on this occasion. All of you follow the development of antitrust law in the courts; and it would be futile and foolish to attempt to improve upon either the reporting service of Law Week, C.C.H., and the advance sheets, or the analyses and discussion available to you both in publications and in your own offices. It may be more relevant and important to indicate what I consider to be the most important development in antitrust, as in other law enforcement, during the past year.

The most important development in the enforcement of the antitrust laws since your last meeting has undoubtedly been the election of John F. Kennedy as President of the United States. This has resulted in the infusion of a new spirit of energy and dedication throughout the public service. Beyond this that historic event has brought to the highest levels of Government administration and law enforcement a new understanding and a firmer faith in the principles upon which antitrust is founded than there has previously been for many years.

This may most usefully be illustrated for you by suggesting some of my own views. Perhaps these may also serve to lay at rest a few ancient shibboleths of the antitrust bar. The first is the notion that violation of the antitrust laws, whether intentional or not, is merely a normal business risk and really quite respectable. This is related to the feeling that has heretofore been tacit but pervasive that it is inappropriate to have criminal sanctions in the antitrust laws, and that, in any event, these were to be applied only to corporations and not to individuals. In this view even deliberate violations of the antitrust laws were, at worst, venial offenses of no more moral significance than a parking ticket.

It may be hoped that the Philadelphia electric cases, for which the preceding administration of the Antitrust Division is to be given all due credit, have helped to dispel this misapprehension. In any event, it should now be clear that a deliberate or conscious violation of the antitrust laws is not a mere personal pecadillo or economic eccentricity, but a serious offense against society which is as immoral as any other act that injures many in order to profit a few. Conspiracy to violate the antitrust laws is economic racketeering which gains no respectability by virtue of the fact that the loot is secured by stealth rather than by force. Those who are apprehended in such acts are, and will be treated as, criminals and will personally be subjected to as severe a punishment as we can persuade the courts to impose.

In the second place, the Antitrust Division is not receptive to pleas for exceptions, exemptions or special treatment of any company or industry. We have been told frequently and are quite well aware that every industry and situation is unique, that every company is most exceptional and that every case is quite extraordinary. We are also well aware that Congress and the courts have repeatedly and emphatically declared that competition, rather than collusion or monopoly, shall be the basic rule of commerce. This rule springs from the conviction that competition is the counterpart and corollary of economic freedom, and that a free economy is necessarily a competitive economy. Therefore, in general we will oppose exceptions to or exemptions from the antitrust laws, sought by way of departmental policy or judicial rulings. When asked for comment on a legislative proposal for antitrust exemption, we will take a long, hard look. With exceptions already covered by existing laws, we have seen no persuasive case for compromising any antitrust principles in special cases.

That the necessity for complying with high standards of business conduct required by the moral principles inherent in our legal codes may sometimes cause concern to businessmen and lawyers is inevitable. This is not a difficulty unique to the antitrust laws. The temptation to get rich quickly by dishonest means abounds in private life. Some succumb, but we do not listen sympathetically to the plea that theft or embezzlement, for example, should be legalized because it is no difficult to acquire wealth by other means. While the antitrust laws are, in some respects, complex, they are also flexible and reasonable. The burden of proof resting on those who seek exceptions or exemptions is not borne by the showing that it is more profitable or convenient to have no such inhibiting standards of conduct.

In the third place, the argument that the laws are basically sound but that they must be made more acceptable to business by modifications to make them both more flexible and more certain is either disingenuous sophistry or compounded confusion. To seek both flexibility and certainty in the same laws is a logical contradiction. It is equivalent to a demand that we simultaneously institute both higher and lower prices for a commodity. It is easy enough to write laws that are certain in their operation. In the antitrust field, the per se violations are examples of rules that provide certainty. These could well be extended by either judicial or legislative adoption of more per se rules. Conversely, it is easy enough to write principles that are flexible. In the antitrust field the rule of reason is an example. But it should be clear to any reasonable man that a rule which is certain is, by virtue of that very fact, not flexible. A rule which is flexible cannot be certain in prospective application.

As applied to the interpretation of law, the demand for certainty and flexibility involves polar concepts which must be reconciled and compromised. The difficult task is to write a law which provides a reasonable certainty and a reasonable flexibility respecting a single subject matter. No doubt judgments may differ as to the precise balance between flexibility and certainty that is desirable in a given instance. There is no objective or absolute standard that can provide a clear determination of the proper balance between these competing considerations. However, it is futile and logically absurd to demand more of both flexibility and certainty from the same law at the same time.

The antitrust laws combine both flexibility and certainty to a degree that has been thought appropriate to their subject matter by several generations of legislators and judges. Perhaps they are imperfect; true perfection is probably beyond human attainment. Improvement may be possible; but it is possible only when the demand is for consistent objectives.

In the fourth place, aside from the inevitable compromise between flexibility and certainty, the antitrust laws themselves appear to me to embody a consistent conception and system. The argument is sometimes made that while the basic mandate of the antitrust laws is for competition, other parts of the laws, such as those against price discrimination, inhibit competition.

However, there is no inherent inconsistency between demanding competition and prescribing the rules by which it may be conducted. It is true that some antitrust laws forbid the use of certain competitive weapons and techniques. This does not, however, indicate that these laws require what their detractors derisively call "soft competition," or, indeed, that they are in any degree anticompetitive. There is no sport or contest conducted in civilized society without its rules. These rules invariably permit certain forms of rivalry and prohibit certain other types of action as means of winning the sport, game, or contest. Of course, there are always those who decry any limitation on the mayhem or bloodshed that is permitted by the prevailing rules of organized sport. The Marquis of Queensbury rules, I am informed, were once regarded as wholly destroying the noble sport of manly combat in the ring. There will always be those who proclaim that any new rule takes all the fun and most of the competition out of a game. However, civilized society lives by its laws, and competition within civilized society is always inhibited by authoritative standards of acceptable social behavior. Were it otherwise, we would not have civilization but anarchy, and life would be quite intolerable.

There may well be reasonable debate as to whether or not a particular rule is desirable in organized sports, other games or contests, or in application to the economy by the antitrust laws. However, such an issue cannot be determined by the dogmatic assertion that all regulatory rules are inconsistent with the basic principle of competition. It is not necessary to hit below the belt in order to fight as hard as you can. The rules that prescribe the mode and weapons of competition are not anticompetitive, but, on the contrary, are quite consistent with free and vigorous competition in a civilized society.

Finally, let me express my profound conviction that competition is neither incompatible with nor a limitation upon efficiency. Indeed, competition is likely to be the stimulus which engenders efficiency. It is significant that the greatest industrial and economic development has taken place in those countries which have had the greatest degree of economic freedom and competition. Although there is not the time to offer the evidence now, I believe that an analysis of history suggests that the antitrust laws have not only permitted but have substantially contributed to the tremendous economic and polititcal development of the United States. However, we must now bear in mind that the future is not foreordained; and that it will be determined not by our past history but by our present character and future conduct.

The great issue of this age is whether this Nation, or any nation, can achieve full economic development, the satisfaction of all material needs, and the provision of adequate economic opportunities for all, together with political and civil liberty. We believe that these goals are compatible, and that the method by which they will be achieved is by observance of the principles embodied in the antitrust laws. The diffusion of economic power and the freedom which engenders competition are expressions in the economic realm of the basic faith of our culture that the individual human spirit represents the highest social value. Thus, we in the Antitrust Division are and will be dedicated to the faith that liberty, equality, and prosperity are consistent social objectives. We are and will be devoted to the effort to achieve these goals by a vigorous and uncompromising enforcement of the laws prescribing competition as our basic economic condition that we may protect and preserve economic freedom in this country.

Hospital Ship "Hope"

EXTENSION OF REMARKS
OF

HON. WILLIAM B. WIDNALL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 13, 1961

Mr. WIDNALL. Mr. Speaker, a privately sponsored humanitarian effort of the American people that has had altogether too little publicity in relation to its accomplishments is Project Hope.

Hope means Health Opportunity for People Everywhere. Its chief instrument is a floating medical training center, the SS *Hope I*, a 15,000-ton vessel owned and loaned by the U.S. Government. Primarily a teaching program, Project Hope combines both instruction and treatment in countries visited by SS *Hope I*.

Project Hope as a mercy mission is not a governmental operation. In fact, the Government does nothing more than lend the ship. It is a free expression of a free people. It should be encouraged, and, since it is financed by contributions from private individuals and groups, it deserves general public support.

An article on this subject by Charles J. Munzinger appeared on April 6 in the Oakland Bulletin, the Pompton Bulletin, the Riverdale Bulletin, and the Lincoln Park Herald.

The story of Project Hope follows:

HOSPITAL SHIP "HOPE"

(By Charles J. Munzinger)

The following is a brief background on Project Hope.

This is a privately sponsored program of help and relief to share our country's modern medical knowledge and skills with all those in need thruout the world. It is a floating medical training center for Southeast Asia, and is on loan from the U.S. Government.

Project Hope has the most modern medical equipment and supplies, together with training aids. This ship, formerly the SS *Consolation*, is a 15,00-ton vessel, with 230 beds, constructed during World War II.

The permanent medical staff on this vessel includes 15 physicians, two dentists, 25 nurses, and 30 auxilitary personnel. Volunteer teams of up to 35 physicians will be flown to the ship on a rotating basis for tours of 4 months. The medical staff includes top specialists in the key fields of medicine.

Hope is essentially a teaching program, although necessarily there will be treatment involved. American members of the medical staff will be assigned to work in small teams with their local counterparts. This will enable the American staff to pass along modern techniques and the latest medical knowledge under working conditions.

Part of the medical staff will work on shipboard; part will be in mobile units, on duty inland. They will work with specialists, nurses, midwives, and technicians. Training will also be conducted through classroom lectures and discussions, movies and film strips.

Teaching is stressed because this will enable Hope to have a more enduring effect on local health conditions, than would attempts at widespread treatment. Concentration on training will enable Hope to help upgrade the local medical staff in their ability to diagnose and treat. In this way, these people will in turn be able to teach others. Thus, Hope's impact will grow and spread.

The SS *Hope* will visit only those countries to which it has been invited by the local medical professions. It is just completing a 6 months stay at Indonesia. Vietnam will be next, for a stay of 4 months, after which *Hope* will return to the United States. Invitations have also been received from Korea, Okinawa and Pakistan.

Hope's program is geared to the specific needs of the countries visited. Activities are worked out in advance with local doctors. This will enable *Hope* to concentrate on the most serious and pressing problems of each country.

A recent study conducted by the Department of Health, Education, and Welfare shows that the construction costs of a 260-bed hospital total $5,720,000, while annual operating costs amount to $2,982,700, for a total of $8,702,700.

In comparison, the total cost of operating the 15,000-ton, 230-bed SS *Hope* as a medical training center and hospital will come to less than $3.5 million a year.

The funds to operate *Hope* are coming from private contributions, also from business, industry, labor unions, and other private groups and individual contributions. The government's only role in this endeavor is the loan of the hospital ship.

Support for Project *Hope* is widespread. It has been endorsed by the American Medical and Dental Associations, and many other medical agencies. It had the personal backing of ex-President Eisenhower and has the wholehearted support of President Kennedy.

The American President Lines are operating the SS *Hope* at cost. Drug and pharmaceutical companies of our country are supplying drugs and medicines when needed. The American petroleum industry has underwritten fuel costs to operate *Hope*. The Pure-Pak Division of Ex-Cell-O Corp. is sponsoring a major motion picture project to raise funds for *Hope*.

Poverty, disease and malnutrition are common in Southeast Asia. Millions of people there are caught up in a catastrophe—they have to produce to survive, but unhealthy men cannot produce.

Hope is an experiment in international cooperation. Hope's backers believe that better understanding among the people of the world can be achieved on a personal level, through friendship, the sharing of knowledge and helping others to help themselves.

Hope's medical staff will benefit greatly, in newfound knowledge. Information will flow both ways. The experience to be gained in diagnosis and treatment of tropical diseases couldn't be gained anywhere in the United States.

These people to people contacts can help form the basis of a lasting peace and understanding. Hope means—Health Opportunity for People Everywhere.

The need for Hope is great. In much of Southeast Asia, there just aren't enough doctors to go around. In Indonesia, there is one doctor for every 71,000 persons.

With such a condition, the medical men are so busy that they find it difficult to keep up with modern techniques and developments. This means they can't get away to the United States or Europe to gain advanced training.

Project Hope will, in effect, bring the medical school to these physicians.

Nurses aboard the good ship *Hope*, now on a training and teaching mission to the Republic of Indonesia, where the religion is chiefly Moslem, report that patients coming aboard the ship carry small compasses, to show them the direction of Mecca.

Project Hope is headed by Dr. William B. Walsh, heart specialist at Washington, D.C.

Hope is the major activity of the People to People Health Foundation, Inc., an outgrowth of ex-President Eisenhower's people to people suggestion in 1956.

The backers of Hope plan to build additional ships as funds become available.

Russia's Space Feat

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Friday, April 14, 1961

Mr. GOLDWATER. Mr. President, Maj. Alexander de Seversky, who for decades has been recognized as one of the world's foremost authorities on air and space power, has written a new book entitled, "America: Too Young To Die." In this excellent work he points out what we as a people must do to preserve our Republic and our way of life. He pulls no punches, as, for example:

In 1955, in an article in This Week, I wrote: "The whole military philosophy must be changed, or we shall forever trail the rest of the world not only in conventional aircraft, but in international ballistic missiles and even in manmade earth satellite development."

Two years later the Russians fired the first ballistic missile and put the world's first manmade satellite into orbit. They built the world's largest aircraft; they sent the first rocket to the moon and another around the moon.

How, to take one achievement, did Russia manage to put a satellite in space before we did? Was it because we lacked creative brans or technological know-how? Not at all. Our scientific and production capability can outperform the Soviets' any day in the week. We were beaten not so much by Russia as by the inevitable results of interservice rivalry, the refusal of the services to work together, the destructive efforts of each to prevent the others from getting ahead.

These words were written before the Russians orbited a man in space, but they are just as prophetic as if this had been accomplished prior to the writing.

Miss Doris Fleeson, writing in the Washington Evening Star, furnished the words that Major de Seversky did not use because of timing, and because I feel she so succinctly follows the major's arguments, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RED SPACE FEAT A U.S. SCANDAL—POLITICIANS ARE HELD AT FAULT IN FAILURE TO RESOLVE PROBLEMS AND PUSH PROGRAM

(By Doris Fleeson)

It is a national scandal that the Russians have been the first to shoot a man around the world in a spaceship and bring him back alive.

Responsible officials of the United States have known for years that the same feat could be achieved by this rich and powerful country. They had every reason to believe that it also could be and would be done by the Russians.

The politicians who must make the decisions on which the survival of the United States depends ducked. They lacked the determination to put an end to Pentagon competition over which service should make the space effort. In the end, they created still a fourth agency, NASA, which has still to get off the ground in any meaningful way, much less conquer space.

The politicians of the executive branch did not have the courage to demand the necessary funds from Congress. Members of Congress did not trust the American people to understand all that was involved and accept higher taxes if need be.

Thus the United States is still dawdling and falling behind in the space race, and all the propaganda in the world cannot hide the fact from any corner of the earth. It would be ludicrous if it were not tragic that politicians are tackling the job now who must begin with a space primer before they can speak even with least lustrous technicians who know the story.

Amid fanfare, astronauts are being trained who have already sold the publication rights to a story which can only be an anticlimax to the Russian triumph. Rarely has the cart been put before the horse on such a scale.

President Kennedy and his new administration must face up to the harsh fact that Russia performed first an epic feat which was possible but forsworn by the United States. The official attitude heretofore has been that it was all very fine but not really too important, and there will be great temptation to continue it.

At the very moment the Russians were orbiting their air force major, Members of Congress were complacently telling reporters that while the voters like President Kennedy much better than on election day, they don't really care about his program. Yet they admitted that the people are thinking about the problem of peace or war and are uneasy, if not apprehensive.

The net impression, however, is that Congress will have to be pushed by the President so that the political risks will be as much as possible all his.

Despite encouraging statements, there is deep gloom in scientific circles. They had hoped against their better judgment that somehow this country would encompass a space first.

The issue is not involved with present cessation of nuclear testing, the hard choice Mr. Kennedy may soon be called upon to review. The Russian feat may lead to cries for resumption of such tests, and many experienced people believe they should be resumed, but the space fiasco is not connected with it.

It may be true that Russia will have trouble with Red China and would like to call off the costly arms race. But in space today, it's ahead, way ahead.

Proposed Junior United Nations

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Friday, April 14, 1961

Mr. WILLIAMS of New Jersey. Mr. President, the excitement generated by the creation of a pilot Peace Corps has already unleashed a flood of other suggestions for constructive and very positive steps to world peace. A nationwide mood is growing; we now realize that to have a secure peace, we must work for it in every way we can.

On March 19, Mr. Herbert Sturz addressed the American Field Service annual meeting at Princeton, N.J., on ways youth can work for peace. Mr. Sturz is executive director of the Vera Foundation, a new nonprofit group dedicated "to seek and further equal protection of the laws for the indigent by research into neglected aspects of court procedures, law enforcement, and the nature of the crime." The foundation will share the results of its research with those who seek it, and the foundation will also "develop and apply programs for the furtherance of law, justice, and civil liberties in the United States."

Mr. Sturz, who has long actively been associated with youth, told the group at Princeton about several new proposals, including a Junior United Nations.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, excerpts from his address.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

You have asked me to say a few words about how youth can work for peace. I am happy to do so. But to be honest, I can't see what I can tell the American field service.

There are young people right here who have taken part in the American abroad program. In staying with families in other countries, in getting acquainted with our world neighbors, you have shown that American youth can represent America abroad. In a way this is the germ of the Peace Corps idea. In fact, the American field service is still a long jump ahead of the Peace Corps, because you are bringing young people of the world to our shores. This is very important. America, too, must learn, must be receptive. Understanding and helpfulness is a two-way street.

There is no beginning and no end to the Peace Corps idea. No one knows exactly where it originated—certainly a number of fertile minds and forward-looking organizations contributed toward its formation. It's one of those ideas that when you hear it you know it's right. You just want to drop everything and work in the Peace Corps. This is dramatized by the overwhelming response to President Kennedy's proposal. One hundred thousand volunteers are expected in the first 6 months. Personally, I believe there will be more. Nor is this enthusiasm confined to youth. And this is the heart of the matter. Young people working for peace are not really separate from adults working for peace. We are all in the same boat, we all have the same fears and hopes. The hydrogen bomb will make no discrimination as to age any more than it will single out people by race, color, religion, or nationality.

Prof. Robert MacIver has said that he would like to abolish the term "juvenile delinquency" because it suggests that youthful offenders are in their own little private stew, that their offenses and their problems have no relation to the adult world, and the implication is that youth and adults have no mutual responsibilities. Well, I agree with Professor MacIver about the term "juvenile delinquency" and just so, I would like to abolish the distinction between young people working for peace and adults working for peace. Is there any distinction? If a young man is old enough to go abroad

as a soldier, perhaps to die, then surely he is old enough to take an equal part in the attempt to create a peaceful world. He is mature enough and wise enough and certainly energetic and enthusiastic enough to demonstrate to peoples in other nations the positive, creative, traits of his fellow Americans.

Those who doubt, who call the Peace Corps "a haven for draft dodgers," or as Representative FRANCES BOLTON said last week "a terrifying thing" should study the record of Great Britain's voluntary service overseas, an organization similar to the Peace Corps. Voluntary Service Overseas has been in existence for 2 years.

Its organizer, Abe Dickson, a UNESCO social worker, saw it as a release for the energy and idealism of young Englishmen. "People want to feel needed," he said. "But it's hard to get this feeling in affluent Western societies. You can't find it in Piccadilly or Times Square." What Dickson says is true. These young Britons—men and women—serve 1 year in underdeveloped countries. Though they receive only subsistence pay and live hard, they stick. Only 2 volunteers out of 165 have quit so far. Private schools, factories, and farms have contributed young people to the voluntary service. And these young people are doing a great job—repairing bicycles, running first aid clinics, delivering babies, mending canoes, teaching English and sewing, designing hotels, vaccinating cattle.

Finally, and at last, young people feel there is something they can do about the world. This is the big breakthrough. Hopelessness and helplessness, despair and cynicism, are left behind in a cloud of dust.

The Peace Corps sounds magnificent. Most Americans are optimistic about it. The response abroad has been, by and large very encouraging. The Peace Corps can work. It must be made to work. In order to make it work we must face the fact that there are problems. Perhaps the most serious problem is the danger of unilateral effort in a multilateral world. Already Russia has offered a few unkind comments on the Peace Corps. They view it as another plot to subvert the developing areas of the world to capitalism. If we let the Peace Corps remain a purely U.S. venture, we can predict, almost certainly, that it will become another area of competition—a new playing field in the cold war. In my opinion, the hazards can be circumvented by making our eventual goal the creation of a Peace Corps of member nations from the U.N.

According to Peace Corps Chief Sargent Shriver, our Peace Corps will make men and women available to U.N. agencies upon request. And President Kennedy is sympathetic to this approach. So, we shall see what comes of it.

WORLD ACADEMIES

I would like to tell you about another idea which is being considered by the President's advisers and which I think is pretty nearly as exciting as the Peace Corps. This is the creation of a series of world academies, again under the auspices of the United Nations. These academies would be set up in Asia, South America, and Africa. Each continent would have four academies—an Academy of Public Health, an Academy of Building Crafts, an Academy for Office Workers, an Academy of Agriculture.

We plan to staff these academies by drawing upon the faculties of leading universities of every country in the world. But the instructors don't necessarily have to have an academic background. For instance, I know two carpenters, marvelous craftsmen, the finest type of Americans, who would do a wonderful job abroad. One of the finest builders in the Princeton area would welcome a chance to share his knowledge and learn something from peoples abroad. There must be many such skilled persons who would be glad to give and to receive in this fashion. By establishing these academies on the home continent, the more powerful nations would demonstrate their genuine interest in the development of emerging peoples.

Allied to the Peace Corps and the world academies is the concept of a West Point of Medicine, here in the United States. As we all know, there is a need, in America and all over the world, for doctors and nurses. This need is already acute in the underprivileged countries and our own need will be sharpened as our population continues to explode. A West Point that turns out physicians and nurses. A School of Medicine and Nursing, supported by the Government, its trainees specializing in diseases prevalent among the emerging peoples. In return for their medical education, these young professionals would put in a 3-year tour of duty—their national service—in the developing areas of the world, again under the administration of the U.N. Upon completion of their national service, these doctors and nurses will go into private practice in the United States. This happens to be a rather clear example of the way foreign and domestic needs are bound up with one another.

Another exciting idea is one which Senator HARRISON WILLIAMS launched as a trial balloon in a speech to the National Student Association at Rutgers University a couple of weeks ago. The Senator proposed a junior U.N.—a U.N. conducted solely by the youth of the world. Its home base might be in New Delhi, Montevideo, or Accra. The delegates to the junior U.N. would attend sessions the year round. They would conduct study programs and debate key issues and pass resolutions. In the process, they will acquire skills and knowledge in economics, linguistics, diplomacy, and world government—and, as Senator WILLIAMS said, "A dozen other fields essential for understanding among peoples in this tense world of tragic misunderstanding."

This is an interesting idea which should be discussed. I hope somebody here has something to say about it. By the way, Senator WILLIAMS has been one of the early proponents of the Peace Corps. He probably knows as much as anyone in Washington about the mechanics of it.

I'm sure many of you have seen "Ballad of a Soldier"—the film Russia has sent over as part of a cultural exchange with the United States. What came through was Russia's abhorrence for war and its waste of human effort and life. As I got it, the movie was a call for peace. Llewelyn Thompson, our Ambassador to Moscow, believes Russia wants peace. So do our other top advisers on Soviet policy. There is no doubt that we, here in the United States, want peace. The Peace Corps is an expression of that longing and of the practical urge to do something about it.

U.S. Policy in Latin America

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Friday, April 14, 1961

Mr. THURMOND. Mr. President, the April 6 and 12, 1961, issues of the News and Courier of Charleston, S.C., contain two editorials entitled "U.S. Promotes Revolution" and "U.S. Document Approving Revolution Was Written by Professor Schlesinger," respectively. I ask unanimous consent that both editorials be printed in the Appendix of the RECORD.

These editorials raise some very serious questions about apparent U.S. policy to foment revolutions in Latin America. This new policy also concerns me very much and should concern every Member of this body.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the News and Courier, Apr. 6, 1961]

U.S. PROMOTES REVOLUTION

The Economic Council letter for April bears this headline: "Our State Department—Enemy of the American People." That is a grave accusation, but it is backed up by facts.

As the letter states: "Even the briefest study of events since 1934 will show that the State Department has nearly always taken a position helpful to the Soviet Union and against the interests of the United States."

One need not rehash the loss of China to the Communists or other tragic chapters in the history of the State Department. It is unnecessary to go beyond the events of the last week to find the State Department taking a position hurtful to the United States.

We refer to the State Department's most recent document on Red Cuba. The language in which the State Department promises to support revolution in Latin America will make patriotic U.S. citizens hang their heads in shame. Never before, to our knowledge, has the U.S. Government issued a state paper filled with radical cliches that have been culled from a leftist political magazine.

Yes, the State Department does support and approve revolution in Latin America, and in these words:

"It is the considered judgment of the Government of the United States of America that the Castro regime in Cuba offers a clear and present danger to the authentic and autonomous revolution of the Americas."

Who authorized unidentified policy planners in the State Department to publish a manifesto upholding revolution in this hemisphere? Who are the authors of this document? Are they the same men who supported Fidel Castro in the first place?

The document is full of false statements about how the Castro revolution started and succeeded. What's worse, it puts the United States on record as praising "positive programs initiated in the first month of the Castro regime." It specifically mentions "land reform." Congress should take note of that. Land reform in Cuba meant stealing hundreds of millions of dollars from U.S. citizens without a cent in payment.

The worst feature of the document is that it constitutes a political endorsement of Fidelistas among the Cuban exiles—Castro's old accomplices who got out of Cuba when they saw the ship was beginning to sink.

The State Department specifically lavishes praise on Jose Miro Cardona, head of the new ultraradical Revolutionary Council, as "a distinguished lawyer of Havanna." Actually he was distinguished as a political tool of Dictator Castro. The Department also praises Manuel Ray, head of the extremist People's Revolutionary Party, who wants confiscation of U.S. property to remain in force after Castro is removed.

Fantastic as it may seem to the average American, the U.S. State Department also praises Raul Chibas. Major Chibas was one of Castro's right-hand men. He presided over the firing squad executions in Havana, a bloody circus similar to Nazi and Soviet trials.

Men like this are the type the State Department hopes will gain power in Cuba. They are revolutionaries with blood on their hands. The Department sponsors revolution.

The News and Courier has received a letter from a distinguished anti-Communist Cuban patriot now in exile. Speaking of the Miro Cardona-Ray-Chibas group, he says:

"During the time they were members of the Castro government every human right was violated in Cuba. Castro stated repeatedly and in no uncertain terms that he did not intend to hold free elections and give the people the opportunity to freely and democratically choose a government. The economic measures approved were clearly Communist-inspired, and Castro's campaign of insults and vituperation against the United States was in full swing. I ask you: Can the people who shared the responsibilities of government with Castro when this was going on now lead the fight against communism and for democracy and good relations with the United States?"

That rhetorical statement is a fitting reply to the truth wisting of leftists in the State Department.

[From the News and Courier, Apr. 12, 1961]

U.S. DOCUMENT APPROVING REVOLUTION WAS WRITTEN BY PROFESSOR SCHLESINGER

Andrew Batcher, Assistant White House Press Secretary, yesterday told the News and Courier that there is great "accuracy" in a report that Prof. Arthur Schlesinger, Jr., Harvard historial now on President Kennedy's staff, drafted the State Department's document on Cuba issued April 3. In Mr. Hatcher's words, Professor Schlesinger was the moving spirit behind the document. It puts the United States on record as promoting revolution in this hemisphere.

This statement is an example of what responsible Americans have warned would happen if a coterie of leftwing intellectuals gained a foothold in the White House. The palace guard is usurping the functions of regular departments of Government.

What special competency has Professor Schlesinger for drafting a new U.S. policy toward Latin America, a policy which rejects Latin evolution and hails Latin revolution? Professor Schlesinger is a former official of Americans for Democratic Action, a leftwing pressure group. He made a hurried trip through several Latin countries after Mr. Kennedy's inauguration. On the basis of this flimsy preparation, he now has ghosted a document which may set off dynamite in several countries south of the border.

For years, the United States had a policy of helping backward Latin countries evolve peacefully and in good order. To that end, the United States has supplied these countries with economic advice and assistance. Professor Schlesinger now comes along and praises authentic and autonomous revolution in Latin America. He writes an official U.S. foreign policy paper which says revolutionists should keep lands confiscated from rightful owners.

Professor Scheslinger may have wormed his way into a position of power in the President's office, but he has no special writ to give the endorsement of the people of the United States to lawless, bloody revolution in Latin America. The President would do well to disavow Professor Schlesinger's statement before it causes the death of innocent people in Latin America and disruption of already precarious economies.

Providing Home Loans for Veterans in Housing Credit Shortage Areas

SPEECH

OF

HON. JOHN P. SAYLOR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 13, 1961

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 5723) to extend the veterans' guaranteed and direct home loan program and to provide additional funds for the veterans' direct loan program.

Mr. SAYLOR. Mr. Chairman, it might be interesting to have a little survey of what has happened to the veterans' housing program since its inception.

Since Congress passed the original Veterans' Administration Housing Authority, 5½ million men and women who served their country honorably have received loans under the conventional method. That is, the local lending institutions supplied the money and the Government guaranteed a portion of the loan. The amount involved in these transactions is approximately $50 billion.

With a potential liability of $50 billion, you might wonder what the experience has been. From the interest income on the sale of acquired properties by the Veterans' Administration, from the repayment by the veterans themselves, from the assets of the properties not sold, and considering them at their value at the time of acquisition and not at the time of making the loan, the net loss in this $50 billion program as of the 28th day of February 1961 was $15 million, which is three one-hundredths of 1 percent of the original invested principal. If there is any bill or any program that has ever proven its worth, I think this program has.

When the Congress found out there were many veterans who could not get loans because either there were no facilities in their area or the banks or lending institutions of the area would not make them, Congress in its wisdom passed the direct loan program. There are, as at the end of February 1961, 180,883 loans made in that program for approximately $1½ billion.

There are on the present list of the Veterans' Administration waiting for direct loans as of the 28th of February 30,115 applications. You may wonder why this additional amount of money is necessary. As the chairman of the committee stated, in the United States there are 3,072 counties. Under the laws that exist at the present time only 332 of the counties in the United States are ineligible for direct loans; in 267 counties they are partially ineligible, but in those approximately 600 counties more than two-thirds of the veterans of the United States live. In the remaining 2,473 counties veterans will be eligible for these direct loans.

It is remarkable that in the small number of counties where the large percentage of veterans live 37 percent of the veterans who are eligible for loans have applied and received them, but in the 2,473 counties where this bill will apply only 12 percent of the eligible veterans have received their loans to acquire their homes.

Let us look what has happened to this direct loan program since its inception. By the way, so that you may understand what happens pursuant to law passed by the Congress, the Veterans' Administrator goes to the Secretary of the Treasury and gives him an obligation in writing guaranteeing to repay that amount of money to the Treasury. He borrows it, and the obligation calls for the Veterans' Administrator to pay to the Federal Government the amount of interest that the Treasurer is required to pay on loans as of the date that money is borrowed. The Veterans' Administration loans the money in accordance with the law, and those loans have varied from 4, 4½, 4¾, and 5¼ percent interest. From that interest there has been an income of $199,824,155. Of that sum the Veterans' Administration has paid to the Treasury of the United States $120,289,184 interest on this money; its property management and sales expense has been $665,926; loan closing expense has been $3,865,303; liquidation expense has been $105,667, and charges against the reserve for losses are $654,308, or a total of expense and charge for losses of $125,580,388, or a net worth of this program as of February 20, 1956, of $74,243,767. This is a profit and will go to the Treasury of the United States.

Mr. Chairman, this is one of the programs with which this Congress can look with pride, because while it has helped the citizens of this country, the American citizens, it has more than paid its way and will continue to do so. I certainly hope that this bill will be approved and that there will be no recommittal of it to the Committee on Veterans' Affairs.

Strengths and Weaknesses in our School Systems

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Friday, April 14, 1961

Mr. WILLIAMS of New Jersey. Mr. President, educators of this Nation are doing their best to analyze the many strengths and relatively few weaknesses in our schools. Their self-analysis has already helped us to recognize that major

efforts are needed to provide the skills and knowledge needed and required in a nation faced with the challenge of new growth at home to help maintain its leadership abroad.

The American Economic Association recently declared that too many students in the United States have only limited understanding of economics; the association has decided to do battle against "economic illiteracy."

An editorial in the Atlantic City Press, Atlantic City, N.J., describes this effort and issues a wise word of caution. It asks the association to avoid "the blandishments of special pleaders and interest groups who may seek to use the new program as a device to disseminate their ideas." Objectivity, of course, should be one of the ground rules for any such educational effort. We need facts and we need fresh ideas, not warmed-over slogans or outmoded concepts. The Economic Education Task Force will perform a vital service if it can help us to understand the forces that strengthen or weaken our economy.

Mr. President, I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Atlantic City Press, Mar. 15, 1961]

ECONOMIC ILLITERACY

Convinced that all too many students are emerging from our schools economic illiterates, the American Economic Association has appointed an economic education task force to deal with the situation.

They begin with the premise that too few students are exposed to economics, that many of those who are exposed get too little of it, and that much of the economic theory taught harks back 60 years ago or more.

There is little doubt that such shortcomings are the rule rather than the exception. A recent survey of college freshmen showed a majority held misconceptions about the simplest workings of the economic system.

In an earlier day this might not have been too important. Americans learned such economics as they needed as they rose in their occupations. But today, government decisions on economic affairs can make or break whole industries, permit or retard economic growth, and permit balance or create imbalance in the economy that affects the business cycle.

These actions are often largely in response to the notions and prejudices of the voters, and widespread economic illiteracy therefore becomes a serious factor in economic progress or the lack of it.

The task force members have vowed to gird themselves against the blandishments of special pleaders and interest groups who may seek to use the new program as a device to disseminate their ideas. They will do well to stand fast on this resolve.

A good grounding in the elements of the economy, and of the causes and effects involved in private and governmental actions is about all that can be introduced at the high school level. This by itself would represent an important forward stride in producing an intelligent work force and an informed electorate in the years to come.

In the past, voters who have believed that net profits represent 20 percent or more of the sales price of goods, that a rock-and-roll singer may legitimately earn half a million dollars a year, while a railroad president is overpaid at $50,000, and that government can guarantee full employment have had some serious effects on our progress.

A Reappraisal of the United Nations

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Friday, April 14, 1961

Mr. CARLSON. Mr. President, at the 13th annual institute of international relations, held at Washburn University, Topeka, Kans., April 9, 1961, Alf M. Landon, a former Governor of Kansas, a former candidate for the Presidency on the Republican ticket, and a student of international affairs, delivered an outstanding address on the United Nations.

Mr. Landon in his address discussed the importance of the United Nations in world problems, and the dangers confronting this organization.

I ask unanimous consent that this address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A REAPPRAISAL OF THE UNITED NATIONS

I speak tonight to focus attention to the facts in this momentous moment of world history. My final conclusions will be neither pessimistic, nor optimistic, since it is uncertain yet whether reason will prevail.

There have been incredibly dangerous developments in world affairs in the past few weeks. There has been a failure to make clear the true import of events and their long-term consequences. If anything, I am particularly dismayed by the opposite tendency, namely, the sugar-coating of deliberate optmism. In some cases, there has been downright concealment of important and deadly significant facts.

One of my major purposes tonight is to try, as fairly and objectively as possible, to reveal what the truth is and how all the elements of crisis revolve about and ultimately center on what I believe to be the most dangerous single conclusion, the potential death of the United Nations.

Let me first clarify certain technical administrative problems which are central to an understanding of the political processes of the United Nations. The U.N. is not, and I must emphasize this point, is not, an independent entity. It has no being and no reality outside of its membership and is entirely the dependency of its membership. In the same sense that a mirror reflects the face, so the U.N. is as strong or as weak, as good or as evil, as much a success or failure as the world it reflects.

But does the U.N. in reality reflect the world? Only the naive would believe that. Member nations are not equally powerful; member nations are not totally independent of political control and manipulation. What the world really is today, and the U.N. beautifully mirrors this, is that Communist power bloc which will act predictably on crucial issues according to the dictates of the Soviet. Of course, on minor matters, there are factions and differences. But don't let that confuse us. On all matters of substance, bloc discipline is enforced.

The Secretariat of the United Nations, and in particular, its chief executive officer, the Secretary-General, is the servant of the membership. No matter his personal convictions, he is bound by the language and the substance of the instructions of the membership. He is further bound, as we are tragically learning, by the willingness of the membership to obey their own directives—on all levels—including the financial one.

At this very moment, two international problems are most revealing—Laos and the Congo.

The history of Laos is a most distressing one. From the very inception, this problem was dealt with outside the United Nations and represented the bitter conclusion of the French collapse in what was then French Indochina.

At the meeting in Geneva of the Great Powers Conference, it was agreed that Laos would be constituted as a neutral state and that all participants to the Great Powers Convention would obey the conventional terms of neutrality. As I have already stated elsewhere, the United States as well as the Soviet Union disobeyed the Convention. And no matter how we attempt to justify this in terms of Chinese, Russian, and Vietnamese intervention, we did not take this case to the United Nations, but supplied arms and military personnel to a faction in Laos in contravention of the Geneva agreement.

In the face of the deepening crisis, we did not steadfastly rely on the United Nations, but on SEATO, a rather ineffectual structure, built by the late Secretary of State Dulles, a structure which has admittedly been of little value because of Britain's and France's indifference, amounting to negative policies. Even in the face of the devastating lesson of the Baghdad Pact, we still followed a course of reliance on a jerry-built power alliance. Furthermore, for 6 years, both SEATO's military and political values were hamstrung by the Eisenhower administration's lack of any positive, definite, and consistent policy in Laos.

In the final analysis, great harm can come from dealing with Laos as an independent problem. Because of its strategic position, it is a part of the whole world's fateful issues.

Despite sugar-coated official pronouncements, Britain, France, and the United States did not present a solid front in SEATO, nor with the United Nations policies in the Congo.

I now turn to the Congo—another key country—unable to defend itself against imperial Soviet control.

Prior to the eruption of the Congo crisis, Dag Hammarskjold had been carefully, skillfully and bravely attempting to strengthen the position of the United Nations so that it would best serve the smaller nations in the face of the East-West power struggle and make possible efficient, immediate action in the face of crisis. Hammarskjold had made great progress in his efforts, so that at the beginning of the Congo crisis, it was possible to field a United Nations army with speed and precision. But here the simmering, underground dangers suddenly burst to the fore. The United Nations blundered in administering policy in the Congo—blunders partially due to the improvisation necessary in the planning and administering of new and uncharted procedures.

The Soviet Union, which felt the time ripe for a major imperialistic move, felt itself frustrated and the stakes were big enough to make major battle. The stakes were and are the Continent of Africa. The Soviet Union waged its war on many grounds, but the most important ground was the United Nations itself.

It would first destroy the Secretariat and, by so doing, create anarchy within the United Nations itself. When the initial attack failed and Dag Hammarskjold refused to resign, the Soviet Union extended its attack by creating a precedent by refusing financial support.

Without money from the Soviet Union and its satellites, United Nations effort would be seriously hampered. The arbitrary withdrawal of troops by member states created

near panic in attempting to field a force large enough to cope with the most difficult situation. And finally, the various political factions in the Congo itself, seeing dissension and disunity in the United Nations proper, were encouraged to defy the United Nations, thereby creating increased economic and political instability which always favors Communist expansion.

In the face of the impudent and cynical Soviet junking operation other member states were handed a precedent for like action. Not until April 3d did Belgium agree to withdraw its military personnel from the Congo in compliance with U.N. resolutions.

The French have refused payment of their financial commitments to the Congo operation and, with the inadequate exceptions of Australia, Ireland, and the Netherlands, who have made only partial payment—the United States alone has paid the 1960 Congo assessment in full.

There has been much talk, at times of past crises, of the capacity of the United Nations to survive. It is my considered opinion that it is this crisis now which represents the great turning point—for it is this crisis which has produced general disobedience and not disobedience merely on the part of the imperialist Soviet bloc.

The League of Nations died in the face of the Italian invasion of Ethiopia—not simply because of unilateral disobedience on the part of Germany and Italy—but of general failure throughout the membership to provide support. No single nation of power and substance elected to go to the defense of the League in clear and certain terms.

At this moment the question of survival by the United Nations relies largely on American leadership. We are compelled to act both within and outside the United Nations to have its very existence. And our actions within and without must be consistent. In terms of our allies and all those areas of the world where the United States is central for aid and survival the United States must demand compliance with the charter of the United Nations. But it can do that only when it, too, complies with the charter.

And when it acts unilaterally, as in Laos, its political position and its moral position in support of the United Nations evaporates. If we don't value the maintenance of the United Nations as the only essential organism which breeds hope for peace we must then clearly face the alternative and the certain inevitability of war. No other organism, no other structure, no other mechanism exists which can act as well to inhibit "the seeds of destruction" leading to eventual general conflict.

Having presented a general background to this momentous crisis, let me deal with those elements which bring us closer to the heart of the problem. The best way is to cite opposing viewpoints and reveal the counterarguments. We all agree on certain basic matters, namely:

(1) The policy of the Soviet Union is clearly and by its own admission imperialistic. It will use all means at its disposal to secure world dominion.

(2) Even if there be no other choice, in the last analysis, the prospect of war is too dreadful to accept with a casual shrug of the shoulders.

(3) If there is any way, any way at all, to preserve freedom, the only condition appropriate to man and that makes life positively good, every effort must be made to find that way, without war.

(4) The only way that offers hope is the existence of a third force, a force capable of channeling, focusing, concentrating the power, the idealism, the will of peoples everywhere. That third force presently exists in the form of the United Nations.

Here are some recent countering positions:

The first of March, Paul Henri Spaak, a Belgian statesman of impressive stature, said that "the idea of a general war such as those of 1914–18 and 1938–45 could now be ruled out. Competition with the Communist East now is in the economic sphere. The test is taking place in Asia, Africa, and South America rather than in Europe."

Dr. Spaak went on to say that NATO and the new Organization for Economic Collective Development are the best reliance of the free world and the United Nations is ended. That is merely one variant on a position held by many, that the United Nations has failed. And there should be a return to out-and-out power bloc alliances.

In the first place, I cannot agree with Dr. Spaak's optimistic conclusion that a general war can now be ruled out, and his optimistic reliance on an empty shell like NATO and an untried organization like the OECD. While the United Nations is facing its greatest test, neither do I agree with him that it has been ineffective and is finished.

But far more important, at the heart of what Dr. Spaak proposes, is a return to tested methods, methods predicated on the certainty of general war, and not as he says the end of the possibility of general war. Power alliances are formed for purposes of mutual defense against aggression. They do not contain within themselves the ingredients for buffering antagonists. Two armed camps facing each other with no middle ground define the logical conclusions of their existence—ultimate conflict. And if the grounds for that conflict already exist, then the greater the need for a common meeting ground. Despite his vast experience, Dr. Spaak starts with a falses premise, a premise utterly out of accord with a rational world. His conclusions are consequently false.

Another argument gaining recent support calls for a withdrawal to our own shores, the "Fortress America" theory. This would mean turning the world over to imperial communism, an act of betrayal and almost inhuman surrender of our fellowmen. It would also hasten, rather than retard, war for with massive control by the Soviet Union of the resources of the world, attack would surely follow, an attack against a weakened and demoralized America fearfully awaiting the awful day.

Against the backdrop of the need for immediate decision, I propose the following as the necessary steps for reasonable men:

I emphatically believe President Kennedy and our Congress must make up their minds soon whether we are going to emphasize the key place of the United Nations in world affairs, as our President did in his inaugural address.

I have made it plain in every address I have made on international relations, that we must keep our Armed Forces and our military strength second to none. That involves our own defense, even though, like an umbrella in a storm, it covers others.

While keeping second to none in our armed strength, I believe we must concentrate on more support of the United Nations.

We really only started that policy last September. It must be continued to a greater degree than heretofore, because, as I have said, the United Nations, as a result of that policy, was steadily growing in responsibility and strength until the member nations failed to keep even their financial commitments.

There has been much talk that the United Nations, to be effective, would have to be equipped with a permanent international army to force peace on the world.

I do not believe that is wise.

It is hard for all peoples to break away from age-old customs, and believe, that international affairs and basic major conflicts can be ultimately settled only by armed force.

However, slowly and falteringly, homo sapiens is feeling his way to new rules, new methods, for avoiding that folly. I believe there are sound grounds for optimistic conclusions that, given persistent and consistent strong support by the major powers of truly peoples' governments, the United Nations can and will grow in strength and responsibility.

That is not to say that we're not testing fate by our policies in world affairs.

The incredible danger we face is whether Khrushchev and the Soviet, Mao and his Chinese echelons, are going to make the same mistake of Kaiser Wilhelm and his war lords, of Hitler and his Nazis, of Mussolini and his black shirts, in underestimating the latent power of the undisciplined peoples of popular governments like Britain, France, and America.

The Prussians, Nazis, and Fascists relied, and the Russian Soviet imperialists are relying on, the same erroneous basic principle. The Soviet believes that disciplined peoples can conquer the undisciplined peoples of true democracies, where, as in America, local labor unions attempt to establish their own foreign policy contrary to their Government's international trade agreements.

Khrushchev cries the free press does not understand him. So did Kaiser Wilhelm II, and Hitler.

Khrushchev and Mao keep pushing here and pushing there—testing the will and the determination of truly peoples' governments to stand their ground for their principles and their freedom. So did the Kaiser, and Hitler, and Mussolini.

All three made the great mistake of believing Great Britain and France were decadent and America "too proud to fight." Well, they got their answer in two world wars. However, Mao, and the Soviet, apparently are still not convinced that governments that permit organized pacifist demonstrations, unrestrained criticism and ridicule in all phases of national life, and are devoted to the rights of the individual, can and will do a better job in war, when the incentive is there, than their disciplined masses. They confuse willing-to-live-and-let-live policy, up to a point, with faint heart. Therein lies the danger of destruction of the world by a great nuclear war.

Khrushchev, a superb actor, or a superb statesman, and possibly both, has truly said no nation can win a third general nuclear war. Therefore, the imperial Soviets' policy is a methodical process, both economically and militarily, in brush wars involving internal conflict. Questions of internal conflict anywhere can quickly become a matter of unilateral action between two major powers and thus resolve themselves into a general war.

When the United Nations charter was adopted many people vowed that was the answer to war and peace. That reminds me of a conversation I had with an old hard-boiled Republican leader in the 65th Congress that enacted national prohibition.

He told me of a visit he had with several other leaders in the Congress who liked their nip. They talked about brilliant colleagues whose opportunity for great public service had been ruined by overindulgence in intoxicating liquors. They were willing to make the sacrifice of their own tastes in order to eliminate that evil.

When I was talking to him, he was disillusioned by the results. He said, "It never occurred to us that the law would not be obeyed."

And it never occurred to people who built too high hopes on the United Nations Charter as the complete answer to settling diffi-

culties by collective process instead of unilateral actions—that the U.N. would not be obeyed forthwith.

The United Nations is going through the same period of trial and error, of growth, that our Republic has gone through, that the British Commonwealth has gone through, that France has gone through, and Germany, and free country after free country.

Take Kansas for an illustration. Its trials and tribulations in the days of horrible brutality of bitter border warfare were born of the failure of the Missouri Compromise and the Kansas-Nebraska Act, and of leadership in both the North and the South, the follies of statesmen and of generals, which resulted in approximately 600,000 casualties on both sides in the Civil War.

And yet, 100 years later, we have not yet reached the solution of the basic principles of that war, or, for that matter, in the Bill of Rights adopted almost 200 years ago. That is, civil rights for all in this great country of ours.

Two groups represent the despair theme of Washburn's Institute of International Relations:

(1) The despair of negative thinking is expressed by the tinkling cymbals of pacifists who would supinely surrender to the tyranny of communism, or reach the same end by appeasement. This very principle of nonresistance is an invitation to the Soviet and Mao.

(2) The sounding brass thinking by those who believe another world war is inevitable.

I do not agree with such extreme positions. I believe that, in the basic interest of the world's mankind, our eagle must neither fold its wings nor yield to the natural impulse in combating danger. We must abandon our presence of mind and become—as it were—a cosmic vigilante committee.

The United Nations is neither the failure some claim—nor the shining forceful success that others expected. It is now facing its greatest test. Its survival is at stake, precipitated by the failure of all the member countries to pay their share of the Congo expenses, thus playing into the hands of Khrushchev and Mao.

If the U.N. is forced to depend on the United States to pay more than its share, in order to continue the United Nations policies in the Congo, the collective position of the United Nations in world affairs is drastically altered by being heavily dependent upon one nation for the financing of its Congo policies. To that extent its collective function is weakened.

Although the possibility of the most dreadful and destructive war in the history of mankind cannot be completely ruled out, the prospects of avoiding that holocaust will improve as the free peoples' governments learn to compose their divergent views and pool their strength by and through the United Nations.

The hope, the creative theme, is expressed by such meetings as this that grasp the fact that the days of self-dependence by a nation are gone forever.

This is a new day and we must adjust ourselves to fit the new rules of the world in which we live. That calls for omniactive leadership by men of determination, of insight, whose eyes are open to the necessity and opportunity of fighting for extended cooperation by and through strengthening the United Nations as the most effective agency for peace.

If it is impossible to present a firm and united position by the United Nations, for equity and justice in the world, I fear a great calamity may be in the making, with the United Nations fading away as did the League of Nations.

Housing for the Golden Years—Problems of the Aging and the Aged

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Friday, April 14, 1961

Mr. WILLIAMS of New Jersey. Mr. President, the national effort to meet the problems of the aging and the aged is progressing on many fronts. Slowly we are achieving nationwide recognition of the fact that we must exercise long-range ingenuity to assure our elderly citizens of adequate resources for at least a minimum of security and comfort.

One of the most pressing needs is adequate, specialized housing. In the Congress last year we recognized this need in several ways. President Kennedy and Mr. Weaver of the Housing and Home Finance Agency have made it clear this year that they want to take even more effective steps this year. Their leadership is welcome and timely; the need grows more obvious every day.

It was particularly heartening, therefore, to read an article written by reporter Andre Briod for the April 2 edition of the Newark (N.J.) Sunday News. Mr. Briod, who has written often about urban development programs in New Jersey, wrote in that article that "New Jersey's cities have taken the lead in the construction of a type of housing which is of growing importance in the overall dwelling supply picture—low-cost, low-rent housing for the elderly."

His report, I believe, gives a helpful summary of the action that can be taken by thoughtful housing officials in large cities and smaller towns. I ask unanimous consent to have the article entitled "Housing for the Golden Years" be inserted in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOUSING FOR THE GOLDEN YEARS—NEW JERSEY LEADS NATION IN PUBLIC UNITS SPECIFICALLY FOR THE ELDERLY

(By Andre Briod)

New Jersey's cities have taken the lead in the construction of a type of housing which is of growing importance in the overall dwelling supply picture—low-cost, low-rent housing for the elderly.

Efforts in this direction have marked this State as the Nation's leader in the field, according to Charles Plotkin, information officer of the Public Housing Administration's regional office in New York.

Figures compiled last month by the regional office show there were 25 separate low-cost housing projects for the elderly either under construction or completed in 17 New Jersey communities. This record, according to PHA estimates, approaches the combined progress to date in the States of Connecticut, New York, Massachusetts, Rhode Island, Vermont, Maine, and New Hampshire.

While other States, both in the East and elsewhere in the country, are following New Jersey's lead in accelerating their elderly housing programs, the Garden State continues to gather momentum in the same effort. As of last month, there were another 25 unstarted projects on the books in New Jersey, and the start of construction was expected on most of them before the end of this year.

In all, 34 New Jersey municipalities are now involved in the program, to the extent that they either have started or completed projects or have definite plans for future construction of low-cost elderly housing. Others may be expected to follow in the future.

The State now has eight completed elderly housing projects, a category in which New Jersey also is the national leader. The completed projects, some of which come within larger public housing ventures which include a portion of apartments designed especially for elderly persons, are in Newark, Asbury Park, Long Branch, West New York, Hackensack, Paterson, Bayonne, and Guttenberg.

What marks housing for the elderly as different from low-cost public housing in general is the inclusion of features and accommodations directed specifically at the requirements of senior citizens, or according to PHA regulations, a family whose household head is over 65 years old.

While the accommodations which distinguish the units for the elderly vary from city to city and project to project, three major housing developments now under construction by the Newark Housing Authority, to provide a total of 500 apartments for the elderly, offer a good example of what makes housing for the elderly something special on today's housing market.

These special features are to be included in those apartments to accommodate the special needs of elderly persons:

Slip-resistant tiles in both kitchens and bathrooms.

Oversized medicine chests in bathrooms.

Slip-proof surfaces on bathtubs. The tubs themselves are to be built lower than normal to make them easier to enter and get out of.

Grab rails around the bathtubs to enable users to steady themselves.

Silent sanitary facilities to prevent the awakening of other persons in the apartment when they are used at night.

Lower than conventional closet shelves to make them easier to reach.

Wider than normal doors to permit the passage of wheelchairs.

Pilot lights on light switches so that the switches can be more easily located in the dark.

Electric ranges, for safety reasons, rather than the gas ranges with which other public housing apartments are equipped in Newark.

Oversized elevator in each building to accommodate wheelchairs.

In addition, at least one building at each project location is to contain space for the establishment of a medical clinic to serve the elderly tenants.

There also is to be space at each location for visiting nurse service and for recreation for the elderly tenants.

Medical and visiting nurse services would be provided independently, either by social agencies, private organizations, or by a public authority other than the housing authority.

While the "extras" for the accommodation of senior citizens to be found in the Newark projects are basically the same as those which mark those included in completed or planned projects elsewhere, there are variations from community to community in the special facilities offered. The differences depend partly on the cost limitations imposed by the Public Housing Administration.

Where land costs for the projects are low, more can be provided. Where land is expensive, fewer facilities are possible.

Just as the accommodations vary, so do the building styles. Newark, Asbury Park, Guttenberg, and West New York, for example, all have employed high-rise construction in their elderly housing developments. The recently opened Long Branch project, which houses 37 elderly families, is low-rise, garden-apartment-type construction.

While most builders, whether low rise or high rise, are conventional in design, there are some unusual examples of public housing architecture in the elderly housing program, such as the hexagonal apartment tower now under construction in New Brunswick. That structure is to contain 60 apartment units for the elderly.

The factor of land cost also has a direct influence on the type of design employed in the construction of the buildings. If land costs are high, buildings must be built higher so as to keep the average cost per apartment within the limits set by the PHA. If costs of land are low, low-rise construction may be possible.

Federal housing law presently imposes a limit of $2,500 per room on expenditures for construction of low-cost housing for the elderly. That limit is about $800 higher than the limit per room for general public housing construction, but it must be set above the general limit to permit the inclusion of the facilities which distinguish elderly housing from conventional public housing.

Units built particularly for the elderly often are included within larger projects which contain a portion of general public housing. This is true of six of the eight completed projects for the elderly now finished in New Jersey.

In Newark, for example, the public housing for senior citizens now occupied consists of 28 apartments within the 1,206 apartments which comprise the Stella Windsor Wright Homes, opened for occupancy last year.

The five Newark buildings which comprise the three elderly projects now under construction here are designed for occupancy by elderly persons only. Each of the projects, however, is located at the site of existing general public housing buildings. Two buildings for aged persons are being built at the site of the Stephen Crane Village, two are being constructed alongside the Otto Kretchmer Homes, and the fifth building is under construction at the Reverend William P. Hayes Homes site.

Only Asbury Park and Hackensack, among New Jersey's municipalities, have completed elderly housing as projects separate from general public housing.

Of the 50 projects completed, under construction, or planned in this State, only 22 contemplate units for elderly persons alone. Many of those 22 developments, including the 3 in Newark, are located or are to be built on the site of an already existing public housing development.

In the case of some of the other projects, where elderly housing is to be incorporated within a larger single public housing venture, that housing portion of the development is to be located within separate buildings exclusively for the use of elderly persons. An example of this is Newark's West Kinney Street public housing undertaking, planned as the biggest single public housing project in the State, for which a site has been carved and cleared out of the city's central ward.

Overall, that project will contain 1,680 units, of which 252 are to be for elderly persons. All 252 apartments for the elderly will be located within a single building in the nine-building complex which will comprise that development.

Public housing authorities believe that a limited mixing of general and elderly public housing, such as the assignment of one or more buildings within a larger project to elderly persons only, is desirable from the standpoint of the living conditions of the older tenants.

By being placed in separate buildings they are able to keep their closest associations with persons with whom they have most in common. At the same time, they are protected from the distractions of the faster, and sometimes noisier, pace of general public housing life. On the other hand, they are given the feeling that they are still part of the overall community and not isolated from the world around them. They are in a position to establish relationships beyond those of their elderly neighbors, but not forced to accept such associations.

Today there are thousands of elderly persons living in general public housing in New Jersey. For these tenants public housing has in most cases provided better homes than they could otherwise afford. As special units for the elderly are constructed, these aged citizens will have available to them still better living conditions at approximately the same rent levels.

At the same time, as conventional public housing apartments are vacated by those moving on to the elderly units, other persons, not eligible for residence in buildings for the elderly but eligible for public housing by reason of their limited incomes, will be able to move into low-rent units from the substandard private housing they now occupy.

In this way, the benefits of the new program to house low-income elderly persons will extend beyond those for whom the new housing is designed.

The overall program in New Jersey at present will bring the eventual completion of 3,650 new apartment units for the elderly, 419 of which are already built.

In addition to the completed buildings for the elderly, these communities currently have the following number of elderly units under construction:

Bayonne, 62; Camden, 164; Guttenberg, 24; Highland Park, 6; Hightstown, 4; Hoboken, 50; Irvington, 42; Newark, 746; New Brunswick, 60; Paterson, 192; Perth Amboy, 48; Phillipsburg, 36; Plainfield, 30; West New York, 24.

Another 838 uhits are planned for the following municipalities: Bridgeton, Boonton, Carteret, East Orange, Edison, Garfield, Glassboro, Elizabeth, Hightstown, Irvington, Long Branch, Lakewood, Morristown, Red Bank, Trenton, West New York, and Woodbridge.

Good Works in Labor Movement Seldom Heralded by Headlines

EXTENSION OF REMARKS

OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Friday, April 14, 1961

Mr. ENGLE. Mr. President, my attention was called recently to an editorial which observed that the "majority of the labor movement, and leaders of industry are honest in their operation." I was pleased to read this editorial in the Morning News, a San Leandro, Calif., newspaper. Usually it is the sensational stories of corrupt practices that get play in the press.

I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SOME HARD FACTS ABOUT GOOD UNION OPERATIONS

Good works, unfortunately, are seldom heralded by headlines.

The newspapers save the big headlines for stories about gangsters moving into unions and for articles about billion dollar price rigging conspiracy by industrial giants.

These are examples, we like to believe, of the exceptions to the rule. The majority of the labor movement, and leaders of industry are honest in their operation.

This week the East Bay Labor Journal printed some hard facts about good unions. Declared the voice of the labor movement in Alameda County: "No union corruption is right. No business corruption is right."

Russell Crowell, president of the county central labor council, declared, "We must differentiate between the union in which an isolated union officer goes bad, and one permeated by corruption."

This is not to mean that the labor movement should try to gloss over the convincing evidence which the McClelland Committee has produced—of sweetheart contracts, gangster tieins, looting of treasuries, perversion of the legitimate ends and aims of unionism, denial of union democracy and intimidation and violence. A black eye on the labor movement—whether they are AFL–CIO or not—hurts all who carry union cards.

Crowell declares that "there are some unions whose leaders have forgotten how to lead." No union member or officer should forget that the union exists for the rank-and-file membership.

Alameda County is fortunate that both Crowell and Executive Secretary Robert S. Ash stress the need for responsible labor leaders. Labor leadership in the county has been a clean, vigorous movement with an outstanding record.

American-Jewish Committee Proposes Intergroup Relations Division in Department of Urban Affairs

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Friday, April 14, 1961

Mr. KEATING. Mr. President, for some time I have urged the establishment of a Department of Urban Affairs in the executive branch. I am hopeful, now that the Reorganization Act has been passed, that such a Department will be established in the very near future.

Most of the people who have commented on the establishment of a Cabinet-level Department in this area, have suggested subdivisions following the present structure of the agencies under the Housing and Home Finance Administration. There would be subdivisions for urban renewal, public housing, community facilities, housing, air and water pollution and covering certain aspects of highway planning and construction.

The president of the American-Jewish Committee, Mr. Herbert B. Ehrmann, in a letter to the editor of the New York Times, has made a proposal which departs importantly from this scheme. Mr. Ehrmann suggests that one of the subdivisions of this new department be charged with the responsibility of dealing with problems affecting the relations of various groups within urban areas. At present there are many such agencies at the local level which seek to iron out and resolve problems between new groups and old groups in urban areas, particularly in connection with redevelopment undertakings.

The national division on intergroup relations in the Department of Urban Affairs would—and I quote from Mr. Ehrmann's letter—"act as a national service bureau for local, State, and regional intergroup relations agencies and work as well with small communities not having their own intergroup relations committees. A principal duty would be to serve as an information clearing center for both public and voluntary agencies in this field and provide consultative services."

Mr. President, this is an interesting and exciting proposal. Up to now it has received little attention. I commend Mr. Ehrmann for his excellent and thoughtful letter to the New York Times, and I ask unanimous consent that this letter be printed in the Appendix of the RECORD in order that those interested in a Department of Urban Affairs may study this proposal.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

FEDERAL PARTICIPATION IN DEALING WITH HUMAN PROBLEMS ENVISAGED TO AID URBAN AREAS

To the EDITOR OF THE NEW YORK TIMES:

In his recent housing message President Kennedy indicated that he would propose a new Cabinet-rank Department on Housing and Urban Affairs. Since more than half of the country's population is now congregated in 168 metropolitan areas, the urgent need for such a Department is compelling clear.

However, there has long been a tendency to consider the situation of urban communities mainly in terms of such physical problems as housing, water, and air pollution, sewage disposal, urban renewal. Important as these matters are, it is hoped that the new Department will give equal consideration to the human problems which daily confront the 108 million urban dwellers of our Nation.

We are by now painfully aware of how crucial these problems can become at home and, especially sginificant these days, in terms of our high visibility to nations abroad. The range of these problems includes relations between groups of different racial and ethnic backgrounds, tensions arising from neighborhood changes, dislocation as a consequence of migration and population growth, and the general urban turmoil that is the chronic concommitant of overcrowding, deterioration, and abrasive encounters between newscomers and old residents.

GOVERNMENT'S ROLE

Many voluntary agencies such as the American Jewish Committee have long recognized the important contribution which government on all levels can make toward dealing with metropolitan human relations problems. Many States and communities, too, have given evidence of their concern for these human relations issues.

In some 70 communities, including Philadelphia, Pittsburgh, New York City, municipal committees on intergroup and human relations have been formed. Twenty States have similar bodies. Their work will be significantly encouraged and enhanced by the creation of an intergroup relations division within President Kennedy's proposed Department of Urban Affairs.

This division would act as a national service bureau for local, State and regional intergroup relations agencies and work as well with small communities not having their own intergroup relations committees. A principal duty would be to serve as an information clearing center for both public and voluntary agencies in this field and provide consultative services.

Fact-gathering and research programs would be among its important tasks, which would also include establishing training programs for professionals and volunteer workers who are urgently needed in the intergroup relations field.

CONTEMPLATED HELP

The 1960 Democratic platform, in fact, contemplated a Federal intergroup relations office "to help solve problems of discrimination in housing, education, employment, and community opportunities in general." The Republican platform pledged "the full use of the power, resources and leadership of the Federal Government" to the same end.

The tremendous prestige of the Federal Government would, of itself, give great impetus toward the effective resolution of some of these pressing problems. Further, it would be of incalculable value in communicating to the world at large our Nation's sincere and constructive interest in those human relations crises so strongly current today.

HERBERT B. EHRMANN,
President, the American-Jewish Committee.

NEW YORK, *March 22, 1961.*

The Vintage Years—Problems of Aged and Aging Citizens

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Friday, April 14, 1961

Mr. WILLIAMS of New Jersey. Mr. President, Mr. R. O. Beckman has given his readers much information about the aging and aged citizens of this Nation in his column, "The Vintage Years." He has often described new innovations worthy of great study by everyone who is working to prevent waste of human resources, which so often occurs among the elderly citizens of our society.

His column of March 20, which appeared in the Newark Evening News and other newspapers, told of community centers for senior citizens sponsored in a relatively small number of cities and towns. He gives special credit to the Auto Workers Union for leading the way in this field under the direction of Charles E. Odell.

Mr. President, Mr. Beckman's column describes a spontaneous response to a problem affecting so many of our older citizens who often find, in their later years, that their idle hours have become very lonely hours.

I ask that the attached article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AUTO WORKERS' UNION IS ACTIVE IN AID TO RETIRED

(By R. O. Beckman)

Community centers at which retired persons may gather for companionship and leisure time are becoming an important aspect of modern social life.

Hundreds of facilities throughout the country, open to persons of all ages, but primarily youth-centered, are sponsored by city recreation departments or by welfare, religious, or other voluntary organizations. Not more than 150 such centers, however have set aside special quarters for older persons and established intensive programs for that group.

One organization in particular has blazed the trail. The auto workers union appears to have been largely responsible during the past 5 years for setting up more senior day centers in some 70 American and Canadian cities than all other agencies at work in behalf of our older citizens. These drop-in centers, sponsored in whole or in part by the union, now operate from 3 to 5 days a week, are professionally staffed, and offer a diversified recreational, educational, and social service program.

This was brought about with the leadership of energetic Charles E. Odell, recruited by the union from the U.S. Department of Labor. Odell modestly denies such credit and insists the achievement is due to the cooperative effort of other public and voluntary agencies.

Of the senior day centers, 15 are in industrial centers in Michigan, 13 in New York and New Jersey, and others largely in Midwestern and Ontario communities. Many receive primary financial support from the union, with some assistance from the community. Other centers initiated by the union are directed by other community groups.

They welcome any older person regardless of former membership in any labor union. The only charge is a voluntary contribution of perhaps a dime when a snack or cup of coffee is enjoyed. In contrast to the attendance at most other community centers and golden age clubs, a majority of participants are men.

The centers are usually open Mondays through Fridays and offer a varied program including educational and cultural activities; social affairs, games, movies, and hobbies; visitation of the homebound; referrals and counseling on health and other personal retirement problems; discussions of community problems; and participation in civic and community service.

Members have an integral part in planning programs that interest them. Monthly calendars are distributed showing each day's events. Visits to the homebound result in supplying many services and needs. Craft activity at the centers embraces such service projects as making decorated flower pots, tray favors, toys and puzzles, and candy fire crackers for a children's hospital. Dramatic and orchestral groups are popular at some centers.

For workers not yet retired, and their wives, a five-session 2-hour series of preretirement training discussions is conducted. The course was developed with aid from the universities of Michigan and Chicago. It has helped prospective retirees answer questions as to what to do to be ready for the nonworking years.

Some other labor organizations are at work for their retired members but are more largely concerned with establishing health clinics for members and retirees or setting up residential homes for older members. None has been as active in senior day center activity as the autoworkers.

Appendix

Francis E. Walter Honored by Assembly of Captive European Nations

EXTENSION OF REMARKS
OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, April 17, 1961

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks, I wish to include the text of the opening statement I made on Thursday, April 13, 1961, at the truly moving and most impressive ceremony of presentation of the honor scroll of the Assembly of Captive European Nations to our colleague, the gentleman from Pennsylvania, FRANCIS E. WALTER, chairman of the Subcommittee on Immigration and Nationality of the House Committee on the Judiciary. My remarks were as follows:

It is a signal achievement for an American legislator to be recognized by the international community of free men as a statesman and a great humanitarian.

FRANCIS E. WALTER was so recognized last year when, at Naples, Italy, he was unanimously elected to serve as president of the Intergovernmental Committee for European Migration, an organization in which 30 nations of the free world banded together in the noble endeavor of providing new homes and—indeed—new lives for those who have had to flee from totalitarian persecution or from economic misery.

Today, again, the free leaders of nine countries behind the Iron Curtain—Albania, Bulgaria, Czechoslovakia, Estonia, Hungary, Latvia, Lithuania, Poland, and Rumania—united in the Assembly of Captive European Nations recognized FRANCIS E. WALTER'S work as legislator, statesman, and humanitarian in paying him an exceptional tribute.

Our friend, Congressman WALTER, has, indeed, very early witnessed the worst aspects of human misery inflicted by godless, dictatorial rulers. He was one of the first Members of Congress to enter the liberated, infamous concentration camp at Dachau, right behind General Patton's tanks. He saw Hitler's victims, and he readily recognized the need for immediate assistance, and he did not just talk about it. He did something about it.

His subsequent work in Europe, particularly his extensive investigation of the displaced persons problem undertaken in 1949, resulted not only in legislation here in the Congress, but generated an international effort culminated in the erection of the successor to the International Refugee Organization, the Intergovernmental Committee in Geneva which refers to FRANCIS WALTER as its founding father.

Throughout the years, FRANCIS WALTER has served his country with distinction, great ability, and courage. He reflects credit not only upon his congressional district which he has served so loyally, but upon our Nation as a whole.

You people, representing the nine captive nations locked behind the Iron Curtain, have a great ally in Mr. WALTER. For he is aware, like you who have fled your homelands, that the vicious forces of atheistic communism are bent on world revolution, conquest, and enslavement of people.

I do not have to tell you who have fled, of the persecution that is being carried on by Communists—the immediate successors of Hitler in your homelands. This is ever present in the minds of all of us, and we must thank God that we have men and women of the caliber, spirit and determination of FRANCIS WALTER. There is no Member of Congress who more clearly understands the intents and purposes of communism, as well as the vicious, inhuman mind of the Communist, than does the man you have come to honor, FRANCIS E. WALTER, the great American statesman and humanitarian.

Presenting the honor scroll, the chairman of the Assembly of Captive European Nations, Mr. Vaclovas Sidzikauskas, former Ambassador of Lithuania to the Court of St. James's, made the following address:

Representative WALTER, Representative McCORMACK, Mr. Attorney General, ladies and gentlemen, this is a memorable occasion for the Assembly of Captive European Nations.

We have come here to pay homage to a man, whose achievements we are singularly endowed to appreciate. As refugees from Soviet imperialism, we have always been aware of Representative WALTER'S concern for the fate of those who fled tyrannical regimes and of the actions he has initiated to support them. As spokesmen for the freedom aspirations of our captive peoples, we have followed with admiration his determined struggle against Communist totalitarianism. And we are bound to state that in combining the qualities of a humanitarian, who aids the victims of a plague, and of a fighter, who sets out to repel and to eradicate the source of that plague, Representative WALTER has set an inspiring example.

Our age is oversatiated with high-sounding words and dazzling statistics. Yet those who have tasted the bitter bread of exile will never forget that Representative WALTER is the person who introduced and piloted through the Congress all immigration, displaced persons, and refugee legislation enacted since the end of World War II. Those who have experienced homelessness will never fail to grasp the full meaning of the facts that under legislation sponsored by Representative WALTER upward of 760,000 displaced persons and refugees entered the United States; that his creation, the Intergovernmental Committee for European Migration, has moved to new homes over 1 million emigrants from Europe of which over 450,000 were displaced persons and refugees.

In coming to grips with Communist imperialism, Representative WALTER went to the heart of its problem and to the roots of its danger. As chairman of the House Un-American Activities Committee, he explored not only the American offshoots of communism, but also initiated a widespread program of research on Soviet strategy and the captive countries. Several members of the assembly, including myself, had the privilege of being called to testify, as experts on communism, before the House Un-American Activities Committee. Our first-hand experiences were recorded and disseminated to the American people, before whose gates the same totalitarian enemy now stands poised.

The freedom cause of our captive nations has always been very close to Representative WALTER'S heart. He was and remains one of the most ardent supporters of the Captive Nations Week. He has shown deep understanding of the aims of the Assembly of Captive European Nations and we have benefited from his advice and support of our activities.

Recently, Representative WALTER has offered one of the most effective rebuttals of Soviet hypocritical charges of colonialism against the United States and brilliantly exposed the Soviet slogan of "peaceful coexistence." Yet his searching mind has also looked penetratingly into the ills besetting the West. Freemen everywhere should ponder his timely warning that: "The security of the West cannot be based solely on the strength of its armed forces or the size of its potential product and on its technical skill and progress. Defense does not mean just guns and tanks and planes. Defense means the strength of dedication and the awareness that ours are the most trying times that have ever faced this Republic and this Nation."

We fully agree that at this juncture of the contest between liberty and tyranny, the will to win is as, or even more, important than the accumulation of weapons. It is the will of the West to preserve and expand the area of freedom, combined with the will of the nations of east-central Europe to become free again, that offers the best guarantee of victory and of a true peace.

Representative WALTER'S forthright views and unflinching determination was bound to make him a target of hostile criticism from various quarters. One of the most conspicuously unjust instances of such criticism was the inference that he had opposed liberal legislation in the area of immigration. We, on the contrary, are both cognizant of Representative WALTER'S past contributions to broadminded and humanitarian immigration laws, and confident that he will propose new liberal legislation which will enable the eastern European refugees from communism to enter the United States.

One day the people of east-central Europe will be able to pay due honors to the free men who stood by them in their years of bondage. As we wait for this day to dawn, we present to Representative WALTER, as a token of our deep gratitude for his contribution to the fight for freedom and human dignity, this scroll which reads:

"To the Honorable FRANCIS E. WALTER, Representative in the Congress of the United States of America from the 15th District of Pennsylvania—fighter and humanitarian—in recognition of his undaunted courage in fighting Communist encroachments upon the freedom of man and nations, of his humanitarianism and of his generosity of heart—evidenced in legislative actions and interna-

tional achievements on behalf of refugees from totalitarian oppression."

VACLOVAS SIDZIKAUSKAS,
Chairman.
STEFAN KORBONSKI,
Vice Chairman.
BRUTUS COSTE,
Secretary General.

The presentation ceremony was attended, among others, by the Attorney General of the United States, Hon. Robert F. Kennedy; chairman of the House Judiciary Committee, Mr. Celler; ranking minority member of the committee, Mr. McCulloch; members of the subcommittee of which Mr. Walter is the chairman, Messrs. Feighan, Chelf, and Poff; the Deputy Under Secretary of State, Hon. Roger W. Jones; the Assistant Secretary of State, Hon. Brooks Hays; the Commissioner of Immigration and Naturalization, Gen. Joseph M. Swing; and a large group of officials from the Department of State and the Department of Justice active in refugee and immigration affairs.

Among the exiled European leaders who honored Mr. Walter were, in addition to the chairman, Mr. Sidzikauskas, Messrs. Stefan Korbonski, Poland, the last head of the Polish underground; Vasil Germenji, Albania; George M. Dimitrow, president of Bulgarian Peasant Party; Peter Zenkl, Czechoslovakia, former deputy Prime Minister and mayor of Prague; Ilmar Raamot, Estonia, member of Parliament; Ferenc Nagy, former Prime Minister of Hungary; Vilis Masens, Latvia, former diplomat; and Constantin Visoianu, Rumania, former Foreign Minister.

Also, there were representatives of the Christian Democratic Union of Central Europe, International Center of Free Trade Unions in Exile, International Peasant Union, Liberal Democratic Union of Central and Eastern Europe, and Socialist Union of Central and Eastern Europe.

Another Saginaw County Board of Education Opposes Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. JAMES HARVEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 17, 1961

Mr. HARVEY of Michigan. Mr. Speaker, under leave to extend my remarks, I would like to insert in the RECORD the following letter I received from the Board of Education of the Frankenmuth School District. The Frankenmuth Board of Education is the second such Saginaw County board to oppose Federal aid to education. A few weeks ago the Saginaw Board of Education took a similar stand in proclaiming local school needs can best be resolved by local efforts. Here is the Frankenmuth letter, dated April 13, 1961:

Mr. JAMES HARVEY,
House of Representatives,
Washington, D.C.

DEAR MR. HARVEY: The MEA Legislation Division has asked local school boards to express their thinking on Federal support to education.

The Board of Education of the Frankenmuth School District wishes to be on record as opposed to further support to public education in any of the forms being currently considered by Congress.

JOHN G. ZIEGLER,
President.
ARNOLD C. NUECHTERLEIN,
Secretary.

Address by Hon. Frank T. Bow Before the National Society of Daughters of Founders and Patriots of America

EXTENSION OF REMARKS
OF
HON. WILLIAM M. McCULLOCH
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 17, 1961

Mr. McCULLOCH. Mr. Speaker, Washington has been honored during the past week with the 63d annual general court of the National Society of Daughters of Founders and Patriots of America. I am pleased that Mrs. Charles A. Baker of Lima, Ohio, in the Fourth Congressional District has served with distinction as president of this society, and during the recent general court our colleague, the gentleman from Ohio [Mr. Bow], gave the address at the annual banquet.

Under leave to extend my remarks, I include his address in the RECORD:

OUR HERITAGE

There is little reason for me to come here tonight if my purpose were to tell you the nature of our heritage.

The fact that you devote your energies to this organization demonstrates that you are acutely aware of that heritage.

You know, as I do, that our forefathers handed down to us the most noble experiment in government in all of the history of mankind; that it has its foundations in religious faith; that it was conceived and has been cherished and nurtured by self-reliant, courageous men and women who were willing to give their genius, their energy, even their lives to preserve it for future generations.

All of these things we know, and so, if there is a purpose for our meeting here, it is to consider how our generation is fulfilling the obligations laid upon us by those who went before. Have we been true and loyal guardians of our heritage? Do our children understand the heavy obligations we will pass on to them? As a matter of fact, will our children inherit? Will there be anything left?

I hope it may be true that my anxiety for the future of our Nation causes me to exaggerate the perils of our situation, but nothing that I read, or hear, or witness gives me reason for either comfort or satisfaction.

The first danger, it seems to me, lies here at home where I think our people are losing the qualities of self-reliance and responsibility that are so vital a part of our heritage. Without them, all else is lost.

The second danger lies in our attitude toward the enemies of freedom in other lands, and here I fear I detect a lack of courage and a willingness to compromise that could lead swiftly to disaster.

In the inaugural address that won acclaim both here and abroad, President Kennedy spoke these words: "And so, my fellow Americans, ask not what your country can do for you; ask what you can do for your country."

That sentence struck a spark in the hearts of those listening. Unfortunately, the spark ignited no flame.

It is as though, for one fleeting moment, the new American President made contact with the self-reliance of our pioneer heritage. The people responded with a feeling of pride and courage as they recognized, perhaps only subconsciously, a basic statement of American faith. And then all was quiet. There was nothing to show for it. The opportunity was lost. No effort was made to build upon the moment when the President and the people shared their pride in America's heritage.

Before the day was out, the trade associations, the labor unions, the professional educators, the chambers of commerce, the unemployed in depressed areas, and pressure groups everywhere were preparing their demands upon the new Congress and the new administration.

And since that day there has come from the White House to Capitol Hill a steady stream of special messages proposing that the Government finance public schools, subsidize new industry in certain cities and States, guarantee the income of farmers by controlling their production, provide homes for millions of Americans, subsidize the States in at least a dozen new or enlarged programs of Federal aid.

In short, we have witnessed a complete reversal of the slogan of 90 days ago. We have a Federal Government eager to do things for citizens, and we have all too many citizens begging to have things done for them.

The Catholic bishops of America, in a historic statement last fall, had this to say:

"Although personal responsibility and initiative have been our national characteristics, explaining in large measure our country's progress in human welfare, yet pressures are growing for a constantly greater reliance on the collectivity rather than on the individual. An inordinate demand for benefits, most easily secured by the pressures of organization, has led an evergrowing number of our people to relinquish their rights and to abdicate their responsibilities. This concession creates a widening spiral of increasing demands and pressures, with a further infringement on personal freedom and responsibility. Intensive socialization can achieve mass benefits, but man and morality can be seriously hurt in the process."

As a Presbyterian, I wish that all of the social action committees of the various Protestant denominations could see as clearly the need for a careful balance between freedom and security, and speak as clearly against the automation of human beings and the steady loss of freedom that has characterized our recent history.

Attempts to maintain free government have failed time and again throughout history because people get tired of governing themselves.

Free governments have been tried and failed in ancient Greece and Rome, in modern Germany, in many other times and places, because the people grew tired of responsibility. They turned to government to do things for them, without pausing to consider what government might do to them. They never learned the lesson—either you run the government or the government runs you. Unable or unwilling to rely upon themselves, they sold themselves and their children's liberty to government.

The question now before us—perhaps it has already been answered—is whether we are going to follow the historic failures of other free peoples. Are we still able to make a choice?

If there are indications that we are forgetting our heritage on the domestic scene, what can we say about our conduct of foreign relations?

The first and most important obligation of our Government is to secure the blessings of liberty to ourselves and our posterity. We can do this only if we have convictions about what is right, convictions about how we should deal with other nations, and follow these convictions regardless of whether we are admired, fawned upon, on despised by friend or foe.

I am deeply concerned by the extent to which our activities are governed by thoughts of how other nations may react.

The most crucial issue in this area today involves the People's Republic of China.

Shortly before his death, John Foster Dulles made a statement on China that reflected his firm conviction on this subject. He said:

"Internationally, the Chinese Communist regime does not conform to the practices of civilized nations; does not live up to its international obligations; has not been peaceful in the past, and gives no evidence of being peaceful in the future. Its foreign policies are hostile to us and to our Asian allies. Under these circumstances, it would be folly for us to establish relations with the Chinese Communists which would enhance their ability to hurt us and our friends."

These words are as true now as they were when Mr. Dulles spoke them.

Here is an issue on which America and Americans have been right.

We know that the Communist rulers of China are tyrants who imposed themselves on the people in bloody revolution. We know they are enemies of human dignity, human liberty. We know they are aggressors seeking to expand their dominion over other people who now are free. We know that they despise religion, and we know that it is right for us to oppose them.

In the past we have not wavered from this position; there has been no appeasement; and there has been no war.

But suddenly there are suggestions from our highest officials that our policy is unrealistic; that our allies think we should relax our opposition to Red China; that we should abandon our ally, the true Government of free China, and arrange a plebiscite on control of Formosa. We are told that recognition of Red China would increase trade, reduce world tension. We are told that admission of Red China to the United Nations is inevitable.

Are we to turn our backs on our friends, ignore right and justice, admit inevitability of something we have successfully opposed for many, many years? Is this the nature of our American heritage?

If you think about it, you know that confidence, like fear, is contagious. Our heritage teaches us courage and confidence, the courage of our convictions, confidence that others will recognize their correctness.

Our heritage does not permit wavering, appeasement, catering to foreign opinion.

Our heritage does not permit us to stand before the world as an image of dismayed indecision.

If it is true that we are losing our heritage, what must we do to regain it?

It seems to me that we should start where the Founding Fathers began.

They ascribed the origins of our Republic to divine providence.

They recognized that the inalienable right of each freeman is a gift from God, which the State can neither curtail nor destroy.

During the deliberations that produced the Declaration of Independence, Benjamin Franklin suggested that each daily session open with prayer, and this is what he said at that time:

"I have lived a long time and the longer I live, the more convincing proof I see that God governs in the affairs of men; and if a sparrow cannot fall without His notice, is it probable that an empire can rise without His aid? Except the Lord build the house, they labor in vain who build it. Without His concurring aid, we shall proceed no better than the builders of Babel."

That statement can serve as our guide. The psalm shows us the way to restore our heritage, our faith.

Let us go out and tell our fellow citizens and our youngsters, that it is not the Government in Washington that gives them liberty—it is the Government that threatens liberty. Freedom is not a gift of government. Freedom is their heritage as God's children. They can enjoy it only so long as they guard it zealously, walking in the paths of righteousness, proud of their individual responsibilities, eager to discharge the obligations laid upon them by the faith of our fathers.

Writing in his epistles to the Romans, Paul said to the believers: "You know what hour it is. The night is far gone. It is full time now for you to wake from sleep."

This is our message to all Americans today. Wake from sleep. It is time. Ignore the dangers longer, and all will be lost.

Jobs for the Handicapped—A Community Challenge

EXTENSION OF REMARKS

OF

HON. ROSS BASS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, April 17, 1961

Mr. BASS of Tennessee. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include the following essay "Jobs for the Handicapped—A Community Challenge," which was written by a young constituent of mine, Miss Nancy Dee Meeks, of Dickson, Tenn. Miss Meeks is a most outstanding young lady—in addition to being a writer of note, she is an accomplished musician; and, just last week, she won the poetry reading contest sponsored by the National Forensic League in Clarksville, Tenn.

The following essay has won for Miss Meeks the honor of representing Tennessee in the forthcoming national essay contest, and I, therefore, feel that her literary efforts are worthy of the attention of the entire membership of the House:

JOBS FOR THE HANDICAPPED—A COMMUNITY CHALLENGE

(By Nancy Dee Meeks, Dickson High School, Dickson, Tenn.)

Close your eyes. Yes, close your eyes for just a moment. What did you see? Nothing? Darkness? Darkness—the absence of light. For a few seconds your life was enveloped in utter obsecurity. What if that obscurity had not been altered? What if you were to spend the remainder of your life under the domination of this darkness?

Be very still for just a moment. What do you hear? A bird singing? People chattering to one another? A typewriter clicking? Perfectly common American sounds, all of these; but what if you were never to hear any of these sounds again?

Look at your legs, your arms, hands, fingers. Perfect to the tiniest detail because of God's endowment to you. Yes, of course, you are thankful. You realize what important additions these gifts are to your independence; but what if you were suddenly deprived of all or some of these vital body members or senses? What if the darkness brought about by these informities should abruptly surround your life?

"Oh, but that's impossible," you say.

If this is your attitude, will you permit your thoughts to accompany me on a short trip down the road toward light—the light of understanding one of America's weightiest problems—her handicapped populace and what can be done for them.

For the first few steps of our journey toward greater understanding, let us determine exactly what a handicapped person is. Generally, handicapped persons can be divided into four main classes—the blind, the deaf and deaf mute, the crippled, and the mentally retarded.

Until approximately three centuries ago, such people were usually doomed to lead helpless lives. Because they were unable to earn a living, they were compelled to rely on their families or friends for support and care.

Although modern scientists have discovered means of curing many of these unfortunate people, they have found ways to make them independent to a great extent. The blind are taught to read, to walk about by themselves, and to work in special fields. The deaf are taught to receive messages; deaf mutes are trained to talk. Men with missing arms and legs are given new ones and are taught to use them. The limbs of paralysis victims are restored to use. Children with subnormal intelligence are given education schooling and are trained to work and live happily with people of normal intelligence. Humanity in general benefits from talents and skills which otherwise would have been lost to the world.

You see, not everyone has been idle. These facts show that not everyone has been content to shake his head sadly and then turn away, forgetting. Not everyone has allowed himself to be convinced that this distressing situation could never occur in his own private little world.

These facts prove that someone has become aware, interested, concerned, absorbed. Someone has felt a compulsion to answer the pleading cry for help, for opportunity, for confidence. Someone has accepted the challenge, the invitation to serve.

Let us walk a little farther down this summoning road of service. How does all of this pertain to us? How are we to be the means by which handicapped persons can secure honorable and profitable occupations—positions where they can fulfill a determined responsibility to use the help of others to help themselves? How are we to be the light by which these people can again see happiness? Finally, how are we to abandon our seats in the audience and become a part of the production—the production of a solution to this perplexity?

First, we must become aware. We must grasp the enormity of the situation and realize that it can be thwarted only by organization and cooperation. As we learn more, our interest must be converted to concern to the extent that we become absorbed in a desire for service, knowing that this problem is our responsibility; the answer lies in our hands.

We, as normal individuals, can serve through industry from the largest factory under the direction of a well-organized labor union down to the smallest independent business firm. We can serve through our representation in Congress. We can serve through veterans' groups, science foundations, churches, and local community organizations. We can serve.

Our Government is responsible for much aid given the handicapped. Through the Department of Health, Education, and Welfare we support the United States Employment Service and the American Printing

House for the Blind. Congress created Gallaudet College in Washington, D.C., the world's only college for the deaf. It passed the Vocational Rehabilitation Act which is carried out by various National, State, and local community committees. The Library of Congress has a special department of books for the blind, and we observe National Employ the Physically Handicapped Week, October 5–11. The U.S. Army, Navy, and Veterans' Administration are active in rehabilitation efforts. The Bell Sound Laboratories have made numerous contributions through new inventions. In addition to many hospitals and sanitariums, some other helpful organizations are: The National Foundation, which raises funds for poliomyelitis, arthritis, and birth defects; The American Foundation for the Blind; and the Seeing Eye Foundation.

Our road of service isn't an easy journey, for we must lead those less fortunate than ourselves so they can avoid stumbling over the rocks along the pathway or being misled by the larger obstructions. We must work hand in hand with these national foundations and committees to apply their labor in our own communities. There are numerous tasks, common to every community in America, which could be filled so willingly and so capably by the rehabilitated and the handicapped—jobs in the field of handicraft such as ceramics, knitting, crocheting, and weaving. Blind persons with keen hearing senses are expert piano tuners. Deaf persons can work on factory assembly lines unhampered by noise. Persons with useless legs are taught skills such as watch-repairing, and victims without hands or arms can learn to paint with brushes held between their teeth or toes. Hobbies can be converted to incomes, to new ways of life, to happiness.

We must give these people the support of our thoughts and our action. They seek not pity, but understanding—not charity, but a change. They crave a chance to lead a comparatively normal life in the pleasant surroundings of people who understand and appreciate them. They deserve a chance to gain sufficient independence to become self-supporting.

We must help them achieve this notable goal. We must see that doors are opened to them—doors which will reveal to their lives the light necessary for survival. We must show them that society needs them, their special talents, and their acquired skills. We must give them jobs because of their abilities, not their disabilities.

May we have a successful journey down the road toward light. May we eagerly accept the challenge offered us. May we reach our ultimate goal of showing the world that these people are no longer handicapped, but handi-capable. They are capable of serving our communities if we will only lead the way.

Lake Geneva, Wis., Public Elementary School Board Opposed to Federal Aid to Any School

EXTENSION OF REMARKS
OF
HON. HENRY C. SCHADEBERG
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 17, 1961

Mr. SCHADEBERG. Mr. Speaker, in view of the fact that the House will soon consider the Federal-aid-to-education proposals, I would like to insert in the RECORD the text of a telegram received from the Lake Geneva, Wis., Public Elementary School Board.

LAKE GENEVA, WIS., *April 13, 1961.*

HON. HENRY SCHADEBERG,
U.S. House of Representatives,
Washington, D.C.:

At a meeting of the Lake Geneva public elementary school board, held on Tuesday, April 11, 1961, a lengthy discussion was held in regard to the Federal-aid-to-education program presently before Congress.

It was decided that the school districts have the responsibility of providing educational programs. Therefore they should and are obligated to provide the necessary funds for their programs.

We feel that the Federal Government should not assume any responsibility in this field and we unanimously adopted a resolution to inform you of our decision and request that you vote against any bill that would grant Federal funds to any school, public, private, or parochial.

UNION SCHOOL DISTRICT NO. 1,
LAKE GENEVA PUBLIC ELEMENTARY SCHOOL,
FULLER BOUTELLE,
President, Board of Education.
E. A. TRAVER, *Treasurer.*
FRANK BULLOCK, *Clerk.*
W. S. HAMMERSLEY, *Director.*
Mrs. CLIFFORD GERBER,
Director.

The majority of people in the First Congressional District of Wisconsin are opposed to Federal interference in local school affairs.

Our Immigration Policy

EXTENSION OF REMARKS
OF
HON. FRANK CHELF
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, April 17, 1961

Mr. CHELF. Mr. Speaker, under the leave to extend my remarks, I wish to include in the RECORD the text of an address made by my friend, the distinguished gentleman from Pennsylvania, Mr. WALTER, at the "Consultation on Immigration Policy," held at the Mayflower Hotel in Washington, D.C., on April 13, 1961. Mr. WALTER's address is as follows:

Mr. Chairman, ladies, and gentlemen, in looking at this fine and impressive gathering, I realize, of course, that you, ladies and gentlemen, are primarily interested in the humanitarian aspects of immigration.

I believe it to be my task, however, to propound to you a few thoughts and observations in behalf of those who, in assuming their seats in the Congress, have undertaken obligations and responsibilities toward the American Nation as a whole rather than toward specific groupings, or shadings of public opinion, as much as those segments of our citizenry may be deserving of respect for their motivations and activities.

Historically, migratory movements were prompted by the desire to find better living conditions, a desire ever present in the mind of every human being and, indeed, in the instinct of every living creature.

Migration—basically—was the search for a more suitable climate, or for more abundant food, or for a drier place upon which to erect a dwelling. Migration still is the same, allowing, of course, for some other desires generated by modern progress.

The free and unfettered stream of immigrants who founded a new nation on these shores had all of these, and one more desire—the search for freedom.

Thus, implicitly, the phenomenon of migration is a composite of economic, social, and political elements. It is the presence of these three elements in the problem of immigration that prompts sovereign nations to establish laws, rules and regulations determining the size of the foreign influx and discerning the quality of the migrant. It is the "how many" and "who" is coming that the law is concerned with. These two fundamental criteria rest at the base of immigration policies and laws of every country of the world, just as much as they constitute the two cornerstones of our laws.

It is not necessary, of course, to stress before this enlightened gathering that the economic, social and political conditions of the world are not static. They change and therefore immigration laws and policies governing the admission of immigrants must change.

If they were to remain frozen, no country would be equipped to cope with the changing aspects of the problem, the vital importance of which could probably be best illustrated by comparing it with the injection or infusion of foreign blood into the veins of a living creature.

What are the changes in the world's conditions that must fashion our judgment at this time?

It becomes gradually evident that in the second half of the 20th century immigration is no more a practical remedy for overpopulation of one country or another. Industrialization, technological progress and economic growth have made appraisals of economic conditions based on density of population completely inaccurate and as obsolete as a horse and buggy in jet age.

This conclusion is sustained by but one glance at what is occurring in the highly industrialized countries of Europe. Germany, overpopulated to a degree of actual crowding, imports hundreds of thousands of workers from Italy and Greece, in addition to providing employment to the refugees from the East, streaming in at the rate of approximately 1,000 per week.

The density of population of industrialized Belgium is the highest in the entire world but Belgium, similarly, imports additional workers. Demands for resettlement opportunities overseas, very vociferous in Holland up to about 2 years ago, have all but disappeared in that overpopulated country due to the exceedingly fast pace of its industrial development.

On the other side of the ledger, Spain could be called an almost empty country, but it strives to send great numbers of its citizens abroad due to lack of industrial progress. The differences between the economic structure of northern and southern Italy, with industries thriving in the north and modern economic development neglected in the south, further serve as a convincing illustration of the diminishing relationship between density of population and economic conditions.

Taking due notice of this development, the Intergovernmental Committee for European Migration strives now to supply skilled or semiskilled manpower to the underdeveloped countries where such manpower is needed, rather than to continue the indiscriminate siphoning off of people from countries not so long ago described by the now obsolete, totally fallacious notion as overpopulated.

Another factor, a most important one, has recently entered into considerations of immigration policy: the universally growing birth rate.

Where do we, the United States, stand in this regard: Recently a Washington newspaper—not particularly friendly to me and my way of thinking—had this to say:

"If the population of the United States continues to grow at its present rate, the census takers in 2000 will count twice as many Americans as in 1960.

"In recent years we have been growing at an annual rate of 1.7 percent, faster than any industrialized country in Europe and faster than some underdeveloped nations such as India and Korea. Our rate of growth is now about the same as that of the 'exploding' world population."

It is by now agreed by everyone that the rate of our economic growth lags badly behind the rate of growth of our population. The number of unemployed attests to that, but what is more disturbing than unemployment created by temporary recessions or seasonal layoffs, is the occurrence which the economists call chronic unemployment.

Chronic unemployment stays with us even in periods of high productivity. It accompanies the population increase and it is attributed to deep-seated causes resulting from technological developments like automation, inadequate business growth rates, changes in international economic structure, and shifts in business location.

Remedies to this dangerous economic disease have been proposed, but it will take a long time before their effects become visible.

These considerations should not, I believe, serve to promote changes in the law designed to lock tight the doors to the United States. They must, however, prompt every responsible American to look at immigration problems with more caution and discernation than it was necessary some three of four decades ago. It should be obvious to anyone concerned with the national interest that our immigration policy must at this particular time be adjusted to our domestic, economic, and social problems with a considerably greater degree of precision than at any other time.

Certainly, the United States must remain a haven for the oppressed and persecuted. Certainly, the United States cannot deny its citizens and residents the right to be united with their families. Certainly, however, the United States cannot for political reasons—domestic or external—attempt to absorb into its bloodstream unmanageable and unassimilable quantities and qualities of immigrants. Nothing strikes me as more preposterous, than the proposals to increase our immigration quotas in proportion to the increase of our own population as shown by the decennial censuses.

It is my firm belief that using the existing law together with timely adjustments which, from time to time, are being incorporated into the basic statute, the United States is quite satisfactorily equipped to protect itself, and at the same time implement its responsibilities to the community of freemen.

Since the end of World War II and up to the present time, this country had continuously possessed in its hands legal instrumentality permitting the admission of a most generous fair share of refugees. Too many people overlook that fact.

Similarly, after removal by the present law of racial bars to immigration and naturalization and after the establishment of equitably determined nonquota categories of immigrants, our statutes compare most favorably with the laws of other countries; another often overlooked fact.

In further implementation of policies, which I attempted to outline to you, I introduced today in the House of Representatives a bill containing the following basic features:

1. In order to expedite and facilitate the reuniting of families, my bill establishes a "quota reserve" consisting of the annually unused quota numbers which will be allocated for the use of relatives of U.S. citizens and lawfully resident aliens. Every country of the world will have access to the quota reserve proportionate to the respective country's participation in the sum total of all annual quotas under 7,000.

2. Temporary laws providing for the entry of adopted children are proposed to be incorporated into the permanent code.

3. Waivers of inadmissibility, including inadmissibility due to affliction with tuberculosis, are to be made part of our permanent law and will be available to relatives of U.S. citizens and permanent residents of this country.

4. Veterans of the Korean hostilities will, under the bill, be accorded the same naturalization privileges as those enjoyed by naturalized veterans of World War I and World War II.

5. An improved procedure governing the admission of highly skilled immigrants will give the Secretaries of Defense; Agriculture; Commerce; and Health, Education, and Welfare, together with the Attorney General, the possibility to provide for the selection of the most desirable immigrants with a view toward serving the national interests in the field of defense, science, technology, public health, and cultural progress.

6. The increasing instances of abuse of our immigration laws have prompted me to propose to the Congress, in the same bill, several provisions designed to facilitate the expulsion of the racketeering elements, subversives and aliens who resort to fraud in obtaining entry and permanent residence in this country. Improved procedures and precise rules of evidence in judicial action bearing on immigration, deportation and naturalization are proposed in my bill to serve to correct laxities harmful to the national interest.

I am convinced that the country needs this legislation and I shall spare no effort to obtain its prompt enactment.

Pharmacist Writes From the Good Ship "Hope"

EXTENSION OF REMARKS

OF

HON. WILLIAM S. BROOMFIELD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 17, 1961

Mr. BROOMFIELD. Mr. Speaker, of all our efforts to aid those who are less fortunate than ourselves, none has had so much success as Project Hope, a floating hospital and medical center which is truly performing medical miracles in the Far East.

The Virginia Pharmacist recently published an article about one of the men who is playing an active part in making Project Hope a success, which appears as follows:

PHARMACIST WRITES FROM THE GOOD SHIP "HOPE"

A young pharmacist has traveled halfway around the world to find the more he knows of the earth, the prouder he is to be an American.

"I have never had the values of my American heritage made so clear to me as out here working with Indonesian medical problems," says Charles Dickerson of Pontiac, Mich., one of the two pharmacists presently aboard the floating medical center SS *Hope*, currently waging the peace in the troubled waters off southeast Asia.

The *Hope*, whose initials stand for health opportunity for people everywhere, is supported by Americans in all walks of life. Members of the American Pharmaceutical Association have contributed over $7,000 in cash, reports Thomas A. Foster, chairman of the Project Hope Committee of the American Pharmaceutical Association.

Dickerson, who has been with the *Hope* since its arrival in Indonesia in October, has been responsible for the cataloging and stocking of the thousands of drug items carried aboard the vessel, in addition to his regular pharmaceutical duties.

The ship's primary mission is to teach Indonesian medical personnel to be better able to handle their own medical problems. Project Hope is not a giveaway program. It is an attempt to help the newly developing nations help themselves.

"It's been a long haul," Dickerson reported from Sumbawa, Indonesia, to Dr. William B. Walsh at Project Hope headquarters in Washington, D.C. "We're in pretty good shape now and I think we're going to lick our resupply problems."

The resupply problem of which Dickerson speaks is the staggering 8,000-mile supply line between the United States and the SS *Hope* over which pharmaceuticals and other medical supplies must travel.

A resupply system, Dickerson reports, has been set up by air between the United States and Indonesia, the first shipment by this method, a cargo of smallpox vaccine, arriving from Seattle, Wash., shortly after the *Hope* arrived in Djarkarta.

On the 15th of December the *Hope* received its next consignment of medical supplies, from the *President Taft* which left the items in Djarkarta to be transshipped to the *Hope* in eastern Indonesia.

"The next major resupply point," Dickerson added, "was Makassar in the Celebes in mid-January. Right now we're in the midst of an inventory of 2,000 expendable items—drugs, bandages, and so forth. When we finish with this we'll know exactly where we stand and can reorder stocks that are low.

"Our job in the *Hope's* pharmacy is to fill prescriptions from the doctors here for their patients on the ship," Dickerson stated. The two pharmacists are busiest at the end of each stay in a port when the *Hope* puts off sufficient drugs to insure continued treatment of the discharged patients.

American pharmaceutical companies have been generous with their donations to the hospital ship, which is supported by public contributions.

Off hours on the *Hope* have been few and far between for Dickerson, whose job keeps him on call every second night and whose working hours have probably totaled more than anyone on the ship except the captain. Nevertheless, he has been able to attend the receptions given the ship's staff by local medical authorities and take part in the tours to nearby points of interest sponsored by Indonesian civic groups.

What does he think of his work on the *Hope*? "It's terrific experience and something I wouldn't miss."

Federal Aid Fallacies

EXTENSION OF REMARKS

OF

HON. CHARLES M. TEAGUE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 17, 1961

Mr. TEAGUE of California. Mr. Speaker, under leave to extend my remarks, I call the attention of my col-

leagues in the Congress to an excellent editorial appearing in the Salinas (Calif.) Californian of April 4, 1961, entitled "Federal Aid Fallacies":

[From the Salinas Californian, April 4, 1961]

EDITORIALS AND OPINIONS—FEDERAL AID FALLACIES

It shouldn't be necessary to restate and restate the many fallacies inherent in Federal aid to education, but since it obviously and urgently is necessary, we can think of no more succinct way of restating them than by quoting a San Francisco Chamber of Commerce resolution. The chamber's directors outlined their opposition to such aid as follows:

"States and localities are in the best position to determine and meet their responsibilities for public education.

"Federal aid to education is inevitably accompanied by undesirable Federal controls.

"Federal tax revenue allocated under such a program would not be 'free' money but would consist of funds taken out of the pockets of local taxpayers and reduced in effective amount by Government bureaucracy costs.

"States which have maintained a high tax rate in support of good school programs would be penalized in favor of States which have failed to do so."

To which all we need add is "Amen" and "CONGRESSIONAL RECORD, please copy."

House Resolution 211, Special Committee on Captive Nations

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 17, 1961

Mr. FLOOD. Mr. Speaker, on March 8, 1961, I introduced a measure calling for the establishment of a Special Committee on Captive Nations in the House of Representatives. This measure is now House Resolution 211. There are not sufficient words to express my profound gratitude and personal delight to the more than 20 Members of the House who joined with me in that most stimulating and very enlightening discussion which took place then on the subject of the captive nations—CONGRESSIONAL RECORD, March 8, 1961, "Russian Colonialism and the Necessity of a Special Captive Nations Committee," pages 3286 to 3311.

The popular response to House Resolution 211 has been so enthusiastic and impressive that I feel dutybound to disclose the thoughts and feelings of many Americans who have taken the time to write me on this subject. These citizens are cognizant of the basic reasons underlying the necessity of the proposed committee. They understand clearly the vital contribution that such a committee could make to our national security interests. In many cases, they know that no public or private body is in existence today which is devoted to the task of studying continuously, systematically, and objectively all of the captive nations, those in Eastern Europe and Asia, including the numerous captive nations in the Soviet Union itself.

Because their thoughts and sentiments are expressive and valuable, I request that the following responses of our citizens to House Resolution 211 be printed in the Appendix of today's RECORD:

CONNECTICUT COMMITTEE FOR FREEDOM OF CAPTIVE NATIONS,
Hartford, Conn., March 27, 1961.

Hon. DANIEL J. FLOOD
U.S. Congress, House of Representatives
Washington, D.C.

DEAR SIR: We are very pleased to hear that you are pressing legislation to set up a special committee to deal with the problem of the captive nations. We urge you to continue your efforts until such a committee becomes a reality.

Our organization represents local branches of the Ukrainian Congress Committee, the Latvian Association of America, the Lithuanian American Council, the Estonian Society of America, and the Byelorussian American Association. The Hartford Hungarian Club is also affiliated with us as are various Polish, Armenian, and Georgian individuals. All of us support your bill.

We shall do everything to encourage local interest in your activities. Thank you for your efforts.

Cordially,
STEVE BOYCHUK, *Chairman.*

HEADQUARTERS,
NAVAL AIR TRAINING COMMAND,
U.S. NAVAL AIR STATION,
Pensacola, Fla., March 31, 1961.

MY DEAR MR. FLOOD: While reviewing the proceedings and debates which appeared in the CONGRESSIONAL RECORD of March 8, 1961, I read with considerable interest your very enlightening and informative remarks on the necessity of a Special House Committee on the Captive Nations.

As you mentioned, from the viewpoint of our own national security and on the question of war or peace, the vital importance of all the captive nations should be self-evident. I wholeheartedly support your resolution and feel sure that the challenge of your remarks will bring to our citizens the realization that here we have an excellent opportunity to move from the defensive to a strong offensive against the Communist conspiracy.

I was very much aware of the enthusiasm and success with which Captive Nations Week was conducted last year. I would like to know if it will be conducted again this year and if the new administration will endorse a strong policy in favor of this urgent and significant cause of freedom.

These matters are of considerable interest to me and to many of my friends. If reprints are available, I would appreciate it very much if you would send me three or four copies of your inspiring presentation.

Sincerely,
WILLIAM E. FLY,
Captain, U.S. Navy.

SCARSDALE, N.Y., *April 4, 1961.*

DEAR MR. FLOOD: It was recently brought to my attention that your recent proposal, House Resolution 211, concerns the establishment of a Special Committee on the Captive Nations. In realizing the vital importance and necessity of such a committee as a valid instrument for letting the free world truly know the deceit and perfidy of Russia, I heartily endorse this resolution.

It is gratifying to know that the Senators from New York, and my Congressman, EDWIN B. DOOLEY, are supporting you in this worthwhile endeavor. Wishing you the successful passage of House Resolution 211, I remain,

Sincerely yours,
BRIAN M. DWYER.

DENVER, COLO., *March 28, 1961.*

Hon. DANIEL J. FLOOD,
New House Office Building,
Washington, D.C.

DEAR SIR: All of our members would like to congratulate you on your introduction of the resolution calling for the establishment of a special permanent Committee on Captive Nations in Congress.

We believe that such a committee will be of great help in our Nation's policy against the Soviet Union. It will serve as a source of valuable information about many nations enslaved by Soviet Russia. We believe that those enslaved nations contain a destructive power which, in many aspects, is more dangerous to the Russian empire than atomic bombs.

Proper support of those enslaved nations, which constitute a majority of the Soviet Union's population, means a win in any kind of war with Soviet Russia.

We are writing to all of the Congressmen of our State asking them to support your resolution.

Respectfully yours,
KORNEL KRUPSKY,
President, Denver, Colo., Branch, Ukrainian Congress Committee of America, Inc.

AMERICAN COMMITTEE FOR THE INDEPENDENCE OF ARMENIA,
Boston, Mass., April 1, 1961.

Hon. DANIEL J. FLOOD,
Congressman from Pennsylvania,
House of Representatives, Washington, D.C.

DEAR CONGRESSMAN FLOOD: Recently you took the occasion before the House to offer a resolution proposing formation of a permanent Committee on Captive Nations.

In our most recent session, this committee, representing more than 300,000 patriotic Armenian Americans, resolved that this letter be sent to you commending you for the important step you have taken, and assuring you of the wholehearted support of our organization in your vitally important work on behalf of the captive nations of the U.S.S.R. whose cause has been too significantly and too long neglected.

If there is anything at all that we may do to signify our full acceptance of the establishment of such a committee, please let us know.

Sincerely,
DR. JAMES H. TASHJIAN,
Executive Secretary.

WORCESTER, MASS., *April 6, 1961.*

CONGRESSMAN DANIEL J. FLOOD,
Old House Office Building,
Washington, D. C.

DEAR CONGRESSMAN FLOOD: I support your action on House Resolution 211, and commend you for it.

Very truly yours,
DAVID G. SCANNELL.

A Tribute to the X–15

EXTENSION OF REMARKS
OF
HON. JAMES C. CORMAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 17, 1961

Mr. CORMAN. Mr. Speaker, late last month, the Nation was given the news that the X–15 rocket-powered airplane had achieved a new altitude record of 32.12 miles over the desert of southern California. The news was exciting and

inspiring to all Americans who are concerned with our position in the space race with Russia. I would like to pay tribute here to the man who piloted the X–15 on this historymaking flight, Test Pilot Joe Walker, and to the scores of men who contributed to the construction, maintenance, and preparation of the X–15.

I would also like to call the attention of this House to a forthcoming project in the motion picture industry which will graphically demonstrate the immense labor that has gone into the X–15. On April 17, Essex Productions, headed by Mr. Frank Sinatra, will begin filming at Edwards Air Force Base in California a motion picture titled "X–15." It will, I believe, show the advances made by manned-rocket aircraft in the last 15 years.

The producers of this picture have worked with the National Aeronautics and Space Administration, the Department of Defense, the Air Force, and North American Aviation, Inc., to assure that this picture will be accurate and will put this entire area of our defense into its proper perspective.

I hope my colleagues will join with me in wishing the men and women who will make this motion picture all the wisdom and inspiration that its subject deserves.

Salute To Maj. Gen. T. W. Parker

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 17, 1961

Mr. AVERY. Mr. Speaker, as is stated in the editorial which follows, Maj. Gen. T. W. Parker, U.S. Army, is leaving his present assignment as commanding general, Fort Riley, in the 1st Infantry Division to join the Office of the Joint Chiefs of Staff.

In my opinion, the editorial written by Mr. W. A. Colvin, editor of the Manhattan, Kans., Mercury, newspaper, very accurately describes the opinion of Kansans regarding the outstanding job done by Major General Parker.

I am happy to bring this editorial to the attention of my colleagues. I wholeheartedly endorse Mr. Colvin's comments.

SALUTE TO A GENERAL

Once again Fort Riley is sending a commanding general into new and higher positions of Army responsibility thus emphasizing the privilege and pleasure it is to have men of such capability in our community life.

The latest of the commanding generals to be rewarded for his years of exemplary service is Maj. Gen. T. W. Parker who has been commanding general of Fort Riley and the 1st Infantry Division for more than 2 years.

General Parker's new position which he will take in late June is one that is testimony to his outstanding ability as a general of the U.S. Army. When he leaves his command here he will join the Office of the Joint Chiefs of Staff in Washington in which capacity he will serve as special assistant to Gen. Lyman Lemnitzer, chairman of the Joint Chiefs of Staff. It is one of the most responsible positions in the entire Army organization and in it General Parker will be assisting in many of the major—and perhaps fateful—decisions of our Nation's defense mechanisms.

In the tenure at Fort Riley, General Parker has won a host of new friends in the surrounding communities. We say new friends because General Parker was not a stranger to this area when he took over command in February 1959. He has previously served here as chief of staff to the 10th Infantry Division, returning as commanding general after service in Europe.

He and his gracious and lovely wife will be sorely missed when the time comes for their departure. But as in all such cases when a deserving man wins promotion to new responsibility there are always mixed emotions. A community to which they have endeared themselves and with which they have worked so cooperatively is always reluctant to give them up. There is always the joy, however, of seeing high-type individuals go on to new and bigger things, and we are delighted for General Parker that he is being accorded this recognition.

It is remarkable to think about how many former commanding generals of Fort Riley have gone from here to the top levels of Army administration and we congratulate General Parker for also having attained this deserved promotion.

The Army has picked exceedingly well and in the ensuing weeks before leaving Fort Riley, General Parker will find he has a host of sincere wellwishers who have no doubt of the great contributions he will make in his new assignment.

Lawrence and the Old Trails

EXTENSION OF REMARKS
OF
HON. ROBERT F. ELLSWORTH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 17, 1961

Mr. ELLSWORTH. Mr. Speaker, on Monday, April 10, a historical marker, entitled "Lawrence and the Old Trails," was dedicated at the Kansas Turnpike service area just 5 miles east of my hometown, Lawrence, Kans. Mr. F. W. Brinkerhoff, editor-publisher of the Pittsburgh (Kans.) Headlight-Sun, delivered the dedicatory speech. He stressed the key role played by the Lawrence area and the Kaw Valley in the development of Kansas and pointed out that right now—today—the multiple advantages of adequate water supply, labor of high character and intelligence, good social and living conditions, and school facilities combine to make a powerful appeal for industrial growth in the Kaw Valley. Under unanimous consent, I include here for the benefit of my colleagues in Congress the full text of Fred Brinkerhoff's speech dedicating the "Lawrence and Old Trails" historical marker, as reported in the Lawrence Daily Journal-World of April 10, 1961:

TEXT OF BRINKERHOFF SPEECH AT TURNPIKE MARKER EVENT

Lawrence needs no marker in history. Its place there has been conspicuous and secure for a century. In Kansas the marker can serve only as a reminder. In every community of the State, men and women have carried through their lives a deep affection for the old town where they spent galmorous years as they ascended and descended Mount Oread. The magnificant campus was scarcely more impressive than the stately old homes, the great trees, the landmarks that survived war and fire. Nor was the imprint deeper than the merger of culture and courage and substance that characterized the men and the women who founded Lawrence on a frontier as a citadel of the cause of human freedom, and who erected on such foundation a city that has faithfully marched forward with the times. Over there it stands with endless pride in its past and boundless faith in its future. That strangers who pass this way may know they are in the Kansas vicinity richest in history and near the city the centennial of which has a seniority of 7 years over the centennial of our statehood which we observe this year, this marker has been erected. In forceful simplicity and eloquent brevity the gorgeous story of Lawrence is here engraved.

There is greater need for the phrases honoring the old trails. Only the ancient records and maps and a few wagon tracks here and there that have not been eradicated by man and time and markers and monuments placed along the routes by patriotic groups and an occasional landmark alongside preserve for history the paths over which pioneers passed on their way to the Pacific Northwest and to the Southwest. After a start together they separated by necessity. The Oregon trail penetrated this vicinity and for 20 miles or so westward and a route near that utilized a century later by the turnpike engineers. The shorter but more famous Santa Fe trail headed more directly toward its destination and was 15 miles south of the Kansas River at this point. But both are honored by this marker.

This marker is more than a marker honoring Lawrence and the old trails. It memorializes the Kansas River and its valley. Before there was a Kansas Territory there was a Kansas River. From it that territory took its name which, of course, remained with statehood.

Here in the Kaw Valley a vast amount of the history of Kansas has been made—territory and State. Here major projects for the settlement of Kansas were started and carried on. Here raged the main struggle for control of the territory. Here were the homes of free State men. Here was Lawrence, the inevitable headquarters of the free State cause, and equally inevitable, the objective of raiding ruffians from Missouri. From the day of its start in 1854 to the August day 9 years later when Quantrill and his bushwhackers killed nearly 150 men there, Lawrence was the object of the concentrated hatred of the Missouri slave cause leaders and the ruffian forces they did not control and did not want to control. Here in the Kaw Valley the fraudulent elections were held. Here the tide turned finally and the free State cause was triumphant.

Up the valley a few miles Lecompton, also on the bank of the river, became the territorial capital and the headquarters of the proslavery forces. There the proslavery legislators, backed by the Federal Government with troops and judges and courts, worked in vain to bring in Kansas as a slave State.

Farther up the river was Topeka where the free State cause was strong and where the Topeka movement was based—the futile effort to take over the government of the territory and have Kansas admitted as a free State.

When Andrew H. Reeder, the first territorial Governor, arrived in Kansas, his office was set up in the fort at Leavenworth. But in a few weeks he moved over to the Kaw Valley—to Shawnee Mission by orders from Washington. Shortly afterward he ordered

the legislature to convene at Pawnee. Where was Pawnee? At the other end of the Kaw Valley—near Fort Riley, one of the three principal Kansas Army posts, or forts of the day—a mile or two from the river junction which creates the Kansas River and starts the valley. A stone building had been erected as a capital. The proslave, ruffian-elected legislature did not stay in Pawnee. But it adjourned to Shawnee Mission and stayed in the valley. The Pawnee building remains today, a priceless Kansas relic—the first capital of Kansas.

Four years later, to the month, the Wyandotte Convention, meeting in the Kaw Valley, with the river flowing nearby, wrote the constitution for the free State of Kansas.

Not all the early history of Kansas was made in the Kaw Valley. Osawatomie and John Brown wrote a tolerably interesting chapter or two. Linn County's contribution certainly was lurid enough to keep historians busy half a century. Fort Scott furnished a fair share. Atchison and Leavenworth were entitled to many pages. Other scattered sections and counties demonstrated activity. But the valley dominated the territory, a habit that was continued into statehood.

An inventory of the things the Kaw Valley acquired or achieved as statehood took effect reveals the enterprise, the ingenuity, the power or the luck of the valley.

Topeka was made the State capital.

The University of Kansas was established at Lawrence.

The agricultural college was set up at Manhattan.

Haskell Institute was located at Lawrence.

The State's hospital for the insane was built at Topeka.

Wyandotte became Kansas City, Kans., and the largest city of Kansas for 75 years.

It was not by accident that the Kaw Valley was the scene of such important territorial settlement. What happened was as natural as sunshine. The newcomers looked for water. The Kansas River had the water in plentiful supply. The New Englanders chose an open space on the high bank, with a nearby hill standing like a sentinel, as the spot for their town and Lawrence entered history. The Army authorities with marvelous foresight in regard to the distant future, set up Fort Riley as far West as they could go and be assured of water—there where two rivers which gathered their contents from vast prairie areas came together and surrendered their identities to make the Kaw. To the East 130 miles, the Kaw itself gave up its own identity as it delivered its burden into the Missouri. On its whole length the Kaw enticed town founders as its valley with its rich soil beckoned to farmers. And so the Kaw Valley moved early to take its place on the Kansas scene—in all phases of life—in public affairs, or politics, in the economy, in culture, in education, and in religion.

Today, a hundred years after the Kansas star was added to the flag, Kansans are still coming to the Kaw Valley for their laws, final decisions in their lawsuits, appointments to office and for political leadership. They are coming in large numbers to the valley for higher and professional education. But they have noted a change in the valley's appearance. They are finding great industrial plants where large groups of Kansans are employed. They note the expanded and expanding borders of the cities. The returns from the 1960 Federal census disclose that more than a fourth of the population of Kansas is supplied by the Kaw Valley. Two of the three so-called big cities of Kansas are in the valley. Their borders spread across the river. Three other valley cities—Lawrence, Manhattan, and Junction City—join with Kansas City and Topeka in accounting for more than 315,000 of the State's 2,178,000 population.

From the industrial plants of the Kaw Valley come products ranging from assembled motor cars to industrial chemical items, from processed meat to greeting cards and heavy tires and dozens of other items of commerce. Along the river are great powerplants supplying public, domestic and industrial needs. Lawrence, where major attention long was devoted to the University of Kansas, with more than minor attention given to a few industrial plants, has seen its population go from a place in the teen thousands to more than 32,000 as industrialists picked sites and erected manufacturing plants. Topeka which not very many years ago was aptly described as an overgrown county seat town with a population under 60,000 now has double 60,000 on its rolls. The other cities in lesser volume have shown the same inclination to grow.

Once again water has "sold" the Kaw Valley. Industries require a water supply. This added to other advantages for which there is no substitute—labor of high character and intelligence, good social and living conditions and school facilities—makes a powerful appeal for industrial growth. The valley cities are growing. Topeka amazes the most optimistic observers and makes enthusiasts of sturdy conservatives. Lawrence is pushing its borders so far beyond the original townsite that the most progressive citizens can scarcely keep up with the expansion. Persons here today who are by no means young may well expect to see an unbroken line of industrial plants along this river for long years noted chiefly for its floods and its contribution of Kaw River sand for constructive use.

It has happened in other river valleys. It not only can happen here but it is happening.

For a long time the small by comparison industries at points along the Kaw furnished products which had a market in Kansas and nearby. But today the things that flow from the Kaw Valley factories go far from Kansas. The world is a market for the factories of the Kaw Valley. It does not require the services of a skilled economist to disclose the advantages of this situation.

This great roadway uses the valley half the length of the valley. It streaks along the Kaw on one side most of the way and then crosses to try the other side but never more than a mile or two distant until finally it curves off to the southwest. Then it rushes to another beautiful and picturesque and romantic part fo Kansas, the Flint Hills region. Finally, as it prepares to finish its course, it enters another valley of Kansas, the valley of the Arkansas, and then quits as it started, in a valley. Strangers in Kansas thus are given in a few hours a panoramic view of Kansas today—cities and factories and pastures and ranches and fields and farms. And here at this spot they may read a vital bit of Kansas history.

Wheaties Next?

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 17, 1961

Mr. DEROUNIAN. Mr. Speaker, the following editorial, which appeared in the New York Herald Tribune April 16, stresses the fact that the President of the United States should have only one sponsor—the citizens of the United States.

THE PRESIDENT LET HIS SPONSORS DOWN

Mr. Kennedy may have performed a valuable service for the sponsors of last Tuesday night's television show, "J.F.K. No. 2." But the President of the United States let his sponsors—the American people—down.

The President justified his appearance under the aegis of a toothpaste company on the ground of the need for more communication "beyond the White House." No one disputes that need. But there are many, many methods of communication open to the President that are not flavored with toothpaste. After all, Mr. Kennedy does not have to imitate Abraham Lincoln, who opened the White House doors to almost anyone wishing to speak to him. He has access to the people through time on TV and radio, through space in the press, without making any concessions to commercialism and without holding open house.

The American President does not have the outward trappings of uniform and ceremonial that were once associated with high executive position. He does not need them. But there is a dignity of conduct that should—and almost always does—distinguish the men whom the American people have chosen as their constitutional leaders.

To maintain that dignity does not require stuffiness or any fake aura. But it does demand that the President abstain from actions whose propriety can be questioned by even friendly Senators of his own party—as Senator JACKSON questioned the propriety of Mr. Kennedy's broadcast; it does demand that he refrain from doing things that bring accusations of bad taste, of cheapening his office, of setting bad precedents, all of which sprang up in the wake of that performance.

Mr. Kennedy is new to the Presidency. In his immensely difficult task, with issues that are essentially and genuinely controversial confronting him at every hand, it is vitally important that he avoid unnecessary and gratuitous squabbles. One way would be to confine the sponsorship of his public utterances to those who have a first and overriding claim on his services: The citizens of the United States.

Foreign Buying of U.S. Scrap Blamed for Rising Scrap Prices

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 17, 1961

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Keystone Employees' News:

FOREIGN BUYING OF U.S. SCRAP BLAMED FOR RISING SCRAP PRICES

Rapidly increasing scrap prices are cutting deeply into company profits, reports R. E. Sommer, president and general manager.

Iron Age magazine, a leading trade journal, last month reported scrap prices of $44 per ton compared with $35 to $37 per ton in mid-February.

"Scrap is our second-largest manufacturing cost, and sharp increases like these in scrap prices are sure to have an impact on our already thin profit margin," the president said. He called on all employees to help reduce waste and improve production in an attempt to offset this serious increase in material costs.

A major factor causing scrap prices to advance, according to Frank Little, director of purchases, is heavy buying by foreign steel

companies. The Japanese have contracted for 103 cargoes (shiploads) of scrap since January. These shipments total more than 1 million net tons. Germany, Belgium, and Italy are also big buyers of American scrap.

"The foreign buyers of U.S. scrap not only buy huge tonnages," Mr. Little commented, "but they also skim off the top grades of scrap available."

Mr. Little also pointed out that the impact of higher scrap prices is greater on semi-integrated steel companies like Keystone because they do not have blast furnaces with which to provide a lower cost "hot metal charge." Keystone is thus forced to buy the higher priced scrap.

Feasibility of Nuclear-Powered Flight Has Been Proven

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 17, 1961

Mr. PRICE. Mr. Speaker, contrary to the gloomy and pessimistic picture painted by some scientists not directly connected with the project, the future of nuclear-powered flight was bright before the recent cancellation of the aircraft nuclear-propulsion program. So much so, it is difficult to understand how the Pentagon chiefs could have made the decision to make a complete break with the program.

A few days before the fateful decision to cancel the aircraft project one of the contractors engaged in the nuclear propulsion program issued an interesting news release relating to progress made in research and development work.

The press release issued Wednesday, March 29, by the News Bureau, General Electric, Schenectady, N.Y., follows:

DALLAS, March 29.—Operation of the heat transfer reactor experiment No. 3 (HTRE 3), in which two turbojet engines were powered by a single nuclear reactor, has proved the feasibility of nuclear powered flight, a General Electric nuclear flight reactor expert said today.

Ben Blumberg, Jr., of the General Electric Aircraft Nuclear Propulsion Department (ANPD), Cincinnati, Ohio, told the American Nuclear Society that the HTRE 3, which operated for some 150 hours on the ground, is the "most sophisticated gas-cooled reactor design that has operated to date."

He said that a test program completed this year, "has proved that the system operated essentially as predicted. With the application of this experience, a much greater degree of confidence and objectivity will characterize future designs."

ANPD is developing a direct-air-cycle nuclear propulsion system for aircraft under contract with the U.S. Air Force and Atomic Energy Commission. Aircraft powered by nuclear propulsion systems will have almost unlimited range, thus making them ideal craft for patrol, reconnaissance, early missile warning, and attack. Because of their nuclear power system they will be able to fly at extremely low levels over long distances and thus avoid altitudes where modern defense systems are most effective.

Chemical powered planes must fly at high altitudes to operate efficiently.

Blumberg said that ANPD now is designing an advanced flight system which will be adaptable for flight propulsion, incorporating lessons learned from HTRE 3.

He explained that "it is generally thought that the power a reactor is capable of producing is limited by the permissible operating temperature of its components, but this is not necessarily true. The power capability varies almost directly with the quantity of working fluid used and in addition can vary a large amount with the design of the various components of the reactor. One of the most important components is made up of the fuel elements. In the design of the fuel elements, if the average power of each cartridge is made identical, the longitudinal power is adjusted to produce a near isothermal temperature and the heat flux from each ring at each longitudinal location is made equal, then the power capability of the fuel elements approaches a maximum."

In the HTRE 3, the fuel elements, made up of concentric metal rings with uranium fuel enclosed in the metal, "have operated satisfactorily at temperatures up to 1,900° F. for periods in excess of 100 hours and at temperatures up to 2,050° F. for periods in excess of 25 hours," Blumberg said.

He pointed out that the average power in each fuel cartridge was controlled to ±10% by varying the hydrogen content of the moderator and this system has indicated what is practical to expect in future reactor designs.

Studies for advanced systems indicated that with materials used in HTRE 3, "exit air temperatures of 1,500° to 1,650° F. are possible," Blumberg reported. "The exact air temperature would depend on the operating time desired, but for this range of temperature it is expected that the operating time would vary from 1,000 hours to 25 hours, respectively."

"In summary," he said, "the performance of HTRE 3 has demonstrated that a system using the same materials can be designed which would power a modern gas turbine powerplant. The reactor would have a size, pressure drop, and power capability compatible with flight requirements. We are now applying this experience to systems using advance materials that will give us even higher levels of performance. It is a generally accepted fact that with the technology now in hand, flight with nuclear power is possible and practicable."

Dangers of Peace Corps

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 17, 1961

Mrs. ST. GEORGE. Mr. Speaker, the following letter, written to the New York Herald Tribune, by a former very distinguished Member of this House, the Honorable Hamilton Fish, is of considerable interest.

There are many of our people who have grave misgivings about this enterprise, known as the Peace Corps. After reading this letter one cannot help but feel that this scheme may turn out to be a Pandora's box and will once again prove the truth of the old saw: "That fools rush in, where angels fear to tread."

DANGERS OF PEACE CORPS

To the NEW YORK HERALD TRIBUNE:

The proposal of President Kennedy to establish by executive order a Peace Corps composed of young college trained volunteers to work in the undeveloped countries, instead of serving in our Armed Forces, has a humane and humanitarian appeal to the American people at first glance. It is, however, the essence of "do-goodism" or internationalism gone stark raving mad.

President Kennedy's motives, I am sure, are unselfish, idealistic and sincere and backed by the best intentions. But unfortunately he does not think the problem through or anticipate its disastrous reactions. The so-called Peace Corps has nothing to do with peace except for its camouflage name. It is an extremely dangerous project emanating from the minds of one-worlders who have completely failed to foresee its dire consequences.

The advent of young Americans into Africa or Latin America would automatically open the gates of darkest Africa and other undeveloped nations to highly trained and dedicated Communist agents. It would be playing directly into the hands of Moscow. This is what Soviet Russia has been preparing for during the past 15 years at its big propaganda universities, teaching Arabic, African dialects, Spanish, and Portuguese.

Instead of young college graduates Moscow would send skilled technicians who know the language and who would build roads, bridges, hospitals, schools and develop the natural resources and mines of the country.

The Peace Corps is part and parcel of the legacy left by Franklin Roosevelt. This interventionism has turned out to be a Frankenstein that has devoured our resources, wealth and consumed our taxes. In the beginning our financial help was necessary to contain communism in France, Germany, Italy, Japan, and England. Today these nations are prosperous and have little unemployment.

Every government in the world today is nationalistic except our own, which is internationalistic and continues to meddle and interfere in the internal affairs of sovereign nations and to hand out billions of dollars long after the emergency has passed. I am positive that if the American people, knowing the prodigious waste and misuse of these funds, could vote in a referendum the appropriations for foreign handouts would be reduced by one-half.

HAMILTON FISH.

NEW YORK.

What Really Happened?

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 17, 1961

Mr. DEROUNIAN. Mr. Speaker, the April 15 issue of the New York Herald Tribune indicates that the space flight of Major Gagarin could well have been fictional.

The article follows:

SPACE PUZZLES

How did Cosmonaut Yuri Gagarin come down to earth? How did he see earth during his flight? These questions have not been clarified, and reports from Soviet sources yesterday confused these points further.

RETURN TO EARTH

Soviet official announcement: "After having orbited the earth, a special brake installation was switched on and the cosmic ship started coming down in order to land in a special preset area of the Soviet Union."

The contradiction, according to Soviet reports yesterday: "Rudenko (a tractor driver) saw the landing of the spaceship. He said the cosmonaut parachuted down close to where he was." Tass also quoted scientist Gurovsky: "The astronaut came down smoothly in a glade near a field. Landing on both feet, without even tumbling, he walked up to the people who saw him first."

HOW DID HE SEE THE EARTH?

Spaceman Gagarin's own report: "From the spaceship satellite (110 to 188 miles above earth) one does not, of course, see as well as from an airplane, but very, very well all the same. The coasts of the continents, big rivers, were clearly distinguishable. It was possible to distinguish which was plowed land and which was meadow."

The contradiction: Soviet scientist A. A. Blagonravov was asked at Florence, Italy, yesterday, if Gagarin's space vehicle had windows or portholes. He said it had neither. Asked how Gagarin could "see," Blagonravov replied in English and without elaboration—"by radio." It was presumed he referred to television cameras that scanned the earth's surface, but the point was not made clear. Could it have been color television?

P.S.—MORE MYSTERIES

A book about Gagarin, published Wednesday—the day of his flight—went on sale in Moscow yesterday. It showed considerable preparation. Also ready for the festive crowds were Gagarin-pictured posters and souvenir postcards—and dishware.

Chemical Warfare

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 17, 1961

Mr. SIKES. Mr. Speaker, I have noted with interest the work of Assemblyman Charles J. Conrad, of the California State Legislature. Of particular note are his efforts to bring into proper focus the importance of the work of the Chemical Corps in the defense of our Nation. I include herewith a copy of a resolution introduced by Mr. Conrad in the California Legislature, together with an article from the Sacramento Bee, of Sunday, February 26, on his work. I understand that the resolution has now passed both the House and Senate of the California Legislature and I consider this a very important development:

CALIFORNIA LEGISLATURE, ASSEMBLY JOINT RESOLUTION NO. 24—RELATIVE TO CHEMICAL WARFARE

Whereas the present balance of power in the world today makes the threat of localized war greater than the threat of nuclear war; and

Whereas there is a great possibility that the United States would suffer inestimable losses in such small conflicts; and

Whereas in these small conflicts it is exceedingly difficult to strike the enemy armed forces without also severely harming the civilian population, which may well include people friendly to our side; and

Whereas such conflicts may involve many of the under-developed countries of the world and as a result require the United States to feed the population and rebuild the economy of these countries; and

Whereas there is one form of warfare, known as chemical warfare, which can suppress a Communist advance without causing widespread loss of life and property; and

Whereas the scientists working in the field of chemical warfare have developed amazing chemical agents which cause temporary incapacity without causing dangerous or lasting effects; and

Whereas the United States is not a party to any major treaty which forbids the use of chemical warfare; and

Whereas the American public and many of its elected representatives know little about the science of chemical warfare and propagandists have given the false impression that chemical warfare is vicious and inhuman; and

Whereas recent world events may lead to an urgent need for utilizing this type of military operation and there is a strong possibility that the United States has not developed the science of chemical warfare to its greatest capacity; Now, therefore, be it

Resolved by the Assembly and the Senate of the State of California (jointly), That the Congress of the United States be urged to give serious consideration to the possibility of expanding the Chemical Warfare Corps, to take such steps as may be necessary to weld the Chemical Warfare Corps into an effective operating force, especially in the use of nonlethal gases, and to inform the American people as to the true value and the humane nature of the use of chemical agents in limited warfare; and be it further

Resolved, That the chief clerk of the assembly is directed to transmit copies of this resolution to the President and Vice President of the United States, the Speaker of the House of Representatives, the President pro tempore of the Senate, the Secretary of Defense, and to each Senator and Representative from California in the Congress of the United States.

[From the Sacramento Bee, Feb. 26, 1961]

STATE SOLON URGES USE OF CHEMICAL WARFARE TO HALT RED-INCITED REVOLTS

Chemical warfare to stop uprisings such as those in the Congo?

According to Assemblyman Charles J. Conrad of Los Angeles County this is not as fantastic as it sounds and he wants congress to give serious consideration to the possibility.

Conrad, who was in the chemical corps during World War II, said scientists in the field of chemical warfare have developed amazing chemical agents which cause temporary incapacity without dangerous or lasting effects.

PLANS RESOLUTION

He reported he will introduce a resolution in the legislature tomorrow asking congress to study a plan to weld the army's chemical warfare corps into an "effective operating force, especially in the use of nonlethal gases, and to inform the American people as to the true value and the humane nature of the use of chemical agents in limited warfare."

Conrad contended this may be the answer in combatting Communist inspired uprisings throughout the world.

"Most authorities believe the Soviet Union, at least for the present," Conrad stated, "will not risk all-out nuclear war, especially if they can bleed America white over a period of years by instigating civil wars, riots, and other disturbances throughout the world.

UNPLEASANTNESS AHEAD

"In such actions the United States is faced with several unpleasant situations if we put down such insurrections by usual military operations.

"For one thing, the Communists traditionally attempt to foment what they call 'popular uprisings' where they can accuse America or the United Nations of 'imperialism.'

"Secondly, in such riots it is difficult and sometimes impossible to divide combatants from civilians or pro-Communists from anti-Communists where a nation, tribe or village is divided in its allegiance. Traditional weapons may inflict death on friend and foe alike.

"Finally, such warfare always results in devastation, leaving the people unable to care for themselves, making it necessary for us to feed them and even rebuild their economy at the expense of the American taxpayer.

"In contrast, use of advanced chemical warfare techniques is both efficient and humane. It puts down the riot or insurrection by rendering the agitators temporarily helpless, without causing death. The most that can happen to friendly individuals caught in the action is temporary incapacitation, from which they will recover. There is no damage to land, crops or industry and when order has been restored normal life may be resumed.

"This revolutionary type of warfare has been handicapped by bugaboos and scare stories left over from World War I. Communist propaganda links chemical warfare with the atomic bomb as inhuman weapons even though the Soviet Union has openly threatened to use both, including the deadly variety of poison gas.

"Many years ago the United States, with great foresight, refused to ratify the Geneva Convention outlawing chemical warfare, leaving us both legally and morally free to develop the modern concept of chemical warfare, namely its use to bring the enemy under control without causing death and destruction."

While the Wild Duck Flew

EXTENSION OF REMARKS
OF
HON. J. VAUGHAN GARY
OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 17, 1961

Mr. GARY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Richmond (Va.) News-Leader of Thursday, April 13, 1961. In view of our recent setback in the space race—and in view of the adroitness with which the subject is handled by the News-Leader—I think further comment by me would be superfluous.

The editorial follows:

WHILE THE WILD DUCK FLEW

When the flash came early yesterday that the Soviets had put a man in orbit, the sharp edge of surprise had been pretty well dulled. Rumors of the impending flight had swept Europe over last weekend. On Tuesday, Gen. Thomas D. Write, Air Force Chief of Staff, trotted up to the Hill to prepare a Senate committee for the blow.

Then the bells rang in newsrooms around the world, and one of the great news stories of the century came pouring out of Moscow: Yuri Alekseyevich Gagarin, the "Wild Duck," had spun around the earth in 89 minutes at a height of more than 100 miles. He was the first man in space. And who had put him there?

"In this achievement, which will pass into history, are embodied the genius of the Soviet people and the powerful force of socialism. With a feeling of great joy and legitimate pride, the central committee of the Communist Party, the presidium of the U.S.S.R. Supreme Soviet, and the Soviet Government note that this new era in the progressive development of mankind has been opened by

our country—the country of victorious socialism.

"By the will of the working class, by the will of the people, and inspired by the party of Communists headed by Lenin, our country has turned into a most powerful Socialist state and reached unprecedented development of science and technology.

"Before the eyes of the whole world, the working class, the Soviet collective farm peasantry, and the Soviet intelligentsia—the whole Soviet people—demonstrate an unprecedented victory of science and technology."

Khrushchev's statement ran on for 1,500 words. While it was coming over the machine, a United Press International reporter began checking for reaction. He telephoned Yangley Airbase and got hold of Lt. Col. John Powers, press officer for the U.S. astronauts. The rest of the story follows:

"It's 3 o'clock in the morning, you jerk," Colonel Powers shouted into the phone.

The reporter suggested that Russia didn't put a man in space as a regular thing, and wondered whether Colonel Powers might be able to get the views of the American astronauts on the Russian success.

"If you're wanting something from us," the press officer snapped, "the answer is, We are all asleep."

O.K. Next editorial.

Aid to Soybean Farmers? "Please, No"

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 17, 1961

Mr. SCHWENGEL. Mr. Speaker, on several occasions I have expressed concern about the Department of Agriculture's unrealistic support price on soybeans.

The farmers who have been raising soybeans have been doing pretty well and they sought no Federal assistance in protecting their economy. The Department seems to have other ideas, however, and under the philosophy which now prevails in the Department, assistance is ladled out without much concern about what it might do to the market for a certain commodity.

Richard Wilson of the Cowles Publications has written an article for the Des Moines (Iowa) Register which supports the viewpoint I and many others have taken. Under leave to extend my remarks, I wish to bring this article to the attention of the Members. I am sure they will find it interesting reading:

AID TO SOYBEAN FARMERS? "PLEASE, NO"

(By Richard Wilson)

WASHINGTON, D.C.—Government has its incomprehensible aspects sometimes when dealt with first hand. Representatives of a major economic group come to Washington. "Please," they say, "please don't help us any more. If you help us, you will hurt us," they add. And the story goes on: "We have straightened things out pretty well in our field and have done it ourselves. If you insist on helping us now you will upset everything." These are the producers of soybeans, a relatively new crop in the United States and a very important one. Henry A. Wallace was fascinated by soybeans, as he was at one time with many things indigenous to Manchuria.

As Secretary of Agriculture a generation ago he used to experiment with food products made of soybeans, gulping quantities of soybean milk at lunch. This product didn't catch on, but feeding soybean meal to livestock and using soybean oil for a variety of purposes caught on in a big way.

About 500,000 farmers raise soybeans. The estimated value of the crop at the end of 1960 was $1,115,432,000. Representatives of this billion-dollar-a-year business, the actual producers of it, pleaded with the Kennedy administration to leave them alone.

THEY REACTED WITH HORROR

They reacted with horror when Secretary of Agriculture Orville Freeman, without consulting them, announced that the support price of soybans would be raised from $1.85 per bushel to $2.30 per bushel. This was a part of the Freeman corn reduction program. Evidently the idea was to get farmers to shift into soybeans from corn and other feed grains. Many farmers grow both corn and soybeans.

Soybean representatives grumbled that Roswell A. Garst, of Coon Rapids, Iowa, the immensely successful corn producer who has even charmed Soviet Premier Nikita Khrushchev, worked his way with Secretary Freeman on the corn program. Garst, it appeared, was willing to encourage producers to grow less corn and more soybeans.

In 1958, the soybean producers got the Eisenhower administration to reduce the support price for their product from $2.09 per bushel to $1.85. They were happy with the deal. Soybeans moved out of Government stocks at a profit to the Government. Producers captured and held the export market they want. On the domestic market, the price went up over $3 a bushel.

Why were they worried, then, when Freeman raised the support price to only $2.30? They were worried because that froze the situation, it took out the element of risk, producers could shift into soybeans knowing they would get $2.30. Foreign producers, looking at the floor under the U.S. price, could make their plans to undercut it.

FREEMAN THINKS CONTROL ESSENTIAL

The soybean producers, doing fine in the competitive climate of risk capitalism, did not want to be woven into the Government's control fabric. A delegation headed by Charles V. Simpson, president of the American Soybean Association, came to Washington and pleaded in vain with Secretary Freeman.

They told him the corn surplus would just be augmented by a soybean surplus and piled in on top of the $9 billion in surplus commodities already held by the Government.

Freeman thought otherwise. More soybean control was an essential ingredient in trying to get a 20-percent reduction in corn production.

So there it rests, with the Government insisting on helping the soybean producers if it kills them.

Congress Should Remove the Shackles From the Nation's Railroads

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 17, 1961

Mr. VAN ZANDT. Mr. Speaker, Congress should take immediate action to unshackle the railroads from burdensome ICC regulations. It is felt by many experts in the field of transportation that the unfavorable trends in railroad traffic, earnings, and employment will then reverse themselves.

At the 1960 level of economic activities, if railroads were able to regain as much as 50 percent share of intercity freight traffic, the added rail traffic at the present rate of productivity would make it possible for the roads to restore more than 90,000 railroad jobs. Still another 10,000 railroad jobs might be added if railroad participation in commercial intercity passenger traffic were increased to 35 percent of the total.

The shackles listed below constitute probably the greatest and most unjust burden ever imposed upon a major industry in the United States and represent serious handicaps to the Nation's railroads in their effort to remain solvent and maintain railroad jobs:

RAILROAD SHACKLES

1. Interest and other costs of capital for building or improving highways, inland waterways, and the Federal airways system of navigation and traffic control used by railroad competitors are borne by Government; capital costs for building and improving railroad lines are borne by railroads.

2. The publicly-owned "ways" used by railroad competitors are not subject to property or "ownership" taxes; railroad right-of-way is taxed in thousands of taxing jurisdictions throughout the United States.

3. Railroad competitors benefit from the use of signal and traffic control systems provided by Government; railroads must provide and pay taxes on their own signal and traffic control systems.

4. Hundreds of costly airports required by airlines in providing passenger service are provided, operated, and maintained by the Government; railroads must build, operate, and maintain their own stations and terminals.

5. Airports, being publicly-owned are tax-free; railroad stations and terminals not only are subject to local taxation, but in most taxing jurisdictions are taxed at a higher rate than other property subject to the same tax rates.

6. Railroad taxes are used to help build and maintain the publicly-provided "ways" of other carriers, but railroads use of public transportation facilities is either prohibited or severely restricted. Motor carriers may own and operate railroads and inland water carriers; inland water carriers may own and operate any form of transportation except airlines; and airlines may own and operate any form of transportation.

7. Besides the enormous advantage of using publicly-provided facilities, airlines have this enormous added advantage over railroads: They remain eligible for direct dollar subsidy from the Government and in fact, the smaller lines are receiving subsidy payments in ever-increasing amounts.

8. There are Government agencies for the promotion at every form of transportation, except railroads. For airlines, there is the Civil Aeronautics Board, the Federal Aviation Agency, and the aviational promotional activities of the Department of Defense; for motor carriers, the Bureau of Public Roads and State highway departments; for inland carriers, the Army Corps of Engineers. (The Interstate Commerce Commission regulates railroads, but has no promotional function or authority.)

9. Federal tax laws assign unduly long depreciable lives to railroad plant and equipment with the result that funds are not recovered in time to take advantage of technological advances as they become available.

10. Before they may abandon unprofitable lines and facilities, the railroads must obtain approval of the Interstate Commerce Commission or State regulatory commission, or both. But railroad competitors, excepting only airlines, are free to abandon unprofitable facilities as desired.

11. Persons who wish to use railroads and other for-hire carriers for travel are penalized by having to pay the Government a tax amounting to 10 percent of the fare; there is no such tax on those who travel by private automobile, which now accounts for 90 percent of all U.S. travel.

12. Although railroads are 100 percent regulated by the Interstate Commerce Commission, their highway competition is only 33 percent regulated and their competition on inland waterways is only 10 percent regulated.

13. All carriers, except railroads, may transport commodities which they own or in which they have an interest; a railroad may transport nothing which it owns or has an interest in except timber, timber products, and commodities used in its business as a common carrier.

14. Numerous agricultural commodities, aggregating vast tonnages, are exempt from ICC regulation when they move by truck, but are subject to ICC regulation when they move by rail.

15. Bulk commodities moving on inland waterways are exempt from regulation when not more than three such commodities are carried in a single barge or tow, and it is estimated that virtually all bulk commodity traffic on inland waterways moves under this exemption. But bulk commodities, like all others, are fully regulated when they move by rail.

16. Railroads are subject to the long-and-short-haul clause of the Interstate Commerce Act; trucks are not.

A Letter From Home Opposing Extension of the 1-Cent Temporary Federal Gasoline Tax

EXTENSION OF REMARKS
OF
HON. HENRY C. SCHADEBERG
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 17, 1961

Mr. SCHADEBERG. Mr. Speaker, my constituent, Mr. Robert A. Cerwin, general manager of the Cer-tex Petroleum Co., of Burlington, Wis., has written persuasively for letting the temporary 1-cent Federal gasoline tax expire June 30, 1961. I commend his letter to the attention of the Members of this House:

CER-TEX PETROLEUM CO.,
Burlington, Wis.

DEAR CONGRESSMAN: According to newspaper reports about President Kennedy's highway revenue proposal, the gasoline tax and highway-user taxes will be an important part of your job in Washington. Because this subject is of utmost importance to me, a jobber in the gasoline business, I thought I should present my views on the subject. For I believe that whatever action Congress takes will be most important to me, my customers, and to your constituents. It will be just as important to you and the Federal Government because we must sell our product to collect taxes for highways and other projects.

I am concerned about that gasoline tax which now totals 10 cents per gallon, 4 for the Federal Government and 6 for the State. I noticed that the President opposed allowing the temporary 1-cent Federal gas tax to expire on July 1, 1961, as promised by Congress back in October 1959. He said that we need the money to construct the National System of Interstate and Defense Highways.

Now, I object to his statement about "need." We already have plenty of money to build this national highway system if all the highway-user taxes were spent on highways and not diverted to the general fund. Too many people believe that continuation of the high gasoline tax is justified because all highway-user taxes are being spent on highways. This simply is not true. Today 40 percent of highway-user taxes are being diverted to the general fund. Therefore, it is not fair to request increases in highway-user taxes for highways when highway-user taxes are now being diverted from highway construction.

I understand that Congress in October 1959, determined to correct this situation by replacing this "temporary" 1-cent gas increase with some of the excise taxes on highway users now going into the general fund. This money would more than make up for the 1-cent gasoline tax. In other words, there would be plenty of money to continue the highway program on schedule and still allow the reduction in the Federal gasoline tax.

It is important in my business that the gasoline tax be reduced. Have you ever tried to sell a product that is being taxed 50 percent of its cost? That's what we are trying to do, and it is getting more difficult every day. Just think what our sales would be if we had no tax on our product.

That, of course, is not in the picture. We want to pay our share of the cost of building highways because motorists want good highways. But we shouldn't have to pay more than our share. We shouldn't have to pay all highway construction costs and also contribute to the general fund a sum of money based on the number of the miles we drive.

Highway user taxes hurt our business. When there is a chance to reduce them and still get the work done, we should do so. This is especially true since Congress—which included Senator Kennedy at the time—promised to do so.

Some people will ask, How shall we replace the money in the general fund? Well, it ought to be replaced by money from all taxpayers, not be just the highway user. The highway user, of course, pays all other taxes like everyone else.

I'm sure you are aware that the highway user is not the only one who benefits from the Interstate and Defense Highway System. Everyone benefits, even the millions who don't own cars. They want to be defended, too. The Defense Department which has set many of the highway construction standards so far has not paid one dime toward their construction. Remember the bridge episode? Millions of dollars had to be spent to change bridge structures for the Defense Department, yet that Department has not paid any part of the construction costs.

There are many reasons—many of them spelled out by President Kennedy in recent messages—why everyone, not only highway users, ought to contribute toward the Interstate and Defense Highway System.

In view of the above information it would appear to me that Congress ought, at least, to use all highway user taxes for highway construction before attempting to raise additional highway user taxes. Other general taxes should be paid by everyone, with no particular group singled out to pay more than his just share.

As a result of the facts set forth above, we urge you to vote to permit the 1-cent temporary gas tax to expire June 30, 1961, as promised by Congress in 1959.

Sincerely,

ROBERT A. CERWIN,
General Manager.

Basic American Principles

EXTENSION OF REMARKS
OF
HON. DON L. SHORT
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 17, 1961

Mr. SHORT. Mr. Speaker, that the American people are becoming more and more concerned over the departure of Federal Government administrative policies from basic American principles is a well-known fact. We read and hear continually of the increasing interest in the conservative cause. Incidentally, this terminology is, I believe, most unfortunate. Conservatives are concerned with the fact that as individuals we are rapidly losing or willingly giving away our individual liberties. At the time this Nation was founded the so-called conservatives of today would have been liberals.

A few days ago a young farmer from North Dakota and his family were in Washington. On their way back to North Dakota, this young man sat down to write the usual thank you letter for the normal courtesies which had been extended to the family by our office. Included with his thanks were some observations which I thought would be interesting to the Members of the House and which typify the thinking of a great many people with whom I come in contact.

Mr. Speaker, I ask permission to insert my remarks, together with a copy of the letter which is attached, in the Appendix of the RECORD:

BEDFORD, PA., *April 12, 1961.*

DEAR MR. SHORT: We Thompsons (all four of us) want to express again our appreciation of your kind courtesy shown us by yourself and your secretaries.

Tonight at the motel I had time to read your news releases and the copy of the CONGRESSIONAL RECORD. It will come as no surprise to you that I agree 100 percent.

We know that the spiritual values and principles that founded this Nation are somehow wrapped up and included into our free-enterprise system. Destroy this system, and you have helped to destroy America.

When the free-enterprise system is functioning properly, it, of its own self, produces goods and more goods. It demands an expanding market at all times. This magic of our system, totalitarianism, socialism, communism cannot comprehend. The lack of Americans in not comprehending the magic of our system is the danger from within. We need more statements of truth like yours made in the Congress and in your news releases. And we know that the truth not only corrects the lie and the misrepresentation of facts, but it gives to us individually and collectively the spiritual strength we need to get our Nation back on the right track. America is waking up.

This struggle that is going on in Congress now domestically is as important as the cold

war. In fact if we (you and I) don't rededicate ourselves to basic American principles and fight for them and win, the other struggle is of small importance.

With kindest regards.

Sincerely yours,

WM. J. THOMPSON,
Post Office Box 41, Grafton, N. Dak.

Republican Imported Campaign Reached Such Extremes It Became an Affront to the People of St. Louis

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 17, 1961

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an appraisal of the Republican National Committee's effort to high pressure voters in local communities in recent municipal elections. The appraisal follows:

GOP BIG CITY TEST FAILS BADLY IN ST. LOUIS

Democratic candidates were swept into office in State and local elections held last week in Missouri, Michigan, Wisconsin, and Texas. In all of these areas the party and its candidates continued to demonstrate their strength and appeal to the voters.

Democratic Mayor Tucker of St. Louis, who won reelection in 1957 by a record margin, easily defeated his opponent. Carrying all 28 of the city's wards, Mayor Tucker received 63 percent of the total vote with a majority of 41,428. In 14 of the 28 wards, he received more votes than in his record victory of 1957.

The victory in St. Louis is particularly noteworthy since Republican National Headquarters in Washington had sent a platoon of special workers to St. Louis as its first move in an all-out attempt to increase its strength in the large cities.

VICTORY IN MICHIGAN

In Michigan, also, Democrats continued to demonstrate widespread strength and support. Of nine statewide races, Democrats won seven and were ahead in an eighth. Support for the ticket throughout the State was evident. State Highway Commissioner John C. Mackie won a majority of the votes in both Wayne County and outstate—the first outstate majority for a Democrat in decades. His statewide victory margin was more than 200,000.

In Wisconsin's election for the Supreme Court, Circuit Judge Myron Gordon, a Democrat, defeated his Republican opponent, former Attorney General Stewart Honeck.

In the Texas primary for U.S. Senator, Democratic candidates polled 68.4 percent of the total vote. Senator WILLIAM A. BLAKLEY led the Democratic field. He will oppose Republican John G. Tower in the June 3 runoff.

Chairman Bailey analyzed the results this way:

"The Democratic victories in St. Louis and Michigan once again demonstrate that the Democratic Party has the support of the people. It also points up the fact that the Republican Party is not going to make inroads into the Democratic strength in urban areas while the Republican Party in Washington fights a fair increase in the minimum wage, opposes a House Rules Committee a chance to let Congress vote on the Kennedy program and carries on a continual battle against progressive legislation."

GOP REJECTED

"The Democratic victories in Michigan and St. Louis are the result of good candidates, good leadership, strong organization, and hard work, but they are also a rejection of the Republican Party and its negative stance.

"The vote in St. Louis is important nationally. It was supposed to be a testing ground to demonstrate that the Republican Party was losing in the cities not because its programs and candidates were rejected by the voters, but because the Republican organizational effort was weak. The Republicans said they would remedy that in St. Louis. They brought in a team of outside 'experts.' Money from outside St. Louis was poured into the Republican campaign. New 'gimmicks' were touted as the way to Republican victory. Strong efforts were made by the Republicans to inject racial issues extraneous to St. Louis into the election."

AFFRONT TO PEOPLE

"The result was accurately described by Mayor Raymond R. Tucker as a rebuke to the imported Republican campaign tactics of fear, misrepresentation, and negativism. The respected St. Louis Post-Dispatch said the Republican campaign reached 'such extremes that it has become an affront to the people of St. Louis. One reason for this, no doubt, is the participation of outsiders from Michigan and Washington who care nothing about St. Louis and are only here to seek a surprise victory which they hope would open the checkbooks of contributors to the 1962 congressional campaign. Their target is not only Mayor Tucker but President Kennedy.'

"The Republicans missed their targets and presumably they will try to find some new tactics for the next city contest. I sincerely hope they come up with a more wholesome campaign plan than they displayed in St. Louis."

Wheat Eaters Wanted

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 17, 1961

Mr. BREEDING. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial which appeared in the Dodge City (Kans.) Daily Globe, of March 28, 1961, regarding the new wheat product, Redi-Wheat, being promoted by the Kansas Wheat Commission with a view to increasing the consumption of wheat.

The Daily Globe editorial reveals a fine understanding of the problem and a real desire to assist the wheat farmers and the Kansas Wheat Commission in reaching a practical solution to the problem of wheat surpluses.

[From the Dodge City Daily Globe, Mar. 28, 1961]

WHEAT EATERS WANTED

Those who have eaten Redi-Wheat, the new canned product being marketed here and elsewhere say it is very good. The food can be eaten as a cereal, in place of rice as a dinner item or in various combinations such as an ingredient of meat balls.

The U.S. Department of Agriculture is making an especially intensive drive to promote sale and consumption of the product in Wichita. Results are being watched with interest.

It is to be hoped that real results are achieved with Redi-Wheat. The great human-food grain crop is rich in nourishment and is palatable in its many forms.

It is rather tragic that two World Wars cut down per-capita consumption of wheat. The food was so valuable and important in both wars, that the public was urged to "eat less wheat" thereby conserving the available supply for military and other essential purposes. The records show that the self-sacrifice of civilians in the war periods accomplished what it was designed to do, but that when peace came, new eating habits made for smaller consumption per head.

The great wheat growing section of the Nation is primarily interested in a market for its top quality wheat. One of the best ways to increase that market would be to get Kansans and others to eat more of a very valuable food.

New Russian Dogma

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 10, 1961

Mr. COHELAN. Mr. Speaker, in the first of a series of articles based on his recent conference with Nikita Khrushchev, the distinguished columnist, Walter Lippmann, has examined in a revealing and critical fashion some of the views and beliefs of the Russian leader.

Among other important insights, Mr. Lippmann suggests that Mr. Khrushchev now believes "that there can be international cooperation only if, in the administration as well as in the policymaking, the Soviet Union has a veto."

Such a belief certainly has great significance and far-reaching consequences for such vital areas of international relations and agreements as disarmament, nuclear testing, and the United Nations. Such a belief creates, in fact, a new dimension in our thinking concerning international cooperation.

I urge my colleagues to read Mr. Lippmann's fascinating account of his interview with Mr. Khrushchev:

TODAY AND TOMORROW—FIRST OF A SERIES
(By Walter Lippmann)

On this, our second visit, my wife and I were taken on a long journey by plane and auto to Mr. Khrushchev's country place in Sochi on the Black Sea. Before we left Moscow, accompanied by two interpreters and an official of the press department, there was much mystery about all the details of the coming visit, such as when and where we were to see the great man. In fact, as it turned out, he had no other appointments after half-past 11 in the morning when he met us in the pine woods near the entrance of his place. Eight hours later, a bit worn by much talk and two large meals, we insisted on leaving in order to go to bed.

I would not like to leave the impression that all 8 hours were devoted to great affairs of the world. Perhaps, all told, 3½ hours were spent in serious talk. The rest of the time went into the two prolonged meals at

which Mr. Khrushchev, who is on what appears to be a nonfattening diet, broke the rules, saying joyously that the doctor had gone to Moscow for a day or two. The talk was largely banter between Mr. Khrushchev and Mikoyan, who joined us for lunch, and the banter turned chiefly on Armenian food and Armenian wine and Armenian customs, which include the compulsion to drink all glasses to the end at each toast. Though we all drank a bit more than we wanted, Mikoyan chose to regard us as American ascetics who only sipped their wine. Finally Mr. Khrushchev took pity on us by providing a bowl into which we could pour the wine as fast as Mikoyan filled our glasses.

Between this heroic eating and drinking, we walked around the place, which is large, met Mr. Khrushchev's grandson and Mikoyan's granddaughter, inspected the new and very gadgety swimming pool, and, believe it or not, played badminton with Mr. Khrushchev.

In the serious talks, I might say that my wife made fairly full notes, I made a few jottings, but there was no transcript and the translation was done very ably by Mr. Victor M. Sukhodrev who is an official in the Foreign Ministry. It was understood that I was free to write what I liked when I had left Russia and to quote Mr. Khrushchev or not to quote him as seemed desirable. I shall set down my own understanding and interpretation of the most important and interesting points that he made.

For an opening I reminded him that we had last seen him in October 1958, nearly a year before his visit to the United States. Much has happened in these 2½ years and would he tell me what seemed to him the most important events for good or evil?

After a moment or two of hesitation, he replied that during this period the two main forces in the world—the capitalist and the Socialist—have concluded that it was useto "test" one another by military means. I took him to mean by "test" the backing of their politicial aims by the threat of war.

In contrast with 1958, when he professed to believe that the United States and Germany might attack him, he spoke with confidence that because of the growing strength of the Communist orbit, the threat of war from our side was dying down. As a result, the United States was abandoning the "Dulles doctrine" that the neutrality of small states is "immoral." He himself welcomed President Kennedy's proposals for a neutral Laos.

You think then, I asked him, that there has been a change in U.S. policy? To this he replied that while there were some signs of a change, as for example in Laos, it was not a radical change, as could be seen in the U.S. attitude toward disarmament. What, I asked him, is wrong with the U.S. attitude? We cannot see, he replied, that any change is imminent when the subject of disarmament is put in the hands of such a believer in armaments as Mr. McCloy. We think well of Mr. McCloy and during his time in Germany we had good relations with him. But asking him to deal with disarmament is a case of asking the goat to look after the cabbage patch.

I interjected the remark that the final decisions would be made by the President. But Mr. Khrushchev insisted that the forces behind the Kennedy administration he summed up in the one word "Rockefeller." The view that he is running the Kennedy administration will be news to Governor Rockefeller. I should add that Mr. Khrushchev considers me a Republican, which will be news to Mr. Nixon.

Then we got onto the subject of nuclear testing. He said that the Western Powers were not ready to conclude an agreement, and that this was shown, among other things, by the demand for 21 or perhaps 19 inspections a year. He had been led personally to believe that the West would be satisfied with about three symbolic inspections. Nineteen inspections, our present demand, were nothing but a demand for the right to conduct complete reconnaissance of the Soviet Union.

I asked him about his attitude toward underground testing. He replied that the U.S.S.R. has never done any underground testing and never will. I asked why? Because, he said, we do not see any value in small tactical atomic weapons. If it comes to war, we shall use only the biggest weapons. The smaller ones are very expensive and they can decide nothing. The fact that they are expensive doesn't bother you because you don't care what you spend and, what is more, many of your generals are connected with big business. But in the U.S.S.R. we have to economize, and tactical weapons are a waste.

I report this without having the technical expertise to comment on it.

Then he went on to say that the second reason why he had no great hopes of an agreement was that the French are now testing and are unlikely to sign the agreement. It is obvious, he said, that if the French are not in the agreement, they will do the testing for the Americans. To which, I said, and the Chinese will do the testing for you. He paused and then said that this was a fair remark. But, he added, while China is moving in the direction where she will be able to make tests, she is not yet able to make them. When the time comes that she can, there will be a new problem. We would like all states to sign a nuclear agreement.

Finally, he came to his third reason why an agreement may not be possible. It turns on the problem of the administrator of the agreement. Here, he was vehement and unqualified. He would never accept a single neutral administrator. Why? Because, he said, while there are neutral countries, there are no neutral men. You would not accept a Communist administrator and I cannot accept a non-Communist administrator. I will never entrust the security of the Soviet Union to any foreigner. We cannot have another Hammarskjold, no matter where he comes from among the neutral countries.

I found this enlightening. It was plain to me that here is a new dogma, that there are no neutral men. After all the Soviet Union had accepted Trygve Lie and Hammarskjold. The Soviet Government has now come to the conclusion that there can be no such thing as an impartial civil servant in this deeply divided world, and that the kind of political celibacy which the British theory of the civil service calls for is, in international affairs, a fiction. This new dogma has long consequences. It means that there can be international cooperation only if, in the administration as well as in the policymaking, the Soviet Union has a veto.

Our talk went on to Cuba, Iran, revolutionary movements in general, and finally to Germany. I shall report on these topics in subsequent articles.

What's the Story Behind OCDM?

EXTENSION OF REMARKS
OF
HON. ROBERT F. ELLSWORTH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Monday, April 17, 1961

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Mr. C. Y. Thomas, a resident of my district and chairman of the board of the Spencer Chemical Co. Mr. Thomas suggests a new look at the underlying concepts, as well as the methods of operation, of the OCDM. I call the Congress attention to his letter, because I think the situation which he mentions deserves considerable attention:

SPENCER CHEMICAL CO.,
Kansas City, Mo., April 12, 1961.

The Honorable ROBERT F. ELLSWORTH,
House of Representatives,
Washington, D.C.

DEAR BOB: Several of us in our shop have been making a very careful and detailed study of civil defense, industrial plant protection, etc. for the past 2 months. It appears to me that OCDM is getting to be a resthome for a bunch of political hacks. In early March the new OCDM Chief, Mr. Ellis, in a story in the New York Times, stated that OCDM and its programs were completely inadequate. Two weeks later, at Louisville at an industrial civil defense conference, the same boondogglers were peddling the same old line.

This subject is so controversial that it deserves study of a committee composed of top-flight men from industry, from the sciences, and from government. I could make a speech on this subject many hours long and write you a many-page letter, but it can all be summarized by saying that there is so much boondoggling in civil defense and so much controversial thinking that the average person today thinks civil defense is for the birds. I am sure that no lawyer from New Orleans, after less than a month in office, could have any idea about the whole problem. Congress ought to investigate the whole subject and then appoint a committee of big names in whom the public has confidence to tell us what we should do about it.

Sincerely yours,

KIT.

The President's TV Appearance

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 17, 1961

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David Lawrence from the April 13, 1961, edition of the Washington Star. I include this article because it expresses my indignation better than I can myself at commercializing the White House and the Office of the President:

THE PRESIDENT'S TV APPEARANCE—DIGNITY OF THE OFFICE BELIEVED IMPAIRED BY COMMERCIAL ASPECTS OF PROGRAM

President Kennedy did Tuesday night on a television network what no other President of the United States has ever done—he participated in a program whose commercial sponsor urged the American people to buy its products. The cost of the time used was not contributed by the television company, but was paid for by a toothpaste manufacturer.

Many observers feel the dignity of the Presidency was impaired when Mr. Kennedy appeared in the role of a television performer in a prerecorded and rehearsed program.

Five times the hour-long show was interrupted for commercial advertising of a toothpaste and, in the final section of the film,

the President's picture was repeatedly used as a background for the presentation of the names of those who edited and produced the show—the television personnel of the program itself.

It will be argued that newspapers and other publications carry advertising matter alongside Presidential pronouncements, but, in rebuttal, it must be said that no story of White House news is interrupted in the middle of a news column while the reader is told in the same column about the merits of a particular toothpaste.

The show had to be rehearsed and prerecorded 2 weeks ago. The President sat at the table in the Cabinet room of the White House with a pile of photographs before him. As he held them up for the viewer to see, the broadcasting company flashed them in full length on the screen. Mr. Kennedy then discussed each of his Presidential assistants and also described the operations of his Cabinet. So the whole effect was that of a television show.

Up to now, a President's appearances on television have been confined to the showing of his unrehearsed press conferences or his public addresses or of pictures of spontaneous news events in which he happens to be participating. There has been a tacit understanding with the broadcasting companies that Presidential press conferences would not be commercially sponsored. No prearranged show has ever been put on with a President in the manner of the Tuesday night performance.

One wonders whether the other toothpaste companies are going to put on a television show in which the vast audience collected for a Presidential appearance will be made available to them to sell their wares.

Actually, the President did a good job, and the television ratings on his performance should be high. Indeed, he acted his dramatic role well, and so did Mrs. Kennedy, who followed him in the closing 15 minutes of the same program. In fact, it can be said that Mrs. Kennedy, with her calm and restrained manner, was the hit of the show.

Plainly a President and his wife have every right to appear on television or to contribute articles to printed publications, selecting those they want to favor with exclusive stories. It may sometimes be unwise politically to do so, but there's no practical argument against playing favorites, especially if it wins a plug needed perhaps for the next election. Thus, the National Broadcasting Co. commentator who narrated the program spoke of the reverses as well as the successes of the President in his first 82 days, but did insert a very nice plug for the Kennedy administration when he said:

"If you had to sum up in one word the general reaction to President Kennedy, it would have to be favorable. You could not say that Mr. Kennedy has electrified the country, but the public, from available evidence, approves of what he is doing, and appears to believe that, so far at least, he has been calm, competent and serious."

There was, to be sure, no financial compensation to President Kennedy in connection with the TV program. But would it be proper for a President to accept compensation and donate it to charity? It will be recalled that congressional hearings in 1937 revealed that Mrs. Franklin D. Roosevelt, while in the White House, had made a contract in 1935 for 10 radio broadcasts for a total of approximately $30,000, which she had designated should go as contributions to charity. At first, the Treasury did not consider these payments to be taxable to her, but in 1942 ruled that they should be included in her personal income, subject to deductions for charitable contributions within the legally specified limits.

Back in the spring of 1933, the late Louis Howe, private secretary and press-relations officer at White House—in fact, the right-hand man of the late President Franklin D. Roosevelt—appeared on a commercially sponsored radio program every Sunday night. It was said at the time that he received $1,500 weekly for his talks. The commercial sponsor was a public utility and oil company. It is estimated that Mr. Howe was paid a total of around $30,000 that year for his radio talks.

The basic question, of course, is whether a President or other high officials—whose salaries are paid by the taxpayers of the United States—should allow the prestige of their respective positions to be used to advertise any commercial product, even though they themselves receive no remuneration and do not accept any compensation whatsoever.

Advantages of the American Free Enterprise System Over Communism

EXTENSION OF REMARKS

OF

HON. ODIN LANGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 17, 1961

Mr. LANGEN. Mr. Speaker, it is a real pleasure and privilege for me to call the attention of the House to the following outstanding essay by Mr. Curtiss L. Wikstrom, a junior in the Karlstad, Minn., high school. Mr. Wikstrom's essay, which recently was awarded first place in the 1961 Association of Physicians and Surgeon's essay contest in Minnesota, is both a tribute to himself and to many others of his generation and a testimony to the American free enterprise system. It is an example of the excellent work being done by today's young people, and bodes well for the future of this Nation.

The essay follows:

THE ADVANTAGES OF THE AMERICAN FREE ENTERPRISE SYSTEM OVER COMMUNISM

(By Curtiss L. Wikstrom)

Today over half of the people of the world are starving. Many top government officials in the Soviet Union are being removed from office because the supply of food does not meet the demand. Communist China is in deep famine. Refugees are pouring out from behind the Bamboo Curtain in greater numbers every day. The starvation in Africa is despairing. Men, women, and children everywhere scurry about in what is the last struggling effort of physical survival.

These are the startling effects of communism. These spots of human suffering are not being caused because of unnatural weather conditions or because of the lack of soil to grow this much needed food. The reason these areas are in distress is because the people live under a system that halts progress and industry.

The governments in all these areas illustrate communism from its most primitive form to its most up-to-date form. We can plainly see by these illustrations that planned economy has not improved the conditions of the world; it has only kept progress from advancing and taking care of the existing problems.

Communists contend that government should engage in economic planning. They believe that government should distribute the goods produced and each man should give according to his ability and receive according to his need. This principle is based on the false assumption that private saving is greed and the accumulation of wealth is selfishness.

The Communists overlook the fact that planned economy does not make a nation prosper; planned economy only has the effect of stifling a people's initiative and incentive to work, produce, and save.

The only thing communism achieves is the distribution of poverty and enslavement. To plan and control a man's life is to bind him and his potential abilities; and when he is bound mentally and physically, he is almost worthless in the advancement of progress.

Another fault of communism is its failure to recognize human value. In communistic countries a man is only part of the mass and is considered just as replaceable as a mechanical device. When a man is treated like a machine, however, he begins to act like a machine; he gives only what is required of him; he does not work to capacity because he knows he will not be benefited by it.

But while half of the world is held in bondage and starvation, the other half is experiencing a new and progressive economy led by the American system of free enterprise. Under our system of free enterprise we have amassed the greatest productive power the world has ever known. No planned economy has ever approached the achievements we have made under our system of free trade protected by a constitutional democracy.

The reason we have made such great progress is because here in America our Government has been limited. We go by the principle that though the people support the Government, the Government should not support the people. Government participation and support encourages the expectation of paternal care and weakens the character of an honest hardworking people.

Free enterprise creates a responsive, energetic, and responsible people. It gives them a quality that is not available when they cannot negotiate, bargain, plan, and construct as they believe right.

Opportunity is one of the greatest advantages of the free enterprise system. Only an individual knows his real ability; and if given the opportunity, he can put that ability to work.

Free competition is an advantage used by Americans to further progress and improvement. It draws out the best abilities of every competitor and give his customer the benefit of new and improved products.

Every American is given the chance to try, to succeed, and perhaps to fail. These things with the prospects of personal incentive drive him on to higher achievements. Success and personal incentive make him strive to do better, and the possibility of failing keeps him from slacking.

In the free enterprise system everyone receives an income proportional to the amount and kind of work he does. Each man is given the right to earn, save, trade, or sell private property, and he is protected from anyone's taking or sharing his property illegally or legally (such as is done in a communistic society where slackers can take advantage of honest laborers by sharing but not contributing). Lincoln said: "Property is desirable, is a positive good in the world. That some should be rich shows that others may become rich and hence is just encouragement to industry and enterprise. Let not him who is houseless pull down the house of another, but let him work diligently to build one for himself, thus by example assuring that his own shall be safe from violence."

Unfortunately, Americans are up against the jujitsu tactics of those who want to destroy our strength by using that strength to destroy what is responsible for it. We must be constantly on guard against such things as welfare, Federal aid, and other socialistic measures.

Individual freedom and free enterprise have made this a modern world. Through

free enterprise people have risen from the depths of poverty and barbarism into a world where there is individual freedom and security. Now it is up to us to see that the world does not stray from the path that has been set before it and resort to the degrading policies of communism. The short period of free enterprise have given to the world more progress in the past 100 years than other systems have given the world since the beginning of time. If that powerful force is continued and spread throughout the world, we will fulfill the dream of mankind—liberty, peace, and security.

Some Facts About Federal Aid

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 17, 1961

Mr. DEROUNIAN. Mr. Speaker, the following informative article by Lyle C. Wilson appeared in the Long Island Daily Press, April 15. It sheds factual light on Federal aid to education:

[From the Long Island Daily Press, Apr. 15, 1961]

SCHOOLS AND TAXES: IS FEDERAL AID NECESSARY?

(By Lyle C. Wilson)

WASHINGTON.—The religious dispute now blazing around President Kennedy's $6.5 billion school aid program diverts attention from two questions that are closer to your kids and closer to your pocketbooks: Is Federal aid necessary at all? How shall the citizen-taxpayer know whether Federal school aid, is necessary or a wasteful, pressure-group steal?

Debate in Congress should inform the citizen-taxpayer. Dr. Ernest L. Wilkinson, president of Utah's Brigham Young University, comes up with some fodder for debate. Dr. Wilkinson is against Federal aid. He believes President Kennedy's $6.5 billion plan is both unnecessary and dangerous; dangerous to education and dangerous because it would increase the inflationary rotting of the U.S. dollar.

Dr. Wilkinson argues that States and local communities have built an average of 68,000 schoolrooms annually for the past 5 years whereas the administration estimates the annual need in the next 10 years to be only 61,000 new rooms; that enrollment increases in elementary and secondary schools will begin to decline within 2 years from the 44 percent hike in 1950–60. In 1960–70 the increase will be 20 to 22 percent. He said these 1960–70 figures cannot be challenged because the children already have been born.

Here are some more Wilkinson statistics which the taxpayers should demand be proven right or wrong to their satisfaction during congressional debate on school aid. If Dr. Wilkinson's figures are right, perhaps the administration bill is wrong:

Schoolteachers' salaries have increased in constant dollars by 106 percent in the past 30 years. Other State and local employees' salaries increased 58 percent and Federal civilian employees' salaries increased 73 percent in the same period.

School teachers' average salary increased from $3,126 in 1950–51 to $5,309 in 1960–61, 72.4 percent. The number of teachers paid less than $3,500 decreased from 62 percent in 1952–53 to 9.6 percent in 1960–61. Teachers paid $4,500 or more increased from 13 percent to 63 percent in the same period.

School expenditures for 1961 are estimated at $16.4 billion, up $1.2 billion over 1960 and up $9.9 billion over 1950–51, and increase of 153 percent.

School enrollments increased 43 percent in the past 20 years while school funds were increasing 185 percent in price adjusted dollars.

Dr. Wilkinson is a hardnosed conservative. There are his figures for some soft-nosed liberal to disprove. Dr. Wilkinson had this to say:

"As a taxpayer, the [Kennedy] proposal offends my sense of fiscal responsibility. As an educator, it offends my sense of moral integrity. As a lover of my country, I very much prefer that the future of my children be premised on the American philosophy of President Kennedy as proclaimed in his inaugural address when he said:

" 'Ask not what your country can do for you, but what you can do for your country.' "

Administration Should Consider Full-Scale Development of Atomic Powered Airplane Under Nonmilitary Auspices

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 17, 1961

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial which appeared in the April 6 issue of the St. Louis Post-Dispatch.

I am in thorough agreement with the suggestion in the Post-Dispatch editorial that the administration consider full-scale development of the atomic powered airplane under nonmilitary auspices.

This does not mean, however, that I agree with the blind judgment of Pentagon leaders who can see no military usefulness of a nuclear plane. But I do have the feeling that if America is to get the job done the administration will have to place it in hands of people more dedicated to the New Frontier.

The Post-Dispatch editorial follows:

HARD DECISIONS ON DEFENSE

Secretary of Defense McNamara, expounding the administration's defense budget for 6 hours before the Senate Armed Services Committee, appears to have made a strong impression on men who could be his most knowledgeable critics. Chairman RUSSELL praised him highly for his grasp of the defense problem after so short a time in office. Evidently he advanced persuasive arguments to counter misgivings among the Senators over administration plans to slow down the B–70 bomber program, the Zeus antimissile missile, and development of a nuclear aircraft.

A strong case can be made for each of these weapons as extra insurance for the future Defense Establishment. But each is tremendously costly, and the administration has a point when it argues that extremely valuable returns must be in prospect to justify such expenditures on top of outlays urgently needed for other, and more immediately effective, arms.

Mr. McNamara holds that technical feasibility of the Zeus missile is so doubtful that resources can be better expended on accelerating production of Polaris and Minuteman. In other words, he would stake our defense upon retaliatory power, in the hope that this would deter attack, rather than upon the defensive power to knock down missiles once the attack has been launched. Similarly he favors cutting back the 2,000-mile-an-hour B–70 bomber program because before this plane could be put into quantity production we would already possess a missile fleet expected to be less vulnerable to attack.

These are both hard decisions, and one can only hope that those who must take the responsibility for them have used sound judgment and the best technical knowledge. But what about virtual abandonment of the nuclear plane, which Representative MELVIN PRICE calls a "tragic error"? There may be a case for dropping it as a military project, and Mr. McNamara is quite right in questioning whether defense projects should be pursued solely for prestige value. But the administration needs to ask itself what its attitude toward a nuclear plane would be if the Russians should put one in the air 2 or 3 years hence. In such event, would not the Nation berate itself for permitting the Soviets to score another scientific victory like orbiting the first satellite?

It seems to us the administration ought to consider seriously a full-scale development of the nuclear plane under nonmilitary auspices, instead of letting the project go by default because the military can't use it.

Wasted Miracles

EXTENSION OF REMARKS
OF
HON. ROBERT F. ELLSWORTH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 17, 1961

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following recent editorial from the Iola Register. It has a good moral, and I am pleased to call it to the attention of my colleagues:

WASTED MIRACLES

The Russian man-in-space episode, however thoroughly expected, hits with a lot of impact.

"Around the world in 80 days." This man went around the world in 80 minutes. And came back alive, apparently without even a bruise.

There is no question that it is a tremendous human and scientific achievement, the forerunner of many others. Who can say how long it will be before every fancy that the space-fiction writers have been able to imagine will turn into actual fact?

There is no question either that Russia's stature as a leader in science and technology has been greatly enhanced throughout the world, and that ours has been lessened in proportion.

This was bound to happen. From the very first sputnik in 1957, Russia has been so far ahead in rocket booster power that for any other nation to catch up by 1961 was unthinkable.

But it is no more palatable on that account. The Ruskies put the first man in space. All we can do is give them credit.

Incidentally, the fact that the first sputnik was in October 1957—just 3½ years ago—is a reminder of the almost unbelievable pace of scientific advance these days. Miracles happen so fast we can barely comprehend one before another is upon us.

But I noticed in the Kansas City Times this morning, by pure coincidence, that the publisher of the Saturday Review in a speech at Jefferson City described our times

as "an age of wasted miracles." And it occurs to me that there could scarcely be a better label for this strange age in which we live.

We can defy the laws of gravity. We can turn man into a living satellite, whirling around the world in free orbit, then return him to his starting point in less than an hour and a half.

Surely this is a miracle.

But of what use is it so long as man can't live in amity with his neighbor across the street or a nation live in peace with its neighbor across the ocean?

What use is the miracle of a nuclear bomb which can burn with the heat of the sun and explode with the force of a thousand bolts of lightning if its only destiny is to destroy its makers?

"Wasted miracles." That's the age we live in.

And it's the age we will continue to live in until that final miracle of peace and good will among all mankind comes about.

Federal Aid to Schools

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES

Monday, April 17, 1961

Mr. SCHWENGEL. Mr. Speaker, an editorial in the Des Moines (Iowa) Register of April 9, 1961, emphasizes some of the points which some of my colleagues and I have been saying about the controversy of Federal aid to education. One is on the matter of need and the other is Federal control. The editorial covers these points very well and under leave to extend my remarks, I wish to bring this editorial to the attention of the Members:

FEDERAL AID TO SCHOOLS

The argument about whether the Federal Government can or should provide low-cost loans to parochial schools is tending to divert attention from the major question of Federal aid to education.

Obviously the proposal for parochial school aid raises an important constitutional issue. But the major question is whether the school system, either public or private, should receive general support from the Federal Government.

Readers of this page must know that we have long favored increased spending from both public and private sources on all levels of education. With a rapidly expanding school population, it is obvious that more money will have to be spent for both buildings and salaries. But it is not clear that this money must come from the Federal Government.

There is evidence to suggest that the need for Federal aid has been exaggerated and the dangers minimized.

Two questions need to be explored. One is the matter of need. How many States are unable to finance satisfactory school systems? There is no indication that Iowa is financially unable to handle all of its primary and secondary school needs, although Iowa is not one of the richest States in per capita income. It is true that this State will have to spend more on education in the future, but Iowa will get more buildings for its tax dollars if the taxes are collected and spent here than if the Federal Government collects the money here and sends it back to the State.

We suspect that most of the other States, although admittedly not all of them, are also able to handle their own school problems.

The second question which needs exploring, and a much more important one, is whether Federal support of the school system will also mean Federal control. Despite many well-meant arguments to the contrary, it seems inescapable that if the Federal Government contributes substantial support to the school system, there inevitably will be Federal restrictions on how the money is spent. Indeed, there should be. No governmental body should spend taxpayers' money without supervision of how it is spent.

The realistic question is whether Federal control or Federal influence over education is desirable. It can be argued that this provides a way to raise educational standards, but the danger inherent in subjecting the educational system to centralized control outweighs this possible advantage.

It may be that the Federal Government is less likely to abuse educational freedom than some State legislatures or town school boards, but Federal control would be universal. The pressure groups that want to control the schools now are scattered and relatively ineffective in a diversely operated system.

There are sound arguments in favor of Federal aid for those few States whose per capita income is sharply below the national average. But this is not the type of Federal aid proposed by the administration. President Kennedy's program would furnish assistance to all States, rich and poor, both for teachers' salaries and for buildings.

The primary question is not whether aid should be provided for private schools as well as public. The primary question is whether the Federal Government should be providing aid of this type for either.

Federal Loans to Private Schools

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, April 17, 1961

Mr. McCORMACK. Mr. Speaker, with permission to extend my remarks, I place in the CONGRESSIONAL RECORD an excellent brief regarding the constitutionality of the enactment of legislation by the Congress providing for loans to elementary and secondary private schools, including parochial schools of all religious denominations.

This brief was prepared at my request by Charles S. Sullivan, Jr., an outstanding lawyer, former trial attorney and Special Assistant to the U.S. Attorney General, Department of Justice.

The brief is both exhaustive and comprehensive and indicates that such legislation would be well within the framework of constitutional limitations.

The submission of this legal dissertation is timely due to the tremendous need for the education of all our children in this country, in view of the present world crisis.

The brief follows:

APRIL 13, 1961.

Hon. JOHN W. McCORMACK,
Majority Leader, U.S. House of Representatives, Washington, D.C.

HONORABLE SIR: You ask me whether or not Congress is authorized, under law, to enact legislation providing for loans to elementary and secondary private educational institutions, including parochial schools of all religious denominations.

Two issues appear involved requiring consideration, in order to ascertain an answer to the question presented: (1) Whether the term "loan" constitutes support within the meaning of the law, and (2) Whether such an act would be violative of the U.S. Constitution.

I

A loan is the delivery of money, article or property to another for temporary use, with a promise, either express or implied, to return the same. The promise to repay the money or return the object borrowed is absolute, and such obligation continues to exist so long as whatever is involved remains in the custody or possession of the borrower. In C. J. S., vol. 54, page 656, it is defined as follows: "A loan is temporary, a temporary letting for a temporary use. It is essential that it be returnable. The borrower expressly or impliedly promises to return the thing lent. A loan implies an obligation to repay."

This same definition is also restated in *Rae* v. *Cameron* (114 P. 2d 1060 at 1062); *Northern Mining Corp.* v. *Trunz* (124 F 2d 14 at 17); and *Nicholas* v. *Fearson* (32 U.S. 103 at 109).

The case of *Beard* v. *Baxter* (258 Ill. App. 340 at 347), in defining a loan, made the following comment: "A loan implies a promise to repay, and the promise to repay is absolute."

The court of appeals (2d circuit), while speaking of a loan in the case of *In re Grand Union Co., N.Y.* (219 F. 2d 353 at 356) contains the identical statement quoted above in *Beard* v. *Baxter, supra,* and further says that the promise to repay must be unconditional and free of contingency if the transaction is to be construed as a loan.

"In its popular sense, a loan of money is understood to mean a transaction creating the customary relation of borrower and lender, in which the money is borrowed for a fixed time, and the borrower promises to repay the amount borrowed at a stated time, in the future, with the interest at a fixed rate" (*Bannock County* v. *Citizens Bank and Trust Company* (32 P. 2d 674)). (See also *Bankers Mortgage Company v. Commissioner of Internal Revenue* (114 F. 2d 130 at 131); *Alworth-Washburn Company* v. *Holvering* (67 F. 2d 694 at 696).)

The most concise and inclusive definition of a loan, containing all the conditions necessary for a transaction to come within the purview of the term, is expressed in the opinion of the court in *Milana* v. *Credit Discount Company* (163 P. 2d 869 at 871): "A loan, on the other hand, is the delivery of the sum of money to another under a contract to return at some future time an equivalent amount with or without an additional amount agreed upon for its use; and if such be the intent of the parties the transaction will be deemed a loan regardless of its form."

It is therefore obvious that money delivered by one to another under an agreement, either express or implied, to return the amount involved at a future date, constitutes a loan in the legal sense of the word notwithstanding whatever attempt might be made to construe the transaction otherwise.

"Support," on the other hand, in the financial sense of the word, is to supply funds for the maintenance of something for the purpose of continuing whatever may be involved (*Board of Commissioners of Logan County* v. *State* (254 P. 71)). It is the furnishing of funds for the sustenance and the means of continuing (Opinion of Justices (13 Fla. 687 at 689)).

The term neither includes nor embraces an understanding to return the money delivered, due to the very nature of its defi-

nitions, and the interpretation of the word placed upon it by both State and Federal courts (*Great Western Power Company* v. *Industrial Accident Commission* (218 P. 1069); *NLRB* v. *Valentine Sugars* (211 F. 2d 317); *Visser* v. *Nooksack* (207 P. 2d 205); *Paquin Ltd.* v. *Nestervelt* (106 A. 766); (Opinion of Justices, supra)). "Support" is a contribution to the one to whom it is given, and the term "contribution" for support is a common phrase found in the respective opinions of our courts (see *Great Western Power Company* v. *Industrial Accident Commission, supra*). "Taxes imposed upon the people by a local, State, or Federal Government are laws for the support of the particular Government."

It appears from the discussion in this opinion that "support" is the outright furnishing of funds or means to the recipient, unaccompanied by any agreement, express or implied, to return or repay the same.

In *State* v. *Blandson* (148 P. 28), the court in defining "support" stated that the term referred to "appropriations for current expenses, maintenance, upkeep, continuation of existing functions, as well as appropriations for such new buildings and conveniences as may be necessary to meet the needs and requirements of the State in relation to its existing institutions."

The two words are so distinguishable in their legal connotations that the vast difference was recognized by the court of appeals (5th circuit), in the case of *National Labor Relations Board* v. *Valentine Sugars, supra*, when it held that the loan of money for expenses by an officer of the company to an officer of the labor organization does not constitute "support."

According to the evidence in the above case, an employer loaned his car and money for expenses to the officers of a union to make a trip to a nearby city to consult with the regional officers of the Labor Board. The petitioners sought an order directing the employers to cease contributing to the support of the labor union, contending that the foregoing loan was, in reality, support and therefore in violation of the National Labor Relations Act. The court said in answer to this argument, on the facts just recited: "In the state of the record * * * these acts alone cannot fairly and justly support a finding that the independent (union) was supported or its administration interfered with as prohibited by the act * * *."

In view of the cases cited and the definitions of the words contained in the opinions of the respective courts, it may accurately be said in the language of *Milana* v. *Credit Discount Co., supra*, if money is delivered by one to another with an agreement, either express or implied, to return the amount at some future date, the transaction will be deemed a loan regardless of its form.

II

Would such an act violate the U.S. Constitution?

The 1st and 14th amendments become relevant to this inquiry, and necessitate an examination of the pertinent judicial opinions, in order to obtain the intent of the respective provisions. The applicable clause of the 1st amendment provides "Congress shall make no law respecting establishment of religion, or prohibiting the free exercise thereof; * * *" and that of the 14th amendment states: "* * * No State shall make * * *, nor deny to any person within its jurisdiction the equal protection of the law. * * *"

At the outset of this discussion, it must be emphasized that all acts and statutes enacted by a legislative body are presumed to be lawful (*U.S.* v. *Di Re* (332 U.S. 581); *Davies Warehouse Co.* v. *Bowles* (321 U.S. 144); until held otherwise by the courts, *State* v. *Martin* (139 N.E. 282); *McPherson* v. *Blacker* (146 U.S. 1)); and no body or tribunal has the power to decisively declare an act of Congress to be illegal except the U.S. Supreme Court (*U.S.* v. *Reynolds* (235 U.S. 133); *Gelpcke* v. *Dubuque* (1 Wall. 175); *Pennekamp* v. *Florida* (328 U.S. 331, 11 Am. Jur. 740)).

This principle is, and always has been the law of the land since the ratification of the U.S. Constitution. Article 3, section 1, of the Constitution provides that "the judicial power of the United States shall be vested in one Supreme Court, and in such inferior courts as the Congress may from time to time ordain and establish."

Section 2 of the same article provides, among other things, that "the judicial power shall extend to all cases, in law and equity, arising under this Constitution, the laws of the United States * * *."

The foregoing sections of article 3 leave no doubt as to which branch of Government is authorized to determine the legality of an act. The authors of the Constitution made their intentions abundantly clear, in the above clauses, that the jurisdiction for the determination of legal issues should be confined to the courts.

The U.S. Supreme Court has held, in several cases, that the 14th makes the prohibition of the 1st amendment applicable to State laws regarding the right of exercising the freedom of religion (*Cantwell* v. *Connecticut* (310 U.S. 296); *Jamison* v. *Texas* (318 U.S. 413); *Follett* v. *McCormick* (321 U.S. 573); *Marsh* v. *Alabama* (326 U.S. 501)); and in the case of *Everson* v. *Board of Education of Ewing TP et al.* (330 U.S. 1, at p. 15) said: "The broad meaning given the amendment by these earlier cases has been accepted by this Court in its decisions concerning an individual's religious freedom since the 14th amendment was interpreted to make the prohibitions of the 1st applicable to State action abridging religious freedom."

Thus the two amendments become interwoven in legal controversies such as the subject under discussion and must be considered together in order to reach an accurate conclusion.

It is well-established law that the first amendment of the Constitution had the same objective and intent to provide the same protection against governmental interference in religious liberty as the Virginia statute enacted on January 19, 1786. The relevant section of this act recites: "That no man shall be compelled to frequent or support any religious worship, place, or ministry whatsoever * * *" (*Watson* v. *Jones* (13 Wall. 679); *Reynolds* v. *United States* (98 U.S. 145)).

Both Madison and Jefferson, who are the recognized leaders in the drafting and adoption of the Virginia statute of 1786, and the first amendment of the U.S. Constitution, intended the object of the statute and the amendment to be the same. It was held in the case of *Reynolds* v. *United States, supra*, that the provisions of the first amendment, in the drafting and adoption of which Madison and Jefferson played such leading roles, had the same objective and were intended to provide the same protection against governmental intrusion in religious liberty as the Virginia statute; and at page 164, the Court said: "In the words of Jefferson, the clause against establishment of religion by law was intended to erect 'a wall of separation between church and State.'" What was the actual meaning of Jefferson's declaration as quoted in the above case?

Taking into consideration the prevailing circumstances of that period in which Jefferson made the statement, it seems clear from his own conduct, he could not have intended that his words be construed in a strict literal sense. There is neither legal nor historical evidence of record revealing any objection by Jefferson to the requirement of taking an oath by a President-elect as a condition precedent to assuming that office, nor to any other public office requiring an oath, nor to the motto, "In God We Trust," imprinted on U.S. coins. At the time of his declaration, almost every colony imposed some type of tax on the people for church support, due to the existence of State religions. It is a historical fact that the people of Virginia, North Carolina, Massachusetts, Connecticut, New York, Maryland, and New Hampshire were compelled by law to contribute to the State in the form of taxes for the support of churches, clergymen and the construction of churches for the particular religious denomination favored by the respective States (see footnote 8, p. 10, *Everson* v. *Board of Education of Ewing TP et al., supra*). It was this existing condition that Jefferson and Madison so strenuously objected to, the abolition of which they desired and eventually realized by the passage of the Virginia statute and the adoption of the first amendment.

The Supreme Court has consistently sustained legislative appropriations enacted for the welfare of the people and the education of children. Even though the money derived from this particular type of legislation might pass to an institution under the operation and control of a certain religious denomination administering such service, it has been held to be within the legal confines of the taxing power of the State when imposed for a public purpose (*Bradford* v. *Roberts* (175 U.S. 291); *Cochran* v. *Louisiana Board of Education* (231 U.S. 370); *Quick Bear* v. *Leupp* (210 U.S. 50)). The Court has further ruled that a law does not have a private rather than a public purpose simply because tax money will be used to reimburse individuals for money they have spent in a manner which furthers a public program (*Everson* v. *Board of Education*, supra).

In the case of *Bradford* v. *Roberts*, supra, an attempt was made to enjoin the Federal Government from paying money to a Catholic hospital in Washington, D.C., contending that this constituted an establishment of religion in violation of the first amendment. Any person regardless of race, color or creed was admitted to the hospital who required treatment. The Court held that the hospital was a secular institution notwithstanding that all the members of the corporation were of a religious order of the Catholic faith. It was said in the course of the Court's opinion in reference to this hospital: "Although its individual members might all be members of a religious order of the Roman Catholic Church, this would not characterize the hospital as a religious or sectarian body."

Regardless of whether the policy of a legislative body meets the objections of a number of people, the courts will not interfere unless the legislation is in violation of the Constitution, and in the absence of such an offense, its policies are not reviewable by the judiciary. It was said by the Supreme Court in *United States* v. *Butler* (297 U.S. 1): "The policy of a legislative body is not subject to review where an act does not violate the Constitution" (see also *Williams* v. *Baltimore* (289 U.S. 36); *Wabash Valley Electric Co.* v. *Young* (287 U.S. 488); *Buchanan* v. *Warley* (245 U.S. 60)).

The fact that a statute might create a new political concept, necessitated by conditions of the times, does not detract from the power of Congress to enact such a law as evidenced by the Court's statement in *United States* v. *Union Pacific R.R. Co.* (160 U.S. 1): "In determining the validity of a statute the courts can consider only the legislative power to enact it, and if this power exists, it is their duty to give effect to the will of the legislature."

The problem of education for children in this country has been of great concern and is more so today, due to the great expansion in population. Both legislative bodies and the courts are agreed on this matter as may be seen from the comment of the Court in

Everson v. *Board of Education, supra,* in commenting on a remedial statute enacted by the New Jersey Legislature for the benefit of parochial scchoolchildren as well as those attending public schools. It was said in this case at page 7: "It is much too late to argue that legislation intended to facilitate the opportunity of children to get a secular education serves no public purposes (*Cochran* v. *Louisiana State Board of Education* (281 U.S. 370))."

As early as 1896, the Commissioner of Indian Affairs, Francis E. Leupp, decided to make a contract with a Roman Catholic organization for the education of children of the Sioux Tribe. The children were to receive their education at St. Francis Mission School on the Rosebud Indian Reservation in the State of South Dakota. The money was to be paid to the Bureau of Catholic Indian Missions. Action was brought by one Quick Bear, a member of the Tribe, to enjoin the execution of the contract on the ground that it was illegal (*Quick Bear* v. *Leupp,* supra). In dismissing the action, the Supreme Court made the following comment: "Some reference is made to the Constitution in respect to this contract with the Bureau of Catholic Indian Missions. It is not contended that it is unconstitutional, and it could not be."

It is obvious the money was to be spent by the Government for a public purpose since it was to be used to educate the Sioux children in accordance with the treaty signed by the United States and the Sioux Nation in 1868.

In the State of Louisiana, the textbooks, excluding religious books, are supplied to both public and parochial schoolchildren at the expense of the State. The law authorizing this expenditure has been tested in the U.S. Supreme Court as to whether it violated the Federal Constitution. It was held to be well within the framework of lawful limits of legislative power in the following words of the Court: "This legislation does not segregate private schools or their pupils as its beneficiaries, * * *. Its interest is education broadly; its method comprehensive. Individual interests are aided only as the common interest is safeguarded."

Answering the question whether this action by the State of Louisiana offended the 14th amendment, the Court continued: The 14th amendment did not strip the State of the power to meet problems previously left for individual solution" (*Davidson* v. *New Orleans,* (96 U.S. 97); *Barbier* v. *Connolly,* (113 U.S. 27); *Fallbrook Irrigation District Commission* v. *Bradley* (164 U.S. 112)).

In discussing the intent of the prohibition against the establishment of a religion by Congress, as provided in the first amendment, the Supreme Court said, in the majority opinion, in the case of *Everson* v. *Board of Education,* supra: "The 'establishment of religion' clause of the first amendment means at least this: Neither a State nor the Federal Government can set up a church. Neither can pass laws which aid one religion, or prefer one religion over another. Neither can force nor influence a person to go to or to remain away from church against his will or force him to profess a belief or disbelief in any religion. No person can be punished for entertaining or professing religious beliefs or disbeliefs, for church attendance or nonattendance. No tax in any amount, large or small, can be levied to support any religious activities or institutions, whatever they may be called, or whatever form they may adopt to teach or practice religion. Neither a State nor the Federal Government can, openly or secretly, participate in the affairs of any religious organizations or groups and vice versa. In the words of Jefferson, the clause against establishment of religion by law was intended to erect 'a wall of separation between Church and State.'"

Again "support" of any religious activity obtained by taxes levied upon the people is stressed, as it was by Jefferson, with the admonition that everyone must remain free in the choice of a religious belief, from interference by either the Federal or State Governments.

Query. Was it ever the intention of the authors of the U.S. Constitution to erect an impenetrable wall between church and state?

If the daily convening of Congress which is commenced with prayer, the payment of chaplains in the Armed Forces with Government funds, and many other instances in which the Government participates, in addition to the foregoing cases discussed, are a criteria, the answer, obviously, is in the negative.

Although the question presented has never been determined by the Supreme Court, the cases reviewed under the first issue clearly distinguish the difference between the legal connotations of the terms "loan" and "support," rendering each of the words incompatible with the other.

In answer to the second issue, based upon the conclusion in part I, and the material disclosed under part II, it would appear that a congressional act authorizing the Federal Government to issue loans to private schools, including parochial institutions, for the advancement of a secular education for the benefit of children, would be for a public purpose and well within the confines of constitutional limitations.

Respectfully submitted.

CHARLES S. SULLIVAN, Jr.

A Smalltown Banker Talks About Business Conditions

EXTENSION OF REMARKS

OF

HON. PHIL WEAVER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 17, 1961

Mr. WEAVER. Mr. Speaker, under leave to extend my remarks I would like to call the attention of my colleagues a very interesting, penetrating discourse on business conditions of today by one of the best qualified men I know. Mr. Vincent E. Rossiter of Hartington, Nebr., is a banker and a businessman. He is also a close observer of the current economic scene and his thoughts along this line are therefore important.

Mr. Rossiter, perhaps more than most, speaks for the businessman whose livlihood is directly dependent upon our farmers—the smalltown businessmen who live in an agricultural area where commercial farming is the rule. His viewpoint is typically that of the Midwest where he has served his customers and the people of Hartington and surrounding area for so many years.

However, transplant Mr. Rossiter into almost any area whose economy is based, as is that of Nebraska, upon prosperous agriculture, and I think his words would be the same, his outlook identical.

Mr. Rossiter was recently interviewed by the magazine, U.S. News & World Report. I would like to include that interview at this point in the RECORD:

A SMALLTOWN BANKER LOOKS AT BUSINESS AT THE GRASSROOTS

(NOTE.—Vincent E. Rossiter is president of the Bank of Hartington, in Hartington, Nebr., a town of 1,650. Mr. Rossiter grew up in the banking business. His father kept the family bank open during depression days of the 1930's "by the skin of his teeth." Now 46, Mr. Rossiter describes himself as "just a little banker from Nebraska." He is a member of a special committee set up in 1960 by the Nebraska Legislature to look into research for new uses of farm products.)

Now that more and more economists are predicting a business recovery, how do things look to a country banker—a man who sees business at the grassroots? From his bank in Hartington, Nebr., Vincent E. Rossiter sees this picture: Farmers still cutting back, pulling their belts even tighter. Businessmen in farm neighborhoods hurt as reduced profits have to be spread thinner over their communities. In this exclusive interview, Mr. Rossiter measures the trends of the present and concludes that, unless there are basic changes in rural America, the recovery now predicted is going to run out of steam.

Question. Mr. Rossiter, how is business out in your part of the country?

Answer. It's stable and probably a little better than it was a year ago.

Question. Is there much optimism among farmers?

Answer. If there's any optimism, it's very reserved. Certainly they're feeling fairly good, because their volume and cash receipts have remained about the same compared to last year. If their net has dropped a little, most of them feel that this is only temporary.

Question. Do you mean the farmers are long-term optimists?

Answer. We're wishful by nature, I think, in the United States—always looking for that pot of gold at the end of the rainbow. Farmers are not different from the rest of us.

Question. Is the farm economy moving ahead or slipping behind in your part of the Midwest?

Answer. Our deposits have been relatively stable, and, of course, this is an indication of stability in the profit level of the community. However, on the other hand, our loans rise every year, on the average, which indicates that some people are covering their lack of income and lack of profit with borrowed money.

Question. If your deposits have made no gains in a period when the country has grown tremendously, is this a relative loss?

Answer. You're suggesting that we've got to run to stand still, if we are going to grow with the rest of the economy. Well, we haven't had any growth.

Question. Is that situation generally true of other banks in midwestern rural areas?

Answer. Yes. Theoretically, had the rural areas enjoyed the same expansion that has been enjoyed in other areas, every bank in the Middle West should be twice as big as it is—filled up with money that has been earned by its depositors. This has happened in some other areas in the United States.

Question. Are you losing farmers in your area?

Answer. Nebraska has lost fewer farmers in the past 10 years than any of the other States in the 10th Federal Reserve District, which includes Colorado, Kansas, Nebraska, Wyoming, and parts of Missouri, New Mexico, and Oklahoma. We've lost about 10 percent, and Cedar County, of which Hartington is the county seat, has had the least loss of any county in Nebraska.

So I feel we have a very stable farm economy in our particular area. But, in spite of this, of the 259 farmer property statements (records of assets and liabilities) that I took from September to December of 1960, only 7 had an increase in net worth. Less than 3 percent of my customers are showing any progress or gain.

Question. What type of farming area are you in?

Answer. We're right on the western edge of the Corn Belt. Our area is diversified—principally corn, hogs, and cattle—but we also have more milk cows in Cedar County than any other Nebraska county.

Question. What happened to the remainder of the 259 farmers from whom you took property statements?

Answer. Their losses ranged from $200 to $300 to the extreme of $4,000 to $5,000.

One of the exceptions to the trend was a man who had $100,000 worth of land, $20,000 worth of farm equipment, and $40,000 worth of livestock and grain. He showed an appreciation of $7,000 in his property statement. Now, that's less than 5 percent return on his $160,000 investment.

So this man got nothing for his depreciation. He had to write that off someplace else. He received no wages for himself or his two big boys or his willing wife who quite often helps him. He received nothing for his management.

Now, he's living and he's calling this interest on his investment "income," and he's not too unhappy. But he's smart enough not to buy the new equipment that he needs and would buy now—he told me $25,000 worth—until he can see something besides interest on his investment. He owed us only $7,000, so obviously he's not in any danger of going broke. He's not a little, inefficient farmer.

Another case I had was a farmer who also had off-the-farm income amounting to $12,000 last year, and a $4,000 appreciation on his property statement, which indicated he had socked $8,000 of his outside earnings into his farming operation.

Question. When you say these farmers are living off depreciation, do you mean that they're not putting aside enough money to maintain their farms and keep their investments up?

Answer. Yes. A good example is the young man who came in last November and said, "I'm going to have a sale." I said, "You're kidding. You've been going a little contrary to the general trend. You're going to have a half section of ground—320 acres—clear the first of January; aren't you?"

"Yes; I am."

"Lord, man, what better could you ask from an industry?"

He said, "Who are you kidding? You know how I got that half section of land."

"No," I said, "I don't know."

"Well, I bought the home place, a quarter section, from the folks, and I got it cheap. I had it paid for by 1950. Then I made a little more money in the early 1950s and I bought this other quarter for $16,000. Now, I'll have that paid for by the first of the year.

"But during this 15-year period I haven't spent a penny for improvements. It'll take $5,000 just to put new boards and new nails where the old ones fell off. I've worn out a complete set of farm equipment. I'll have to go to four-row equipment, where I was getting by with two-row, because my teenage boys have grown up and moved away. That will cost around $10,000.

"Now, should I go out and mortgage my farm again to finance $15,000 for improvements and equipment, or shall I sell out now, rent my farm and go into town and get into some kind of business? That way, I could eke out a living and let the farm take care of itself until times get better."

Question. What did he do?

Answer. He had a sale in February of this year. This is a 42-year-old farmer. His reasoning was that, if he stayed on the farm, bought the machinery and made the improvements, he would depreciate the whole thing again in 10 years while he paid off the loan on the land. He would again have a clear halfsection, with a set of wornout machinery and buildings that needed repair, and he'd be 52 years old. And they're having a little trouble getting jobs at 40.

Question. Who bought this man's land?

Answer. He didn't sell the land. He kept the land, and it's supposed to pay the taxes. It's leased to a nephew who is borrowing 10 milk cows from his dad. Dad will get half the cream check for the loan of the cows. By working for his dad, he bought a tractor. He'll borrow equipment from his dad and dad-in-law.

Now, this young fellow thinks he's going to farm this halfsection without borrowing any money. But it's hard to see how he's going to make ends meet, because he doesn't have enough invested, so he can't live off interest and he can't live off depreciation.

Question. And there's a hidden cost there in the use of this borrowed equipment—

Answer. Oh, definitely. And somebody's likely to lose part of his crop because, when harvest comes, there just wont be enough machinery to go around and get the job done in time.

Question. What's the effect of all this on Main Street? Are you having any business failures?

Answer. Well, yes and no. We've had no bankruptcies. We've lost an auto dealer since the first of the year. In an adjoining town, an implement dealer just locked his door one Saturday night and said, "I'm through." He left unfinished work in his shop and told them to come and get it and drag it out, that he was tired of repairing their damned machinery and carrying it on the books.

Every time we lose 10 or 12 farmers from our community, we lose the people who would spend the income to sustain one average-size, smalltown business—roughly $100,000.

Question. But aren't the remaining farmers running bigger farms and spending more money?

Answer. Well, no. They'll spend more money for operating costs, but 10 fewer farm families means 35 fewer people to buy shoes and groceries and overalls and shirts. This hurts a community.

I suppose we should number our business houses and say, "All right, No. 10, it's your turn—you're done. We don't have the money to sustain you any longer," and then put a stick of dynamite under him and blow him up—inventory, family, and all.

This sounds kind of violent and, of course, I don't mean it literally, because the loss of a town family, by whatever means, is just as damaging to a community as the loss of a farm family. I'm only trying to illustrate that this is the only way a community could keep the remaining businesses relatively prosperous, and still not add to the unemployment situation.

But instead of that, nobody knows who is supposed to go, so everybody stays, and we spread this smaller profit over the community just a little thinner, with the consequence that everybody is operating on less profit.

Question. Your bank seems to be doing fairly well. Didn't you do an extensive remodeling job recently?

Answer. We bankers have never had it so good. We're cleaning up because the farmers are coming in to borrow everything we've got to lend. I've got 150 new borrowers coming in—driven in by the low-price level in agriculture. It's increased our loan volume to a record high. Naturally, our income has gone up. If I didn't think it through, I could be real happy.

Question. What do you see when you think it through?

Answer. Well, you can't collect bank loans from people in an orderly manner unless they are earning a profit. I know that; I'm in the banking business. Loans in my own bank have increased every year on the average since 1951. My deposits have been relatively stable for 4 or 5 years.

And I watch my customers bring in their savings bonds and deposit them to their accounts—not earned income, but income earned in other periods—to stabilize my deposits. But I know that, ultimately, my deposits are going to decline, and, as they do, I'm going to curtail my correspondent accounts with city banks. As I do that, their loan ratios are going to go up out of proportion to what they are now. And, according to one economist, they're already at historically high levels.

Now, when the credit is eliminated in our economy, and if we haven't restored the earned income, we cannot sell the goods and we're going to have another depression.

We're dangerously close, in my opinion, to a point where, one of these days, I'm going to have somebody walk in with a $60,000 property statement and say, "Vince, I need $2,000." And I'm going to have to say, "I'm sorry. We're not loaning any money because we're not getting any back."

Now, this is going to happen in metropolitan areas before it happens in the rural areas, because of the natural conservatism in the rural areas and the more liquid position of the banks there. When it happens in the metropolitan areas, it won't make any difference how much money there is out in the country. We just won't be able to bail out the Nation, because the top 300 banks in the country—about 2 percent—control more than 50 percent of the total deposits of all banks.

What we've been doing in these recession periods is liquidating manufactured goods inventory to get the money back. The day we can't liquidate manufactured goods inventory out of these industrial and rural areas, and the money doesn't come back to the banks, then we're going to be in serious trouble.

Question. Are you saying that the country is headed for a farm-led and farm-fed depression?

Answer. The fact is that, for 10 years, we've been using the agricultural segment of the economy as a tail on the kite of the whole economy to stabilize it. We've been depressing farm prices to offset inflation in other areas.

The Joint Economic Committee of Congress made a study of this in 1956, when there was kind of an abrupt jump of the wholesale prices index. An economist in the Agriculture Department testified that, yes, they knew this was going on. They knew that they were offsetting a decline in farm prices with a rise in industrial goods, which was resulting in an approximate stability in the wholesale prices index. They called in William McChesney Martin of the Federal Reserve Board, and he said, "Yes," he knew that. They asked him if it would be inflationary if farm prices should rise. He said, "It's certainly something we don't want to contemplate."

As it is now, you've got a farm price level that's down here at around 89 or 90 percent of 1947–49 at wholesale, with an industrial-goods price level at 128 percent of the same base period.

So, you're giving the farmer a 70-cent dollar and telling him to buy a dollar's worth of goods, which he cannot do.

That 70-cent dollar is not only the farmer's income, it has to flow through these small-community businesses. They are nothing but the tool of distribution. They buy things from manufacturers, set them on the floor or the shelf, and sell them to farmers and to people in the community who are making their money working for the merchants who sell goods and services to farmers. We're all farmers.

You just can't get away from the fact that your farm income provides the reciprocal market for manufactured goods.

AFFECTED: A THIRD OF UNITED STATES

Question. Aren't you giving too much weight to the farm market in our economy? Agriculture accounts for a much smaller proportion of our national income today than it did two or three decades ago.

Answer. But what the economists overlook is the fact that a large percentage of business and industry still is dependent on the farm market. In the communities of 5,000 population and under, and on the farms surrounding these communities, you have 35 percent of the Nation's population, people earning their income directly and indirectly from agriculture: either directly, in the production of agricultural commodities—or indirectly, in the business of providing goods and services for agriculture. We have permitted this rural market to lag, behind while the balance of the economy has nearly doubled its income since the 1947–49 period.

Question. What do you think should be done?

Answer. It's utterly clear to me. It's a question of whether or not we want to purchase prosperity by restoring a parity of income in the agricultural rural areas. We can go on stimulating the overall economy by needling it, by advancing payments, by doing all the things that the administration is doing now. But, unless we restore this earned income in the farm economy, there won't be anything coming along behind the temporary improvement to sustain a real recovery.

We've knocked the socks off one segment of our economy. There's no way you can create another segment of business that will restore overall health to the national economy as rapidly as just bringing the income up to a parity level in agriculture.

Question. Would you do that by raising Government price supports?

Answer. That's right. This is the quickest way, and time is running out.

Question. A number of farm economists are predicting that increases in price supports for farm products and other actions taken by the Kennedy administration will increase net farm income by around a billion dollars this year. If they are right, will this solve the farmer's problem?

Answer. It can hardly solve the problem, for the simple reason that this billion or so of additional net income is less than 10 percent of the increase that farmers would have had if their net income had been growing in proportion with other segments of the national income. It may alleviate the situation a bit, but it certainly doesn't solve anything.

Question. Will this predicted increase in net income help rural businessmen?

Answer. It's bound to have some benefit up and down Main Street—a billion dollars is going to make some difference. But it's one of these "too little, too late" propositions. We're not moving fast enough in the right direction.

A WAY TO CUT SURPLUSES

Question. With price supports where they are, farmers now are producing too much. What happens if we raised supports to a higher level?

Answer. I think we'd have less trouble with surpluses. The fact is that, when farm prices have been highest, production has been lowest. And when prices are the lowest, production is greatest. The farmer reacts just like you would. If you weren't making enough money to support your family at the job you have, you'd be out on some moonlighting job, like driving a cab at night.

Now, the farmer hasn't got this opportunity. All he can do is expand production. So he plows up the brome-grass pasture where he had his beef cows and plants the land to grain, and goes to milking dairy cows, because it gives him a weekly income. They do everything—raise more chickens, produce more eggs, more everything—trying to maintain their income with increased production.

The midwestern farmer that I know has a built-in panic button which goes off when the grass begins to get green in the spring, right about now. He works furiously and without regard for the number of hours each day or each week, from planting time in the spring until harvest time in the fall—approximately 7 months of the year. Then, not by choice but because of the nature of his business, he relaxes through the winter months.

Even during this period of relaxation he has more, or less, chores to do every day, 7 days a week, in order to process the fruits of his harvest through livestock and poultry and into the marketplace. During the rush season he easily works as many hours, in 7 months, as does the average office worker or factory worker—to say nothing of the banker—in 12 months, at 40 hours per week. And then he works half as many hours more in the 5 winter months remaining.

If you raise the prices, let them get the banker off their back, you'll see the "relaxingest" bunch of people in this world, and they'll cut back production automatically.

Question. That would be subsidizing laziness then. You increase their income by letting them work less——

Answer. I don't consider a fair profit a subsidy, to agriculture or any other industry. The midwestern farmer, the farmer that I know, is working 1½ times as long as the average 40-hour-a-week laborer in industry, for considerably less money—for 75 cents an hour. They have to in order to sustain themselves, you see.

Question. Do you really think farmers will relax, if they can afford to?

Answer. Sure, I do. Let me illustrate what I mean. They enjoy recreation just like the rest of us, and they are willing to take the time and to pay the price when they can afford it.

The other day, a farmer came in and said to my vice president, "Edgar, I've got to pay my taxes."

Ed said, "How much are they?"

"Three hundred and sixty dollars—2 years' taxes."

Ed said, "You've waited 2 years. We better wait 6 months more and see if you're going to get a crop."

"No," he said, "I've got to get them paid today."

So we fixed him up for his taxes and said, "Now, tell us, what's the big rush?"

So he told us, "You know, I can't get my boat license unless I pay my taxes." The boat license was 8 bucks, and the fishing was awful good that day, and it had been for several weeks.

Question. Wouldn't it help if there were fewer farmers? Wouldn't that give the ones who are left a better income from a larger, more efficient operation?

Answer. Well, we've been moving them off the farms at a rapid rate. Theoretically, this should leave a bigger piece of the pie for those who are left. But the facts are that the people who are remaining and who have extended themselves to increase their size, by assuming the other man's land, in many cases are extending themselves beyond the limits of their credit. These people now are in the worst condition of any segment of agriculture. So size apparently isn't the answer.

If you are producing at a loss, the more you produce, the more you lose. This is happening to some farmers. For example, corn at a dollar a bushel is a loss item on the farm unless it can be turned into pork and beef and poultry and milk. And the poor devil who is grain farming now, according to U.S. Department of Agriculture figures, earned about 2 cents an hour for his trouble last year.

SQUEEZE ON FAMILY FARMS

Question. Aren't there some cases where consolidation of farms does produce a more economical operating unit?

Answer. Up to a point—up to the limits of the family labor. The minute you start hiring help, you becouse uneconomical again.

If you hire a man and pay him $2,400 a year, and you are earning a 20-percent margin of profit on your gross, then you have to have five times his salary—or $12,000—in increased gross income just to earn his wages. So, if it takes an extra quarter section to earn his wages, then you've got to go to an extra half section before you make any headway. So, you reach a point of diminishing returns here, after you've utilized your family labor. And family labor is the most efficient farm operation, bar none—because it's so cheap and readily available.

Question. Is it the corporate farm that makes the big leap? Is that what we're heading for?

Answer. That is where we will get the big leap. The family farmer isn't capable in most cases.

Question. Do corporate farms make money?

Answer. Well, you can get some idea from income tax figures put out by the Internal Revenue Service. I got them for 1957 and 1958.

At that time, a little more than a third of the farms owned and operated by individuals were paying no income tax. By comparison, 43 percent of the corporate farms were paying no income tax. Now, whether this is a matter of bookkeeping, or whether it reflects what is really going on in agriculture, I don't know.

Question. Of course, farmers have more tax loopholes than anybody else—

Answer. Oh, they have. But, even so, unless a farmer is paying income tax, he's going broke. He's just not able to sustain himself over the long haul. I've proved this in my own business.

Question. What is the wage for a hired hand in your area?

Answer. Around a dollar an hour for labor hired by the day. A full-time hired man gets $200 a month, or approximately $6 a day.

Question. And farmers aren't even able to afford that when their boys grow up and leave the farm?

Answer. That's right. The example is that man who decided to quit farming and rent his land. His two boys could go to town and get $50 or $60 a week working in a filling station or garage, and he couldn't afford to pay them that much. His next choice was to go to four-row equipment and do the job alone, or quit. So he quit.

Question. Couldn't he have gone ahead and bought the four-row equipment?

Answer. He could have, but he couldn't have paid for it at the profit level in farming today. That kind of equipment is clear out of line with the profit farmers are getting, and it's no trouble to see why. For example, from 1943 to 1952, farmers were getting around $1.42 a bushel for corn. During that period, the average wage in the manufacturing industry was $1.28 an hour.

Now, corn is selling in my hometown for 91 cents a bushel—this is No. 2 corn, and very little of our corn will grade that high. By comparison, the farmer is paying $2.32 for an hour's labor in industry.

So, that's how one side has gone up and the other has gone down, to put the farmer in distress. Maybe I should have called this young fellow who quit a coward. I'd like to challenge him and say, "Stay here and settle this thing instead of running." But he'd have been a damn fool to stay. I've got a lot of good customers who are foolish to remain on the farm at the prevailing profit level.

Question. Where do the people go when they leave the farm and the rural community?

Answer. Sioux City, Omaha, and points beyond. I've got four youngsters who are out of high school, and two out of college. One of them is working at Memphis, Tenn., for the Phi Mu fraternity. Another one is in California going to school. The third one is working for a bank in Sioux City. The fourth one is working in my bank. So I've managed to keep one out of four. This is a good average.

Question. Isn't this a transferring of wealth from one part of the country and one segment of the economy to another?

Answer. That's what it amounts to. We sustain the cost of raising the children and educating them, and then we export them. This is part of the reason why agricultural areas are retarded. We have the burdensome expense of producing a large part of the labor force for the rest of the economy, but have no way to recover our investment.

Of course, your people create wealth, so, as you lose people, you lose potential wealth. And this is what we're doing in Nebraska. There just is no way you can replace people; there is just no substitute for people.

IF THE THIRTIES ARE REPEATED

Question. If farmers are slipping as fast as you say they are, why aren't they more agitated?

Answer. Well, they're probably the most complacent people in the world—maybe the happiest, too; I don't know. They can cut back faster, farther, deeper, and they're not going to be agitated until Mr. Banker in the local community says, "I'm sorry, this is as far as we can go with you."

When it happens on a large scale, at the same time, then they are going to get the shotguns and the pitchforks out, and in my opinion, we'll see a recurrence of all the things that happened in the thirties, including the farm holiday, when milk was dumped in the road and a county judge was strung up over in Plymouth County in Iowa. They didn't quite hang the poor devil; they cut him down before it was too late.

"Old Man Rivers"

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 17, 1961

Mr. SIKES. Mr. Speaker, the current issue of the monthly national magazine the Officer, published by the Reserve Officers Association of the United States, refers briefly, but cogently, to the outstanding service being rendered this Nation in the field of national defense by one of the Members of this body.

We all respect and admire our colleague, the Honorable L. MENDEL RIVERS, of South Carolina.

All of us are concerned about the state of national defense. Each of us has a constitutional obligation to provide for national defense, and to help write legisislation prescribing regulations for the military services.

MENDEL RIVERS has been taking a lead in this field since he came to the House more than 20 years ago. He was a member of the former Naval Affairs Committee, and since its creation by statute, has been a senior member of the Armed Services Committee. He is one of the best informed citizens in the United States on the question of national defense.

All of us will join ROA, in its own dedicated assessment of national defense needs, in its recognition of MENDEL RIVERS.

He not only is a patriot, but a scholarly expert in the military field. He exemplifies the spirit of self-sacrifice which motivates all of the members of the Armed Services Committee in working day and night to make sure we have adequate military forces to protect this country, and thus to keep the peace.

Under unanimous consent, I include the editorial from the Officer magazine in the RECORD:

"OLD MAN RIVERS"

Everyone knows that MENDEL RIVERS is not an old man, but his manner of running the House Armed Services Subcommittee on Reserves is so deeply embedded in democratic processes, and so marked with his magnetic personality that we need to use the term to convey the affection in which he is held by those privileged to participate in deliberations with him.

Chairman RIVERS commended his committee's work on a stack of pending bills recently by announcing that his roundtable will be continued this year. He listened patiently to the formal presentations, and gave "all the time you want" to the freshman members who had searching questions to ask.

Then he squared away to rewrite the bills sentence by sentence. He told ROA's representatives to "come on up here and sit with the committee because we consider your views like ours when we get ready to decide these questions."

Congressman RIVERS is genuine, dedicated, and sincere. Coupled with the fact that he is one of the best informed men in the United States in his field, out of more than 20 years' service in officially dealing with the military, this makes him a great American in ROA's lexicon.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 29, 1961

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newsletter of April 15, 1961:

WASHINGTON REPORT BY CONGRESSMAN BRUCE ALGER, FIFTH DISTRICT, TEXAS

APRIL 15, 1961.

Two news item in the Nation's Capital this week involved my efforts to unite all forces in Congress and in the executive branch to get early approval and appropriation of funds for the Dallas Federal Center Building.

The first step was to challenge the statements attributed to the Speaker of the House, SAM RAYBURN, in a number of publications vowing political vengeance upon the people of Dallas County because they vote for me to represent them in Congress. In an exchange of letters, I asked the Speaker to confirm or deny the statements. You will note in the copies of the correspondence as reproduced on this page, he says such statements attributed to him are wholly untrue. Never to be forgotten is the fact that political reprisals or political and legislative intimidation with the taxpayers' money can never be prmitted or condoned in our society, for if so, at that moment our form of representative government would cease to exist, a far greater loss to all than any seeming temporary and expedient gain to a few.

Once we laid to rest the stories of political retaliation, and with congressional committees in session, there seemed to be no reason for further delay on the Dallas Federal Building. Therefore, at this time I have called upon the Speaker, the chairman of the Subcommittee on Public Buildings of the House Committee on Public Works, and the Administrator of the General Services Administration to join me in bringing about the speedy approval of this project. This will mean better service, not only to the people of Dallas, but to all those of the great Southwest, and will benefit all our citizens through the saving of money to the taxpayers.

Because of the interest of Dallas people in this matter, I am reproducing all the correspondence involved in this newsletter.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., March 29, 1961.

Hon. SAM RAYBURN,
Speaker, House of Representatives,
The Capitol,
Washington, D.C.

DEAR MR. SPEAKER: Recently Newsweek magazine (the Periscope, p. 17, Mar. 20 issue) quoted you as follows:

"'If you want the House to do anything for Dallas, back someone else next time.' That's the blunt word Speaker SAM RAYBURN is sending Dallas influentials who supported BRUCE ALGER, the lone Republican in the Texas congressional delegation."

The National Review, page 5, March 4, under "At Home, Washington," says, "Speaker RAYBURN has told Dallas political leaders that unless they eliminate Mr. ALGER, not 1 cent of Federal money will go to the district."

Reprints of these articles are enclosed.

The implication of these statements goes to the heart of sound representative government, therefore, it is important that you confirm or deny these statements, at your earliest convenience.

Sincerely yours,

BRUCE ALGER.

THE SPEAKER'S ROOMS,
U.S. HOUSE OF REPRESENTATIVES,
Washington, D.C., March 31, 1961.

Hon. BRUCE ALGER,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN ALGER: When your letter of March 29, 1961, arrived this morning I telephoned its contents to Speaker RAYBURN in Bonham.

He asked me to advise you that he had already told Newsweek's Capitol correspondent, Sam Shaffer, that he had never made such a statement as is contained in the March 20 issue of Newsweek.

Furthermore, he categorically denies the statement attributed to him in the March 4 issue of the National Review.

Both of these statements attributed to the Speaker are untrue.

Sincerely yours,

D. B. HARDEMAN,
Research Assistant to the Speaker.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., April 11, 1961.

Hon. SAM RAYBURN,
Speaker of the House, the Capitol, Washington, D.C.

DEAR MR. SPEAKER: Thank you for your prompt and forthright answer to my letter of March 29 concerning remarks attributed to you in certain publications.

It is good to know that we can continue to disagree politically but maintain mutual respect for the honesty and integrity of one another. Such respect is the solid foundation upon which our representative form of government is built. The people of Dallas County may now be certain that, although you and I will not always be in agreement on means, we both are dedicated to serving the people of our respective districts and the country as a whole.

In this spirit I now ask you to join me in doing all possible to end further delay in securing congressional reauthorization for the Federal Center Building in Dallas. Such a center will serve, not only the people of Dallas, but all those of Texas and the Southwest and at a tremendous saving to the taxpayers. This project, of course, was not my original proposition, but I have been glad to support it on merit alone and it is only on that basis, without regard to any political implication, that I seek your aid. I have asked the chairman of the Subcommittee on Public Buildings of the Committee on Public Works for early action and I hope you will be able to support my request.

Sincerely yours,

BRUCE ALGER.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., April 11, 1961.

Hon. ROBERT JONES,
Chairman, Subcommittee on Public Buildings, Public Works Committee, House Office Building, Washington, D.C.

DEAR MR. CHAIRMAN: In reference to my correspondence with you in August 1960 and our previous conversations regarding reauthorization of the Federal Center Building for Dallas, Tex., I sincerely hope your committee can schedule early action so that appropriations may be provided in the new budget.

This project has been thoroughly investigated by congressional committees, the General Services Administration and the General Accounting Office. Opinion has been unanimous that the project is a worthy one, will make possible better service to the people of the Southwest, and will save money for the taxpayers. I ask that the committee consider these investigations and decide to approve the project on its merits.

If there is any doubt in the minds of committee members which may delay early action, then I ask that public hearings be scheduled as soon as possible to permit me and interested citizens of Dallas to present additional facts.

Thank you for your prompt consideration of this request.

Sincerely yours,

BRUCE ALGER.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., April 11, 1961.

Hon. JOHN L. MOORE,
Administrator of General Services, General Services Administration, Washington, D.C.

DEAR MR. MOORE: On December 11, 1959, the General Services Administration approved construction of a Federal Building for Dallas, Tex. The project had previously been authorized by Congress after investigation proved it to be sound and in the best interest of serving the people of the Southwest at a saving to the taxpayers.

In 1960 the Budget Bureau did not include the Dallas project for completion because of limited funds and the fact that approved projects were further along in planning at that time. It was understood by GSA, the Budget Bureau, and the Congress that the building would be included in the 1961 appropriation. However, this was not possible because, for reasons unknown to this office but alleged by many to be political, reauthorization of the project was not made. The stated reason for the failure was that it was to be held up pending the outcome of the investigation of site acquisition by the Government Activities Subcommittee of the Government Operations Committee.

My investigation of the subcommittee activity and a debate on the floor of the House with the subcommittee chairman resulted in establishing a clean bill of health for the site acquisition, as substantiated by a GAO investigatory report of April 1960.

In view of these developments it is expected authorization will be obtained in this session of Congress and I hope GSA will support the project because of the advantages it will offer to the people of this area and the savings which will be made in Federal operations. I would appreciate your views.

With kind regard.

Sincerely yours,

BRUCE ALGER.

Why I'm a Democrat—Government for the People

EXTENSION OF REMARKS
OF
HON. CLEM MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 21, 1961

Mr. CLEM MILLER. Mr. Speaker, recently, the San Francisco Examiner asked two leaders of each major political party to describe the reasons for their political allegiance. One of those selected to tell the Democratic story was Roger Kent, State central committee chairman. As one who has given unstintingly of his time and effort for many years, who has been a major factor in the resurgence of our party throughout the State, and one who has made an outstanding contribution to raising the standards of political activity, I am pleased to submit his statement as follows:

GOVERNMENT FOR THE PEOPLE

What does it mean to be a Democrat? It means believing that the United States is big enough, rich enough, and wise enough to assure every child a good education, every family a decent place to live, every worker a job at a fair wage (except for temporary unemployment—cushioned by insurance), every sick person good medical care, proper drugs and hospitalization, every old person a comfortable and dignified life. We won't tolerate hunger or discrimination.

In short, it means belonging to a party that cares and a party that will generate and activate new ideas and new solutions of new problems and old unsolved problems.

It means belief that the national parks, forests, and other public property of the United States must be protected for the public of this and coming generations. It means a concern for these lands, for their fish and wildlife and their natural beauty and for the people that will enjoy them that goes far beyond short-term financial profit for private individuals or the Government itself.

It means belief that when public resources are developed they should be developed for the benefit of the public and not for private profit.

It means defense of the Bill of Rights and all of it as the keystone of the greatest thing this great country has given us—our personal liberty. It means not being afraid of free speech and it means a firm stand to secure for persons accused of any crime the full measure of protection provided by the Constitution.

It means we implacably oppose the dictatorships of the right and left, but will defend the constitutional right of their misguided adherents to attempt to convert our people peacefully to their alien and objectionable philosophies. It means full confidence in the good sense of Americans.

It means devotion to competitive free enterprise and preservation and enlargement of opportunities for individuals. It means admiration for the accomplishments of big business and respect for its rights, but it also means a continuing supervision through the courts and regulatory agencies to prevent monopoly, price fixing, and exploitation of the public domain.

It means a policy that the regulatory agencies must be staffed not from the industry to be regulated, but by people who represent the public interest.

In foreign affairs, it means belonging to a party that has no strong isolationist bloc to be appeased by stupid statements for domestic consumption; a party with strong policies and soft words; a party that sees little sense in trading insults with the Russians, and much in firm but courteous negotiations.

It means appreciation of the immense difficulties of the new nations and programs to help them and to show them that they belong in the free world. It means, for instance, full approval of the Peace Corps to use the strength and idealism of our people in that effort.

In the area of national defense, it means we must have the best, even if that means we cannot meet the Russians at the border with a balanced budget.

It means that since Thomas Jefferson, we have trusted the judgment of an informed people and rejected the concept that a few know best what is good for the many.

To me, it means an enormous satisfaction in working with vigorous and intelligent people at every level of the party who believe in and support the things I believe in.

Schuylerville Woman Takes Issue With Murrow in Views on Migrant Labor

EXTENSION OF REMARKS
OF
HON. CARLETON J. KING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 11, 1961

Mr. KING of New York. Mr. Speaker, under leave to extend my remarks, I would like to call to the attention of my colleagues an answer to Mr. Murrow's "Harvest of Shame" which was written by Mrs. Adelaide Bullard who, with her husband, runs a large farm in my district in upstate New York. They have always employed migrant labor. However, conditions at Bullard camp are far different from those shown by Mr. Murrow:

SCHUYLERVILLE WOMAN TAKES ISSUE WITH MURROW IN VIEWS ON MIGRANT LABOR

(By Adelaide Bullard)

(Edward R. Murrow's "Harvest of Shame"—now that it has been seen against his wishes in Britain—continues to stir controversy. The author of the following article takes a completely opposite view to Murrow's, telling some of the problems that employers of migrant labor face. She writes from the experience gained as an employer

of migrant labor on her own farm in upstate New York.)

SCHUYLERVILLE, March 27.—"Harvest of Shame," Edward R. Murrow's exposé on migrant labor, has now been shown in Britain, too. Unfortunately, Murrow, as Director of the U.S. Information Agency, had been unable to suppress it.

Since Murrow's November telecast, there has been a barrage of stories that migrant laborers are being ruthlessly exploited by callous employers.

On March 9, for example, Senator HARRISON WILLIAMS, of New Jersey, claimed repeatedly that children of migrant workers received no schooling.

On our farm in upstate New York we have run a labor camp for 18 years, employing many of the same workers during all that time. As soon as the families arrive in the spring, the schoolbus appears for the children.

They remain in school until it closes, then play, or do work according to their age level during the summer. In the fall the bus reappears and the children, all scrubbed and starched, go to school until early November when the apple harvest is finished and the workers return to Florida.

BECOME PERMANENT RESIDENTS

The school is happy with the extra money that the State pays per child, and the parents are sometimes so pleased with our desegregated school that they obtain jobs in this area and become permanent residents.

We have plowed several thousand dollars into a State-sponsored nursery school on our property. Neither Ed Murrow nor the Senator mentioned these schools. The infants and preschoolchildren are treated as well as our own, or better.

There are cribs, formulas, clean diapers, cod liver oil, fresh orange juice, and planned diets, with college trained young women as nurses. There is a storytelling hour, play hour, nap hour, and transportation to and from the camp. All this service costs the parents 50 cents a week.

Senator WILLIAMS told the Nation that migrants receive a dollar a day, and sometimes less, and about $900 a year.

Our workers receive from $10 to $20 a day, which in 5 months adds up to a lot more than $900—and this is apart from what they earn in the winter. Of course, when a man and wife both work this income is doubled.

Neither Mr. Murrow nor Senator WILLIAMS mentioned that housing, electric stoves, space heaters, wood, transportation to and from work, hot water, rain gear, and warm clothes in the fall are provided free.

FREQUENT PAYDAYS

To prevent workers from going on spending sprees, we pay our help twice or three times a week. This creates quite a social security tangle but, theoretically, insures an entire week's wages won't be spent on something foolish; liquor, for example. Binges and brawling are common among migrant workers. These are unpleasant facts, but facts just the same.

Our labor camp has everything the State laws demand, and more. Inspections are numerous, and time consuming. We have hot showers and laundry equipment, and recreation space. We supply electricity. We have a good baseball team, transported by us to Sunday games, uniformed by merchants in the village who vie for the camp trade.

There is a community house at the camp with jukebox and piano, plus facilities for short order diner type meals. Dances are held here and sometimes weddings.

It is quite true the people are crowded. When they arrive, three families move into one unit, leaving empty apartments on all sides. They insist on being crowded.

GOOD AND BAD TYPES

Some of the people are hard working. They spend no money on whisky or gambling, and drive much better cars than ours. Others sell their daughters to the bachelors for a night at a time, bring prostitutes who refuse to do fieldwork, lend money at usurers' rates, and draw knives when drunk.

We pay the people to empty their own garbage, which most of them toss out the door though their garbage pails are 2 feet away. When they leave in the fall we clean, paint, and repair their houses, inspecting the electric stoves, which they hardly use, preferring outdoor fires.

Sometimes the employers, not the employees, are the exploited ones. Then men come to our door night after night in the summer, breathing alcohol fumes, asking for $10 to send a sick aunt, or for the price of a ticket to Florida to see a dying father.

Another gimmick is for a pregnant woman who has made good money all summer to stay over late in the fall, then ask us for money to get the baby out of the hospital, where it is retained until payment.

We parley constantly with doctors, jailers, hospitals, and State troopers, bailing laborers out of trouble.

Whether they drive north in inspected trucks or in their own cars, the migrants telephone us collect from the same spots every spring—the Carolinas, Virginia, Delaware—asking for extra money for the trip we have already financed.

We always send it.

We can no longer afford all of them, receiving, as we do, the same price for apples that we received in 1929. We are cutting down on crops, and looking to automation for an answer.

The Constitution and What It Means

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

Mr. BOW. Mr. Speaker, among the many splendid essays in the contest sponsored by the American Legion of Ohio, one of the finest was the work of Miss Donna Jean Kirkland, a senior at Lake High School in Hartville.

Miss Kirkland was winner in the Legion's district 10, comprising nine counties in east central Ohio.

Under leave to extend, I include her essay with my remarks:

THE CONSTITUTION AND WHAT IT MEANS

(By Donna Jean Kirkland)

The Constitution is one of the most masterful pieces of literature that has ever been written. Its words are not fancy, but its beauty lies in its meaning and what it represents. It represents the hopes and ideals of millions of people all living together in one vast but united country—united because of these common hopes and ideals.

It also represents freedom. In the Constitution our freedoms are listed as freedom of speech, religion, the press—freedom to assemble and to petition. But its meaning goes much deeper than its words. It means freedom to live as an individual, to have the same privileges as any other individual, and to have an equal voice in one's government.

In addition, the Constitution stands for security. This means that we can live without fear—without fear of labor camps and prisons and lies and unjust punishment. This does not mean we are free from injustice, for injustice can always creep in when men sit back unconcerned and let it. It means we have the power ourselves to destroy and prevent injustice.

Because of the Constitution, Americans don't have to answer to a dictator; they only answer to the moral and civil bounds they set up for themselves. We are our own masters and are not slaves to anyone on earth. Our strength is in our common bonds and sense of oneness with our fellow Americans—the spirit preserved by our forefathers and handed down through the ages incorporated in our Constitution. This is our great heritage.

The Constitution is the core of our civilization—our way of life. It's more than the basis of a government, it's the basis of a nation—a free nation and a strong nation.

Our Constitution has stood the test of time and the threat of foreign principles. It is no longer just a written document, but it is a living symbol of justice and peaceful coexistence. It is a radiant light in a world of darkness. It is a principle for tomorrow and the tomorrows that follow.

As long as it exists there is hope for man, but without it there is no hope, for man cannot live and grow as God intended when he is not free to express himself as an individual. Our Constitution alone has provided that freedom. It is an example for the world to follow.

What does the Constitution mean? It means all of this and more.

Troubleshooter

EXTENSION OF REMARKS
OF
HON. HOMER THORNBERRY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 17, 1961

Mr. THORNBERRY. Mr. Speaker, the Boston (Mass.) Herald recently published an excellent editorial in which it called attention to the splendid manner in which Vice President LYNDON B. JOHNSON is performing his responsibilities in behalf of the people of the United States.

Under permission heretofore granted, I include the editorial as a part of these remarks:

TROUBLESHOOTER

Vice President LYNDON B. JOHNSON, like his predecessor, is proving a handy man to have around.

His experience as Senate majority leader has given him a special touch with legislative matters. Although he ceased to be an insider when he became the Senate's presiding officer, he still knows what goes on on the Hill, and has already helped the President out of one scrape with the lawmakers (during the House rules fight).

This week the Texan is undertaking his first oversea assignment for the President. This, too, has evolved into something out of the ordinary.

The original purpose was to represent the United States at the celebration of Senegal's independence last Monday, but additional duties have been added. From Dakar the Vice President will fly to Geneva for a conference with Arthur Dean, the U.S. representative at the nuclear test ban negotiations, and then on to Paris for talks with U.S. Ambassador James M. Gavin and NATO commander, Gen. Lauris Norstad. Before coming home he will stop off in Spain to in-

spect U.S. bases on behalf of Defense Secretary Robert S. McNamara.

This is quite a schedule for a man whose office has been described as "the most insignificant * * * that ever the invention of mancontrived." And it is apparently only the beginning.

The President has provided Mr. JOHNSON with a staff and a suite of offices in the old State Department building next to the White House. The Vice President is scheduled to head the Space Council, and he will be given other permanent assignments. Mr. Kennedy's preinauguration promise to "keep LYNDON JOHNSON happy (and busy) for the next 4 years" is being carried out.

This is good for Mr. JOHNSON and good for the country. The Vice Presidency is still an awkward office, neither wholly in the executive branch nor wholly in the legislative branch, but its potential is great. Mr. Eisenhower's practice of using the Vice President as an all-purpose troubleshooter has given Mr. Kennedy a valuable lead.

Troubleshooter JOHNSON is getting off to an even faster start than troubleshooter Nixon.

Suggested Restrictions on Bank Mergers

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 17, 1961

Mr. MULTER. Mr. Speaker, I am pleased to commend to the attention of our colleagues the following letter written by Mr. Harry J. Harding, honorary president of the Independent Bankers Association on April 3, 1961, to the editor of American Banker. Mr. Harding's letter points out the urgent need for serious discussion of the bank merger problem. It is my hope that enough men in the banking business will concern themselves with this problem and suggest a solution to the Congress.

The letter follows:

APRIL 3, 1961.

To the EDITOR, AMERICAN BANKER,
New York, N.Y.

DEAR SIR: We read with a great deal of interest the item in the American Banker of March 28, headed "Robertson Joins Critics of Trend in Bank Mergers." This pleased us very much because our organization for many years has been advocating more stringent control of bank mergers so as to prevent the tendency to monopoly. We were able to have a number of amendments added to the bank merger bill which was enacted into law last year.

During the hearings on this legislation there were strong arguments advanced by the supervisory agencies that they needed a broad latitude in passing on applications for mergers. They outlined a number of situations where other factors might be of more importance than maintaining competition. The bill was passed giving them such broad discretionary authority.

While only the annual report of the Board of Governors of the Federal Reserve System has been made available thus far, disclosing the attitude of the Department of Justice, and the basis for approval of the mergers by the Board, the report does show that the Department of Justice has in a number of situations warned of the danger of monopoly.

There is no question but that many bank mergers are designed merely for self-aggrandizement or for a quick profit, with the public need far in the background. If the tendency to follow this course is not checked we will have a concentration of control over banking that will practically mean the elimination of our American system of locally owned and controlled banks. But how can we restrict these monopolistic mergers? What criteria can we establish that will be reasonable, somewhat elastic, and yet prevent monopoly?

In a talk before the convention of the Independent Bankers Association at Miami Beach, Fla., in May 1957, I advanced for discussion an addition to the then proposed bank merger legislation that would establish some standards that could be followed by the supervisory agencies, as follows:

"No merger shall be approved under this act, in cities of 10,000 or less population, when the result will be two or less banks located in the city in which the merging bank is located; nor in cities of more than 10,000 population up to 25,000 population when the result will be three or less banks located in the city in which the merging bank is located; nor in cities of over 25,000 population to 100,000 population when the result will be four or less banks located in the city in which the merging bank is located; nor in cities of over 100,000 in population when the result will be five or less banks located in the city in which the merging bank is located. In each case, the population figures will be those of the last Federal census.

"Nor shall any merger be approved under this act when the result will be that the merging bank will hold more than 30 percent of the total banking deposits of the area in which the merging bank has offices.

"Let's kick this around for awhile. I don't want you to say you are for this or that you are opposed. I would like to have you think of the arguments both for and against such a proposal, so that we may carefully study and weigh them.

"You may feel that the criteria specified in this suggestion are not realistic, but can you think of better yardsticks than the ones suggested? Do you think that we ought to have any yardsticks other than the discretion of some Federal agency? Have you any reason to believe the Federal agencies would?

"The yardsticks I have suggested are no more arbitrary than the existing requirements as to the capital necessary for the establishment of a new bank, or of a merging bank. The prevention of undue concentration of banking control is just as much in the public interest as the limitations on the loans that a bank can make. As to the argument that mergers should be left to the discretion of a supervisory agency, this, in my opinion, could apply equally as well as to the capital requirements for a new bank.

"I know the supervisory agencies will immediately howl that the merger door must be kept open so that without hindrance they can merge a failing bank, a bank that is not properly managed, or a bank that is undercapitalized, with another good bank, regardless of its monopolistic tendencies.

"If such an emergency escape hatch needs to be kept open, that can be provided, of course, but I wonder if merging a weak bank is the one and only solution that the FDIC or any other supervisory agency can think of. If so, why do not the laws say something affirmatively giving the power to compel the merger of a bank under such circumstances, to the supervisory agencies? Or is this a method they themselves have seized upon without congressional sanction?

"You will note what we have proposed places no limitations on size, nor does it in any way hinder normal growth. It merely restricts cannibalism.

"Let's not say it can't be done, but rather ask ourselves, should this be done? I am convinced we must have a ceiling on concentration of control over banking or face destruction to our independent banking system."

Your publication at the time did editorialize on my suggestion and urged bankers to comment. However, no serious discussion ensued. We know some bankers want to absorb other banks and they would not be in favor. Others would like to keep the door open to merger in case they wanted to sell. Others just would not do anything to criticize any other banker. If we had been able to get the views of the supervisory agencies some light might have been shed on the problem, but we can hardly expect any agency to suggest restricting their powers.

I still believe the idea is worth kicking around. I wonder if your publication might not secure the views of some of the members of the Senate and the House Banking and Currency Committees. At all events something needs to be done, and quickly, either by implementing existing law or by obtaining recognition from the supervisory agencies that tendencies to monopoly should be frowned upon rather than encouraged.

Very truly yours,

HARRY J. HARDING,
Honorary President.

Personnel of Veterans Hospitals

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 13, 1961

Mr. ULLMAN. Mr. Speaker, it is always a pleasure to receive a letter commending a Government agency and its staff. I am sure my colleagues will be interested in the letter I received today from a constituent, Mr. Henry A. Hansen, of Baker, Oreg., praising the personnel of the veterans hospitals in Boise, Idaho, and in Portland, Oreg.

The letter follows:

BAKER, OREG., *April 13, 1961.*

Congressman AL ULLMAN,
Washington, D.C.

DEAR CONGRESSMAN ULLMAN: I would like to inform you as to the operating conditions that I have experienced and observed at the veterans hospitals.

The general public has a misconception regarding the functions of a VA hospital. They look at it as a last resort, or a place to send their relatives or friends after they have exhausted their resources and given up hope of recovery, and are under the impression that he will be a guinea pig for the medical profession. I was included in that category before I learned my lesson.

Last April I had trouble with a tooth and had it extracted. The wound would not heal, and after doctoring with it until August, my mouth and jaw were getting worse. Having exhausted all my resources, I decided to try the VA hospital.

I went to Boise, Idaho, last August, and after 5 days of tests and examinations I was informed that I had cancer, and that part of my lower jaw and sections of my mouth would have to be removed. The shock that you get when you know you have cancer, and that some of your head has to be chopped out is something that words cannot express. I was told that Portland had better equipment for my kind of operation, and that I would be sent there.

In Portland, after more than 2 weeks of tests and examinations by many doctors, supervised by Dr. Harvey Baker and Dr. George

M. Long, I was operated on August 25. They had to remove a few more glands, etc., in the neck, throat, mouth, and half the lower jaw, as was recommended in Boise.

This was the experience I went through to get the information that I want to convey to you. I do not believe that the President of the United States or even a four-star general could get any better treatment, care, and service than was given to me at these VA hospitals. Their testing and examinations were very thorough and left very little, if any, chance for a mistake. Every test and diagnosis by any instrument or doctor had to be verified by a specialist in the particular field that it appertained to.

The personnel connected with these hospitals I found were the very finest, from the top to the bottom. All very considerate and efficient, and the most amazing of all—everyone had a full day's work to do, and did it without any griping. I never saw anyone standing around with nothing to do. And the cooperation was something to see. A doctor would not hesitate to lend a helping hand to a hospital aid or a housekeeper. Everyone just seemed to have one thing in mind—to keep the patient happy and contented. And that's some job, especially with some of the patients who think the Government owes them a new set of brains and a million dollars. Sure there are students there—lots of them—but they have a tough job. They must assist and observe many times before they are allowed to go on their own; and then they have specialists watching them very closely to see that their work is perfect. And then they are questioned no end, to be sure that they themselves knew what they did.

Now the food. I have eaten in some of the best restaurants, and I have never seen any better cooking and preparing of food than I had in the VA hospital; and variety that should please anyone.

As for supplies and material, there is very little waste. I don't mean they are miserly with things. They use as much medicine and material as necessary, but they do not throw things in the waste basket that should go back on the shelf.

The operation and maintenance of the VA hospitals are conducted much more efficiently than most private businesses and institutions, and they are a great credit to the country. And the Government is getting more for its dollar and doing more good than any money they spend. What could be better than saving a man's life and putting him back with his family and on the job again. There is only one way he can ever repay that service and that is to be a better citizen, and his own conscience will force him to do that. And God knows we can stand some good citizens.

Mr. Congressman, I wish you would take some of your time and help this VA hospital situation. Many more hospitals are badly needed. They are all overcrowded. The Government could not spend money to any greater advantage. The need is not only for the present, but the future is going to demand it. And with all the money the Government spends, nowhere does it get more out of its dollar than investing it in VA hospitals. It's not only a great help to our veterans and the country in general, but all humanity will benefit.

My gratitude and thanks to Dr. Harvey Baker, Dr. George M. Long of Portland, and Dr. Helferty, and Dr. Hastings of Boise, and all the personnel of both hospitals.

One other thing, Mr. Congressman. If you are unable to do anything about aiding the VA hospitals, please try and get President Kennedy to find time to read this letter.

Thank you very kindly for anything you are able to do, I am,

Sincerely yours,

HENRY A. HANSEN.

Soviet Claim of Man in Space Needs Further Study

EXTENSION OF REMARKS

OF

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 30, 1961

Mr. PUCINSKI. Mr. Speaker, I am including with my remarks today a letter I have sent to the chairman of the House Committee on Science and Astronautics urging an exhaustive investigation of Soviet Russia's claim that it has placed a man into space.

It is my earnest hope that the House committee will undertake such a study because as I have stated in my letter, it is indeed lamentable that the world is so willing to accept at face value every claim of the Soviet Union, when for the past 20 years we have seen conclusive proof that the Communists are masters of deception.

In my letter to the chairman, I cite the fact that Russia's chief delegate to a space-science symposium in Italy, A. A. Blagonravov, told the press that Major Gagarin's space capsule did not have any windows or portholes through which he could have seen the spectacular description of outer space which he gave after his alleged flight.

Professor Blagonravov has since retracted that statement, and several people have asked me if this retraction in any way alters my own views on this subject. It is my belief that the contrary is true, and Professor Blagonravov's retraction only fortifies my original suspicion of the whole Soviet claim. It stands to reason that if the top space scientist of Russia does not know whether Soviet space capsules have windows and portholes, then we indeed have the right to probe this entire Soviet claim to the fullest dimension.

As an aside, I might add that it appears rather strange to me that this top Soviet space scientist would be attending a seminar in Italy at this historic moment when the Soviets claim they have placed a man into space. We have a right to ask whether or not such a flight had in fact been made when the Soviet Union's top space scientist was not around to personally help supervise the operation.

Mr. Speaker, my letter to the chairman of the Committee on Science and Astronautics follows. I hope my colleagues will join me in the admonition that we Americans must go beyond the realm of normal assumption in accepting Soviet Russia's claims and will further join me in requesting this full-scale investigation of Russia's latest space claim:

APRIL 16, 1961.

HON. OVERTON BROOKS,
Chairman, Committee on Science and Astronautics, House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: May I take this opportunity to suggest that the House Committee on Science and Astronautics immediately launch an exhaustive investigation into the merits of Soviet Russia's claim that it has launched a manned vehicle into space.

I make this request because as this entire story unfolds, more and more evidence begins to strongly suggest the possibility that the Soviet Union has again perpetrated a monumental hoax on the people of the world.

I should like to suggest that your committee seek the full cooperation of the executive branch of our Government, including a request to President Kennedy, that through diplomatic channels the President request the Soviet Union to permit an international team of experts to review all technical data involved in the Soviet claim before Russia's contention that it has successfully launched a manned spaceship is accepted.

There is sufficient precedence for such a request, particularly when we remember that in 1947, when the United States successfully exploded the first hydrogen bomb at Eniwetok, our country invited scientists from every nation in the world, including two from the Soviet Union, to witness this historic accomplishment.

It is not my purpose to in any way deflate the Soviet claim if it is true. But since the successful launching of a human being into space affects the future of the entire world, I believe it is the responsibility of some responsible branch of our Government to fully investigate this accomplishment before we accept it as a reality.

It is indeed lamentable that the world is so willing to accept at face value every claim of the Soviet Union, when for the past 20 years we have seen conclusive proof that the Communists are masters of deception. I, myself, during the past 20 years have made a thorough study of Communist techniques, and I am convinced that any claim made by the Soviets must be exhaustively examined before it can be given any credence.

It is my firm belief that the Soviets needed a spectacular propaganda vehicle to offset world attention from the demand made by President Kennedy and Prime Minister Macmillan for a cease-fire in Laos. I believe the Soviets also wanted to detract world attention from the visit of Chancellor Adenauer to this country; and so the decision to announce the successful launching of a man into space by the Soviets was made at this particular time.

I believe the American press and radio, with correspondents throughout the world, are doing an excellent job in helping piece together information which strongly suggests that the Soviet Union is indeed perpetrating a hoax in its claim.

It is my earnest hope that neither your committee nor anyone else is going to be detracted from this investigation by the fact that the press in this country has given such spectacular coverage to the Soviet claim. It must be remembered that the role of the American press is not to sit in judgment upon the veracity of claims made by world leaders, but merely to report them objectively. It would be a mistake to blame the press in any way for giving this story such wide coverage because, in fact, the press is merely carrying out its traditional assignment.

However, it would be a catastrophic mistake if responsible people in Government were to accept these Soviet claims at full face value. I believe it is the duty of your committee to explore the veracity of this Soviet claim in every conceivable way possible.

I should like to point out briefly some of the reasons why there are valid grounds to question the veracity of the Soviet claim.

You will recall that the first reports that the Soviets successfully launched a man into space began trickling out of Moscow on April 7. It is extremely significant to me that only a short time earlier the Soviet Union had removed all censorship on news dis-

patches emanating from Moscow. Obviously the Soviets wanted world journalists to report these carefully planted rumors as extensively as possible.

On April 11 the London Daily Worker ran a story which gave the first official color to rumors emanating from Moscow that an astronaut had been successfully launched by the Soviets. The Daily Worker's details, published 24 hours before the Soviet Union's announcement on April 12, differed relatively little from the official announcement.

It is my firm conviction that the Soviet Union had hoped to confirm the rumors probably on April 11, but were frustrated in their carefully laid plans when the U.S. National Aeronautics and Space Administration disclosed, following the London Daily Worker story, that American satellite tracking networks had not reported any recent space launchings by the Soviet Union. I believe this announcement by NASA threw a serious block into Russia's propaganda coup, and it is for this reason that apparently Moscow chose to ignore its official spokesman in London, the London Daily Worker, an hurriedly launched a vehicle into space Wednesday morning.

Space Pilot Gagarin's story seems to be full of significant contradictions. Major Gagarin was quoted extensively by Tass as describing what he had seen of the earth from his space vehicle, including the statement that he saw a blue rim separating the atmosphere of the earth from that of outer space. The talkative pilot told about seeing the cities and coastal boundaries, and even embellished his account with a strong plug for Russia's Sovetized collective farms.

But, according to the Associated Press reports from Florence, Italy, on April 14 Russia's chief delegate to a space-science symposium in Italy said the Soviet astronaut had no portholes or windows to look out of during his flight around the earth. A. A. Blagonravov, of the Soviet Academy of Science, was quoted by Associated Press newsmen as stating that Major Gagarin saw all these details of the earth by radio. Even assuming that by the word "radio" Blagonravov meant television, it is highly doubtful that the Soviets would place a color television camera into Gagarin's spaceship so that he could distinguish the various colors and brightness of the sun, which he so eloquently described in his interview.

The Soviet Union has released photographs of Gagarin allegedly leaving his spaceship; and in his own account, he told of how the reverse rockets went into operation to slow down the speed of his ship on his return to earth and said that he finally felt a thump which to him indicated that he was back on earth.

Yet, on April 14 the Associated Press reported from Moscow that a Soviet scientist and a tractor driver suggested that Gagarin left his space capsule at some point during his descent to earth and parachuted the rest of the way to the ground. The Associated Press, quoting a Tass News Agency story, quotes the Soviet scientist, Nikolai Gurovsky, as saying: "The astronaut came down smoothly in a glade near a field. Landing on both feet, even without tumbling, he walked up to the people who saw him first."

The AP story further quotes how a Soviet tractor driver, Ivan Rudenko, working near his field station saw the landing: "Rudenko saw well the landing of the space ship. He said the cosmonaut parachuted down close to where he was."

I do not question that Gagarin landed on the field, but he could have accomplished this sort of parachute jump from any Soviet airplane and not necessarily a space capsule.

Of particular interest in this AP dispatch is the statement that Tass admitted that the day before the landing a Soviet newsman visited the farm (where the capsule landed) and saw a field that had been plowed, presumably to soften the landing. The significance of this particular statement in suggesting further that the Soviet claims are a fraud is the fact that Western space experts have pointed out that an error of 1 yard per second in adjusting the space capsule speed as it returned to earth would have hurled the rocket 30 miles from the landing zone.

It is highly doubtful—or at least is subject to serious question—whether the Soviets or any other nation can develop a technique of premeasurement to pinpoint a landing of a space capsule within such narrow tolerances. We know that Soviet experiments with capsules in the Pacific have missed their mark by a much wider area than claimed in this latest Russian alleged accomplishment.

It is indeed most significant to me, and I trust will be sufficiently significant to you and your committee to justify this investigation, that the Soviet Union has showed the world only the most meager evidence to support its claim of placing a man into space. On the other hand, the entire world was permitted to view by television the heroic welcome given Major Gagarin in Moscow.

I believe the time has come when the free world must go beyond the scope of normal assumption in dealing with Soviet claims.

It is perfectly permissible for the Soviet Union to capitalize to the fullest on the propaganda value of such a claim, but I believe those of us in Congress, who have a responsibility to the American people, should make every effort to place these Soviet claims in their proper perspective.

In further support of my request that your committee undertake this investigation immediately, I should like to recall for you the conduct of the Soviet Union during the U–2 incident. You will recall that President Eisenhower went to Paris determined to deal firmly with the Soviet Union on the question of many problems involving world peace; and the Communists again, finding themselves in a hopeless situation of no retreat, staged a similar propaganda coup around the U–2 incident. That particular propaganda succeeded in wrecking the summit conference. I hope your committee will not permit this latest space revelation by the Soviets to wreck President Kennedy's efforts to bring a just solution to the Laotian crisis.

I am perfectly willing to give the Soviets all the recognition they deserve in scientific accomplishment, but I, as one Member of Congress, have no intention of letting the Communists deceive me, particularly when I am reminded of their long history of deception since the very founding of the Communist Party.

I trust you will order a complete investigation as quickly as possible.

Sincerely yours,

ROMAN C. PUCINSKI,
Member of Congress.

Business Under Suspicion

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, April 17, 1961

Mrs. ST. GEORGE. Mr. Speaker, the following editorial appeared in the Wall Street Journal of April 14. It points up once more the fact that we have an Achilles heel and that it is well known and very vulnerable.

We seem to have a mania for apologizing for our successes and magnifying our failures. Of course, historically speaking, our greatest success has been in commerce and industry, so we now see an administration dedicated to making business the "whipping boy" and putting swarms of two-bit bureaucrats in charge of the whipping.

This of course is a splendid picture to hold up to the world, especially to the Soviet Union who never indulges in any such masochism, but proclaims always that everything is for the best in the Communist world:

[From the Wall Street Journal, Apr. 14, 1961]

REVIEW AND OUTLOOK—BUSINESS UNDER SUSPICION

The administration is losing no time making clear its attitude toward the business community—and in case anyone thought otherwise, it is not a friendly one.

Recent statements by high officials have far too freely tossed around terms like "corruption" and "economic racketeering," accompanied by assorted threats and warnings. A flock of indictments, like the new General Motors diesel locomotive one, is promised. At the same time Senator KEFAUVER, indefatigable in his efforts to discredit business, is trying to make hay out of the electrical price-fixing cases already disposed of in court after being exposed by the Eisenhower administration.

Now this newspaper happens to believe in the proper enforcement of the antitrust laws; it has no sympathy for price fixers or other business transgressors; and it certainly does not oppose congressional investigations as such. But all that is far different from a general Government attempt to cast suspicion on the whole business community. If that is what Washington is setting out to do, it is not a healthy matter for anyone, including Government.

It must be wondered what some of these people think American business is, anyway. Too often, in the past as well as in the present, they sound as though they thought that American prosperity, the envy of the world, just happened; either that or it was the creation of labor unions or of government.

But it didn't just happen. The free economic interaction of millions of individuals trying to make a living and better their living for themselves and their families is what created the prosperity. It is what has provided the capital investment for the workingman as a result of which he has no peer in the world.

Not least, it is this kind of economic activity—which is to say business—that supports and indeed makes possible the Government and its manifold projects, including the vital one of defense. What would Government be without Henry Ford's development of the assembly line?

So there is something distasteful about this sneering at business, for it amounts to sneering at the American people in general. Beyond that, Federal officials sometimes evidence no awareness of the developing and changing character of business over the years. Their conception of it seems pre-20th century if not prehistoric.

In an earlier era in this country the task of scratching a living was much tougher for everyone, at least in a physical sense. But as the economic structure developed shape and strength, a humanizing of the machine society developed with it. Today's business concerns are solicitous, to an extent unbelievable a hundred years ago, of the well-being of their employees and their communities; in a word, of the public good.

It is today's business concerns, moreover, which seek to extend the trend toward a one-class (meaning middle class) society by in-

viting employee ownership, among other ways. It is the union leaders who oppose this, who remain committed to the shibboleths of a class struggle of an outworn era.

The point is not, of course, that business should have a "friend" in the White House, as organized labor so long had. The point is that Government should understand what business is and try to foster business expansion not because it is business but because it is the national economy.

How in the world can a government talk seriously about promoting economic growth and at the same time indiscriminately attack, in word and deed, the business community which is the only source of economic growth we have?

No one reading the Democratic platform last summer would have any reason to expect a Democratic businessman's administration in Washington. But one might have expected in practice a little more realism, a little more maturity, about the facts of American economic life.

Shall We Put an End to the Nuclear Airplane?

EXTENSION OF REMARKS
OF
HON. SAMUEL S. STRATTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 17, 1961

Mr. STRATTON. Mr. Speaker, as a member of the Committee on Armed Services I have been troubled by the decision announced recently by the Department of Defense not to proceed with development of a nuclear-powered aircraft. I recognize that the technical problems in such a project are enormous. I recognize too that oftentimes our military leaders would prefer to have a weapon in the hand than one in the bush.

But can we really hope to make progress by taking counsel only of our fears? Can we really expect to move ahead in a highly technical and competitive world merely by reciting the difficulties that lie ahead? Was there any clear-cut military requirement for a nuclear submarine when Admiral Rickover was waging his uphill fight to develop that great craft, or was it only after the admiral proved that his ideas were indeed feasible that our military leaders recognized that there was not only a military requirement for a nuclear submarine but in a very real sense the nuclear submarine would actually give the Navy a new and vastly greater lease on life in a changing and up-to-date defense field?

Mr. Speaker, because of the sizable interest in nuclear aircraft in my home city of Schenectady, and because of the close connection between this project and the General Electric Co. whose home is located in Schenectady, I insert at this point an editorial which appeared in the Schenectady Gazette for April 14, 1941. The editorial follows:

NUCLEAR PLANE

Is it wise for the Defense Department to abandon the project for the nuclear-powered plane? The average citizen cannot say. On the one hand he hears the President say the project is too expensive and that the "possibility of achieving a militarily useful (nuclear) aircraft in the foreseeable future is still very remote." And there is the opinion of Defense Secretary McNamara that the military nuclear plane "would have little or no military value" because of its huge size, slow speed and radiation dangers.

On the other hand the citizen has the word of the developers of nuclear propulsion equipment, such as General Electric, that the nuclear plane is available not in the dim, distant future but in a relatively short time. In the opinion of Dr. Miles C. Leverett, president of the American Nuclear Society and manager of GE aircraft nuclear propulsion, the Russian "certainly are working" on such a plane and he believes they are "as far along as we are, or even farther."

General Electric contends that the administration is mistaken about the cost of development from this point on—provided there is no long delay. GE has offered to make the first experimental flight test of a nuclear-powered plane in 1963 for less than one-fifth of what the administration said it would cost.

If one of these days the Russians announce they have a workable nuclear-powered military or nonmilitary plane the U.S. Government perhaps will point to important differences in defense strategy between the two governments. Yet, if the lesson of sputnik has been learned, one doubts that Washington would dismiss it as of no importance, because it could be assumed that even if the Russian nuclear plane at first was huge, slow and had radiation dangers, the improvements that usually follow the development of a new craft or weapon would justify the initial effort.

The purpose of the administration seems to be to divert funds from a nuclear plane to other defense weapons, craft or methods with the idea of increasing the ability to fight limited wars. The citizen can only hope the administration's decision is wise.

In Defense of Innovators

EXTENSION OF REMARKS
OF
HON. HARLAN HAGEN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1961

Mr. HAGEN of California. Mr. Speaker, I wish to include in the RECORD four items of comment related to a subject currently agitating the country. The first is an article "In Defense of Innovators," written by Bernice Harrell Chipman for the February 13, 1961, issue of the Bakersfield Californian. The second is an April 11, 1961, editorial from the same newspaper. The third is an April 3, 1961, editorial of the Hanford Sentinel. The fourth is a comment from the February 1961, edition of the Standard Oiler, a trade publication of the Standard Oil Co. of California. The articles follow:

IN DEFENSE OF INNOVATORS
(By Bernice Harrell Chipman)

That people are funny has been fully established by a not-so-funny radio personality, and one of the characteristics which seems to me most funny—peculiar and disheartening is that of the closed mind, the mind that cannot, or will not, accept ideas or art forms differing from a pattern set by personality, predilection or environment.

There is something horrifying to these persons with their feet planted firmly in the past, in modern experiments in sound, color, and thought. They turn their backs on the new art, they leave the concert when the modern music is played, they cry heresy or communism in response to ideas to which they are unaccustomed. And they use that terrible cliche—I don't know anything about art—but I know what I like. Nothing could be more fallacious. True—they don't know anything about art—but they don't know what they like either, for they like only what is familiar, and take no opportunity to know or like anything else.

It is always enlightening to note that the innovators of yesterday are the conservatives of today. At the time of the Panama-Pacific Exposition in San Francisco in 1915, there was a room devoted to the modern art of that time, including "The Nude Descending the Stairs." It became known as the "Oh, My God-Room" from the exclamations of those who met its impact for the first time, yet many of these pictures would cause not even a ripple of excitement today. To see an exhibit of the 20th century moderns which aroused such arguments in art circles in their time, Manet, Cezanne, Renoir, Van Gogh, is to enjoy their light and beauty without comprehension of the carping of their contemporaries.

So we should give some thought to understanding what is being attempted by our own moderns, the as-yet-strange art forms—or lack of form, in painting and sculpture—and in music the dissonances and discords which are, perhaps, opening new areas of listening. We don't have to like them. We don't need to accept them just because the forms are new and different and break with our preconceived ideas, but we should for our own sake make an effort to know what the artist is trying to do, and to decide by how much he has met his own requirements.

It is only by experiment in any field that further dimensions are explored, and expanded or discarded. We can't listen to Bach, Brahms, and Beethoven all our lives, but they too were innovators in their time. Wagner was hooted and hated for dissonances which we now accept and acclaim as tuneful and melodic. An art which does not attempt to open new avenues of expression is dead, indeed.

And those who think all portraits should look like Sargents even though he was much criticized in his day, or like Whistler's Mother which was a break with contemporary portraiture, that all landscapes should look like Constable or, perhaps, Keith, that all music should sound like Chopin, or maybe, "America the Beautiful," and that all poetry should sound like Longfellow—these are the people who, in the field of ideas, fear each new concept, who would like to abolish the United Nations, who would make the United States an island isolated from the world, and who would ride backward with Senator GOLDWATER into a past that will never come again.

For some strange reason individuals following this pattern have some vague idea that they are upholding the American way of life, that way which was—and is—the greatest experiment of all time. Communism is our enemy, both without and within our country, but the closed mind is not its adversary as many who pride themselves on their ultraconservatism seem to think, but, on the contrary, its able ally and assistant, shutting out in its every attitude the wonderful possibilities of advancement through freedom to find new expressions, which is the real enemy of communistic ideology.

TOP G-MAN WARNS AGAINST HYSTERIA

Sensible advice has come to the American people from J. Edgar Hoover, Director of the Federal Bureau of Investigation, regarding

the proper way in which to conduct themselves in the present period of confusion and doubt and involving the appearance of movements assertedly devoted to the extermination of communism on the domestic scene. Mr. Hoover, whose position as Chief of the leading Government investigating agency, is able to speak with authority on the subject.

Although the country, he says, is engaged in "a mortal struggle with world communism, it is time for both citizens and governmental authorities to confront this threat in a calm, realistic, rational, law-abiding manner." He reminds the people of America that this land, among other things, is "historically an impregnable force against tyranny," which reminds us that there must be recognition and rejection of any movement, whatever its nature, that has within it the seeds of tyranny and authoritarianism.

Mr. Hoover, observing that the Communists find it easy going in a country convulsed by fear, hysteria and confusion, warns against what he describes as "the danger of irresponsible counteraction by citizens who lend impetus to communism through inept attempts to fight this insidious menace."

Mindful of the present discussion regarding an organization much in the news, no doubt, Mr. Hoover points out that the Communist leader Lenin urged the exploitation of every rift that appeared among those who are opposed to the extension of this doctrine, and he notes that "there exists today in our land a vital rift which the Communists are exploiting. Unfortunately, this involves certain people across the country who engage in reckless charges against one another. The label Communist is too often indiscriminately attached to those whose views differ from the majority."

This warning is particularly appropriate at this time and coming from Mr. Hoover, a dedicated opponent of all un-Americanism, it is of vital importance.

Mr. Hoover also points out that the job of curtailing and containing communism is one for legally constituted authorities with the steadfast cooperation of every loyal citizen; this is neither the time for inaction nor vigilante action. He urges the people of this Nation to unite, understand our basic American heritage under law and face the Communist menace with deliberation, quiet courage and knowledge.

We commend Mr. Hoover's counsel to all who seek to preserve the American freedoms and oppose communism and other doctrines that thrive on bigotry, intolerance, ignorance, slander, and fear.

PARANOID FASCISM

The bright glare of publicity is the most effective antidote to such an outbreak of political disease in the United States as the John Birch Society seems to be.

Newspaper stories such as the series published in the Sentinel last week show the organization for what it is, a Fascist movement, pure and simple.

It is not the first time in this country that Fascist movements have been mounted. During the dark days of the thirties, when our national economy seemed to be in serious trouble, there were many who saw in authoritarian government the only salvation for the Nation. There were also many, in those days, who saw salvation at the other extreme, in the Russian experiment. Fortunately, for the country, neither of the extreme views prevailed.

The Birch Society has the marks of fascism. Its leader openly denounces the democratic process. He attempts to repudiate our national leaders, and tries to make the American people doubt the patriotism of such irreproachable men as former President Eisenhower, Richard Nixon, Chief Justice Earl Warren, Gov. Nelson Rockefeller, and others, by saying they are Communists or tools of the Communists.

The Birch Society attempts to discredit our churches and religious leaders. It attacks the integrity of newspapers.

Its methods are the opposite of democratic. By organizing into tight cells controlled rigidly from the top, discouraging free speech, and urging the members to accuse and denounce fellow citizens without proof of wrongdoing of formal charge—by these methods and others the Birchers show their colors.

The founder of the movement, Robert Welch, realizes the danger of publicity to his movement. He has attempted to keep the organization secret and have its members operate clandestinely.

But secrecy is repugnant to the American people and the secrets of the Birchers are now public knowledge.

Thus informed, the American people will know the Birch group for what it is, and the Nation will not be fooled.

[From the Standard Oiler, Feb. 1961]

DISSENT? PARTY LINE

The tendency to confuse legitimate dissent on controversial issues with the Communist Party line is an ever-present danger in these critical times.

"Communism," says FBI Director J. Edgar Hoover, "feeds on social ferment. On both the local and national levels, the Communist Party, U.S.A., is continually exploiting social, economic, and political grievances for its own tactical purposes.

"For this reason, the party line will frequently coincide with the views of many non-Communists on specific issues. We must not, therefore, indiscriminately label as Communists those whose opinions on a particular question may, on occasion, parallel the official party position. We must also guard against the tendency to characterize as Communists those who merely disagree with us or who advocate unorthodox or unpopular beliefs.

"When anyone is erroneously branded a Communist, it not only constitutes an injustice to the individual but also helps communism by diffusing the strength of the anti-Communist forces."

The Constitution and What It Means

EXTENSION OF REMARKS

OF

HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 29, 1961

Mr. BOW. Mr. Speaker, it is a pleasure to offer in the RECORD the essay entitled "The Constitution and What It Means," by Paul Murphy, of Alliance, Ohio, one of the 12 winners in the American Legion essay contest for our State.

Paul, a junior science seminar student at Alliance High School, is the son of Mr. and Mrs. Charles Murphy, won this award in his first attempt at essay competition.

Reading this and other entries in this fine competition gives me faith that the young people of our country do understand and appreciate our constitutional system:

THE AMERICAN LEGION OF OHIO ESSAY CONTEST—THE CONSTITUTION AND WHAT IT MEANS

What does the Constitution of the United States mean? It means, to 180 million Americans, life, liberty and the pursuit of happiness. It means to 50 different governments a ligament of national unity. And it is to millions of freedom searching people overseas a symbol of all that they hope and die for.

What is life? Life is the right to live and let live. It is freedom from fear of death at the hands of the government for unjust reasons.

What is liberty? It is the right to do as we please so long as we harm or injure no others while doing it. Our liberty is thoroughly and emphatically protected by the first 10 amendments, the Bill of Rights. In the Bill of Rights we are irrevocably given freedom of the press, of speech, of religion, of petition, and of assembly. We are free from unjust criminal prosecution and from cruel and unusual punishment. And we have a right to a trial by a jury and the right to keep and to bear arms.

What is the pursuit of happiness? In America it is the right to seek and enjoy fun, security, and contentment in any way that is not injurious to others. In some parts of the world this simple privilege is nonexistent.

Life, liberty, and the pursuit of happiness, each is meaningless without the other two but combined they make our American way of life the envy of the entire world.

Why is national unity as is provided by the Constitution vital to the 50 States and people living in them? Let us look to history for the answer. During the weak years under the Articles of Confederation our country almost went the way of Latin America. Our great country almost broke up into 13 constantly bickering little countries which never could have reached the pinnacle of world power and leadership. Instead of being a world power as we are today, we, without our Constitution, would be today divided, poor, and politically insignificant. As Thomas Jefferson, the drafter of the immortal Declaration of Independence and our third President, said, "The Constitution is * * * the ark of our safety."

Why is the Constitution of the United States of America a symbol of all of those who yearn for freedom—of all that they hope someday to obtain? They who yearn for freedom have not only tasted oppression but have had to swallow it whole. When they look across the sea and see Americans happily and industriously working for their country and themselves they are even more desirous of freedom. It is plain to see that if given their free and unobstructed choice, men would always choose life in a free and democratic country rather than life in a country in which each individual is just another ant on the hill.

Americans have many reasons for giving thanks to God, but they should be especially thankful that He planted wisdom and judgment in the minds of the drafters of the Constitution of the United States of America.

Federal Aid to Education

EXTENSION OF REMARKS

OF

HON. ROLAND V. LIBONATI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 17, 1961

Mr. LIBONATI. Mr. Speaker, I have received a communication from the members of the Illinois General Assembly enclosing a copy of House Joint Resolution 6, as adopted in the 72d General Assembly of the State of Illinois, relative

to Federal aid to education, especially allowing a tax deduction for all tuition, whether paid to a public or fully accredited college or university, and, in addition, allowing parents a tax deduction of $1,500 for each child or dependent they may send to any fully accredited college or university.

The resolution follows herewith:

STATE OF ILLINOIS,
OFFICE OF THE SECRETARY OF STATE,
Springfield, April 12, 1961.

HON. ROLAND VICTOR LIBONATI,
Member of Congress,
Washington, D.C.

DEAR MR. LIBONATI: As authorized, I am enclosing herewith a copy of House Joint Resolution 6, as adopted in the 72d General Assembly of this State.

Sincerely,

CHARLES F. CARPENTIER,
Secretary of State.

STATE OF ILLINOIS, 72D GENERAL ASSEMBLY, HOUSE OF REPRESENTATIVES—HOUSE JOINT RESOLUTION 6

(Offered by Messrs. Burks, Noble W. Lee, Coulson, Dolezal, Clarke, Alsup, C. A. Walker, Finfgeld, Butler, Branson, Heiple, Conti, Jack Walker, Williams, Marek, Hoffelder, Fitzgerrell, Hoover, Hachmeister, Reum, McDevitt, Robinson, Hansen, Ralph T. Smith, Casey, Erienborn, Parkhurst, E. E. Dale, and Mrs. Dawson.)

Whereas it is undisputedly recognized that there is an urgent need to expand our schools and colleges, both public and private, to provide our exploding school-age population with the best possible education; and

Whereas private schools should be encouraged in their efforts to attract students in order to lighten the burden which will fall upon the taxpayer for the enormous expansion of State-supported schools and colleges; and

Whereas private schools and colleges should be allowed to compete on a more equal basis with tax-supported schools and colleges; and

Whereas the citizen who pays taxes to meet all or a large portion of the tuition for students who attend public schools and State universities is allowed to use such taxpayments as a deduction in reporting his Federal income tax but is denied such tax deduction for tuition paid private schools and colleges to which he may elect to send his children; and

Whereas the Federal Government is now considering some form of aid to education, and also the possibility of some tax relief to stimulate the national economy; and

Whereas by making all tuition a tax deduction, whether paid to a public or private school, the Congress would be providing an effective form of Federal aid to education without any risk of Federal control of education; without the diluting process of having such aid filtered through Washington; and would, at the same time, be providing a stimulant to the economy by this form of tax relief: Therefore be it

Resolved by the House of Representatives of the 72d General Assembly of the State of Illinois (the Senate concurring herein):

(1) That the Congress of the United States be memorialized to enact legislation allowing a tax deduction for all tuition, whether paid to a public, or fully accredited not-for-profit private school, or to any fully accredited college or university and, in addition, allowing parents a tax deduction of $1,500 for each child or dependent they may send to any fully accredited college or university.

(2) That this resolution does not constitute an approval of any other form of Federal aid to education.

(3) That suitable copies of this resolution be forwarded by the Secretary of State to the President of the United States and the Members of Congress from the State of Illinois.

Adopted by the house, March 7, 1961.

PAUL POWELL,
Speaker, House of Representatives,
CHAS F. KERVIN,
Clerk, House of Representatives.

Concurred in by the senate, March 22, 1961.

SAMUEL H. SHAPIRO,
President of the Senate,
EDWARD E. FERNANDES,
Secretary of the Senate.

Address by Chief Justice Earl Warren

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, April 17, 1961

Mr. MULTER. Mr. Speaker, on March 26, 1961, Yeshiva University bestowed upon Chief Justice Earl Warren an honorary doctor of laws degree at an academic convocation.

I am pleased to commend to the attention of our colleagues the text of the address of the Chief Justice on that occasion:

ADDRESS BY CHIEF JUSTICE EARL WARREN AT CONVOCATION OF YESHIVA UNIVERSITY, MARCH 26, 1961

How pleasant it is in these turbulent times, when the news of the day pyramids one crisis upon another throughout the world, to join in a convocation of students and scholars who are searching for truth, and who subscribe to the principle that the welfare of our society and of the individuals in it depends upon the vigor and soundness of our moral and spiritual values. It is inspiring to celebrate the opening of still another decade of growth of a great university which is dedicated to that principle—for it is to that principle that our Nation owes its rise to greatness; and upon the preservation of that principle rest our hopes for the future.

There are far too many flaws in the pattern of our life to permit us to relax on the comfortable assumption that our progress is inevitable, without added effort or concentration of purpose on our part. Each day we are confronted with shocking evidence of departures from our moral and spiritual standards so extensive and in such responsible quarters as to undermine the respect in which we are held throughout the world. How we may rise above these deficiencies is the great present-day problem of our Nation. If we wish to stand before the world as a good nation as well as a great one, it must be accomplished through education, and education on the broadest possible base.

We have made great progress in the past, but our problem today is to continue to grow in moral and spiritual stature in a world which is increasingly blinded by cynicism and materialism and which too often makes a fetish of conformity. Our Nation has gained depth and maturity of judgment and has avoided the barrenness of conformity because we have nurtured within our society many priceless strains of thought, religion, tradition, and historical perspective. We have preserved within our national unity a rich variety of cultures—and they have given us intellectual and spiritual strength.

Our Nation is composed of many divergent ethnic groups and religious persuasions. It is our national purpose to live together in harmony and with a mutual understanding of each others aims and ambitions. And in this Nation there is no other city in which this divergence is more sympathetically preserved and its rich rewards more fully appreciated than in this great city of New York.

It is comforting to feel that the tenets of this university and the occasion of this convocation are in harmony with that purpose of our Nation and with the life of this great metropolitan area. They are in keeping, too, with the history and traditions of American education. Higher education in this country came into being very largely through the establishment of seminaries and colleges by various religious groups. The best of these religious educational institutions survived—some as small colleges, others as great universities encompassing all of the complex facets of modern higher education. In the aggregate, these colleges and universities of religious origin constitute the heart of our system of higher education—the leaven in the loaf of our intellectual bread.

State universities and colleges are latecomers in the field of higher education in this Nation. In the main public institutions of higher education are now little over a century old—and most of them were antedated by private colleges and universities by a century or even two.

Many state colleges and universities are truly great educational institutions, and perform a service which is essential to the welfare of our Nation. But these fine public institutions can only achieve their highest efficiency if they are compelled to meet the competition of private institutions, both secular and religious, where the pursuit of knowledge is wholly beyond the influence of Government.

Competition between public and private institutions of higher education does indeed exist; and it is desirable that it should. But this competition is a friendly rivalry which flows from each striving to achieve a higher level of excellence. This is a kind of competition which can never be cheapened by selfish or unworthy desires. Neither its means nor its ends can be tainted with evil. In the competition for excellence none who participate need fall by the wayside—all may take from the struggle added strength and dignity and usefulness—and these fruits will come in increasing abundance to both sides in direct proportion to the intensity of the competition between them.

The men and women who possess the vision to see the good that can come to our people from this fruitful competition, and who have the means and the generosity to make it possible by supporting our fine private colleges and universities, are entitled to our deepest thanks and to all of the personal satisfaction that flows from the performance of a truly worthy deed.

It is commonly asserted that America is on trial before the world. It is at least accurate to say that masses of men yet uncommitted are in the process of making a choice among systems of social organization, and that in every quarter of the world our system is being compared—in philosophy and in performance—with others which are antagonistic to it. If we care about the outcome of this comparison, if we are concerned with the choice which the new nations of the earth will make, then it is of the greatest importance to us that our institutions of higher education be dedicated to the unremitting pursuit of excellence.

If we are to be judged by the extent to which our Government functions effectively and in the interests of every individual in our Nation, then we must develop a degree of excellence among our political scientists and governmental leaders which will aid us in attaining that end. The present recruitment of scholars in the political science field by the National Government demonstrates

both that the need is real and that the leaders of our Government are aware of its existence.

If the unsolved social and economic problems of our country are to be considered the products of our system—as surely they will be—then nothing less than high excellence in analyzing these problems and searching out effective solutions can demonstrate the value of our institutions.

If the survival of our Nation is to depend upon the effectiveness of our defense, if national stature is to be measured by our success in the exploration of space, if we are to be judged on the basis of our accomplishments in pushing back the frontiers of knowledge in all of the fields of science vital to the comfort, health, and safety of man—surely then we must, through our schools, strive for a new excellence in all of the scientific disciplines.

If we really believe in a just and living God, then, in large part through the dedicated efforts of our educational institutions, we must achieve an excellence not yet achieved in spiritual power and in public and private morals, so that we may do worthily those things that will, in time, bring about peace through good will among the peoples of the world.

Much has been said by way of comparison of the number of engineers, the number of scientists, the number of sociologists and economists, the number of students of government, that are being educated in other nations of the world and in our own. Numbers are important—for the problem is vast. We must have enough trained men and women to solve the immediate problems and to develop the ultimate potential not only of our own Nation but also of other great areas of the earth.

Yet I wonder if it is not of far greater importance that we produce minds and hearts dedicated to the achievement of excellence—excellence in the natural and social sciences and in the realm of the spirit. If excellence becomes our preoccupation we can well afford to be optimistic about the outcome of any competition for the minds of men, for eventually the world will surely honor excellence wherever it appears.

Scores of nations even now emerging from conditions which sometimes approach the primeval are searching among the institutions and the ideals of older states for the pattern best suited to the basic needs of man. If we believe that man does have a soul which spurs him constantly to search for improvement and for truth, we can be confident that our striving after excellence will be heeded by peoples everywhere.

We will measure up to the responsibilities that history has imposed upon us only if we chart a course which makes freedom a living thing for every citizen of our land, and which gives to other nations of the world an abiding conviction of our devotion to peace with honor to all. The sure basis for success in this endeavor is the unremitting pursuit of excellence through institutions like your own. I wish you Godspeed in your efforts, and I promise you as your sufficient reward the deep satisfaction that flows from accomplishments in the interest of humankind.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Death of John A. Willo

EXTENSION OF REMARKS
OF
HON. FRANK J. LAUSCHE
OF OHIO
IN THE SENATE OF THE UNITED STATES
Tuesday, April 18, 1961

Mr. LAUSCHE. Mr. President, Slovak-Americans were saddened by the death on April 1 of John A. Willo of Youngstown, Ohio. Mr. Willo not only was a prominent and active member in the Slovenian community but had served as the law director of Youngstown. He was a founder and first president of the Slovak-American Political Federation and was named to many local, State, and national positions in Slovak organizations. All Ohio and especially our Slovenian community mourns his passing.

I ask unanimous consent that an article which appeared in the Falcon, the official organ of the Slovak Catholic Sokol be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

JOHN A. WILLO, AMERICAN-SLOVAK FRATERNALIST, DIED

Attorney John A. Willo, 71, of 480 Wildwood Drive, Youngstown, Ohio, prominent Slovak-American fraternalist and former Youngstown law director, died April 1 at 2:25 a.m. in St. Elizabeth Hospital. He had been ill several years.

Attorney Willo, who had offices in the Union National Bank Building, had practiced law in Youngstown since graduating from Columbia Law School in 1914. He was one of the first Slovak lawyers in Youngstown and was a colorful member of Mayor William B. Spagnola's cabinet from 1940 to 1943.

Funeral services were held at 10:30 a.m. Tuesday at the Vaschak Funeral Home and 11 a.m. in SS. Cyril and Methodius Church. Members of the Mahoning County Bar Association met at 10:45 a.m. Tuesday at the church to attend services in a group.

A member of the city park and recreation commission for 2 years before his appointment as law director, Attorney Willo worked closely with the late park superintendent, Tommy Pemberton. As a youth he had played amateur baseball and basketball and helped organize one of the first Slovak teams.

At Columbia, Attorney Willo was one of the founders and first president of the Slovak-American Political Federation. In 1933 he was elected president of the Youngstown Solvak Society and later was named to various local, State, and National positions in Slovak organizations.

He was general counsel of the National Slovak Society 25 years and also president of the Ohio Fraternal Congress of the society, the Fraternal Society Law Association and the Mahoning Valley Assembly of the Slovak League of America. He served on the board of the National Fraternal Congress.

Attorney Willo was born March 25, 1890, in Youngstown, a son of Michael and Caroline Roth Willo. His father operated a Boardman Street boarding house which was a popular meeting place for immigrant Slovaks.

He attended St. Joseph School, Canisius Preparatory School, Holy Cross College, Georgetown University, and Columbia University.

At Holy Cross Attorney Willo was chosen grand marshal on "Holy Cross Night," the highest honor students could confer on one of their fellows. At Columbia, he was a founder and first dean of the Dwight Senate of Delta Theta Phi, a law fraternity.

During his early activity as a Slovak official, he traveled to many States to fight taxation planned against fraternal insurance organizations. The National Slovak Society is one of the oldest such groups in the country.

Attorney Willo also served as president of the Northeastern Ohio Chapter of Holy Cross Alumni and the Youngstown Bridge Club in the 1950's.

He was a member of Mahoning, Trumbull, State and National bar associations, the Elks Club, and SS. Cyril and Methodius Church, of which his father was a founder. He also belonged to the First Catholic Slovak Union, Pennsylvania Slovak Catholic Union, Zivena Beneficial Society, Protected Home Circle, Croatian Fraternal Union, Ukrainian National Aid Association and Slovak Gymnastic Union Sokol.

Attorney Willo leaves his wife, the former Veronica O'Brien of Boston, whom he married in 1912, and a sister, Mrs. Stephen J. Slifka of Youngstown, former supreme financial secretary of the First Catholic Slovak Ladies Union.

Migrant Farm Labor Problems and "Harvest of Shame"—X

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1961

Mr. ROGERS of Florida. Mr. Speaker, this is the 10th in a series of articles presented in the public interest by the the Palm Beach Post-Times to show the Members some of the progress being made in Florida to solve problems relating to migrant farm labor which were left out of the television presentation "Harvest of Shame." The omissions of all that has been, and is being done in this field did a great injustice to the Floridians who have given their time and efforts to these problems over the years. It is hoped that by reading these articles and the ones to follow the Members and public will have a better understanding of this important matter:

[From the Palm Beach Post, Feb. 3, 1961]

GOODLETT INTERVIEWS MISPLACED IN TIME

"They sleep around the bars, and the grass, and the packinghouses around the lake area, in the parks. Any place they can find to sleep and rest for a few hours."—Chief Goodlett in "Harvest of Shame."

Belle Glade Police Chief Charles Goodlett regrets now that he went hunting last November 25 and missed the "Harvest of Shame" broadcast.

But the chief said other residents of the community who saw the show told him his statements made during the interview were distorted.

Interviewed at his office, Goodlett obviously didn't like the manner in which the film was presented.

The chief said he told David Lowe, who questioned him for the show, about certain conditions existing in the community when he took office 13 years ago.

Because of the shortage of housing at that time, he said, many migrants had no place to sleep and used the parks, the lake area, the packing houses and other areas.

"But the film made it appear that condition still prevails," Goodlett said. "Actually, it doesn't. There has been a great improvement in housing for the migrants, in schools and recreation."

Most migrants living in the city pay $7 or $8 a week for 2-room apartments, the chief said.

Goodlett said he was interviewed for 45 minutes. But persons who saw the show made it clear to him, he said, that all of the improvements he mentioned were edited out of the film.

"I have suggested the network make a second film from the portions that were deleted from the various interviews," he said wryly.

The chief said he still gets telephone calls, letters and postcards from persons in the north who saw the show and want to help.

"One woman called me and said she was ready to send a truckload of food," he said. "She couldn't understand why I didn't jump at the chance to ask her to send it on down. She thought all of our people were starving."

The officer said he finally told the caller CBS had spent months shooting the film and that portions of it were almost a year old when shown.

"Any conditions at that time would be changed by now," he said, "and I explained to her that the film didn't show a true picture of conditions here."

Goodlett showed a postcard from a South Carolina man who offered permanent employment to a family.

"But there's more to it than making jobs available," he said. "There is a need to inspire in these people a desire for self-improvement."

The chief, a native of Alabama, said he himself in the past has found permanent jobs for some migrants.

"Many of them say they want out of the migrant stream," he said, "but I found that when June rolled around they started getting that faraway look in their eyes, and pretty soon they were gone."

Others, though, he said, have found it possible to break out of the migrant stream when given the chance.

Belle Glade has made great progress in improving the living conditions of its migrants,

the chief said, and he cited the availability of two swimming pools during warmer weather.

"In the last 13 years, the city has made 50 years of progress," he said.

Goodlett said he and Lowe became good friends while the show was being filmed. "I liked him," he said.

"After he left, he used to call me about once a week," the chief continued. "But a funny thing—he hasn't called me since the broadcast."

Stevenson Emerges as Powerful Figure

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 18, 1961

Mr. HUMPHREY. Mr. President, I ask unanimous consent that an article written by Mr. Roscoe Drummond, published in the Minneapolis Tribune of April 14, 1961, entitled "Stevenson Emerges as Powerful Figure," be printed in the Appendix of the RECORD.

The article describes the splendid work which is being carried out by our Ambassador to the United Nations, Mr. Adlai Stevenson. It points out the high regard and respect in which Ambassador Stevenson is held by the members of the United Nations and, indeed, the outstanding job he is doing in behalf of American policies.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STEVENSON EMERGES AS POWERFUL FIGURE—HE IS EXERTING UNUSUALLY WIDE INFLUENCE IN THE STATE DEPARTMENT AND THE WHITE HOUSE

(By Roscoe Drummond)

UNITED NATIONS, N.Y.—Viewed from both Washington and the United Nations, Ambassador Adlai Stevenson is emerging as a powerful figure in the Kennedy administration.

This does not mean that the President is not making the final decisions on policy. This does not mean that Secretary of State Dean Rusk is being detoured as Mr. Kennedy's principal adviser on foreign affairs.

It does mean that, on the basis of his experience, initiative, and political prestige at home and abroad, Stevenson is exerting unusually wide influence in the State Department and the White Hoouse.

Whatever coolness there may have been in the past, Stevenson and Mr. Kennedy are now establishing a good working relationship. As a consequence, the President's U.N. Ambassador is today at the center of policy formulation.

Every delegate here is under instruction from his Government. Stevenson is, too. But to a notable extent his recommendations shape his instructions. And beyond that his views on the widest range of foreign policy carry great weight in the top councils of the administration.

It was at Ambassador Stevenson's initiative that the United States for the first time voted with the Afro-Asian nations in their anticolonial resolution on Angola.

It was Stevenson, in part because of his long personal acquaintance with Soviet Foreign Minister Andrei Gromyko, who was called upon to conduct the delicate and important negotiations for resuming the disarmament talks with the Russians.

When British Prime Minister Harold Macmillan was in Washington this past week to meet with President Kennedy, Stevenson took part as well as Secretary Rusk.

Mr. Kennedy needs Stevenson in his administration. The President, aware of his close election, wants to keep the support of Adlai's followers. In addition, Stevenson, through his wide travels, has gotten to know personally more world leaders than anyone in the administration, including the President. This is invaluable for his job as Ambassador at the United Nations. He also brings his gift of articulate speech to the United Nations, perhaps the best forum for Stevenson's talents.

All of these things give Stevenson a voice in cabinet deliberations and a degree of access and influence with the President which is exceptional.

Everything hasn't always gone well. Mr. Kennedy was annoyed no little when Ambassador Stevenson publicly guessed that the President would be glad to see Premier Khrushchev if he decided to come to the United Nations—this when the President did not want to give Khrushchev any encouragement to come. I am also told that Stevenson delivered two speeches, not before the United Nations, which had not been cleared by the State Department.

But these things were in the early period of the administration's takeover—and have not recurred. Rusk and Stevenson have worked together smoothly thus far.

In his job at the United Nations Stevenson is at many points doing things differently than did Ambassador Henry Cabot Lodge. He is initiating breakfast, luncheon and dinner sessions with the heads of all the 99 delegations, sometimes including wives. For the first time Stevenson, as U.S. representative, let it be known that he would be available to meet with the caucus of the Afro-Asian nations on a common matter. They invited him at once.

There is one intriguing thread of sameness-plus-difference between the Governor and his predecessor. As U.N. Ambassador, Lodge was, to a degree, seeking to make his political reputation while Stevenson is seeking to conserve his political reputation.

It is premature to guess what Stevenson's record will look like when it takes fuller shape. But at this point he is proving a powerful advocate of U.S. policy within the United Nations and an influential spokesman for his own views within the Kennedy administration.

No More Baubles

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1961

Mr. BROOKS of Louisiana. Mr. Speaker, confronted by another Russian successful space-spectacular, Americans once again are going through a period of reexaminations in regard to our space effort. This morning the Washington Post carried an editorial entitled "No More Baubles" that, in my opinion, is a most thoughtful, well-balanced assessment of the predicament in which we find ourselves today. Under leave to extend my remarks, I commend it to the attention of my colleagues:

NO MORE BAUBLES

In the face of all the publicity and praise the Soviet Union has been receiving for its man-in-space feat, statements about the better balance of American science are bound to appear defensive. Mr. Khrushchev and his colleagues have been exploiting Major Gagarin's flight by every means available, and with devastating effect in some parts of the world.

It is unquestionably true that the United States is far more advanced than the Soviet Union in the broad range of scientific endeavor, and this is probably also true of the meaningful aspects of space exploration. As Howard Simons wrote in this newspaper on Sunday, the Russians go in for splashy projects of propaganda and prestige value. The space vehicle in which Major Gagarin circled the earth appears to have been relatively unsophisticated in many aspects. But it is unnecessary to depreciate the Soviet achievement. The plain fact is that the effort succeeded.

This was possible because the Soviet Union, starting from a vastly more primitive base, has concentrated upon certain specific objectives. Soviet science is respectable in its own right; but the Communist leaders have understood well how to make their science serve a political as well as a scientific purpose. That political purpose, of course, has been to persuade people elsewhere that communism has an irresistible momentum and is the wave of the future.

In this there is an important lesson for the United States. There is no point in either belittling or bemoaning the Soviet man in space; we shall have a man of our own in space at the right moment, and a lot more too. But the utter failure in the past to consider the political importance of being first has been very costly to American prestige.

Enough has been said of the misjudgments. We all have made them. It would be altogether foolish now to stake all our money and effort on some showy project that did not hold real promise of scientific merit and advance. But it ought to be clear that henceforth a wise national policy must inevitably comprehend the potential political reaction as well as the scientific benefit from American programs. We ought at least to be spared any more comments like those which dismissed the first Soviet sputnik as a mere bauble.

Administration Responsibility for Coming Deficits

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Tuesday, April 18, 1961

Mr. WILLIAMS of Delaware. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a recent article entitled "Kennedy Trying To Blame Eisenhower for Two Deficits," which appeared in the New York Herald Tribune, written by Mr. Joseph R. Slevin.

This article calls attention to the manner in which the Kennedy administration is trying to dodge their own responsibility for the coming deficits.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

KENNEDY TRYING TO BLAME EISENHOWER FOR TWO DEFICITS

(By Joseph R. Slevin)

WASHINGTON, March 27.—President Kennedy is trying to blame a pair of coming budget deficits on former President Eisenhower, but his own budget figures tell a different story.

The Chief Executive hammered on the Eisenhower-deficit thesis in a special message that he sent to Congress on Friday and Budget Director David E. Bell said it all over again today.

Mr. Bell flatly told the Congressional Joint Economic Committee that the budget deficit now in prospect for fiscal 1962, which begins July 1, "will be the consequence of the overestimation of revenues and underestimation of expenditures" in Mr. Eisenhower's January budget.

Mr. Kennedy repeatedly took the same position Friday. "Should there be a deficit in 1962, it will be the consequence of the overestimation of revenues and underestimation of expenditures in the January budget, and not the result of new policies or programs proposed by this administration," he declared.

The troubling thing about the President's contention is that it just isn't so and constant repetition can only serve to mislead the public.

Mr. Kennedy has been making much of the critical dangers facing the country and of the importance of telling the people the straight, unvarnished facts.

It's a good policy and it's just as applicable to the budget as to any other Government activity.

The President is trying to make a political point and the most immediate consequence has been the submission of one of the most bizarre budget messages on record.

The bulk of the message is devoted to a strained exposition of Mr. Kennedy's claim that the fiscal 1961 and 1962 deficits are Mr. Eisenhower's and the message contains very few budget facts.

The President is afraid that he will be considered "fiscally irresponsible" and that is why he is going to such strenuous lengths to convince Congress and the voters that he is a true believer in sound financial policies and an honest dollar.

The administration now is forecasting that the Federal Government will have a $2,169 million deficit this year instead of the $79 million surplus that Mr. Eisenhower predicted in his January budget message.

Similarly, it is forecasting that the Government will post a $2,126 million deficit next year instead of the $1,468 million surplus that Mr. Eisenhower had predicted. And it has painted the lily by not including defense spending increases that are expected to lift next year's deficit above the $3 billion mark.

What Mr. Kennedy's detailed budget figures disclose is that his spending programs have greatly increased the dimensions of the 1961 and 1962 deficits.

Mr. Eisenhower did overestimate the size of tax collections this year and next and the former President did underestimate the amount that the Government will spend.

But the new Kennedy calculations show that the Government would have had only an $805 million deficit this year if Mr. Kennedy had held to Mr. Eisenhower's policies. Instead, he has proposed additional spending programs that will increase the deficit to $2,169 million.

And the official Kennedy arithmetic shows that the Government would have had only a $704 million deficit next year instead of a deficit of more than $3 billion if Mr. Kennedy had continued Mr. Eisenhower's policies.

But Mr. Kennedy chose to increase civilian and defense spending by several billion dollars. Those were Mr. Kennedy's decisions—not Mr. Eisenhower's.

High National Awards Presented Applied Physics Laboratory of the Johns Hopkins University

EXTENSION OF REMARKS

OF

HON. RICHARD E. LANKFORD

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1961

Mr. LANKFORD. Mr. Speaker, we of the Fifth Congressional District of Maryland have for a long time recognized the important role that the Johns Hopkins University Applied Physics Laboratory in Howard County has been playing in our national defense effort. We, therefore, were not surprised but were extremely gratified when the laboratory and members of the staff received three significant awards for outstanding contributions to Department of Defense research and development programs over the past few months.

In January, Dr. Frank T. McClure, chairman of the applied physich laboratory's research center, was the recipient of the first Invention Award to be made by the National Aeronautics and Space Administration. It was for Dr. McClure's invention of the Satellite Doppler Navigation System.

A month later, Dr. Richard B. Kershner, supervisor of the space research and development program of the laboratory, was given the Navy's Distinguished Public Service Award for organizing and directing progress evaluation in the Polaris program conducted by the laboratory. The Distinguished Public Service Award is the highest recognition the Navy can give a citizen who is not an employee of the Department of Defense.

During the same ceremony, the applied physics laboratory was awarded the Navy's Certificate of Merit for outstanding service in the field of ballistic missile systems development and analysis. The citation said: "APL contributed immeasurably in achieving the first successful firing of the Polaris missile from a submerged submarine on July 20, 1960."

Dr. Kershner's citation noted that "because of his unremitting efforts, profound professional knowledge, and astute technical direction, the program of flight test analysis yielded essential information vital to the fleet ballistic missile system program."

It was the second time that Dr. Kershner had won the Distinguished Public Service Award. In 1958, he was similarly honored for his leadership in development of the Terrier missile as a fleet weapon. He presently has responsibility for developing the Transit navigational satellite system.

It was for the basic invention leading to the Transit system that Dr. McClure was honored by NASA.

The Transit system is based upon the ability to extract extremely accurate positional information from the measured Doppler shift of a satellite's transmitter during passage of the satellite over a tracking station or a ship's receiver. The shift is the measurement of the change of frequency of a radio signal transmitted from a satellite. This change of frequency is caused by the satellite's motion relative to a receiving or tracking station. Dr. McClure recommended study of the Doppler shift as the basis of a new method of navigation. He said that if man could accurately calculate the location of an orbiting vehicle by its Doppler shift, then the reverse must be true and that the location of a point on earth could be correctly established by analysis of the Doppler signal from a satellite.

When presenting the award to Dr. McClure, Dr. T. Keith Glennan, who was then NASA Administrator said: "This award is being made to you as an individual whose initiative and keen analytical insight were responsible for the undertaking of a development program that will have far-reaching benefits, the extent of which cannot yet be properly assessed."

In March, Dr. McClure was also honored by the Washington Chemical Association, a chapter of the American Chemical Society, which presented him its Hillebrand Award for work in solid rocket fuels and other fields.

The Certificate of Merit was the fourth such award won by the applied physics laboratory. It has received two Naval Ordnance Development Awards for contributions in the field of naval ordnance and the Department of Defense Reserve Award.

The first such honor was tendered the laboratory in 1945 by the Navy for the laboratory's wartime development of the proximity (VT) fuze. In 1958, five members of the staff, including the director, Dr. R. E. Gibson, received the Distinguished Public Service Award, and four were presented the Meritorious Public Service Citation for outstanding contributions to the research and development program of the Navy.

Besides the proximity fuze the laboratory provided the first ramjet engine, the Terrier, Talos, and Tartar missiles, and is now developing the Typhon weapons system. The Typhon is a completely automated missile firing system for global fleet operation. It is designed to provide the fleet with a defensive system with greatly extended range, accuracy, and target-handling capacity, capable of intercepting and knocking down both enemy aircraft and missiles, and for long-range bombardment of surface targets.

S. 901, the Marine Sciences Bill

EXTENSION OF REMARKS

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Tuesday, April 18, 1961

Mr. MAGNUSON. Mr. President, the Marine Digest, an outstanding maritime publication issued weekly at Seattle, Wash., recently editorialized on the need for enactment of S. 901, the proposed Marine Sciences and Research Act of 1961. I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LET'S PASS MARINE SCIENCES BILL

The Marine Digest before has asked for support for Senator WARREN G. MAGNUSON'S national program of oceanographic research. We do not hesitate to ask for support again.

Hearings on the Magnuson marine science bill will be held next week before the Interstate and Foreign Commerce Committee. Because of regional interest and benefits, the University of Washington will have three of its scientists testifying in support.

The University of Washington Fisheries Instrument Laboratory was closed last year for lack of funds after 4 years of internationally recognized technological achievement. Funds in the Marine Science bill would reactivate the program, and would also authorize support at the university for marine resources studies and specialized programs including research in marine radio biology, selective fish breeding and other programs now in progress.

The bill, simply described, provides funds and direction for a 10-year program which would cut down or remove the United States dangerous lag in oceanographic and marine science research. It is substantially the same bill passed by the Senate last year, but not acted upon by the House.

In the meantime, Senator MAGNUSON reports, Russia has further increased the gap between it and the United States in oceanographic ships, oceanwide research operations, and ocean-trained marine scientists and technicians.

Last year Russia launched four new research vessels, two of them over 3,600 tons and is building three more in the 6,000-ton class. The United States let contracts last year for only two research ships of about 1,500 tons each for completion in 1962.

This is just not enough when it comes to ocean equipment. The need has been well researched and documented by many, including Navy reports which show America 15 years behind in its need to replace obsolete small vessels in the present fleet. The Navy says the need for new ships requires a construction program that will see 25 years of shipbuilding done in 10 years.

The marine sciences bill will provide funds for this and for immediate long-term research bearing on fisheries conservation, underwater routes and ocean currents, marine food supplies, and mineral capabilities. These things have a bearing on our national military and economic survival.

Let's get the marine sciences bill passed this time.

What Next in Space?

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1961

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very timely editorial which appeared in the Lynn (Mass.) Daily Evening Item for April 15, 1961:

WHAT NEXT IN SPACE?

Cold second thought on the achievement of the Russians in putting a man in space is beginning to place the matter in proper perspective.

The actual flight itself was a tremendous undertaking with overtones of courage, painstaking research and resourcefulness that merit only the highest praise. The news had dramatic impact of the highest order and Major Gagarin is entitled to all the glory and plaudits lavished upon him in Moscow. It would have been more satisfying to Americans, of course, if one of our own astronauts had been the first to pierce outer space, but that does not detract from our willingness to recognize the heoric achievement of the Russian flyer.

But in appraising the actual results produced by the flight there is less reason for unbridled enthusiasm. As one commentator put it, this might be a kind of technological tour de force and not much more.

What, actually, do we know about space today that we did not know a week ago except perhaps that a blue haze surrounds the globe?

We knew before that the Soviets possessed rockets of much larger thrust than ours. The flight demonstrated their ability to control these rockets and to solve the perplexing problems of direction and re-entry. It may be that the flight will make it possible for us to know much more than we do know about certain forces in space which affect our own planet, but is there any certainty of this or will it provide any more information that we already have from our own earth-bound observations?

The Russians, of course, have scored a tremendous psychological and propaganda victory. At the moment, their prestige is riding high, particularly among those nations easily impressed by dramatic coups.

But it should be remembered that while billions of dollars were being spent on the studies and research that eventually sent the Russian major into orbit, millions of Russians were living in hovels. And while the official announcement of the success of the flight had grandiose references to enduring peace and an end to the arms race, the Soviet delegate at Geneva suddenly reversed a concession he made in principle a week ago. After agreeing to an Anglo-American proposal for research into underground nuclear explosions, with full Russian participation, he suddenly did an about-face and withdrew his assent. The Russians apparently feel at the moment that they need make no concessions to anyone, anywhere.

A New Look at Agriculture—Address by Secretary of Agriculture Freeman

EXTENSION OF REMARKS
OF
HON. ALLEN J. ELLENDER
OF LOUISIANA
IN THE SENATE OF THE UNITED STATES

Tuesday, April 18, 1961

Mr. ELLENDER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent address which was delivered by the Secretary of Agriculture, the Honorable Orville L. Freeman, before the National Press Club, Washington, D.C., yesterday.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A NEW LOOK AT AGRICULTURE

(Address by Secretary of Agriculture Orville L. Freeman prepared for delivery at the National Press Club, Washington, D.C., April 17, 1961, 12:30 p.m.)

I especially appreciate this opportunity to urge you to take a new look at agriculture because you are leaders in the opinion field, and because I think that there is no economic problem in America today in which we find more faulty emphasis, more outmoded concepts, and less real understanding than we find in current public attitudes toward the nature, causes, and possible solution for our agricultural problem.

I believe that the achievement of an effective solution to that problem requires a much greater public understanding of the factors involved, a more widespread public recognition of the contribution farmers make to our American standard of living, and a more general realization of the implications for agriculture that are inherent in the scientific and technological progress that characterizes our times.

One of the most significant characteristics of our age is the fact that physical, scientific, and technological progress is far outrunning social, political, and economic change. No recent event has illustrated this fact more dramatically than last week's successful orbiting of a man around the earth. Scientific and technological progress made this achievement possible. But man does not yet know how to use this new power to orbit the earth. Governments of men do not yet know how to control the power that can send tons into space. They have developed no social instruments to control the scientific instruments that now boast such incredible precision that they can pinpoint targets on the other side of the earth. This social lag represents a dangerous gap, a gap that must be closed if men on earth are to have any hope for security against the destructive power that man himself has created.

But what has this to do with the price of peanuts? Or wheat, or milk, or feed grains—or the other specific problems with which the Secretary of Agriculture is immediately concerned?

Only this. There is an equally dangerous gap in agriculture. Technical and scientific progress has for outrun social and economic change in agriculture as well as in the conquest of space. The social lag represented by the gap between the abundance of food that we can produce and the extent of hunger that exists in spite of this potential for abundance may, in the long run, be far more significant than the gap in space.

True, it is less spectacular, less dramatic. But to men and women and children who are really hungry, bread and milk at hand is more important than a star in the sky. To billions of men and women throughout this world the higher standards of living that can be achieved if we properly use our capacity to produce are of more direct and personal concern than the discovery of other worlds.

It is the awesome responsibility of this generation to close the gap between scientific progress and social progress sufficiently to make our civilization secure. It is the tremendous responsibility of this Nation and this administration to exercise leadership toward closing this gap in every field—in space, in human rights, and in the task of making the abundance that we can produce available to satisfy human needs. It is the special responsibility of those of us in the field of agriculture to close the gap represented by our capacity to produce abundantly, on the one hand, and, on the other, our lack of the social and economic organization necessary to both manage and utilize that abundance.

It is in the light of this responsibility, as a part of our overall national responsibility, that this administration has developed its agricultural policies and programs and formulated the legislation that the President is today recommending to the Congress. We are now pressing forward vigorously with all our resources to achieve these programs, so that we may begin to close that gap without delay.

May I say quite frankly that I believe undue delay would be very serious—more serious than simply a postponement of the gains that we expect from the new program. In a real sense we are reaching the point of no return. Delay or postponement now could mean economic disaster. The time is running out.

We can neither ask nor expect an indefinite continuation of programs and policies under which the U.S. Government pays ever-increasing amounts for stockpiles of commodities that threaten to become ever more unmanageable. We can neither ask nor expect that the American farmer will continue to invest his capital, his labor, his skill, and his management ability for a material reward that is shockingly below the national average. Our farmers are the world's most efficient agricultural producers, and their products are the basic essentials of human life. For this efficient production of essential needs they must have an average capital investment, exclusive of the farm home, of $36,000. Yet they receive for their labor an average of about 81 cents an hour.

In achieving its prime purpose of production, American agriculture in this generation has reached a pinnacle of success. It has tripled its output per hour of labor in the past two decades, while industry's output has only doubled. Twenty years ago 1 farmer produced enough for 11 people; he now produces enough for 25.

Under our system of enterprise and initiative we expect that success will bring an appropriate reward. And this phenomenal success in agriculture has brought its reward. But the reward is to the American consumer, and not to the American farmer. The consumer in America works fewer hours to feed himself and his family than in any other country. He is able to buy a balanced and varied diet for approximately one-fifth of his take-home pay.

Contrast this with the consumer in other nations. A meal of beef, potatoes, cabbage, bread, butter, milk and fruit for four people can be bought by the average industrial worker in the United States for 1 hour's wages. In Germany and England that meal would take over 2 hours' work; in Austria, 4 hours; in France, 4½ hours; in Italy, over 5 hours.

These are facts the American public should acclaim, and for which they should pay tribute to the American farmer for his contribution to our standard of living. Let us give at least as much recognition to this as do our Communist opponents. I saw very little emphasis here on one item in last Friday's reports from Moscow that to me has real significance. In reporting on Russia's new space triumph the wire services quoted Khrushchev as saying, "The space flight must not detract the attention of the Soviet people from other targets, and these include catching up with the United States in the standard of living."

Gratifying as this is, I have already noted that the farmer has not reaped the reward of his success. Quite the contrary. Farm output was 19 percent higher in 1960 than in 1952, but realized net farm income was 19 percent lower. Incomes of farm families today are lower relative to the rest of our population than they have been at any time since the 1930's. During the years between 1952 and 1960 the cost of living exclusive of food rose 15 percent, while the cost of the typical market basket of food increased only 2 percent. During this time the marketing charges associated with that basket of food increased 17 percent, but the decline of 15 percent in farm prices accounts for the difference.

These facts illustrate that, for the farmer, productive success has paradoxically meant economic distress. And, as if to add insult to injury, the public attitude toward the farmer has come to reflect concepts of surpluses and subsidies rather than the regard we expect for ability, industry, efficiency, and successful productivity.

Such erroneous concepts and public attitudes must be changed if we are to get a farm program that meets today's needs before we reach that point of no return.

I should therefore like to note here some areas in which adequate public understanding is most essential.

I

I have already referred to the need for a recognition of the productive success of American agriculture and the extent of the contribution the farmer thereby makes to our high standards of living. Agriculture in America leads the way to a new age of abundance in mankind's most essential commodities, and as such has achieved a landmark in history more important to human health and happiness than last week's landmark in the conquest of space. This success is the direct result of amazing progress in agricultural science and technology and the farmers' ability to put that progress into practical use.

II

We need to recognize how this success, in itself, has resulted in economic distress in a society in which we have not yet learned how to live with abundance. Because we are so unaccustomed to an age of plenty, we have tried to apply economics of scarcity as we repeated the shibboleths and slogans and phrases that were a part of the "conventional wisdom" of the past, and they won't work. We need to know a little more about agricultural economics to reach a sound and constructive solution of the farm problem.

The public must understand that any realistic solution to the farm problem requires the adjustment of our agricultural abundance to current domestic and foreign needs and demands. We may, in fact we must, increase our utilization of farm products both at home and abroad, and several of the early actions of this administration have been directed toward that end. The doubling of our direct distribution of food to the needy, our pilot food stamp programs, and the expansion of our food-for-peace efforts illustrate the determination of this administration to use fully our abundance of food and fiber. But, even with an expansion of such programs to the greatest possible extent that is consistent with sound and humane ideas and policies, we will not be able, in the years immediately ahead, to expand consumption enough to absorb all of our potential agricultural productivity. Thus, we must adjust our abundance. An understanding of the problems of achieving this goal—as well as of the consequences of not achieving it—is essential to a sound approach to new legislation.

Both the problems and the consequences stem in a large measure from the inelasticity of the human stomach, and the resulting inelasticity of demand for food. A little too much in the way of food supplies leads to dramatic farm price declines—hence to a farm-income problem. And a little too little in the way of food supplies leads to skyrocketing food prices and a real income squeeze on consumers. This is the food problem so often encountered in wartime.

To cope with these problems in the past, we have imposed price ceilings in wartime, and we place floors under farm prices during periods of surplus. But neither of these measures in themselves effectively corrects the imbalance of supplies relative to the existing demand. Nor can the uncoordinated efforts of several million farm producers correct unbalanced supply situations. Farm price and income gyrations that have resulted in the past have alternately hurt both the consumer and the producer.

Chronically low farm prices in the 1950's did not induce the average farmer to contract production. On the contrary, the average producer increased his production substantially. Caught up in the technological revolution on the one hand, and rising production costs on the other, the average farmer tried to solve his income problem by increasing his output. He succeeded in increasing his output, but he did not succeed in increasing his income. Government price support operations in the great commodities of wheat, cotton, and feed grains held the prices of those commodities at support levels as the Government accumulated stocks. The new "third market," the Commodity Credit Corporation, acquired the 6 to 8 percent excess production each year, and held the farm price level some 20 to 40 percent above what it would have been with no programs.

No one liked the program of the late 1950's—the farmers, because it gave no hope for improved incomes; consumers, because it was wasteful and ineffective; and congressional leaders and taxpayers, because it was needlessly costly. It was a failure on all these counts because it did not and could not effectively adjust supplies. Supplies outran demand in the 1950's and pushed farm prices down to support levels and held them there.

Every responsible projection made for the 1960's suggests that unless we act supplies will continue to outdistance demand with the same chronic price-depressing effects.

Confronted with this prospect for the 1960's, we must now establish procedures and enact legislation to enable farmer producers to work together to adjust their production to the quantities we can use. The President is therefore proposing legislation that will provide the tools whereby they can adjust their supplies effectively whenever there is general agreement among them that such a course of action is desirable.

III

We need to recognize that all the farmer is asking for is equality of economic opportunity.

The farmer is the only basic producer in our economy who now has available to him no means by which he can adjust his production to demand, and who therefore has no effective means by which he can influence the economic rewards of his enterprise.

It is absurd, in any consideration of a farm program, to compare the farmer with the small corner merchant.

Perhaps there should be Government action for small business, but of a different nature for a different reason. But the farmer, as a basic producer and not a retailer, can be more accurately compared with other basic producers—such as, for example, the producers of steel. Government has given to such producers the instrument of incorporation, by which they can become large enough to effectively adjust their production to quantities that can be sold profitably.

Government has likewise given to labor the instrument of collective bargaining whereby millions of individual workers, who, as individuals, would be even more helpless than the farmers, can work together to achieve a fair return for their productive activity.

To achieve economic equality, therefore, we propose programs to provide farmers with the institutional machinery for coming together and developing supply adjustment programs, and with democratic methods for approving or rejecting such programs. We would specifically provide safeguards for consumers' interests in this process.

By enacting the proposed legislation the Congress would establish the ground rules

and guidelines under which supply adjustment programs would be developed and placed into operation. Then, whenever action is needed with regard to any commodity or group of related commodities, a committee of producers—including one consumer representative—would be selected to consult with the Secretary of Agriculture to develop and recommend a program of supply adjustment for that commodity. The Secretary would recommend a program based on these consultations. Only after such a program had been approved by the President, sanctioned by the Congress, and approved by a two-thirds vote of the producers themselves, would it become binding upon all farmers who choose to produce that commodity. The farmers who serve on these commodity advisory committees would be chosen from nominees designated by farmer-elected county committees and by farm organizations.

Thus, in return for the limitations to which farmers would conform only after they, themselves, had reached decisions by the accepted democratic method of voting on proposed programs—in return for these limitations the farmers would gain more real influence over the economic consequences of their farming enterprise, more real influence over their opportunity to earn fair incomes, than they have ever had, or can have, without such programs.

The new program would raise the level of the function and the responsibility of the Congress, and of the agricultural committees in Congress. As the new programs formulated under these proposals get underway, many of the powers that the Congress has now granted to the Secretary of Agriculture—powers to fix support levels, prescribe acreage allotments, establish marketing agreements and orders, and others—would require final approval by the Congress. This would add to the responsibilities of the Agriculture Committees in the Congress the function of careful review of each such program, many of which are now put into effect by order of the Secretary without any such review.

Thus, while the Congress would be relieved of the onerous burden of a detailed analysis of a multitude of separate proposals, commodity by commodity, season after season, under countless and fragmented pressures; it would have an increased responsibility for considering broad programs and policies in their entire implications, and for the continuing and final authority to determine what programs shall become the law of the land.

Under the procedures set forth in the proposed legislation programs could be developed to meet different needs and conditions by utilizing a variety of methods, many of which have already proved their usefulness. It would be the responsibility of the commodity advisory committee to adapt those methods to a program that would meet the needs of the farmers producing the commodity involved; and it would be the responsibility of the secretary of Agriculture to consider, in addition, various intercommodity relationships, potential effects on our economy as a whole, and the national welfare.

IV

For some commodities the adjustment of supply to demand could be effectively achieved by means of marketing quotas and allotments in terms of quantity as well as acreage. For some commodities programs of marketing orders and agreements could be formulated under which producers could develop research, promotion, higher standards, and quality control, as well as the effective adjustment of supply. Government cooperation in support of farm income could be by means of a variety of methods, but in all cases to be limited to instances where a supply adjustment program is in effect, after consultation with the appropriate advisory committee and after approval by the President and review by the Congress.

A final point that we need to understand to achieve a successful farm program is the extent to which the problems and performance of agriculture are inextricably interwoven with problems of domestic prosperity and economic growth and with those of achieving security and peace in the world.

I believe the American public is becoming increasingly aware of the importance of our agricultural abundance as an instrument in foreign policy. We are stepping up our programs for expanding the export of food and fiber, both for dollars and for foreign currency. We have launched a program to determine just what the world food deficit is. As we increase such efforts, and as we develop means, in cooperation with other countries, for the more effective use of greater quantities of agricultural exports, these new and increasing demands on American agriculture will have to be taken into account in the formulation of our agricultural programs at home. This is why an extension and strengthening of our food-for-peace program is an integral part of the agricultural legislation presented to the Congress today.

I have hopes that the American public is beginning to realize how essential a healthy agriculture is to the long-term soundness of our economy. Evidences of this, such as that reflected by the keen observations of the Nebraska banker interviewed in the last issue of the U.S. News & World Report, are encouraging. I am confident that when the nonfarm public fully understands how essential a healthy agricultural economy is to its own well-being we will get support from cities and towns, as well as from the farms, for the program we propose. And I am confident that, with the cooperation of American farmers, we can achieve an effective adjustment of our agricultural abundance within the framework of this legislation, and thus close the gap between our tremendous productive potential and our ability to manage and utilize it in the best interest of all. It will not be easy, but it can be done.

Migrant Farm Labor Problems and "Harvest of Shame"—XI

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1961

Mr. ROGERS of Florida. Mr. Speaker, this is the 11th in a series of articles presented in the public interest by the Palm Beach Post-Times to show the Members some of the progress being made in Florida to solve problems relating to migrant farm labor which were left out of the television presentation "Harvest of Shame." The omissions of all that has been, and is being done in this field did a great injustice to the Floridians who have given their time and efforts to these problems over the years. It is hoped that by reading these articles and the ones to follow the Members and public will have a better understanding of this important matter.

[From the Palm Beach Post, Feb. 3, 1961]

COUNTY MIGRANT CAMPS MUST MEET STRICT CODE

"I notice there is some straw over there. What is it for?"

"Well, that was the straw they brought for the people to sleep on."

"Well, weren't mattresses supplied here?"

"No. There used to be, but there ain't now."

"Mrs. Quigley, where is the water supply over here?"

"That's it right yonder."

"For how many people?"

"This, that and yonder. All uses the same."

"Where do you use the bathrooms? Where are the facilities?"

"Don't have one."—"Harvest of Shame."

Migrant housing varies greatly in Palm Beach County, and throughout Florida.

If there is a labor camp in the county which does not have a bathroom, or has only one outside faucet for the entire camp, the county health department's chief sanitarian, Joseph Alvarez, would like to know where it is.

If one did exist, it would be closed down.

The pattern of housing in the county is quite different on the coast and in the Glades.

In the coastal area, the expense has been borne by the farmer himself. Examples may be found in the Delray Beach area. And outside the county, examples may be found at Pompano Beach, Homestead, Fort Pierce, and other communities.

In the Glades area near Lake Okeechobee, farming is more extensive. More workers are employed. This has increased the demand for housing, and it has been provided in several ways.

At Pahokee, for example, the Federal Government has financed a 115-unit housing project for which the average monthly rent in 1959 was $39.59. The cost of the project was $1,295,000. Ground was broken in June 1957. Three other camps also are located there.

Belle Glade has two huge camps for the migrants. They were built by the Federal Government, later turned over to the Belle Glade Housing Authority.

Low-cost living quarters are provided both for bachelors and family units. Nurseries for children 2 to 6 are available, and recreation and parks are convenient.

Migrants pay 75 cents per day for each child left at the nursery at the Osceola Camp. This entitles them to supervised activities, a meal, two snacks and a nap.

The cost has been increased this year from 50 cents. Juian Griggs, staff workers of the Florida Christian Ministry of Migrants at the camp, said the increase has been mandated by a deficit under which the program operated in the past.

"During the last 10 years, the Church of the Brethren has spent $5,000 to make up the deficit," he said.

The entire migrant program has cost churches $50,000, he said.

In the two Belle Glade housing projects, rents range from $4 per week for a single room to $12.50 for a two-bedroom apartment. They are funished if the renters desire it, the chamber of commerce reports.

Elsewhere in Belle Glade, migrants may rent apartments, rooms or dwellings provided by private capital. Recently, several modern concrete block multiple-unit apartment buildings have been built.

Larry Royal, member of a family that provided some of this housing, said migrants like it and occupy about 30 percent of that available.

"We rent to some on a year-round basis," he said. "When they're not here, they pay a reduced rent to make sure their apartments will be ready for them when they return."

Higher Postal Rates Are Needed

EXTENSION OF REMARKS
OF
HON. FRANK J. LAUSCHE
OF OHIO
IN THE SENATE OF THE UNITED STATES
Tuesday, April 18, 1961

Mr. LAUSCHE. Mr. President, is it not worth a nickel to mail a letter to your old Aunt Hepsibah in California? Is it not worth 8 cents to fly a letter to Maine? These two questions have been raised and other comments have been made in an editorial supporting the Postmaster General's recommendation for postal increases in order to help reduce the annual $800 million deficit. This editorial appeared in the April 15, 1961, edition of the Cleveland, Ohio, Plain Dealer. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HIGHER POSTAL RATES ARE NEEDED

When the total U.S. postal deficit amounts to more than $800 million a year, Postmaster General J. Edward Day has every reason to seek to reduce this deficit, and every American ought to be willing to accept the requested rate increases in good spirit. The $741 million a year increase requested of Congress will not permit the postal service to break even, but it will cut down the loss to a great extent.

After all, where can you buy so much service for your money? Isn't it worth a nickel to mail a letter to your old Aunt Hepsibah in California? Isn't it worth 8 cents to fly a letter to Maine? Isn't it worth 4 cents to send a surface postcard or 6 cents to send a postcard by airmail?

It will be noted by those who study the new rates that books and publishers' second-class matter, which includes newspapers and magazines, are in for some sort of increase, for, according to the Associated Press, the proposal would increase the rates of "all other classes of mail." This, at any rate, should preclude the receipt of letters saying, "Naturally you're for higher postal rates—you won't be affected." To what extent we shall be affected we do not know at this moment, but we have said before—and we repeat: We are perfectly willing to pay any increase in postal rates the Government thinks we should pay.

Actually, the larger the newspaper, the smaller the percentage of its mail circulation. American Newspaper Publishers Association figures show that of papers over 100,000 circulation, only 5.7 percent of this circulation uses the mails, whereas in papers under 5,000 circulation, 28.2 percent goes through the mails.

Perhaps one reason Uncle Sam has been moderate in increasing mail rates for newspapers (outside of the perfectly obvious one that he thinks it valuable to have citizens well-informed) is that the newspapers, themselves, give him a lot of help, even though paying full rates for services not rendered. Some 83.3 percent of all copies of daily newspapers in second-class mail are sorted by the newspapers, arranged in sacks or packages by the newspapers, delivered to railroad stations or post offices by the newspapers, thus eliminating sorting or other handling by postal employees.

Since we too shall be affected, we can, in good conscience, applaud the Postmaster General's wise plan to put the Post Office Department on a more businesslike basis—and we hope Congress will give him what he asks.

Moral Principles Have To Be Revived

EXTENSION OF REMARKS
OF
HON. WILLIAM H. BATES
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1961

Mr. BATES. Mr. Speaker, Dr. Julius Szygowski, representative of the Polish Government in exile, has written a timely letter under the heading of "Moral Principles Have To Be Revived." I believe the cause of liberty will be strengthened by calling nationwide attention to this excellent document, and under leave to extend my remarks in the RECORD, I submit the following statement by Dr. Szygowski:

The disquieting turn of events upon the international arena makes it ever more urgent to reassess western policy with regard to Russia and her ruthless methods. The truth must be faced and the admission made that so far the behavior of the Western Powers towards Russia and her political aims has ben marked by vacillation and mistakes, even by moral shortcomings. As an outcome, public opinion has the deeply rooted impression that the Western World cannot cope with Russia and is defenseless against the progressive expansion of international communism.

The process which has brought about these pernicious consequences is not of recent origin.

It cannot be denied that many lofty ideals proclaimed by the Western Powers were abandoned. Many agreements for assuring the fate of minor nations were not honored, and many war aims were jettisoned.

All this took place gradually, until the Western World's moral position offered rather gloomy perspectives before the subjugated and other countries.

There is a small wonder that in this moral and political climate, Russian affirmations that the Western World will gradually be forced by pacific means to submit to the Communist world, superior to it in every field, are beginning to acquire an air of probability especially in the eyes of various masses of Asian and African populations.

On the other hand, the memory of various accomplished facts so detrimental to different nations lives forever in the minds of people and in the pages of history, serving us a warning not to believe in the words of those who once have broken them.

The elevated and equitable principles formulated for the postwar world in the Atlantic Charter and later incorporated within the Charter of the United Nations Organization remained only upon paper.

Soviet Russia understands well this moral weakness of the West and takes proper advantage of it. And so, Khrushchev's obvious aim is to undermine the authority and prestige of the governments, systems, and ideologies of the Western democracies. He tries to destroy this not only among the Western peoples, not only among the captive nations living in hope that the West will help to liberate them, but also among the people of the newly formed African and Asian state entities.

CASE OF POLAND

Lack of broadly conceived political vision, a decline in morality with regard to other countries and in the sense of obligation to honor agreements on the part of the West are nowhere more evident than in its attitude to Poland, its most loyal ally and holder of a prime key position in Europe.

The Ribbentrop-Molotov agreement of August 1939 for a new partition of Poland should have helped the West to see through Russia, while the latter's invasion of Poland on September 17 of the same year should have opened eyes to Russia's chief purpose, i.e., to the spreading of communism westwards.

Immediately after the Germans attacked her on June 22, 1941, and she had to seek salvation in Western aid, Russia was obliged to conclude agreement (signed on July 30 and December 4, 1941) with the Polish Government, then in London. She announced in this that the German-Soviet treaties for the partition of Poland (of 1939) were considered null and void.

Yet Russia did not for a single moment hold up efforts to undermine the Polish Republic from within and from without, nor cease to lay insistent claim to Poland's eastern provinces. The Western Powers failed at the time to assess the danger facing the whole democratic world, they gave Poland no proper support against Soviet designs, thus opening the way for the Communist westward drive.

It was in October 1943 that Great Britain, the United States, Russia, and China agreed under paragraph 6 of their security declaration drawn up at a conference in Moscow that a Soviet administration would take over Polish territories in measure as war operations proceeded. Here it must be stressed that the Polish Government in London, though an ally in good standing and obviously a party most directly affected, was neither invited to the conference nor informed of this decision.

On Stalin's demand and chiefly with the support of President F. D. Roosevelt, it was definitively decided at the Teheran Conference in November 1943—again without the knowledge of the allied Polish Government in London—that in the allocation of occupation zones, i.e., future spheres of influence, Russia's share would embrace all Poland and Hungary, a large part of Germany, and part of Austria.

It was only later, at the Yalta Conference held on 4–11 February, 1945, that formal agreement was reached between Great Britain, the United States, and the Soviet Union regarding the annexation of nearly half of Poland's territory by Russia who would also have absolute control over the rest of Poland.

It can be safely stated that most of the world perturbations and the menace to security in general undoubtedly stem from this hardly creditable transaction. It decisively helped to shift the balance of power between the two incompatible worlds in favor of the Russian communistic imperialism.

All this could have been avoided but not being so, the Western World had to pay dearly for the subsequent consequences.

KATYN WOOD MASSACRE

As mentioned before, Russia on July 30, 1941, declared the Ribbentrop-Molotov agreement of 1939 null and void and in the same time concluded the treaty with the Polish Government in London, whereby diplomatic relations were resumed. This, however, did not hinder Russia from continuing to prepare Communist administrative and military cadres which were to seize in a proper time all civil and military authority in Poland.

But after 21 months, Soviet Russia broke off (on April 26, 1943) relations with the Polish Government in London as a first step to securing a free hand. The pretext for this unusual step toward an ally in time of war was an exceedingly flimsy one: namely, Poland had requested an investigation into the massacre of several thousands of Polish officers in the Soviet Union, in Katyn Wood near Smolensk.

On April 15, 1943, the Polish Government applied to the International Committee of the Red Cross asking it to appoint a delegation to investigate the case on the spot.

Stalin thereupon wrote personal letters to President Roosevelt and to Mr. Churchill on April 21, 1943, accusing the Germans of this mass murder of Polish officers. The Western Powers ostensibly accepted the Soviet version and, judging by the documents published to date, refrained from alluding to this crime at any major international conference, at Teheran, Yalta, Potsdam, or on any latter occasion.

In the U.S. House of Representatives a resolution was passed on May 18, 1951, whereby a Committee for the Investigation of the Katyn Murder was set up with Hon. RAY J. MADDEN as chairman. Detailed evidence was collected and the committee filed its final report on December 22, 1952, with the following recommendations: (1) that the U.S. President issue instructions to the U.S. Delegate at the United Nations Organization to present the Katyn case to the General Assembly; (2) that the President request that the General Assembly seek action before the International Court of Justice against the U.S.S.R. for committing the massacre; and (3) that the President instruct the U.S. delegation to seek the establishment of a temporary U.N. Commission which would investigate mass murders and crimes against humanity.

Since then, however, nothing has been done. It can be safely stated that the attitude of the Western Powers with regard to the Katyn massacre does not reflect credit upon them nor raise their prestige.

The rupture of diplomatic relations with Poland, because Polish Government requested the International Red Cross to investigate the Katyn massacre, was deemed necessary by Stalin not only for the realization of his underhand plans against that country but also for his longer designs against the whole democratic world.

FOREIGN OCCUPATION OF POLAND

This whole unfriendly attitude of Western Powers toward Poland and disregard of the international law, allowed Stalin to realize his plans. In measure as Germans evacuated Polish soil before the advancing Soviet forces, Stalin handed over the civil administration of Poland to his stooge organization, the so-called "Polish Committee of National Liberation" very soon proclaimed as the government of the country. It cannot be too strongly stressed that this alleged government could not be and was not a Polish government in the legal and constitutional sense. It was nothing but a political tool in the hands of the Kremlin.

The German administration of rump Poland during the occupation (1939–45) was directed by a German governor-general in Cracow. Craftier Communist Russia has camouflaged her occupation of Poland by ruling through "the Government of the Polish People's Republic" in Warsaw but composed for the most part of Communist graduates of the Moscow school. Both systems, of course, can be regarded merely as the administrative organs of a foreign occupation. The only difference, that the German occupation never claimed to be anything else whilst that of the Russians is more skillfully and cunningly devised. Stalin succeeded even to obtain the respectability for his administration in Poland by assuring its legal status upon the international forum. And again, this success will be found to derive from the weakness and imprudence of the representative of Anglo-American policy at the Yalta Conference. Thus, Poland has been given, against her will, the status of a Russian satellite.

CONSTITUTIONAL GOVERNMENT OF POLAND—IN EXILE

In virtue of the Polish constitution and, hence, of the international law, there exists the legal and constitutional Polish Government (in exile) in London, England. It works and acts abroad for the reestablishment of Poland's freedom and independence. Realizing that in our times the liberation of Poland has to be based upon a broader scheme which would help other eastern-central European nations to regain their freedom, the Polish Government (in exile) deems that the following points obviously merit an examination: (The below described plan has been repeatedly presented to the Governments of Western democracies by the Polish Government in exile since October 1955; however there has been no favorable reaction at this time.)

1. It is an essential condition for security in Europe and (owing to this continent's key position) to the whole world to establish such a state of affairs that could eliminate or at least seriously hinder any direct clash of the war potentials. This could be attained by linking together the countries of Europe within a United States of Europe. Until nations of Europe become ripe for this, it is necessary to seek some intermediate solution.

2. The solution of this problem should be sought in the creation of a neutral zone between East and West. It would embrace countries neighboring with Russia and now subjected by her: Estonia, Latvia, Lithuania, Poland, Czechoslovakia, Hungary, and Rumania. The setting up of such a neutral zone on sound political, economic and military foundations would produce a favorable basis for a durable arrangement of peaceful relations in Europe.

3. This neutral zone in east-central Europe should be created on the basis of an accord concluded on the one hand by all the member-countries as sovereign states, free of any foreign military occupation and foreign-imposed governments, and on the other hand, by all the powers interested in the maintenance of world peace. The countries of the neutral zone should bind themselves not to join any warlike blocs and not to conclude any military alliances with countries outside the neutral zone. The powers not belonging to the neutral zone and interested in maintaining world peace, including a united Germany and Soviet Russia, would jointly guarantee the frontiers of the neutral zone countries so that, in case of aggression from East or West, all the guarantors would automatically become the allies of the neutral-zone lands in defense against such an aggression. Such a situation would undoubtedly become an element arresting any kind of aggressive design from whichever direction it may come.

4. The neutral zone so conceived would not act as a barrier separating East from West, but would preeminently serve as an intermediary and liaison between them in the ideological, cultural and economic fields. Those member countries of the neutral zone who have for centuries past been so wronged by both Russia and Germany, would gradually lose memory of this painful past, the bitterness felt toward these neighbors would die out little by little and could in the future become transformed into a loyal international collaboration based on sincere, natural amity.

5. The relations between the member-states of the neutral zone in east-central Europe would best be based on a sui generis confederate agreement. Such a union of independent states, adequately armed for the defense of its neutrality and guaranteed by the other powers, would provide full assurance for the maintenance of peace in Europe and hence facilitate this in the whole world. Only under such conditions would the question of disarmament acquire current significance, and only then could the huge sums now uneconomically expanded be devoted to the good of humanity.

6. The problem of the unification of Germany can really be reduced to that of liberation of East Germany from Soviet occupation. Once such a zone of neutral countries is created between Russia and Germany, with East Germany west of this zone, unification of the two German republics would probably be immediate and automatic. Hence, it can be said that the problem of the unification of Germany is a function of the general problem of security.

7. In order to accomplish this, the Western Powers should regain the political initiative at all costs. Under the present circumstances, this could be achieved solely by presenting Russia with the demand for a far-reaching revision of the situation she has brought about by dint of violence, underhand methods and the violation of international agreements. Russia's acts to the plain detriment of the weaker nations should be disavowed and denounced forthwith. It is necessary firmly to demand the immediate and unconditional liberation of the captive nations, and the righting of all the wrongs inflicted upon them. But again at this point it should be cited that the Western democracies failed (a) to guarantee the existing frontiers between Germany and Poland (b) to initiate talks about the organization of eastern-central Europe, thus giving Mr. Khrushchev an opportunity to bring up these two problems at the U.N. General Assembly in September 1960 in such a way as to further his own interests. The hypocritical and brutal ideology of the Communist world should be countered by a clearly formulated, broadly conceived ideology based upon the moral principle of the truth that equal rights are due both to strong and to weak nations.

It is worthwhile to mention that the recent "14 points accord" of Gov. N. A. Rockefeller and Vice President Richard Nixon stressed the necessity "of leading and inspiring the formation in all great regions of the free world of confederations, large enough and strong enough to meet modern problems and challenges," and suggested that "we [the United States] should promptly lead toward the formation of such confederations in the North Atlantic Community and in the Western Hemisphere."

In applauding this idea, such remarks seem to be proper: the more precise and definite are the plans of the Western democracies, the greater the determination they show in the realization of these plans, the greater their pressure toward this end and the greater their solidarity in such action, the sooner and the more certainly will it be possible to establish a system of relations that will enable mankind to enter upon the road of lasting peaceful development, and assure Europe the possibility of real unification.

And this must be done—before it is too late. A two-power world can never be at peace.

The John Birch Society

EXTENSION OF REMARKS
OF
HON. MILTON R. YOUNG
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Tuesday, April 18, 1961

Mr. YOUNG of North Dakota. Mr. President, one of the best editorials that has come to my attention with reference to Robert Welch and the John Birch Society is one appearing in the April 17 issue of Newsweek written by its contributing editor, Raymond Moley entitled "It Is Not Conservatism."

Mr. Moley present a powerful argument to every thinking American. Mr. President, I ask unanimous consent to

have this editorial printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IT IS NOT CONSERVATISM

(By Raymond Moley)

Five weeks ago I noted in this space the rapid growth of conservative groups on many college campuses. That manifestation of dissent from prevailing liberal thinking, together with the evidence that conservatism is growing among older people as well, is a wholesome sign. It offers a promise that our two-party system and our national elections will be real contests of opposing political philosophies. And the fact that so many young people are in the movement indicates that the coming generation realizes more than ever the burdens and debts which it will inherit from the altogether too spendthrift governments we have had since the war.

The perils that threaten this growth of conservatism will come, not from its liberal opposition but from those who in the name of conservatism would bring discredit by igniting passions against their neighbors, besmirching good Americans as friends and dupes of communism, and by adopting methods of organization which should be alien in this country. One such threat is the John Birch Society and the utterances and activities of its founder, Robert Welch, and some of the leaders in the group.

I have watched the growth of this society with the deepest regret and misgivings especially because so many sincere people have become members of it and risk their good names through association with its more radical spokesmen. Those who are devoted to sound conservative principles owe it to themselves and their true objectives to repudiate the John Birch Society and methods as I do here.

COMMUNISM AND CRIME

As I have noted the writings of Robert Welch over the past decade I have seen the transformation of a man who in the beginning spoke out against a certain blindness in our foreign policies to the real nature of the international Communist conspiracy and the danger embodied in the presence in our Government and society of elements of communism. Well before Welch appeared on the scene I advocated in this space and before a congressional committee the outlawing of the Communist party in the United States. That objective has substantially been accomplished although it must be recognized that elements of that conspiracy still lurk in our midst. It is the responsibility of our Government and indeed of all of us to expose and eliminate such elements by due process of law, just as we would deal with the criminally inclined elements of other sorts.

But opposition to communism as a criminal activity is not confined solely to conservatives. Individuals of all shades of ideology share the conservative's fear of communism. In fact, it was to a degree due to the warnings of American socialists that this Nation was sharply made aware of the danger. Because Norman Thomas and I agree that communism is our enemy at home and abroad does not make us ideological brothers.

UNFORTUNATE METHODS

The evidence is now before us through the enterprise of the press and the statements of Members of Congress that the John Birch Society has so concentrated its attention on communism and has become so vehement in its pursuit of that one issue that it has adopted methods and has made statements which must bring it into general disrepute. Specifically, Americans do not like the terms "monolithic" or "authoritarian" as applied to any American group or society. They resent loose and inaccurate name calling especially when applied to Presidents and other high officials who are charged by the people with responsibility for their protection. They don't like the idea of "infiltrating" various worthy organizations in our society.

I need not elaborate upon these facts. They were documented by Senator MILTON YOUNG of North Dakota in the CONGRESSIONAL RECORD of March 20.

For a good many years I have specified those mistaken policies of Government under the name liberal which tend to limit the liberty of the individual, weaken the fiber of America and its institutions, and endanger national solvency. A belief in dynamic growth through individual enterprise constitutes a true conservatism. It is endangered by those who assume the livery of conservatism, but adopt radical methods.

Peace Corps Relationship With the Selective Service System Explained by Lt. Gen. Lewis B. Hershey, Director of the Selective Service System

EXTENSION OF REMARKS

OF

HON. RICHARD BOLLING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1961

Mr. BOLLING. Mr. Speaker, the following article appeared on page 1 of the April 1961 issue of Selective Service, the official publication of the Selective Service System:

PEACE CORPS RELATIONSHIP WITH SELECTIVE SERVICE SYSTEM EXPLAINED

(By Lt. Gen. Lewis B. Hershey, Director, Selective Service System)

The Peace Corps has been established by Executive order of the President. Legislation has been requested to continue this organization. The activities of the Peace Corps have been covered rather completely by the press, radio, and television. Its relationship with the Selective Service System has been indicated but a statement of this relationship seems advisable.

The Universal Military Training and Service Act, as amended, is flexible enough to provide deferment for members of the Peace Corps without amendment of any kind. In other words the relationship of the Selective Service System with registrants who become members of the Peace Corps can be handled administratively.

The power to defer registrants who perform functions in the national health, safety, or interest now exists. The establishment and operation of the Peace Corps is in the national interest. So the classification of registrants in the Peace Corps can be handled as any other registrant engaged in activities in the national health, safety, or interest. They will, of course, enjoy the right to appeal shared by all registrants of the Selective Service System.

These statements presuppose the continuance of the present situation of the United States in relations with other nations of the world.

The question has been raised as to the status of registrants who enroll in the Peace Corps, after their return from this assignment. This requires the assumption as to the situation of this Nation in the world, the age of the registrant when he returns, the physical condition of the registrant with reference to his acceptability for military service, his marital status, and the regulations which apply in existence at the time of his release from the Peace Corps, and whether or not the registrant on his return from service with the Peace Corps engages in an activity which permits him to be deferred in the national health, safety, or interest.

The fact that the registrant has been a member of the Peace Corps will not prevent him from qualifying for further deferment, the same as any other registrant who is engaged in activities vital to the national health, safety, or interest.

New Frontier of Freedom and Equality

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 18, 1961

Mr. HUMPHREY. Mr. President, I ask unanimous consent that a declaration by the American Religious Town Hall Meeting, Inc., calling on the President of the United States to proclaim a "new national frontier of freedom and equality," be printed in the Appendix of the RECORD.

There being no objection, the declaration was ordered to be printed in the RECORD, as follows:

A DECLARATION BY THE AMERICAN RELIGIOUS TOWN HALL MEETING, INC., CALLING ON THE PRESIDENT OF THE UNITED STATES TO PROCLAIM A "NEW FRONTIER OF FREEDOM," A NATIONAL JUBILEE COMMEMORATING THE INALIENABLE RIGHTS OF ALL MEN DURING THE 100TH ANNIVERSARY OF PRESIDENT LINCOLN'S EMANCIPATION PROCLAMATION

At this time when our liberal-democratic society is confronted by dangerous enemies abroad whose intention is to destroy our way of life and to dominate the course of human history, it well behooves America to look closely to the springs of her culture, to the sources of her liberty. Every society expresses its highest aspirations, its conception of civilized man and his destiny, and its hopes for the future, in the idealism of its founders. These goals, aspirations, hopes and ideals can be called the mystique of the society; ours has been boldly expressed in great documents, stirring orations and beautiful poetry that has warmed the hearts of millions. We all known only too well that it is difficult to realize all these social goals in actual practice; nonetheless, a society is judged by the gap that exists between the ideals of constitutional government it proclaims, and the political reality of everyday life. It is on this level that our enemies attack us in the forum of the world; they compare our lofty idealism with some of the sordid problems that mar our everyday life. It is to be noted also that they compare our problems, particularly the questions of civil equality and economic opportunity, with the idealism, that is, the mystiques of communism: They carefully avoid comparing the realities of social life in the United States of America with that of the Union of Soviet Socialist Republics.

Our liberal-democratic political idealism has been proclaimed for the world to hear by Franklin, Paine, Jefferson, Hamilton, Adams, Jackson, and a host of other statesmen and philosophers who assisted in the founding of the Republic. That mystique

was reaffirmed 100 years ago during the great crisis that threatened to destroy the Nation. On September 22, 1862, President Lincoln issued the Emancipation Proclamation freeing the slaves from the bondage that had long been a glaring gap between the lofty idealism of America as the land of the free and the actual reality of everyday life in the young Republic. It is small wonder that in the great world beyond our shores Abraham Lincoln is the best known President of the 19th century; he was the man who reaffirmed our basic American belief in the equality of mankind and man's natural right to freedom.

In our own days, 100 years after Lincoln's stirring proclamation, there still exists a glaring gap between the political idealism we profess and the reality of American society. In defiance of clear and precise orders from the highest court in the land, a large segment of our population is still denied basic civil liberties and rights, thereby creating a scandal in the world and giving our enemies ammunition to use against us. Anyone who has traveled beyond our frontiers, well knows that the first question a foreigner asks about the United States of America deals with the problem of discrimination. And we do not need to travel abroad to know that we have a desperate need to strengthen our heritage and to bolster our self-respect as a nation by closing the gap between our lofty aspirations and the political reality that so humiliates us. Our national mystique is as lofty and noble as any ever conceived by any people, but we must live up to these ideals if we are to be true to our destiny.

The American Religious Town Hall of the Air represents a program of action committed to the proposition that Americans can best be educated to fulfill their responsibilities if they can have and hear free and frank discussions of the issues before the Nation. As an interreligious institution, including within its scope all facets of religious life in our land, the Religious Town Hall of the Air has brought to the radio and television audiences discussions of all sorts of religious, political, social, and economic issues, with emphasis upon the moral problems that are involved, and with ample opportunity for all points of view to ventilate opinions. We believe that in this program we are helping to strengthen the determination of our fellow citizens to defend and protect the ideals of civil and religious freedoms of our Nation. With this in mind we would like to suggest that it would be fitting for the Nation to pause for a review of the problems of equal rights for all citizens during the 100th anniversary of the Emancipation Proclamation.

Therefore, we of the Religious Town Hall of the Air urge other Americans interested in maintaining the moral tone of our Nation to join us in an appeal to the President of the United States for the proclamation of a new national frontier of freedom and equality during the centenary of the Emancipation Proclamation. Let us join together to expel the remnants of intolerance, tyranny and oppression, and let us renew our faith in our national mystique that honors liberty, equality, and opportunity for all by declaring the period from July 4 to September 22, 1962 as a national jubilee commemorating the liberation of the inalienable rights of all men.

Bishop A. A. Leiske of the Seventh-day Adventist Church and President of the American Religious Town Hall Meeting, Inc.; Bishop T. Otto Nall, Minnesota Methodist Conference and Vice President of the American Religious Town Hall Meeting, Inc.; Donald G. Paterson, Secretary; Martin E. Kriesel, Treasurer; Jane P. Power; Violet G. Culbertson; James J. Daiglish; Doreen Wendland.

"Hope" Comes to Indonesia

EXTENSION OF REMARKS
OF
HON. WILLIAM S. MAILLIARD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1961

Mr. MAILLIARD. Mr. Speaker, I know many of my colleagues share my great personal interest in project Hope. Accordingly, I call their attention to the following article appearing in the San Francisco News-Call Bulletin on April 1, 1961:

"HOPE" COMES TO INDONESIA—NATIVES HAIL CHAPLAIN OF HOSPITAL SHIP

(By the Reverend William P. Anna, Jr., rector of Zion parish, diocese of Washington)

(The Reverend William P. Anna, Jr., an Episcopal priest, is Protestant chaplain aboard the steamship *Hope*. This San Francisco-based hospital ship, financed by public contributions and Government help, is spending a year in the South Seas. It treats native patients aboard and ashore; its staff teaches nurses and doctors. How the *Hope* has become a symbol of international hope is told in Father Anna's article.)

ABOARD SS "HOPE."—The first greeting I got in Indonesia was from a 10-year-old boy.

The *Hope* had been at sea almost 3 weeks out from Honolulu. It was Sunday. She was docking at Balikpappan in Borneo, during the 7 o'clock communion service.

After the service, I went ashore. As I stepped onto the dock, the boy came up. I greeted him in what I believed was idomatic Indonesian we had studied evenings on the voyage. "Salamat pagi," I said. "Good morning."

In very intelligible English, the lad replied: "Good morning, Pastor. Thank you very much. Welcome to Indonesia. We are glad to see you. We like to practice our American."

The language barrier, I discovered, is not at all impossible. Ours is studied in their high schools and universities, their second language.

Indonesian contains no conjugation or declensions. Man is "orang"; men, "orang-orang."

By the time we reached Djakarta, the ship's hospital was in order, ready for business.

Twenty nurses from the training center at Bandoeng were with us, and 30 other nurses are with us for 6 months. They will form the nucleus of the teaching staff for the new Ibu Sukarno Hospital in Djakarta, where a nursing academy will be established.

I went out to the theological seminary to talk with the student body. The faculty is American, Dutch, Filipino and Indonesian.

I learned quickly, I hope, never to preach to them nor lecture them. Just answer their questions. And the questions about the *Hope* and its purpose were sharp.

"Tell us about your church in America?" they asked. "Tell us about your home and family?" In the end, I told them almost every detail, even about our dogs.

"We like you," they said. "We like American people. We like America. We do not understand American policy."

I certainly learned more about Indonesia than I have been able to tell them about America.

The most unexpected call of the first half of our tour was Sumbawa, a primitive and sparsely populated island, but seemingly rich in resources.

We stopped in a well-protected anchorage to go ashore.

There is only one doctor on the whole island, a German from Stuttgart who came here after his retirement to spend the rest of his medical career working in a place that otherwise would be without a physician.

Our work was well organized. Soon the hospital was full. A clinic, set up ashore in a warehouse, operated at full capacity. Ninety-eight operations were performed by our surgeons in 2 weeks. A German surgeon aboard did a fantastic number of cataract operations, and for these he is especially well qualified.

The gratitude of one old man surpassed anything I have seen, and it was rather a symbol of what makes our medical project real.

He came on the first day. Constantly, he asked, "Am I next?" All he was praying for was to be able to see the outline of his family.

I was going down the aisle in the ward just before he was to go to the operating room. He pulled my shirt. "They say I am next," he said; and they rolled him off the cart, rejoicing.

The last day in Sumbawa they had a final reception and lunch for the staff.

There he was, standing at the edge of the crowd, and repeating again and again, "Thank you. Thank you. Thank you."

A Responsible Study To Advance Freedom Against Communism

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Tuesday, April 18, 1961

Mr. PROXMIRE. Mr. President, the problem of alerting the American people to the significance of freedom and the danger of communism is far too important to be left to the crackpots.

The fact is that communism is on the march in the world. Freedom has been on the defensive. Too few Americans care deeply about freedom. The oppressive nature of communism is far too little understood.

For these reasons, it was heartening to read of a responsible and constructive attempt to meet this need. An article in a recent issue of the Milwaukee Journal reports on the efforts of a group sponsored by corporations, and several foundations, to do this. Educational and Federal Government leaders met and worked with this group.

I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IMPROVED STUDY OF REDS IS URGED—EDUCATORS, MILITARY CALL INSTRUCTION ON COMMUNISM SAFETY MEASURE FOR UNITED STATES

(By Edmund B. Lambeth)

CHICAGO, ILL.—An organized effort to expand and improve instruction about communism in the Nation's schools and colleges was urged Wednesday by more than 700 participants in a national military, industrial, and educational conference.

The participants approved a resolution which, although carefully worded, expressed an urgency that has characterized the 3 days of talks here on the struggle between communism and the free world.

The conference was a project of the Institute for American Strategy, a nonpartisan, privately managed organization financed by the contributions of more than 100 corporations and several foundations. Cooperating with the institute were the Department of Health, Education, and Welfare and groups and individuals from industry, education, and Government.

MAIN NEED SPELLED OUT

The resolution said that the main need was to provide authoritative, competent, and objective advice on the adequacy of existing text, reference, and source materials for courses on communism on all educational levels.

The group refrained from making specific recommendations on courses. However, it said that "an examination of existing programs shows a compelling need to strengthen school curriculums."

Instrumental in preparing the resolution were William Yandell Elliott, Harvard University professor and former consultant to the State Department and National Security Council, and Msgr. William E. McManus, superintendent of schools of the Catholic archdiocese of Chicago. Monsignor McManus headed the conference's educational advisory committee and Elliott its program development committee.

TWO DANGERS CITED

The resolution urged that two dangers be avoided.

"First we must not be frightened into using the educational and political methods of the enemy. Second, we must not lose, in our concern with communism, the balance of science, the humanities, and the cultural traditions which is the true strength of freedom," the resolution said.

Stricken from the first draft was a recommendation that a specific organization with a board of directors be set up to promote improvement of courses on communism.

It was understood that the committees, after some disagreement, decided that such a step should come from educational groups themselves.

At the closing session, Elliott said: "This must grow out of the grassroots of the educational community itself, otherwise it will not be accepted."

In urging support for "realistic teaching of the history and policies of communism," the resolution declared: "This means protecting our constitutional system against false friends as well as open or covert enemies. It means assisting our youth as well as our mature citizens to detect and to protect themselves against extremists at both ends of the spectrum."

Elliott said he did not think that the conference's action should or would "give impetus to crackpots all over the country."

There were unresolved differences of opinion among the speakers at the conference but several broad themes were common to many of their remarks. Among them were:

Many Americans, including otherwise well informed community leaders, do not understand the scope and depth of the Communist effort around the world and they do not yet have the degree of understanding needed to respond effectively.

The United States must find a way to counteract, with its own message, the Soviet propaganda and cultural offensive aimed at convincing the uncommitted nations that communism is the shortcut answer to their problems.

Communists in this country have not made deep inroads in American education but their efforts to do so are continuing.

Individual responsibility and free choice must be increasingly emphasized in an era when they are being challenged by bigness in government, business, and labor.

More Americans should be able to articulate what they believe in and why.

Housing Loans Made Under Title V of the Housing Act of 1949

EXTENSION OF REMARKS
OF
HON. WINFIELD K. DENTON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1961

Mr. DENTON. Mr. Speaker, farm housing loans made under title V of the Housing Act of 1949 are used to finance the construction, alteration, repair, or modernization of farm homes and service buildings. Since the program started in 1949, 44,000 families have received loans totaling $300 million.

There is an extensive and continuing need for this type of credit service to farmowners who are not in a position to improve their homes and farm buildings with their own resources or with a loan from a private or cooperative credit source. The farm housing program gives such families an opportunity to acquire an adequate home and necessary farm buildings by making available loans at favorable rates and terms. Farm housing loans bear 4 percent interest and may be repaid within periods up to 33 years.

The rate at which funds are being obligated and applications being received indicates the rate of obligation will increase substantially during the coming spring months. As of February 28, 1961, 4,189 loans, totaling $31,657,671, had been obligated. New obligations currently exceed $1 million a week and are soon expected to reach several million dollars a week. Applications on hand as of February 28, 1961, were close to 10,000, which is a third more than a year ago. Almost 1,500 applications were received during February and this number was 45 percent greater than the number received during February last year.

Farm housing loans are made throughout the rural areas of the United States. The loans provide farm families with an opportunity to acquire an adequate house and efficient service buildings. The credit extended also provides job opportunities for carpenters, electricians, and masons and increases the volume of business of building supply dealers and related service industries.

Most of the farm housing funds have been used for dwelling purposes. Last year, 70 percent of the funds was spent by borrowers for new dwellings and 10 percent for dwelling modernization and repair, such as adding a bath and sewage disposal system, central heating, and kitchen modernization. The remaining 20 percent was used for construction and modernization of farm service buildings and water systems.

The average cost of a new dwelling during the 1960 fiscal year was about $9,800. This represented an increase from about $8,000 4 years ago.

Study Finds Lag in U.S. Shipbuilding Methods—Modernization Is Necessary, Facts Need To Be Determined

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES

Tuesday, April 18, 1961

Mr. RANDOLPH. Mr. President, the New York Herald Tribune of March 18, 1961, carried an article by the financial writer, Allen M. Smythe, which refers to a recent informal study by our Navy officials of U.S. shipbuilding methods. Our Navy experts apparently concurred with the findings of an official British report on world shipbuilding which states that Germany, Japan and Sweden lead the world in shipbuilding techniques, with Holland and Norway close behind.

The writer quotes the pointed comment of Adm. Ralph K. James, Chief of the Bureau of Ships that, "plans for new war vessels require that American shipyards lead, not lag, in shipbuilding." Despite this fact, we witness a constant spiral in the cost of American warships—$109 million for a Polaris-type submarine and $285 million for an atomic aircraft carrier—due perhaps in part to the lag in shipbuilding technology.

It would not seem irrelevant to suggest, Mr. President, that the Defense Department, the Department of Commerce, and the Maritime Commission should investigate the accuracy of the official British report and determine the part that the lack of modernization of American shipyards has played in the mounting costs of our naval and commercial vessels.

In order that Members of this body may inform themselves more adequately on this problem, I ask unanimous consent that the Herald Tribune article be published in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STUDY FINDS UNITED STATES LAGGING IN SHIPBUILDING METHODS

(By Allen M. Smythe)

A recent informal study just completed by high Navy officials of American shipbuilding methods has revealed "a very disturbing" lack of the latest modern techniques that are needed to construct the future nuclear surface naval vessels and deep-diving submarines.

The Navy technical experts agree with a recent British official report that Germany, Japan and Sweden lead the world in modern shipbuilding methods. Norway and Holland are close behind.

The British report did not list the United States as being ahead in any category. However, the other countries are admitted to be

well in advance in equipment for metal-shaping, in welding equipment and in modern methods of ship construction.

ADMIRAL'S COMMENT

Adm. Ralph K. James, Chief of the Bureau of Ships, said: "I dislike to learn that the shipyards of smaller and less wealthy countries are ahead in metallurgical research, marine engineering, installed facilities and productivity. Plans for new war vessels require that American shipyards lead, not lag, in shipbuilding progress."

Other Navy officials revealed that for over a year the Navy has been urging private shipyards to modernize their plants in order to reduce costs and efficiently construct the latest designs of submarines and surface vessels.

Administration and congressional leaders have been concerned about the increasing costs of naval vessels—$109 million for a Polaris-type submarine and $285 million for an atomic aircraft carrier, for example.

The British report, issued by the Department of Scientific and Industrial Research, emphasized costs of commercial ship construction. It estimated the world production of ships during the next 5 years could fall to a quarter of the present level (8,300,000 tons) before it begins to recover.

LABOR COSTS CHEAPER

At a rough estimate, labor costs in 1959 were 20 percent cheaper in Germany and 45 percent cheaper in Japan, but 40 percent dearer in Sweden than in England. Sweden has been securing her share of the market because Swedish yards were able to offset higher labor and materiel costs against substantially higher productivity. The average time in months to build a ship in the period 1957 to 1959 were: Britain, 19; Germany, 10; Sweden, 9, and Japan, 8.

Against the background of excess shipbuilding capacity in the world, and the probable contraction in British shipyard production over the next few years, the report reaches these conclusions:

1. The world shipbuilding industry is facing a major and probably prolonged recession.

2. There is no indication that the United Kingdom shipbuilding industry has on balance any marked technical or economic advantage over its major foreign competitors, apart from its large home market.

3. The total effort at present devoted to research and development in the field of shipbuilding and marine propulsion is insufficient in relation to the serious problems now facing the industry.

4. In particular, almost no organized research has hitherto been applied to the industry's production and management problems with the object of increasing the productivity of labor and capital and reducing costs.

5. While adequate effort is probably being devoted to problems of hull resistance and propeller design, the development of propulsion installations is handicapped by the organizational structure of the industries producing propulsion units and auxiliaries, and in consequence by the insufficient use of available research facilities.

Many Navy officials believe these conclusions apply equally well to the U.S. shipbuilding industry.

Mexico: Our Troubled Neighbor

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, April 18, 1961

Mr. KEATING. Mr. President, Newsday's Jack Altshul recently spent a month in Mexico. He has written an excellent account of his experiences and his analysis of the Mexican political scene in a series for Newsday, the Long Island publication. Sympathy for Castro is greater in Mexico than the United States likes to admit. U.S. policies have not kept up with the Mexican ambition for greater economic progress and national development. To combat the call for revolution from Moscow, the United States must press its case for peaceful evolution in vivid and forceful terms.

The program first enunciated by President Eisenhower and authorized in the act of Bogotá is an excellent beginning for a policy which I hope the present administration will practice as well as preach.

As former Ambassador to Mexico, Robert C. Hill, who distinguished himself on the football field as well as at the conference table, pointed out "We have to approach Latin America as partners not as masters." We must work out and carry out with them the programs which are necessary to raise the standards of living and literacy in Latin American nations.

Mr. President, in order that this perceptive analysis may come to the attention of a wide national audience and receive the careful study it deserves, I ask unanimous consent to have printed two articles by Jack Altshul in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

MEXICO: OUR TROUBLED NEIGHBOR

(Is Mexico ready to follow Cuba and become a trouble spot right at our border? Newsday's Jack Altshul spent a month touring our neighbor to the south, observing and speaking to people in all walks of life. Here is his report in this series of articles beginning today.)

(By Jack Altshul)

The setting might have been Moscow or Peiping or Havana. Gathered in conclave were several hundred hard core Communists and their sympathizers from farflung corners of the world. They billed themselves as a World Peace Congress, extolled Fidel Castrol and excoriated the United States. The time was 3 weeks ago. The place, Mexico City—capital of the nation that shares 1,600 miles of border with the United States.

It was no coincidence that the 5-day conference had selected Mexico as its locale. For the past year it has been the scene of anti-American demonstrations, an unusual series of leftist statements by Government leaders and a gigantic propaganda and espionage effort by the Soviet Union.

Such a conference poses the question:

Is Mexico becoming the soft underbelly of the United States in its fight against Soviet penetration of the Western Hemisphere?

A tour of the country can produce a picture as confusing as the complexities of Mexican political life, despite interviews and quiet chats with Government officials. American embassy representatives, businessmen of both countries, Communists, campesinos on agrarian reform farms, university students, and man-on-the-street types.

Their opinions ranged from forebodings that Mexico may follow Cuba into the Moscow camp to predictions that President Adolfo Lopez Mateos is leading his country on a continuing course of stability and prosperity that will make it impervious to Soviet blandishments.

MEXICANIZATION PUSHED

The most objective evaluation, shared by a number of U.S. Embassy attachés, is that most Mexicans fear and abhor Soviet-style communism but the country still remains vulnerable to its salesmen. The vulnerability exists because:

1. The private enterprise system that has sparked the last 15 years of Mexico's prosperous industrial revolution has suddenly run into roadblocks from an administration that feels it politically expedient to make concessions to the left.

2. Mexico's presently sound economic structure could collapse if the Government insists on injecting itself into the business picture.

3. Should this happen, the Soviet Union will have built up a fifth column that may be strong enough to exploit resulting chaotic conditions.

In the past year, American investments in Mexico have dropped sharply as the Government moved in to nationalize the light and power and movie industries, took over a number of businesses and pushed a program to force 'Mexicanization" (Mexican majority control) of all new companies. Three previous administrations had adopted a comparative handsoff policy toward the private enterprise system and it was during their tenure that the nation made its greatest economic advances.

The problem that will confront the still-to-be appointed U.S. Ambassador to Mexico is whether Lopez Mateos' policies signify the end of a 15-year-old mutual interest past—a pact most observers agree is largely responsible for Mexico's current prosperity.

Suspicions that this might be the case were aroused during 1960 because Lopez Mateos' veer toward increased state socialism coincided with stepped-up Soviet propaganda efforts selling the Castro revolution as the ideal for which Mexicans should strive.

There were other worrisome signs.

In August, Mexico University students staged two anti-American demonstrations in which they attempted to burn the American flag and stone the glass-fronted U.S. Embassy building on Mexico City's fashionable Paseo de la Reforma. The demonstrations capped off a long series of leftist statements from Government leaders. Congressional Leader Emilio Sanchez Piedras reaffirmed Mexico's solidarity with Cuba. President Lopez Mateos defined his administration's stand as being to the "extreme left within the constitution."

That Lopez Mateos' definition can be interpreted as a tipoff that he is ideologically sympathetic to communism is given little credence even in politically conservative quarters. Most observers believe he had to make the traditional obeisance to "izquierda" (the left) because there are powerful political leaders on that side of the fence who do not believe he is advancing fast enough the cause of Mexico's social revolution.

Chief among these is fellow-traveling Lazaro Cardenas, President of Mexico between 1934 and 1940 and the leading figure at the recently concluded "peace congress." Cardenas is retired from politics but many believe he would like to return and that he has been chafing for 20 years at the conservative direction taken by the three Presidents who succeeded him and preceded Lopez Mateos.

It was Cardenas who expropriated United States and British oil holdings in 1938, a historic move that gave him Lincolnesque stature among his people. It was also Cardenas who distributed more land among the peasants than any President before or since. And it is Cardenas, today, who sings the praises of Fidel Castro's Cuba and whose voice, observers feel, is forcing Lopez Mateos on an increasingly socialistic course. They regard, for instance, Lopez Mateos' nationalization of the light and power industry as an effort to undercut Cardenas and still his voice.

UNITED STATES IS DISTRUSTED

When the President announced on September 1 that he had purchased the foreign-owned Mexican Power & Light Co. to complete the nationalization of the electric industry, he declared a national holiday and watched schoolchildren march with yellow armbands that proclaimed "Electricity for the Mexicans."

Since then he has also nationalized the movie industry by purchasing the two leading movie chains in the country, and pushed the Mexicanization policy which makes it difficult for a foreign company to do business unless it gives up majority control to Mexican capital.

Both moves received mixed reaction. U.S. businessmen expressed nervousness and their jitters were reflected in a sharp dropoff of investments. It was rumored that one U.S. firm had canceled a $25 million industrial development. On the other hand, Mexicans generally saluted Lopez Mateos' policies if for no other reason than their president was showing his independence of the United States.

To the average Mexican, the United States presents an image of a rich, patronizing neighbor who swindled him out of most of his property and is still seeking to dominate him. There is some historical justification for the image. Through war and power politics the United States was able to acquire more than half of Mexico's territory between 1836 and 1948. It is hard for them to forget that Texas, New Mexico, Arizona and California once belonged to Mexico.

The Mexican also remembers that as recently as 1910, Americans owned nearly half the total wealth of Mexico and that even as liberal a President as Woodrow Wilson ordered American troops into Vera Cruz in 1917. Only 22 years ago a group of American oil men, in effect, disputed the Mexican Government's right to rule its own country.

What most Mexicans are unwilling to accept and what Lopez Mateos feels would be political suicide to concede is that there has been change in the breed of American businessmen from circa 1910 to those of today. It is not a popular concept in Mexico to give credit to the American capitalist who crossed the border with his know-how after World War II and sparked an industrial revolution that has brought the country its present prosperity.

It took an era of mutual interest with the United States for Mexico to lift itself up from an agrarian economy in which the overwhelming majority of its people lived on bare subsistence levels. The era really began in 1943 when the late President Roosevelt came to Monterrey for a meeting with Cardenas' successor, Manuel Avila Camacho. F.D.R. needed Mexican minerals for the war effort and he got it in exchange for an agreement to help rehabilitate the nation's broken-down railway system. He also agreed to finance a program for a highly expanded electropower capacity and to accelerate the development of certain basic industries.

This opened the door for the industrial revolution which followed World War II and hundreds of American companies started Mexican branches to take advantage of the emergence of a middle class and new-found buying power. The revolution went on through the conservative administrations of Luis Miguel Aleman and Adolfo Ruiz Cortines.

Today Mexico has reached its "takeoff stage." The capital, Mexico City, is a bustling metropolis of 5 million population, second only to New York in the Western Hemisphere. Monterrey and Guadalajara, the next two industrial giants, have trebled their population since 1940. Mexico can look back on its last 15 years as the most prosperous in its history and can count among its gains an increase of 5 times its national income and 10 times its production in manufacturing, oil, steel, and iron since 1940.

AMERICAN INVEST $1 BILLION

These giant steps, of course, were accomplished under a system of private enterprise aided substantially by investments from American companies that now have a stake in Mexico totaling well over $1 billion. Of the estimated 500 American companies doing business in Mexico today, almost 80 percent have come in since 1945.

But in less than 12 months the system that has bred prosperity is undergoing refinements of a nature that prompted even Mexican businessmen last November to openly question the Government's attitude toward private enterprise.

They received President Lopez Mateos' answer a month later when he told newsmen: "Private capital has been using skates and we are traveling by motorcycle. You can see anywhere you go that the works of the official sector are much more impressive than those of the private sector."

The President's glowing assessment of Government initiative is disputed in many quarters today by knowledgeable people who have been dealing with and in Mexico for years.

An American lawyer, who has been in Mexico for 42 years and whose friends are among the most powerful in the nation, said: "The President is talking rubbish when he brags about government enterprise. Every nationalization program has ended in dismal failure. The Federal railway system loses from 200 million to 600 million pesos a year, service is bad, sabotage frequent, and wrecks an almost daily occurrence. Carelessness is rampant and the Government's authority over workers to do a good job nonexistent. It always has to worry that regulatory measures will have a bad political reaction.

"The Government makes proud statements about the success of the oil industry since it was taken over by Cardenas in 1938. The fact of the matter is that 80 percent of Mexico's oil production is dependent on one field in Poza Rica, which was developed 40 years ago by private enterprise. It is showing signs of petering out and, since it is a coastal field, engineers are convinced that drills will hit salt water any time now.

"When they purchased the light and power companies, they did it by refusing to allow them to raise their rates by as much as 6 percent, although labor and other costs had risen many times more than that. Now that the Government owns it, they find that they'll have to raise the rates 50 percent and even then they won't have enough capital to keep going. Can you imagine the howl when the Mexican people finally get the bill?"

A high-ranking official in the administration of President Luis Miguel Aleman, under whom Mexico made its greatest postwar gains, is also disenchanted with the extent of government participation in private enterprises.

"There is a difference," he said, "between Mexico building highways, dams, and other projects for the public good and getting itself in businesses which it takes experts, not political ministers to run. The Government has taken over about 350 companies, which is a far cry from its original intention of confining itself to basic industry. What is basic about the movie industry for instance?"

The former officeholder lashed out, too, at what he termed "nepotism and venality" in the present administration.

As an example he points to the position now held by Mariano Lopez Mateos, the president's brother. "For 22 years, this man was a ticket-taker for the federal railway system. Now suddenly he is on his way to becoming a millionaire because he has been put in charge of the government warehouse and storage company that imports basic foodstuffs we don't grow in our own country. And he is only one example. Every time the government takes over a business, somebody close to the president gets a big job that would amount in your country to the presidency of a corporation."

An American businessman who came to Mexico only 3 years ago and has made a fortune admitted that the reason he has been successful is: "I found out you got to have the right kind of partners if you want to do business down here. My business is selling to the government. I have 16 associates in my firm. All of them are relatives or friends of government ministers."

While they hesitate to express it publicly, most American businessmen are gravely concerned about the policy of Mexicanization Lopez Mateos has been pushing for the past year. Although there is no formal law, foreign investors seeking to begin industries in 1960 found themselves stalled in obtaining government concessions for which they had come down in the first place. Even companies in business here for years found themselves subjected to Mexicanization pressures. One firm employing about 1,500 heard bluntly from a government minister that it ought to give up its majority control.

REFUSAL BROUGHT STRIKE

The company refused and found itself in the middle of a strike in which its workers demanded a 25-percent wage increase. In the past it had been able to appeal to the government for reasonable arbitration with the knowledge it had the power of settling strikes. But in this case the government kept hands off and the strike lasted for 5 months, the company finally capitulating to a 20-percent wage increase, although holding firm in resisting Mexicanization.

A troubled U.S. Embassy official said: "The combination of nationalization and Mexicanization is just too much for foreign investors to cope with and we're just not getting nearly as many calls from people who want to start new businesses as we used to. If Lopez Mateos continues succumbing to pressures from the left to nationalize and to pressures from his own businessmen who want to get in on the profits foreigners showed them were here, I'm afraid the whole bubble can burst."

If it does, the Communists are waiting to take over.

WANTED: NEW U.S. POLICY ON MEXICO

(This is the last of a series on our shaky relations with Mexico by Jack Altshul, who recently returned from a month-long tour of the country.)

The stadium at the University of Mexico was packed to its 100,000 capacity for a game of American-style football. The opponents were Mexico University and Mexico Polytechnical Institute, traditional rivals. One of the interested spectators was an old Dartmouth lineman, Robert C. Hill, then U.S. Ambassador to Mexico. He had expressed an interest in seeing how football is played south of the border and the rector of the university had invited him to occupy the box of honor—on the 50-yard line but fortified against thrown objects by a padlocked, wire-mesh cage.

Just before the kickoff a group of students snake danced up to the box with a football and asked the Ambassador if he would be willing to throw out the first ball. Hill went them one better. He offered to kickoff on the field. Horrified officials representing the Mexican Government and the school warned him against the gesture. They could not guarantee his safety, because on that

day in 1959 Fidel Castro was the hero of the university and Uncle Sam the villain.

Hill, a husky 6-footer, came out of the cage to a mingled reception of whistled catcalls and a few cheers for his courage. He made it down to the field unmolested and proceed to show the fans an American-type place kick, booting the ball 60 yards over the goal-line, a feat never before seen in the stadium. When he returned to his box, the stadium was on its feet according him a demonstration usually reserved for a historic performance by a matador.

Bob Hill went on to become one of the most popular emissaries Washington had ever sent down to Mexico City. He won this affection during a period when anti-Americanism was manifesting itself throughout Mexico and when Soviet-Cuba propaganda efforts were building a fire under the Mexican people.

An Eisenhower appointee, Hill resigned from office last November to successfully run for the legislature in his home State of New Hampshire. His successor has yet to be picked by President Kennedy.

I interviewed him recently in New York where he was on his way to make a speech in Texas on what this Government's policy should be toward Latin America. It was a few days before the announcement from the President that he was going to ask Congress to approve a multimillion-dollar program for Latin America along the lines of the Marshall Plan.

"There is no question that we need a policy toward Mexico and the rest of Latin America," Hill declared. "And there is no question that we haven't had one in 15 years. We have been practicing crisis diplomacy instead of long-range planning all over the world and now that we have a problem with Castro, Latin America is our crisis. This is in contrast to the Soviet Union which has a planned policy and follows it."

Hill brought up the football kickoff incident as an illustration of another weak point in our dealings with Latin American nations. "They respect strength, not vacillation. If I had sat by in a protected cage at the football game, I would have given 100,000 people the image of a frightened Uncle Sam. When I was lucky enough to get off a good kick, they respected me for it. Their whistles changed to cheers. I don't expect every ambassador to Latin America to be able to kick a football 60 yards, but we will never gain their respect unless our diplomats are willing to get down to the level of the people.

"Castro is definitely a danger to our continued peaceful relations with Latin America. They have traditional reasons for hating and fearing us and when one of their own can thumb his nose at us and get away with it, he has their sympathy. It is our job to show them that he can't get away with it. But we have to go a step further. We also have to approach Latin America as partners, not masters. Our diplomats can't run their embassies at cocktail parties for the privileged few of each nation."

Hill's sentiments are echoed in many quarters in Mexico City. One Government official, whose views do not always coincide with that of President Adolfo Lopez Mateos, told me frankly:

"The sooner your Government forgets the phrase, 'Monroe Doctrine,' the sooner it will gain the respect of many nations to your south. The United States must realize that it does not speak for all of the Western Hemisphere, that every nation wants a voice in hemispheric policy."

Other influential Mexicans told me that one of the reasons anti-American resentment has manifested itself since the ascension of Castro is that the Latin American nations have felt themselves neglected for 15 years. "When your late President Roosevelt was at the head of Government," one of them said, "he took a big interest in our problems—a mutual interest. But for the last 15 years, your Government has offered financial aid to every part of the world but in your own hemisphere."

A professor at the University of Mexico, who does not subscribe to the Communist and near-Communist leanings of many of his fellow faculty members, criticized the limitations of the American student-exchange program. "Less than 20 Mexican students received scholarships to America last year despite a thousand requests," he said.

From Moscow come offers of 500 scholarships to Latin America for their Freedom University in Prague. And from Moscow, too, comes an impressive program of catering to the intellectual in Latin America through the medium of cultural fairs, appearances by leading dancers and musicians, and sponsorship of trips. It is in this field that the United States has fallen down badly.

In Latin America today the race is between evolutions and revolution. From Moscow the message is that revolution is the answer. The United States, so far, has not kept pace in selling evolution.

Migrant Farm Labor Problems and "Harvest of Shame"—XII

EXTENSION OF REMARKS

OF

HON. PAUL G. ROGERS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1961

Mr. ROGERS of Florida. Mr. Speaker, this is the 12th in a series of articles presented in the public interest by the Palm Beach Post-Times to show the Members some of the progress being made in Florida to solve problems relating to migrant farm labor which were left out of the television presentation "Harvest of Shame." The omissions of all that has been, and is being done, in this field did a great injustice to the Floridians who have given their time and efforts to these problems over the years. It is hoped that by reading these articles and the ones to follow the Members and public will have a better understanding of this important matter.

[From the Palm Beach Post, Feb. 3, 1961]

MIGRANT INCOME VARIES

"It is the story of men and women and children who work 136 days in the year and average $900 a year."—"Harvest of Shame."

The most informed estimates available in Palm Beach County is that migrant workers who winter here average better than 100 working days and around $700 in the half year they are here.

Frequently a family unit, with father, mother, and older children working can earn a good half-year income before moving north with the harvest.

In the Glades area, migrants can count on 7 to 9 months of employment if they want it, Belle Glade Police Chief Charles Goodlett has found.

"They may arrive in September to work on corn and beans and stay for the other crops," he said.

In the coastal area, the situation is a little different, according to the Florida State Employment Service.

Bob Douglas, who's been in close contact with the migrant picture for more than 10 years, said the State figures show the average migrant in the immediate vicinity works an average 4-day week and stays 22 weeks.

His earnings may range up to $700, Douglas said, depending on the crops, the individual, and the weather.

Pieceworkers—such as pickers—average about $450 on the coast, depending on the aforementioned factors, he said, but some have been found to make $9 per day.

The wife's income can be added to this as well as money earned by older children, he said.

"There are many things which determine the earnings," he said. "I've seen workers who decide they've made enough money for the day stop and wait 4 hours for a truck to haul them from the fields."

Many like the social life in the fields, he said, and spend much time in talking, playing cards, or eating around the chuck wagons.

Basically, he said, the migrants who work on the coast arrive about the middle of November and stay until May.

Tenth Anniversary of General MacArthur's Speech to a Joint Session of Congress

EXTENSION OF REMARKS

OF

HON. JOHN B. ANDERSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1961

Mr. ANDERSON of Illinois. Mr. Speaker, today we mark the 10th anniversary of the historic occasion of Gen. Douglas MacArthur's speech to a joint session of the Congress. For it was on April 19, 1951, that this truly remarkable and dedicated American patriot delivered his magnificent address from the rostrum in this House where we now sit. It was not my privilege then to be a Member of this great body. However, I can well remember sitting by my radio and being stirred by the power and the poignance of this great man's gifted and lofty eloquence.

The passage of 10 years of time has merely served to asseverate the truth of General MacArthur's historic pronouncement. From his tremendous breadth of experience and knowledge he delivered a warning which was so prescient that it demands repeating in this hour. I quote from his speech of 10 years ago today a single paragraph:

There are some who for varying reasons would appease Red China. They are blind to history's clear lessons for history teaches with unmistakable emphasis that appeasement but begets new and bloodier wars. It points to no single instance where this end has justified that means, where appeasement has led to more than a sham peace. Like blackmail, it lays the basis for new and successively greater demands, until, as in blackmail, violence becomes the only other alternative.

This advice is just as salient and meaningful today as when it was uttered a decade ago. Indeed world events during this intervening period have proven its wisdom beyond peradventure of a doubt.

I sincerely hope that a new President and a new administration will re-read this speech of April 19, 1951, and ponder its message. We are all sincerely motivated by a wish for peace and the twin desire to accomplish a lessening of the present international tensions.

However, this should not obscure from us the fact that we cannot compromise with evil. We cannot recognize Red China as a peaceful member of the community of nations when her actions belie such recognition. We cannot and should not seat the Red Chinese in the United Nations to obfuscate and eventually destroy the work of that body.

This was, I believe essentially the advice that General MacArthur gave us 10 years ago today.

Blueprint of Death

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 18, 1961

Mr. HUMPHREY. Mr. President, I ask unanimous consent that a column of April 17 by the gifted writer Ralph McGill, which recalls the mass murders committed by the Nazis be printed in the Appendix of the RECORD.

This column is not pleasant reading, but it is a potent reminder of the end results of a totalitarian system whether it be Fascist or Communist. It should serve to strengthen us in our determination to preserve our free and democratic society.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington (D.C.) Evening Star, Apr. 17, 1961]

THE PASSING SCENE—EICHMANN TRIAL'S BIZARRE TONE

(By Ralph McGill)

To any of the reporters who covered sessions of the Nuremberg trials, the trial of Adolf Eichmann is bizarre only in the cloak-and-dagger details of the more than a decade of patient search for the man who was one of those responsible for the deaths of millions of men, women, and children.

The mind automatically rejects the word "millions." For most of us the word death conjures up a battlefield, which few have seen, or the death of a friend or one of the family in which as much of the reality of it as possible is obscured and diluted by the undertaker's arts.

BLUEPRINT OF DEATH

The blueprinted plan of death which Eichmann and others carried out as part of the Nazi philosophy of establishing a superrace is so massive an operation in murder that the mind cannot quite take it in.

"Millions? Millions? They killed millions?"

The answer is "Yes." They did. Millions.

No man who sat any time in the grim old courtroom at Nuremberg as the trial of the Nazi war criminals slowly, tediously unfolded will ever forget his experiences. Eichmann would have been there had he not escaped.

The witnesses came. Some were badly crippled from the fortunes inflicted. There were men and women who had fingers which looked like lumpy carrots. They had been broken and burned in efforts to extract information from them. Others were mutilated by experimental operations and tests of new surgical techniques which the Nazis hoped could be used on their wounded in the many military hospitals.

There were women there who had been hideously used. Some had the prison numbers tattooed on their arms. Many had been forced into soldiers' brothels.

The representatives of the super race were in the defendant's box—Goering, Hess, Speer, Schacht, Rosenberg, Streicher—22 of them. They did not look like supermen, sitting there in their prison clothing, their faces aging, the jowls of the fatter ones sagging; the faces of the thinner ones lined and masklike.

They heard the witnesses day in and out. Usually they were silent. Now and then one would whisper with another. Two managed to commit suicide—Robert Ley and Hermann Goering.

One could leave them and go to the courts trying the lesser criminals. I recall one such. He had been in charge of one of the lesser known concentration camps. He was charged with having killed more than 40,000 men, women, and children—Jews, Poles, and Balts. They put him on the stand.

"I did it," he sneered. "It was a fine life while it lasted. We had a great time. I have no remorse. We lost. Now it is over. Let us be done with this. I am guilty. Hang me."

They did. But one does not forget such a man.

There was another one. He had sent an estimated 20,000 to be executed. They had gone, of course, in daily groups. Many were marched into long ditches and made to lie face downward. Soldiers with automatic rifles walked along shooting into the bodies. The dirt was then scooped back into the ditch, and the fact that some were merely badly wounded and not dead did not concern them. It was not pleasant to hear the defendant say, "It was an order. What else was there to do?"

The stories of the larger camps are more familiar. The gas chambers went night and day—as did the crematories.

CAMPS OF DESPAIR

If one wearied of the trials one could go to the concentration camps made into rehabilitation centers. There, still skeleton-thin men, women, and children were waiting out their departure. There were children who would never know what became of their parents. There were husbands who would never know what had become of their wives or children; mothers who would never know where or how their husbands or children had died.

In the summer of 1959 those newspapermen who went to Moscow and Poland with the then Vice President Nixon went with Mr. Nixon as the Poles showed the graves of several thousands of persons taken into the forests outside Warsaw and shot down by the Nazi guards. (Eichmann was said to be one of those who planned it all.)

Anyone who had seen all that will oppose all the rest of his life any Fascist or Communist groups which seek to dilute American freedom by fanatic attacks on our courts, our Constitution, and our individual liberty.

Long Beach Federal Savings & Loan Case Bungling by Home Loan Bank Board Causes Distress to Many Innocent Parties

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1961

Mr. HOSMER. Mr. Speaker, this RECORD has carried many items in the past contributed by myself and other Members of Congress respecting the inept actions of the Home Loan Bank Board against the Long Beach Federal Savings & Loan Association.

Many years ago the Board seized this institution and finally had to restore it to its management when it turned out the seizure was unfounded and improper. Last year the Board again seized the institution. An investigation followed by the House Committee on Government Operations which concluded the Board acted improperly and the negotiations should be promptly made to restore the institution to its management. These negotiations have dragged on for approximately 10 months and still they have not been concluded. The Board's so-called conservator in charge of the institution's assets has been anything but conserving them. One of these assets is a loan on a large real estate development known as the Bellehurst tract in Orange County, Calif. Because of this trouble between the Board and the association's management not only has the company developing Bellehurst been stopped in the midst of its operations, but hundreds of persons who purchased homes there have been caused to suffer anxiety and loss. The following is typical of hundreds of letters I have received from these home buyers.

APRIL 12, 1961.

Re the Bellehurst development.
The Honorable CRAIG HOSMER,
House of Representatives, House Post Office, Washington, D.C.

DEAR SIR: The more than 250 families residing in the Bellehurst development of Buena Park, Calif., are seriously concerned with the loss in value of our homes. Our homes are now worth at least $10,000 less than the $30,000 to $40,000 we paid for them and continue to decline in value daily.

Sales stopped in August of 1960 when title to the area was apparently clouded by lawsuits brought by the trustees under the trust deeds covering the development. There has been no construction for almost 2 years since the Federal Home Loan Bank Board took control of the development. As a result we have been living in a blighted area of partially completed premium housing with continuing deterioration in appearance and declining sales prospects. All of this is destroying the value of our homes and seriously jeopardizing the millions of dollars of financing the Government has tied up in the development as the present managers of Long Beach Federal.

We understand that an agreement for continued financing and completion of the development between the developer and the Home Loan Bank Board and/or the Federal Savings and Loan Insurance Corporation was entered into early in December of 1960. Whether or not the old management of Long Beach Federal was a party we do not know, but we understand its consent may have been required in order to clear title so that financing could go forward. Apparently the agreement provided for close of escrow on March 31, but for some reason the escrow did not close and no extension of the closing date occurred. We say for "some reason" because there is apparently disagreement between the parties involved as to who is responsible for the delay.

We are not primarily concerned with who is to blame except insofar as investigation will result in concrete action to get this development underway again. Only in this way can our property values be protected and the area again made an attractive one for family living, thus assuring renewed sales potential. Certainly the Home Loan Bank Board and the Federal Savings and Loan Insurance Corporation have a tremendous stake in protecting the millions of dollars already tied up here.

As homeowners we feel we are caught in the middle of the disputes between the Bank Board, the ousted Long Beach Federal management and the developer, in which we have no part but which have cost us individually and collectively many hundred thousands of dollars already. Unless something is done about this at once, we are faced with complete loss of our investment.

We hope you will apprise yourself of the facts of this situation and take active steps to see that the Federal agencies involved promptly proceed with a program which will reactivate the development.

Sincerely,

BELLEHURST COMMUNITY ASSOCIATION,
JOHN WALLER, *President*.

The Home Loan Bank Board was established by Congress to help people, not cause them grief and loss. It is high time the Board carried out the responsibility fixed on it by law and the obligations it owes to the people of the country which it is supposed to serve.

Scientific Successes of Soviets and the United States

EXTENSION OF REMARKS
OF
HON. CLINTON P. ANDERSON
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES

Tuesday, April 18, 1961

Mr. ANDERSON. Mr. President, in the wake of last week's news that the Soviet Union had made the first orbit of a man in space, much was heard in this country about the urgency to catch up with the Russian achievement. I recalled the observation of Henry Kissinger that, "Our period offers no prizes for having done rather well." This is true. But at the same time we must not lose sight of our own accomplishments. Many of these achievements have lacked the element of spectacle, yet their significance is far reaching. President Kennedy, I thought, said something last week that passed with little notice, but is worth repeating as an example of what I mean.

The President said that if we could produce fresh water from salt water at a cheap rate we would score a gain "which would really dwarf any other scientific accomplishment." We are working toward that goal and there is a good chance we will push toward it more rapidly.

I ask unanimous consent that an article from the Washington Post of April 16, by Howard Simons, be printed in the Appendix of the RECORD. It is a calm and clear interpretation of recent events.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SOVIET SURELY EXCELS US IN SHOW WINDOW—U.S. SCIENCE SUCCESSES UNSUNG

(By Howard Simons)

(Simons, a Washingtonian, has written on scientific subjects for magazines and other periodicals for several years.)

Not since the advent of John F. Kennedy, Jr., has a predictable event been so anticipated or prepublicized as the Russian man-in-space flight. Even though the Russian success came as no surprise, perhaps because of this Pavlovian conditioning, when the bell finally rang, the world drooled.

The impact of this latest Soviet space spectacular will be as great as the launching of Sputnik I was on October 4, 1957. It will reinforce Russia's apparent usurpation of world technological supremacy.

It will again raise cries in this country for review and revaluation of our own effort. It will suggest military implications, and it will heighten interest in man's step-by-step conquest of the heavens.

A PROPAGANDA BONUS

It would, of course, be a grievous error for American decisionmakers to downgrade the political and propaganda value of outer space spectaculars. The propaganda by-product of Sputnik I was not foreseen by either American or Russian planners. What began as an experiment for the recent International Geophysical Year has become a potent geopolitical weapon.

Certainly the peoples of emerging nations have been impressed with the Russian successes in outer space. These feats have been a dramatic advertisement for Russia to show that it has risen from backward agriculture to advanced technology in just a few decades.

There is no doubt that if the United States had launched the first earth satellite, the impact on the world would not have been as great as that achieved by the Russians; it would have been expected of us. Also lost on the peoples of the world are the subtleties of why the United States is lagging behind the Russians.

Few persons know or care that the United States made a decision to build smaller boosters because of its remarkable breakthrough in reducing the size of nuclear warheads, from the big fission affairs to the small fusion bombs.

At the time, it was a monetary decision. The United States could perfect intercontinental ballistic missiles cheaper than the Russians could. That was before both sides realized that outer space exploration would be a major ideological weapon.

CELESTIAL ARTILLERY

But the Russians' successful orbit of Maj. Yuri Gagarin in near-space also has heavy military implications. There can be little doubt that the Russians will soon be capable of launching a manned spaceship that can fire a rocket at a target on earth in much the same manner they launched a rocket from a satellite toward Venus February 12.

It would be an expensive weapon, however, and the Polaris nuclear submarine can do the same job with the same advantages—it is hard to detect and hard to destroy—at the proverbial half-the-price. Nonetheless, one cannot discount the psychological effects of a Russian orbiting the earth in a nuclear arsenal.

But to suggest that the Russian feat was "the greatest scientific achievement in the history of mankind," as did the British scientist Sir Bernard Lovel, is gilding the lily. President Kennedy gave it the proper emphasis when he congratulated the Russians on an "outstanding technological accomplishment."

This choice of terminology points up a continuing problem for American scientists, made sharper by space spectaculars: how to make clear in the public mind the great difference between science and its offspring, technology.

The United States has been outdone repeatedly in terms of propaganda by Russia's outer space feats. Yet it has not been second best in scientific achievement. On the contrary, it is an intriguing paradox of the so-called space race that American efforts receive less respect at home than in the Soviet Academy of Sciences.

Since Sputnik I, the boxscore reads: Soviet Union: 1 man in space, 11 Earth satellites, 2 shots around the Sun, and 1 to the Moon; United States: 37 Earth satellites, and 2 Sun orbiters. Yet, discovery for discovery, Russian achievements in outer space are no match for America's which include:

The first detection of trapped particles through the discovery and identification of the Van Allen radiation belts.

Satellite contributions to geodesy and celestial mechanics, including the theory that the earth is pear shaped.

Tiros cloud cover pictures which promise satellite weather forecasting.

Echo and Courier satellite communications experiments which will lead to a satellite-based communications system.

Transit satellite experiments for all-weather navigation.

GRANDSTANDING IS COSTLY

In fact, it has been a mystery to American space experts why the Russians have failed to exploit their capabilities scientifically. One observer says it may be that the Russians are using their dramatic space shots solely for propaganda purposes, with science as a poor hitchhiker, and then filling in the gaps with data from American findings in outer space.

For one thing, the Russians are running a very expensive program. One Pentagon official suggests that one reason why the Russians have been so sparing with their launchings is the enormous cost of sending up one of their 7-ton vehicles.

Some American scientists have expressed reservations about spending billions on outer space, particularly for a man in space. One is James R. Killian, Jr., President Eisenhower's first special assistant for science, who has said that he would rather see the huge sums spent on outer space used for earthly education instead.

Other scientists say that if the United States wants to catch the Russians purely for propaganda reasons, the terms should be spelled out just that way and the job done. But if the scientific elements of our outer space exploration are to be maintained, there is little essentially wrong with our past, present and future programs, in their view.

Of course, it would be impossible to update our own space efforts overnight. Space research and development are not the same as automobile production, where it is possible to order more cars off the assembly line within 24 hours.

Space scientists and engineers live in the future. They talk about and work on proj-

ects that will become reality 5 or 10 years hence. In the development of space hardware, time can rarely be compressed drastically even by the application of more money.

Despite the recent Russian success, there remains a strong body of opinion which shudders at the suggestion of a redirection of American efforts. These observers are convinced that over the long pull, America's scientifically oriented space effort will reap far more benefits and prestige than the Russian pyrotechnics.

The difference in what the two countries have been doing in space research tells much about a fundamentally different approach to scientific research in general.

From all available evidence, the Russians go in for massive assaults on specific scientific challenges, employing the same tactics in the laboratory that the Red Army used in World War II. American science, on the other hand, makes an across-the-board effort, seeking gains in many scientific areas, of which space exploration is only one.

It is encouraging that the promise of the American approach has not been lost on a number of scientists, Government leaders and, surprisingly perhaps, business leaders. In the fall of 1960, some 1,700 subscribers to the Harvard Business Review, mostly top management executives, were questioned about their attitudes toward the country's space program. A heavy majority favored space research over a tax cut.

Seventy-seven percent did not think we get propaganda value out of duplicating Russian research and did not think the space program should be reoriented for propaganda purposes. Sixty-six percent rejected the idea of spending several million dollars for a rapid, spectacular propaganda victory.

The United States has made significant research gains in physics, chemistry, biology and medicine. In medicine, for example, Russian contributions hardly bear comparison with America's. Here, it would seem, is a far more significant lag in prestige.

Just before he left Washington, T. Keith Glennan, the former administrator of the National Aeronautics and Space Administration, told a reporter: "I would be fearful if the worth of the United States were measured solely by our ability to put a man on the moon."

Student Unit Fights Coast Campus Bias

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 10, 1961

Mr. COHELAN. Mr. Speaker, this last week I had the pleasure of meeting and making appointments for three Berkeley High School students visiting Washington as a result of winning awards for excellence in scholarship, creativity, and community service.

I would like to publicly commend the city of Berkeley and Berkeley High School for their efforts to identify and reward outstanding achievements in these fields. This is an important and exceptionally worthwhile program which is entirely consistent with our national goal of encouraging excellence.

One of the award winners, Kipp Dawson, initiated a program to overcome unofficial, but real prejudice in her high school. The Washington Post in a recent article reported on this program and I urge my colleagues to read about this encouraging and significant undertaking:

STUDENT UNIT FIGHTS COAST CAMPUS BIAS
(By Victoria Stone)

Students for Equality is the name of a small group of students in a large California high school who are trying to overcome prejudice in their midst.

The group started with the conviction of 15-year-old Kipp Dawson that "it's possible for people of different backgrounds to get together."

Kipp is one of three Berkeley High School students visiting Washington this week as a reward for excellence in scholarship, creativity and community service. The city of Berkeley paid their fares.

Kipp said the group is working to dissolve the cliques that make school segregation a fact, even if it is not the law for Berkeley High's 3,000 pupils. She calls it "self-imposed segregation."

Berkeley High, like the city itself, is a racial and national mixture of Orientals, Mexicans, Negroes, and both high and low-income whites. Until World War II, Kipp explained, the city was almost exclusively white. Kipp said she was not the first to notice that students were drawing their own color lines at school cafeteria tables, that class placement always seemed to isolate nonwhite pupils, and even that school counselors were discouraging Negro pupils from preparing for college.

A searing letter she wrote for the school newspaper last year brought her a nucleus of supporters that has grown to 50 pupils. Students for Equality concentrates on discussions, lectures and example-setting at school.

"We all went into it with deep prejudices," she confessed. A warehouse worker's daughter, Kipp said she used to be "tremendously bitter against anyone who came from the right side of the tracks."

Kipp and the other winners, Conal Boyce and David Gordan, called on District School Superintendent Carl F. Hansen yesterday for what proved a thought-provoking visit.

Hansen later told a press conference he was mildly envious of Berkeley's ability to honor its top students on public funds. "This would be a great thing to do in Washington," he said, but he doubted that the District would ever be able to afford it.

Hansen said he was impressed with young Conal's ability to compose a complete opera. He said a search for such extra-bright youngsters in city schools was worth exploring.

The District so far has not tried to single out exceptionally gifted pupils but it is "a field in which we ought to make a study," Hansen said.

What It Meant to Them

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1961

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article on the Battles of Concord and Lexington, as it appeared in the Christian Science Monitor on April 17, 1961:

WHAT IT MEANT TO THEM—PROPAGANDISTS OF THE DAY SAW THE BATTLES OF CONCORD AND LEXINGTON WITH DIFFERENT EYES FROM THOSE OF LATER POETS

The propagandist, 1775:

"Americans, forever bear in mind the Battle of Lexington—where British troops fired upon and killed a number of our countrymen. * * *

"Our deceased brethren, by their noble intrepid conduct, in helping to defeat the forces of an ungrateful tyrant, have endeared their memories to the present generation, who will transmit their names to posterity with the highest honor."—Massachusetts Spy.

The Poet 1836:

By the rude bridge that arched the flood,
Their flag to April's breeze unfurled,
Here once the embattled farmers stood,
And fired the shot heard round the world—
From "Concord Hymn," by Ralph Waldo Emerson.

THE BATTLE—APRIL 19, 1775

On the morning of April 20, 1775, a tall young man strode purposefully along the road from Boston to Worcester in His Majesty George III's Massachusetts Bay Colony. Isaiah Thomas was not alone on the road that day, for he continually met groups of men headed in the opposite direction, bearing arms.

These men were headed for Cambridge, there to join the colonial militia which was holding British forces at bay across the Charles River in Boston. Eager for news, they delayed the young stranger in his purposeful journey, seeking confirmation of the wild rumors that had spread quickly throughout the colony after the British marched on Lexington and Concord.

Isaiah Thomas unburdened his thoughts to these inland farmers, artisans, and shopkeepers, thoughts aboil over the events he had lived through during the previous day.

The sound of his name likely brought knowing grins, for though perhaps surprised at his youthfulness, they knew him as the printer of the Massachusetts Spy, a voice heard in behalf of liberty in many corners of Massachusetts and other colonies.

And after raising himself and his listeners to fighting pitch with his eyewitness report of the portentous clashes of April 19, he might have concluded, "Now I go to Worcester, whence my presses have preceded me; there to expose the iniquity of our oppressors so long as strength is left in me and paper can be procured."

PAPER INDEED SCARCE

Isaiah Thomas rode into Worcester on a horse procured for him along the way by a friend. He did indeed find that paper was hard to come by. After 2 weeks, with the help of John Hancock, he finally got some paper on which to print his first issue in Worcester of the "Massachusetts Spy"—May 3, 1775.

The issue was avidly read, passed along, reread, and reprinted, for it gave one of the most incendiary accounts to be found of the Battle of Lexington and Concord.

Propagandists like Thomas didn't see the event in poetic terms. Their accounts, in which events, names, and figures are consistent by their inconsistency, are designed to rouse, to incite, to precipitate revolt.

After an opening blast, calculated with its charge of British treachery and atrociousness to set colonists' blood boiling, Thomas picked up his account of the battles at the beginning.

REPORT REPRINTED

It is reproduced in part, here:

"A few days before the battle, the Grenadier and Light Infantry companies were all drafted from the several regiments in Bos-

ton, and put under the command of an officer, and it was observed that most of the transports and other boats were put together, and fitted for immediate service. This maneuver gave rise to a suspicion that some formidable expedition was intended by the soldiery.

"About 10 o'clock on the night of the 18th of April, the troops in Boston were discovered to be on the move in a very secret manner, and it was found they were embarking in boats at the bottom of the Common; expresses sat off immediately to alarm the country, that they might be on their guard.

"The body of the troops in the meantime, under the command of Lieutenant Colonel Smith had crossed the river, and landed at Phipp's farm: They immediately to the number of 1,000 proceeded to Lexington, 6 miles below Concord, with great silence: A company of militia, of about 80 men, mustered near the meetinghouse; the troops came in sight of them just before sunrise; the militia upon seeing the troops began to disperse; the troops then sat out upon the run, hallooing and huzzaing, and coming within a few rods of them, the commanding officer accosted the militia in words to this effect, 'Disperse you rebels.'

"SHOTS THEN FIRED

"Upon which the troops again huzzaed, and immediately one or two officers discharged their pistols, which were instantaneously followed by the firing of four or five of the soldiers, and then there seemed to be a general discharge from the whole body; it is to be noticed they fired upon our people as they were dispersing, agreeable to their command, and that we did not even return the fire: Eight of our men were killed and nine wounded.

"A little after this the troops renewed their march to Concord, where, when they arrived, they divided into parties, and went directly to several places where the province stores were deposited.

"Another party of the troops went and took possession of the Northbridge. About 150 provincials who mustered upon the alarm, coming toward the bridge, the troops fired upon them without ceremony, and killed two upon the spot.—(Thus did the troops of Britain's king fire first at 2 several times upon his loyal American subjects, and put a period to 10 lives before 1 gun was fired upon them.)—Our people then returned the fire, and obliged the troops to retreat, who were soon joined by their other parties, but finding they were still pursued, the whole body retreated back to Lexington, both provincials and troops firing as they went.

"During this time an express from the troops was sent to General Gage, who thereupon sent out a reinforcement of about 1,400 men (the British numbers are exaggerated throughout), under the command of Earle Piercy (Percy), with 2 field pieces. Upon the arrival of this reinforcement at Lexington, just as the retreating party had got there, they made a stand, picked up their dead and took all the carriages they could find and put their wounded thereon; others of them to their eternal disgrace be it spoken, were robbing and setting houses on fire, and discharging their cannon at the meetinghouse.

"The enemy having halted above an hour at Lexington, found it necessary to make a second retreat, carrying with them many of their dead and wounded. They continued their retreat from Lexington to Charlestown with great precipitation; our people continued the pursuit, firing till they got to Charlestown Neck (where they reached a little after sunset), over which the enemy passed, proceeded up Bunker's Hill, and the next day went into Boston under the protection of the Somerset man of war of 64 guns."

The Revolutionary War was begun.

THE SHOT RICOCHETS

(By Leon W. Lindsay, staff writer of the Christian Science Monitor)

Newspapers—especially Isaiah Thomas' Massachusetts Spy—played a significant role in rousing the colonists to battle pitch. But in 1775 the fastest means of communication was a good horse. And there were post riders as well as horses of proven endurance.

One of those post riders was to become known as the first man to take the news of the Battle of Lexington south—Israel Bissel.

Col. Joseph Palmer of Braintree, arriving in Watertown, April 20, the morning after the battle and grasping quickly its import, hastily scribbled a combined report and rallying cry, gave it to the veteran post rider, and told him to take it as far as Connecticut.

But Bissel went much farther than that: after shouting and showing his message through Connecticut, he rode into New York on Sunday, April 23. After throwing New Yorkers—and especially the Sons of Liberty—into a frenzy of speculation and activity, he crossed the Hudson and rode into the Jersey flats.

KEPT ON TO PHILADELPHIA

Bissel did not stop until he reached Philadelphia on April 25. He covered more than 400 furlong miles in something less than 6 days. From Philadelphia, his message was sent on south.

Charleston, S.C., received the report, say some authority, by way of the brigantine *Industry* on May 8. And in the southernmost of the English colonies, Georgia, it was sometime near the end of May before the news was heard—but it had lost none of its impact.

Dr. Joseph Warren, the famous commander in the Battle of Breed's Hill, prepared a circular on the battle on April 20 also—another report, but still in broad terms, with little detail—account was also sent hoofing down the coast.

A later, still more detailed account written by a committee of the Provincial Congress went out by special courier—with fresh men and horses waiting along the line to speed the official document all the way to Georgia.

FACTS SECONDARY

In all these accounts one purpose was paramount: arouse the colonies; the true facts of the battle were secondary.

Printers hastened to get out special broadsides on the event, and most newspapers carried accounts of the battle. These accounts contained the few facts available, bolstered by a good deal of speculation and rumor.

Though the news was, admittedly, slanted and colored—no colonist need have been ignorant or misinformed as to the essential happenings of April 19, 1775.

OPPOSING ACCOUNT RUSHED

The Boston Evening Post printed three lines on the battle the following Monday—the regular publication date. The paper was suspended after this issue and never reappeared.

Connecticut papers had accounts of the battle on Monday, too. Timothy Green of New London was so busy pursuing the cause of liberty he couldn't do justice to the clash—he got out only a half-sheet on it.

In New York, Hugh Gaine, a Tory printer, got out an account on Monday, the day after Bissel came riding in. Gaine's account was as biased in one direction as Isaiah Thomas' was in the other.

Philadelphia had a newspaper account of the battle a week after it happened, Wednesday, April 26. The Pennsylvania Packet got out a special supplement.

North Carolinians were reading of the exploits of the Minutemen, according to one authority, on May 7—a day before the *Industry* was supposed to have docked. And in Savannah, the Georgia Gazette had the story for its subscribers on May 31.

Back in Massachusetts, the Essex Gazette of Salem had one of the best accounts 5 days after the battle, and of course, there was the May 3 issue of the Massachusetts Spy.

WHO WAS ISAIAH THOMAS?

Isaiah Thomas grew with his country. In some ways his career is like that of the man he emulated, Benjamin Franklin—though Thomas started from a lower station in life.

When he was six, his widowed and impoverished mother had him apprenticed, in 1756, to a Boston printer and pamphleteer, Zechariah Fowle. He wasn't the first early American to be educated at the type case.

At 16 he, like Franklin, broke his contract and ran away to Halifax, Nova Scotia, where he was taken on by another printer. But his employer soon found he had to get rid of his ambitious helper, who was too brazen in his defiance of the Stamp Act.

After attempts to start a business in North Carolina, Thomas returned to Boston, where his former master welcomed him with no apparent ill-will, and together they began publishing the Massachusetts Spy. Soon Thomas bought out Fowle.

His first aim was to print a paper, not for the "gentle folk," but for the workingmen—an impartial journal with views of every color. Early attempts at impartiality were soon dropped. The Spy took on revolutionary tones and became one of the most important papers in America.

Though Thomas' paper has not had the historical notoriety of the Boston Gazette of Benjamin Edes and John Gill—which was the "official" mouthpiece for Samuel Adams and the Sons of Liberty, the Spy had its role, and played with at least as much histrionics, if with less adroitness.

The Spy—along with the Gazette—found Boston's British rule inhospitable, not to say dangerous, as a clash approached in 1775. With the help of friends, Thomas sent his printing equipment to Worcester a few days before the Battle of Lexington.

On the night of April 18, Thomas was one of the expresses who rode to spread the alarm that the British troops were crossing the Charles.

He was reported to have been with the militia in Lexington the next morning. As to his activities during the rest of that eventful day, no one, not even Thomas himself, seems to have left any account.

Thomas printed the Spy intermittently during the Revolution, but after the war he began to prosper. He set himself three objectives, and attained them before his passing in 1831: (1) compilation of a History of Printing in America (published first in 1810); (2) the collection of printings and artifacts having to do with America; (3) formation of a society to preserve Americana.

The American Antiquarian Society was founded by Thomas in 1812.

Yes, You Can Plant a Garden

EXTENSION OF REMARKS
OF
HON. PAUL FINDLEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1961

Mr. FINDLEY. Mr. Speaker, the people of the United States felt much better recently when they read in a bulletin from an office of the Department of Agriculture that it is still all right to plant a garden in the backyard.

The bulletin brought this response from Allan A. Seiler, editor of the Pike County Republican, Pittsfield, Ill., in a comment published April 5, 1961:

A clue to the degree of regimentation around the bend for the American farmer can perhaps be found in the latest news release of the Agricultural Stabilization and Conservation Committee of the U.S. Department of Agriculture.

After explaining some of the current prohibitions and restrictions on production of grain and hay crops in 1961, the news release winds up with this encouraging note, "Home gardens can continue to be used to produce crops for home use."

When it comes under the heading of news to explain that the Federal Government has no objection to the planning of a home garden to produce food for home use, we have an illustration—with more clarity than might have been intended—of the degree to which we have become conditioned to governmental control.

Ambassador Pawley's Grave Revelation

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 18, 1961

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which was published in the Brazil Herald on March 1. The article is in regard to one of Florida's outstanding citizens, a former Ambassador of the United States to Brazil and to Peru, and one of the most knowledgeable persons about Latin American affairs I know of—Mr. William D. Pawley.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AMBASSADOR PAWLEY'S GRAVE REVELATION

(By Paul Vanorden Shaw)

Of all the noncareer diplomats sent to Brazil as chief of mission, William D. Pawley stands out for notable successes in Brazil itself and for his personal and professional impact on Brazilian-American relations. He served during the Gen. Gaspar Dutra regime, the first elected President after the fall of the Vargas' dictatorship and the first under the constitution of 1946, which replaced the semitotalitarian 1937 charter. Mr. Pawley, an affluent businessman, patriotic to the core, and possessing a broad and enlightened vision of Brazil and Brazilian-American relations, gained the respect of Brazil, and its people because he could see their point of view, and their needs. And, it was a failure to meet their needs which has led him to reveal at this time the real cause for that failure. A grave and sombre revelation which comes to prove a thesis we have set forth in these columns.

Former Ambassador Pawley in hearings of the Senate Committee on Internal Security last September, published only on February 20 of this year, minces no words in laying the blame for a failure which, in his opinion, caused "a deterioration of our relations with the Brazilian Government from which we have never to this day recovered," where it belongs.

We call attention to the fact that ex-Ambassador Pawley was testifying before an Internal, not External, Security Committee showing that failures in diplomatic relations do affect the internal security of the United States as well as its security in the world. Very briefly the story he told is this. The Brazilian Army bought 40,000 tons of wheat which were sorely needed in Brazil. Bureaucratic obstacles in the United States were raised to prevent the shipment. Sizing up the sumtotal situation very accurately Ambassador Pawley came to the conclusion that that shipment of wheat should come through at all costs. With his intimate contacts great ability and drive he obtained green lights from the President of the United States down the line. Having moved Heaven and earth in the United States to meet the Brazilian need he returned to report to President Dutra that all was well and the wheat would be received. "Quacada," as the Brazilian would say, nothing came. And this led to "severe questioning" by the President of Brazil who all but impugned the honesty of the U.S. Ambassador.

The explanation, according to Mr. Pawley, was the existence of "some people in junior positions in the U.S. Government who decide "what is good and what is not good for the United States." In other words not only the U.S. Ambassador but the U.S. President and other high officials of the United States were stymied to the point of jeopardizing the relations of the United States with Brazil by junior bureaucrats who formed "a panelinha," as the Brazilians, call it, which could make a travesty of the promises and words of the representatives of the United States to Brazil. The panelinha was a self-appointed cabal of junior officers which met weekly to approve or disapprove decisions by their hierarchical superiors.

This is far from the only case on record but has particular revelance just now there are signs that Washington, after the seemingly inevitable more talk and fact-finding, is determined to do something to improve Brazilian and Latin American relations with the United States. We have been insisting that the ablest U.S. ambassadors abroad cannot carry out their missions without complete and understanding support from Washington. Especially from the high-ups in the State Department and White House responsible for foreign policies and for specific decisions affecting foreign relations.

If "panelinhas" or cabals composed of junior officers systematically meet to accept or veto decisions by their chiefs and have the power to enforce their vetos then the situation is far worse than we had imagined. Although this happened many years ago, recent events make us believe that the danger of similar occurrences is not altogether past. It is utterly illogical to maintain a first class diplomatic corps if unauthorized junior pipsqueaks can make their will prevail over the decisions of their chiefs. Ex-Ambassador Pawley has rendered a real service by bringing this episode to light.

Deplorable Conditions in the Middle East

EXTENSION OF REMARKS
OF
HON. STANLEY R. TUPPER
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1961

Mr. TUPPER. Mr. Speaker, a prominent Maine businessman, Herman D. Sahagian, of Belgrade Lakes, Maine, recently made a trip, accompanied by his wife, to the Middle East, where both he and his wife were born.

Since their return, Mr. Sahagian has been asked by many groups to relate what he found in these countries. The following talk was given before the Rumford (Maine) Rotary Club on April 10. I recommend to my colleagues that they read this firsthand account by a man who is familiar with this section of the world, speaks their languages, and sees a situation that demands immediate correction:

I have returned home to Maine from a visit to the Middle East.

I was appalled at what I saw. Appalled that after the millions our Government has appropriated and sent to the nations of that section of the free world; so much poverty, misery and want should still exist.

I saw heart-rending scenes, scenes hard (if not impossible) for any American to even imagine, especially any American who knows how genuinely concerned our people are with the plight of the underprivileged nations of the world. A concern, manifestly proved by the enormous sums under point 4 program allocated and sent to those countries.

In Beyrouth I saw a "tin city" the abominable "La Flueve." La Flueve is the name of this camp or "tin city" which is situated about 6 miles outside of the capital city of Beyrouth. Beyrouth is the capital of Lebanon. La Flueve is the city of refugees—a city of tin huts—huts made of tin beaten out from discarded American petroleum cans. Dwellings, if we can term them as such, are unheated, unsanitary, and unfit for occupancy by either man or animal.

In Athens I saw children kicking through piles of refuse in the streets trying to salvage from the offal a scrap to eat.

In old Jerusalem, I saw a community of people, fugitives from the various political upheavals of recents events in the Middle East. These people exist in crowded, oppressive rooms provided for them through the charity of hard-pressed local churchmen. This community is a veritable teaming anthill of civilization.

In Aleppo and Damascus, I say 6-year old girls consigned to domestic service with wealthy families. This contracted arrangement exists so that they would not be a burden on their defeated, destitute parents, until they reach the age of 14 when they might legally be married. These things I saw.

I talked to these people, hundreds of them, and I learned how little America is understood and appreciated by them. I thought of the enormous sums we have sent to the countries of the Middle East; I found not one soul who could admit they had benefited one iota from our enormous expenditure of money, food, clothing, and other commodities. Indeed, it was news to them that America was at all interested in their plight.

One man said to me: "We hear so much of the great wealth of America, then we look around ourselves and see this poverty. This causes us to wonder if Americans are so selfish, so unfeeling, so blind. I am an anti-Communist by nature and inclination. I hate the Soviet. Can you blame us if, in our need, some day, we accept gladly the help being offered to us by the Soviet Union?

This, of course, pinpoints the dual nature of the tragedy of the Middle East—a tragedy of unutterable consequence—not only to the United States of America, but to the future of the free way of life in this world.

Our charitable nature must be based on a foundation of self-preservation if we are not only to aid the underprivileged of the world, but save them for the cause of freedom.

Although we are annually sending huge sums of money to the nations needing aid in the Middle East, we still find these sums are somehow neither aiding the lot of the impoverished people, nor winning friends for freedom and America.

I ask, in wonderment, how is it that our generosity is not reaping rewards, rewards in uplifting human dignity in strategic areas of the free world, rewards in raising our prestige as the champion of freedom worldwide, within a section of the world where, as it may very well prove true, the coming great and decisive struggle between freedom and tyranny may take place.

Gentlemen, if we, the American people, do not take effective steps to act now, we will lose the Middle East. We will lay it open to Soviet incursion and influence, and finally Soviet captivity.

Asia will be blocked off from us, hundreds of millions of people, who are by nature champions of freedom, will find themselves standing static in this moment of great world reawakening. They will find themselves under the control of the greatest despotism the world has ever known. All because they wanted to live in dignity, to find a square meal.

For let it be known that the Arab, the generic name given to that great family of people who dwell in the Middle East, cannot by nature become a Communist. The tradition of the Arab people makes communism, collectivism, social, and thought control completely unacceptable to them. The proud, nomadic traditions of the Arab people, rebel against that which is communism.

These people we must aid to better themselves. The alternative is disaster. They want to be our friends, yet they know nothing about us.

They say that they have heard about the segregation of our Negroes, yet they do not know that nowhere else in the history of mankind has a Negro been as free as he is today in the United States.

They speak of the millions of Wall Street, yet they know nothing of the tremendous sums collected and spent by Americans and their charitable organizations.

They say that we are clannish, that we do not share our wealth.

One parent told me: "If I had but $1 a week from America, I could keep my little daughter home, give her warm clothing and food."

I am not here to tell you what is wrong with our governmental aid program in the Middle East. I don't know what is wrong, but I do know that somehow the Federal sums allotted for aid, under point 4, are not reflecting themselves in bettering the living standard of the poor in the Middle East. In that section of the world one is either very rich or very poor. There is no middle class as we know it in America.

Gentlemen, I am here rather to sound an appeal, to utter a warning. I think it is time the American people establish methods of funneling money directly into the hands of those who need help the most in the Middle East. I think we ought not at this critical time to indulge in the luxury of a national debate on the subject of, "What Is Wrong With Our Point 4 Program?" I think rather that swift action on our part as private citizens, is of essence, and I call for the establishment of an organization of Americans of good will to collect funds and send those moneys to private agencies abroad entrusted with the distribution of that aid among the people, directly, with no middlemen.

We must get our mostest to the people the fastest, to use an expression made popular by the Confederate soldier, Forrest; and if the present system of extending aid to the vital section of the world is not effective, we must render it effective with characteristic American ingenuity and drive.

The stakes in the Middle East are high. The Soviet is playing its cards expertly; we are simply trumping our aces. This is a task for all Americans. It will mean further calls on our generosity; it will mean the establishment of a new private agency; it will mean a giant public effort; but for the future of America, of the peoples of the Middle East, and for freedom, we must succeed.

The Academy of Medicine of Cincinnati

EXTENSION OF REMARKS
OF
HON. DONALD D. CLANCY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1961

Mr. CLANCY. Mr. Speaker, while this Congress inquires into the alleged shortcomings of medical care, it behooves us to remember that American doctors exemplify all that is best in the ancient profession. They are men who are skilled, selfless, and charitable. It should not surprise us that physicians are taking a greater collective part in the health and welfare of the community in which they serve. A case in point is the Academy of Medicine of Cincinnati. This century-old medical society sponsors a popular Sunday morning TV program, "Call the Doctor." And the public does just that. People by the hundreds telephone their symptoms, their anxieties, and their grievances to the station, and a doctor panel answers them straight from the shoulder. Here is a fine example of the medical profession responding to a public interest in the facts about total medical care which serves them so well today.

This same academy also took a forward-looking step on February 23, 1961, when representatives from medical, educational, and legal agencies in Cincinnati and Hamilton County were invited to a special meeting. The subject of the meeting: "How To Protect the Community From the Menace of Intoxicated Drivers."

The audience first saw a film, "The Silent Witness," which deals with police-administered tests for intoxication. Then they heard a panel consisting of a police officer, judge, and physician discuss the legality and medical effectiveness of such tests, and how they can help reduce the drunken driving problem in Cincinnati or any other community.

"The Silent Witness" was produced by the Wm. S. Merrell Co., a drug manufacturer established over 132 years ago in Cincinnati.

Merrell, as a public and professional service, produced "The Silent Witness" as one in a series of educational films dealing with new problems of medicine and the law. The series was made with the cooperation of the American Medical Association and American Bar Association.

The meeting was sponsored by the Academy of Medicine of Cincinnati and is a laudable example of physicians taking the lead in public service at a time when both medicine and the pharmaceutical industry are under fire. Let us be reminded of the "good men do."

Reuse of Water

EXTENSION OF REMARKS
OF
HON. CLINTON P. ANDERSON
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES
Tuesday, April 18, 1961

Mr. ANDERSON. Mr. President, for years the senior Senator from Oklahoma [Mr. KERR], has been a campaigner for a national program of water resource development. He was the able chairman of the Select Committee on National Water Resources on which I had the privilege of serving. He has become something of an educator in this field, seeking to inform the American people about the water needs of the future. This is why he was asked to be the keynote speaker at the 8th annual National Watershed Congress, which convened Monday in Tucson, Ariz.

I ask unanimous consent that an account of his speech, which appeared in the New York Times, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REUSE OF WATER HELD IMPERATIVE—KERR CALLS ON HYDRONAUTS TO FIND WAYS TO REMOVE BOTH SALT AND POLLUTION

(By Bill Becker)

TUCSON, ARIZ., April 17.—By the year 2000 most Americans will be drinking water that is used three times or more, Senator ROBERT S. KERR said today.

The Oklahoma Democrat predicted that by then the United States would be using all its streams' flow, making reuse imperative throughout much of the Nation. He said that this would require methods of removing pollution so that water could "be used again not once, or twice, but perhaps several times."

The Senator called on "hydronauts of the New Frontier" to "crack the barriers" of stream pollution and desalting sea water. He referred to President Kennedy's statement that a breakthrough on salinity would dwarf achievements in space from the standpoint of the welfare of humanity.

Senator KERR was the keynote speaker at the eighth annual National Watershed Congress, which opend a 3-day session here today.

He predicted to newsmen that conversion of salt water into fresh water should be economically feasible within 5 to 8 years.

CITES GOVERNMENT TESTS

Preliminary tests at several Government-operated plants indicate that conversion costs can now be reduced to $1 a thousand gallons in a plant capable of treating 1 million gallons a day, the Senator said. He added the cost could be cut to 50 cents a thousand gallons at a 10-million-gallon-daily rate.

For normal drinking use, a 40-cent rate would be acceptable in most communities. For irrigation purposes, anything over 5 cents a thousand gallons would be considered too high.

Senator KERR forecast congressional passage of twin bills he is sponsoring to curb pollution and increase reservoirs for recreational use. The antipollution measure would authorize a 5-year research program to develop new methods of treating sewage.

The Nation is now using more than a third of all its streams' flow and will use two-thirds by 1980, he said. By 2000 "virtually complete storage of river flows" will be needed, as well as indefinite reuse in metropolitan areas, he said.

MORE SEWAGE IN WATER

The United States uses 300 billion gallons of water daily. New York City alone uses about 100 million gallons a day.

American cities now receive nearly twice as much sewage in their water supplies as was considered safe in 1955, a report to the Senate Committee on National Water Resources indicates. Senator KERR is chairman of the committee.

The National Watershed Congress comprises 27 organizations ranging through farm, forest, wildlife, and urban groups. Some 350 delegates from about 40 States are attending the meeting.

About 8,300 of the Nation's 12,000 watersheds are suited for multipurpose projects, Donald A. Williams, Administrator of the U.S. Soil Conservation Service, told the meeting. He said that the needed projects—for supply, flood control, and recreation—would affect nearly a billion acres, roughly half the Nation's land area.

Soliciting Made-Work Projects

EXTENSION OF REMARKS
OF
HON. BEN REIFEL
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1961

Mr. REIFEL. Mr. Speaker, at a time when most economic indicators point to an upturn in the national economy, city officials across the country are being invited by the administration to submit lists of needed public works projects in their communities.

The inference is made clear to these officials: Here is a chance to get your hands on some more Federal money. It is an appealing prospect for the local officials, an opportunity to make civic improvements without asking the hard-pressed local citizenry for the money to pay for them.

Yet it would be the local citizenry that would end up paying the bill—only it would cost more by the time their dollars came back from Washington.

Mr. Speaker, I have no objection to the Federal Government participating in local projects which are vital to the welfare of the community, the State, and the Nation. But I have never heard that there is such a shortage of these projects that we have to go out looking for them.

The fallacy and dangers of soliciting made-work projects are pointed out in an editorial which appeared in the Sioux Falls, S. Dak., Argus-Leader of April 6, 1961. Under leave to extend my remarks, I include it in the Appendix of the RECORD:

WHY ROB PETER TO PAY PAUL?

City governing boards throughout the Nation have been asked to compile lists of needed projects in their communities. President Kennedy seeks this information as a basis for the consideration of various public works in the event of the desirability of an accelerated program to provide employment.

All communities, including Sioux Falls, can present a substantial list of such projects. Our city commissioners have mentioned a few. But one wouldn't have to draw hard on his imagination to develop a list representing an expenditure of $10 million to $20 million. And all of the projects would have some merit.

Similarly it might be said that all householders could present substantial lists of what they might like to acquire if funds permitted.

There is, in truth, no end to the possibilities. But certain basic questions are involved. As we take more and more money away from the people through taxes, we reduce their ability to do what they might like to do in the way of home improvement and so forth. And certainly the better way to stimulate employment is through the normal and private avenues of spending.

The made-work proposal can in a sense become a method that works against its objectives. We learned that lesson in part in the thirties. Despite made-work of many kinds, the economy was beginning to crumble in the late thirties. The picture was changed basically only when we began to prepare for World War II.

Russ Lynch of Milwaukee Cited for Excellence in Conservation Reporting

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, April 18, 1961

Mr. PROXMIRE. Mr. President, I ask unanimous consent that an article describing the national honor that has come to an outstanding Milwaukee newspaperman be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LYNCH CITED FOR ARTICLES—CONSERVATION HONOR

Russell G. Lynch, conservation writer for the Milwaukee Journal, placed second in the 1960 Thomas L. Stokes National Award competition for conservation and natural resources writers, it was announced Tuesday. Lynch was cited for his "year long articles on State and natural resources and conservation, preservation of fish and wildlife, parks, forests, water pollution, land use and resource teaching." He will receive a citation.

The first place award of $500 and a citation went to Associate Editor John F. Huth and Reporter Robert J. Drake of the Cleveland (Ohio) Plain Dealer.

The Stokes Award is given annually for outstanding writing on the development and conservation of natural resources. It is named after the late Thomas L. Stokes, a nationally syndicated columnist who wrote in that field.

Lynch also was cited for special commendation by the Stokes Award committee last year, when only a first place award was given.

Louis M. Lyons, curator of the Nieman Foundation and one of the judges, praised Lynch's "hard digging investigative articles on the problems of river development, pollution, flood protection, hazards of chemical controls, soil and water conservation—very able, factual articles and most effectively published in the Journal."

Ku Klux Klan Leader Picked Up—Warned by Police

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1961

Mr. BROOKS of Louisiana. Mr. Speaker, on January 31, 1961, the House of Representatives voted on the question of increasing the size of the Rules Committee by adding three additional members, one Republican and two Democrats. Immediately, in my district in Louisiana, the reaction to such a vote became much discussed. Within a few days, on the night of February 8, as a matter of fact, some unknown individuals burned a large, 8-foot cross on the front lawn of my home in Shreveport, La. These individuals perhaps thought I would be at home on that occasion.

On April 6, in the afternoon, the police department in Shreveport questioned at length one, R. E. Davis, of Dallas, Tex., self-styled leader of the Ku Klux Klan.

Since the cross was burned on the lawn of my home in Shreveport in obvious protest to my vote in regard to the Rules Committee in the U.S. Congress, I think it is of interest to the Members to have available the account of the questioning of this KKK official, R. E. Davis, by the police chief of the city of Shreveport, Chief Harvey D. Teasley. With this in mind, I am presenting an article giving the details of the questioning, written by Jim Leslie, and appearing in the Shreveport Times on April 7, 1961:

KLAN LEADER PICKED UP—WARNED BY POLICE HERE

(By Jim Leslie)

The self-styled leader of the Ku Klux Klan was arrested here yesterday and questioned for 2 hours about his local activities and Shreveport crossburnings.

During the extensive questioning, he was strongly criticized by Police Chief Harvey D. Teasley.

The Klan official, R. E. Davis, of Dallas, was arrested at 4:45 p.m., as he was returning home after a 2-day visit to Bossier City. During much of this time, he was under surveillance by law officers and Shreveport Times newsmen. Capt. Coles Thomas arrested the Texas man in the 1000 block of Texas.

Davis told Teasley that the charter of the local KKK chapter has been revoked. He said he took the charter away from the local group because he became suspicious that some of its members were involved in the crossburning in front of U.S. Congressman OVERTON BROOKS' home in February.

Teasley denounced both Davis personally and the clandestine group that Davis purports to head as imperial grand wizard. And he warned the man that "Shreveport does not need this subversive organization."

Teasley, in his tongue lashing of Davis, said that the crossburning "disturbed the people of Shreveport and caused considerable concern."

The police chief warned Davis that the Klan would be treated as "we do all subversive organizations that degrade and demoralize people." And he added, "our investigation so far reveals that your organization is just like this."

Teasley told Davis that his investigation revealed that the Shreveport Klan had been

made up of "irresponsible people * * * debt beaters, liars, and drunkards."

The police chief told Davis that he had a copy of his long arrest record, which, the chief said, dates back for several years. Teasley also said that he had obtained information from Dallas "where your actions and activities disrupted the citizens council." "Because of that you're very unwelcome there," said Teasley.

Davis denied the criminal record, stating that "I've made a lot of enemies and the same ones that were after me there are after me here." Davis also said that he had never been convicted of any of the criminal charges.

When questioned about the cross burning in front of Representative BROOKS' home on February 8, Davis said that he did not know where he was on the night of the incident, although he admitted being interviewed by a Times reporter the day after the cross burning.

Davis said that he has taken "drastic measures" as a result of the cross burning. He said that he has evidence that tended to indicate that the Shreveport KKK chapter was responsible for the cross burning and "I was suspicious, but couldn't prove it."

Davis said that when he was unable to discover exactly which members of the local chapter were responsible, he revoked the charter of the entire chapter some 5 weeks ago.

Teasley asked Davis if Dr. Jerry Bristol, president of the National Organization of Whites, had anything to do with the cross burning.

"I asked Dr. Bristol about it and he told me that he positively didn't do it," Davis replied.

Then Teasley asked Davis if it wasn't Dr. Bristol's group that had its charter revoked and Davis replied, "I don't know just which one of the klaverns that he claimed to have been in."

Davis denied any connection between the Klan and now.

Teasley then started questioning Davis about his activities in the Shreveport area for the past 2 days.

(Two Klan meetings have been held in this area this week. The Bossier-Webster group met Tuesday night on Lake Bistineau and the Coushatta group met Wednesday night near Coushatta. Both meetings were known to law officers.)

Davis said that he was in this area to sit for a picture that was being painted of him in his "full dress" purple robe.

Davis spent most of the day yesterday with J. D. Swenson, Bossier City drycleaning establishment owner, and two other men, according to Teasley.

Teasley asked Davis what he was doing with Swenson. Davis said Swenson is a member of the citizens council and that he went to talk to Swenson because "I understand they had great success with a meeting in Bossier City recently."

HAD RECORDS

Davis also admitted, after being asked by Teasley, that there were members of the Shreveport KKK chapter with criminal records. He said that an investigation of the local chapter revealed "that we had men in our organization that should have been in the penitentiary."

He said he based his decision to revoke the local charter on a report given to him by the State board of governors.

Teasley also questioned Davis about the finances of the Klan. At one time Davis said that all he received was "donations to help pay my expenses" from the local chapters, but when pressed he said that he receives $3 per man after the State becomes "an organized State."

Davis said that there have to be 50 chapters in the State before it becomes an "organized State" and at present there are 35 chapters in Louisiana. Then after becoming an "organized State," Davis said he receives 72 cents per member per year.

Davis said that he also publishes a newspaper for Klan members and that the subscription rate is $2 a year.

He said that the Klan is a "charitable organization" and that its moneys are spent in "charitable ways." He cited as an example the helping of a "poor church." However, he added, "it has to be done so that you don't let your left hand know what your right is doing."

Klan activities in the Shreveport area first came to light on February 10, and after criticism by Caddo Sheriff J. Howell Flournoy, Shreveport Mayor Clyde E. Fant and other officials, the Caddo group began to fall apart.

Several high-ranking officers were kicked out.

But then the movement spread to the two parishes east of Caddo—Bossier and Webster.

Davis, continuing to make trips into the Shreveport area, met with Bossier Parish Klan leaders on a number of occasions and attended several meetings.

The Bossier-Webster group, following the patterns of the Klan in most sectors, held its meetings at a camp alongside a lake.

Most of the time, these gatherings have been held on the west side of Lake Bistineau, at a camp located on the north end of the lake.

A visit by Times newsmen showed this meeting place to be a white, concrete block building situated under a grove of pine trees.

The Bossier-Webster meetings, at which persons from Minden, Bossier City and Shreveport attended, have been held on Tuesday nights.

Last Tuesday, however, the meeting place was changed to another camp, located about a quarter of a mile away.

The place of the meetings, unlike many Klan gathering spots, can be seen from a number of surrounding fishing camps.

Members driving to the meeting from Bossier and Shreveport would go east on U.S. Highway 80, turn south on the road leading to Doyline, continue through Doyline on the Doyline-Minden road 4 miles, then turn right on a gravel road. This gravel road makes a turn and curves back onto the Doyline-Minden highway.

From Minden, those attending the Klan meets would simply drive west out the Doyline-Minden road and turn on the gravel road.

Our Man in London

EXTENSION OF REMARKS
OF
HON. JAMES A. BYRNE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1961

Mr. BYRNE of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I would like to include in the RECORD the following article which appeared in the Philadelphia Evening Bulletin of April 10, 1961:

IN OUR TOWN

(By James Smart)

Our man in London: Advertisements began appearing on and off in the London Sunday Times a couple of months ago.

For a while they were a mystery to the city administration. Here's the solution: the ads were placed by Samuel Berger, Philadelphia builder who, with his brother Henry, has been responsible for several big developments and is one of the developers of the new Eastwick.

"I just thought it was a good gesture," said Berger, "and it might stimulate others to do the same.

"You know, there are two bills before Congress that are supposed to put out some loot to do this kind of thing."

Why didn't he sign his name?

"Why should I?" he said. "I'm not going to sell any houses in London, that's for sure. If I whet the appetite of a dozen people over there, I'll feel satisfied."

Sam Berger is a most patriotic, public-spirited individual who is interested in promoting good will and the virtues of America abroad. I am proud to count him among my good friends and he is to be congratulated for encouraging foreign tourists to visit the United States and particularly historic Philadelphia.

Columbus, Nebr., Looks Ahead to a U.S. Spaceman

EXTENSION OF REMARKS
OF
HON. RALPH F. BEERMANN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1961

Mr. BEERMANN. Mr. Speaker, in case the administration is interested in what effect Russia's being first with a man in space has had on rural America, I would like to offer this news story from the April 17 issue of the Wall Street Journal. The story originates from what is one of the largest population centers in the Third Nebraska Congressional District, the city of Columbus. Columbus I might add, is well known in Nebraska as a fine progressive community that solved its problem of farm mechanization after World War II, by using its native wit, spitting on its hands and going to work.

GAGARIN AND COLUMBUS, NEBR.: VIGOROUS PRAIRIE TOWN LOOKS AHEAD TO A U.S. SPACEMAN

(By Edwin A. Roberts, Jr.)

COLUMBUS, NEBR.—Almost everyone in this vigorous prairie town has heard of Yuri Gagarin, and they admire his brave voyage in orbit around the earth. But there is quiet confidence that the United States will not be far behind—a confidence born, perhaps, of the town's own orbit here on earth and of what has been accomplished by the enterprise of its free citizens.

True, there is disappointment that the United States was not first. But Columbus, anyway knows what it is to be on top, to take a tumble, and to come back stronger than ever.

The town started in 1856 as a trading post on the Platte River, some 80 miles west of Omaha. It gradually grew into a nice prosperous farming town of about 7,000. Then farm automation hit after World War II and people were being laid off right and left; population dwindled fast. Town leaders decided to encourage the people to stop crying and do something constructive—to get out of farmwork if they were working at all, and into something else.

Walt Behlen, laid off from the cornfields by mechanization, became an inventor of improved farm equipment. He started with nothing and his company now does $14 to $16 million volume annually. He is the town's most famous success story, but there are dozens of others. And now Columbus is known through the Plains States as a little hub of technology for the farm. Population has climbed to 13,000.

EXUDE CONFIDENCE

"If Columbus can catch up, so can the country's scientists," says a pipe-smoking store owner. "We're doing all right with our missiles, and it won't be long before we show the Russians something. Funny thing about Americans—once they wake up they usually go to town. Some people don't believe that, but I do."

William Floyd is 45 years old and he has been principal of Columbus Senior High School for 6 years. In those years the number of students taking advanced science courses has almost trebled, and he attributes this to the effect of the East-West space race on the popular imagination. He thinks Gagarin's flight should be kept in perspective.

"I don't lie awake nights about it. Remember Russia has really concentrated on this project to the exclusion of many other fields of inquiry. The United States is well ahead in the overall picture, and in time we'll overtake the Communists in space exploration. It would be a mistake, I think, for the country to become alarmed because the first man to orbit the earth was a Russian.

"It's overall balance that counts, don't forget. Why we've had outstanding hurdlers from time to time and still had lousy track teams."

Columbus High is a sprawling buff-colored structure situated just north of U.S. Route 30, a major transcontinental highway. The school is 3 years old and impressively equipped. In one room, a laboratory, students not entirely unhappy about an interruption in their work gave a visitor their views about Gagarin's flight.

"I don't think of it as a space race," says Bert Aerni, an 18-year-old senior, as he throws aside his rubber apron. Bert, who wants to be an electrical engineer, adds, "It's all human achievement no matter who does it. The Russians will make propaganda gains, but I don't think we're very far behind them."

After a pause Bert says softly, "Even so, I guess I am disappointed we didn't do it first."

Anita Mueller, 17, a senior who plans to be a math teacher, isn't especially impressed with the Soviet feat. "Really," she remarks with a twinkle, "what's the difference between a man and a monkey?"

Back downtown Ben B. McNair, president of the Citizens Bank, leans back in his chair and rubs his chin. Mr. McNair, at 63, has been a banker all his life, but it was only 2 years ago that he helped found Citizens. The institution has grown rapidly and now has deposits exceeding $2 million. Mr. McNair doesn't think "we should be down on ourselves."

"The Government's going about this space business in a logical way," he says. "We're not shooting a man up there just for the sake of trying.

"The sad thing is that some foreign nations are so impressionable. When I was in Italy a while ago, some people over there told me communism has more to offer than democracy. They tried to support this notion by pointing to Russia's superior athletes. What sense does this make? But undoubtedly many people will be impressed in the same way by the Soviet space man."

The idea that many of the peoples of the world use vulnerable criteria in judging ideologies was echoed heatedly by Peter Haas, a young farm-equipment salesman.

"Answer me this, will you? Why should we get in a scientific vaudeville show with the Russians? So what if all the banana countries start doing a rain dance every time somebody shoots off a rocket. Sure, putting that guy up there was a great stunt, but does anybody doubt next year at this time we'll have guys doing the same thing? I'm tired of all this moaning and wailing."

But Alice Micek, a bookkeeper, was unwilling to pass off the Soviet success so lightly. "This is a serious setback for the United States. It will provide a lot of propaganda for the Reds. I think the Russians are ahead of us because we give away too many secrets. Television and newspapers report about our missiles in such detail, it's no wonder the Communists have the advantage. Now something should be done about it."

OTHER PROBLEMS

Joe Justice, an auto mechanic, doesn't see the sense of space experiments in the first place. "The Government is having a hell of a time making ends meet on earth without going someplace else," he declares.

Mike Kincaid, owner of KJSK, the local 1,000-watt radio station, believes interservice squabbling is still holding up the U.S. missile program. He thinks it's time we got busy and got a man up there too. And he's confident we will eventually outstrip the Russians in space.

Expressing similar confidence were three workers at the Behlen Manufacturing Co., a farmer and his helper who were repairing a corn crib, two housewives browsing in the J. C. Penney store, a pharmacist, and James Preston, manager of the Columbus Chamber of Commerce.

And if a casual traveler through the pleasant streets of Columbus, Nebr., can claim a total impression it must be that confidence in America's ability to cope with this challenge in space is both strong and deep.

It could be, of course, that Columbus, which found out how to make such a strong comeback itself, could be an exception. Or it could be that the climate that permitted the ingenuity of its citizens full play is not much different from the climate in Livermore, Calif., and Waterville, Maine.

The Constitution and What It Means

EXTENSION OF REMARKS

OF

HON. WILLIAM M. McCULLOCH

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1961

Mr. McCULLOCH. Mr. Speaker, each year the American Legion of Ohio promotes as essay contest among the high school students in Ohio.

The subject assigned always has some connection with civic or governmental responsibility.

This year the subject assigned was "The Constitution and What It Means."

I am proud that the Fourth Congressional District of Ohio is represented among the 12 winners selected this year.

Miss Diana Dietrich of Laura, Ohio, is one of the ninth grade winners. Her prize winning essay is as follows:

THE CONSTITUTION AND WHAT IT MEANS

To fully develop your own character you must know your country's character. Therefore it is necessary to understand our Constitution of the United States. The Constitution of our country provides for the form of government, limits the Government's powers, and assures the rights and liberties of the citizens. First, let's consider the history of our Constitution.

The signing of the Declaration of Indepedence marked the birth of a new nation. In the period between the signing of the two documents, America had no centralized government. In 1778 the Articles of Confederation were drawn up by the Second Continental Congress. These articles left much to be desired. There was no President, Vice President, or Supreme Court. Congress could make laws, but had no means of enforcing them. In September 1786, commissioners from five States met at Annapolis. This important meeting soon led to the ratification of the Constitution by nine States on June 21, 1778. From this time on the Constitution became the supreme law of the United States. Many people agree this was the most important document made in our history.

What I like best about the Constitution is the soul and heart of it. Unless our Constitution satisfies the feelings of our heart, unless it feeds the human soul, unless it stirs our emotions, it cannot be regarded as an expression of the American spirit. The most precious expression, next to the Bible, is the Constitution. In the Bible we find our relationship to God. In the Constitution we find liberty, the next important thing in life. In studying the Constitution every American can say with pride: "When danger threatens my life and liberty neither the President nor Congress nor armies can enter and take away my life and liberty." The soul of the Constitution is in every paragraph. All the parts are mighty links that bind the people in an unbreakable chain of the Union.

You need not be a a scholar to understand the basic principle of the Constitution. Yes, it is important to know the laws and regulations, but not as much as knowing it gives the three God-given rights: life, liberty, and the pursuit of happiness.

Let's consider the Preamble to the Constitution. We do not know from whose brain it came. It is a great voice of the people, giving expression to their souls' desire. Summed up, the Preamble declares that our forefathers sought union, justice, tranquality, safety, welfare, and liberty. You should read the Preamble again and again. As you read it, the words are most ardent hopes and the holiest feelings of the human heart.

Times does not wear down nor eat away the truths of the Constitution. War cannot overturn our liberty as long as Americans are worthy of their forefathers. Instead of fading with age, the glory of the Constitution will remain through the ages. May we guard our birthright and hand it down to our future generations as the "jewel of their soul."

The John Birch Society

EXTENSION OF REMARKS

OF

HON. J. W. FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, April 18, 1961

Mr. FULBRIGHT. Mr. President, an excellent editorial concerning the John Birch Society appeared in the Pine Bluff Commercial, a rather small daily newspaper in my State. I think that this editorial hits the nail on the head

about the significance of this group, and I hope that my colleagues in the Congress will take time to read it. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Pine Bluff Commercial, Apr. 1, 1961]

THE NEW PERIL

We have been trying to work up a proper degree of concern and indignation about the John Birch Society, and have not so far made the grade.

The society may well be the menace it is being painted to be. We remember a fellow who laughed at Joe McCarthy.

But the Republic has stood off the Soviet Union since 1945 and, with considerable help, whipped two sets of Fascists plus Mussolini's legions more or less simultaneously in the period immediately preceding.

It lived through the know-nothings, the Klan, the silver shirts, and the aforementioned McCarthy, and will, from all indications, also survive the citizens councils.

We are experienced, as a Nation, with crackpots and authoritarians. If the John Birch Society is not about the nearest to impotent of the lot we are, as a newspaper, a good way wide of the mark.

It has been alleged that the John Birch Society is a hate group, hence dangerous. Certainly it is made up of people who know how to hate, and who enjoy the sport. But they are also, and more profoundly, people shaken to their being by fear.

Whether the founder (who girded for his present large responsibilities in his brother's candy factory) knows it or not, the John Birch Society is built upon the proposition that mankind is doomed, and that there is now time only for a desperate rearguard action.

The society is convinced that all forces of change are exclusively in the service of the Kremlin, and that they threaten the civilized world at every point of contact.

What we have here is a fellowship of fear. In its articles of faith, the society resembles nothing so much as one of those sects which have from time to time taken to the basement and sealed up the cracks around the door in the conviction that the world would end at 5:27 a.m. a week from Thursday.

Consider the men and things which the John Birchers or their founder have already conceded to the Communists: They include the President and his predecessor; the Supreme Court; the Nation's city managers; the urban renewal advocates; the proponents of fluoridation; the United Nations.

These people don't need condemnation. They need help.

They need, each of them, a quick course in American history, a heart-to-heart talk with a trustworthy friend and then, perhaps, a good long rest.

The evidence is that John Birchism is incurable, but we can try.

Nor does John Birchism seem to us to be contagious. The presumption on which the organization has been viewed so generally with alarm, is that it is a virus likely to infect innocent people.

All of the evidence we've seen indicates that the people already had the virus, and have simply gotten together to share its miseries.

We suppose that there may be people in meaningful numbers willing to take the oath of allegiance to an outfit which is willing to forfeit the American system of Government for something the John Birchers call, quite gratuitously, "the American way of life."

But we doubt that there are many men of sound mind willing to accept the collateral dictum that Dwight Eisenhower is a Communist.

To the extent that they have done anything, except to each other and themselves, the John Birchers seem to us to have performed a substantial public service.

They have alerted their fellow Americans to the existence on the far, far right of the political spectrum of people every bit as confused, troubled and willing to be led around by the nose as their opposite numbers on the far, far left.

The society also has provided an interesting litmus test for some of our noisier politicians.

Senator EASTLAND, for example, has just spoken well of them.

Until they move beyond their present activities, which appear to consist pretty exclusively of whipping up each others' hysteria and of occasionally slandering men so eminent as to be substantially invulnerable to such attacks, we think the John Birchers more a nuisance than a peril.

If we must have people willing to believe in the things the society stands for, we may as well have the society.

The existence of such a group is bound to cut down on the number of Birchists running around unencumbered by the label, and thus likely to be mistaken for responsible citizens.

"Wisconsin Agriculturalist" Writer Ralph Yohe Describes Vocational Training Outlook for Rural Youth

EXTENSION OF REMARKS

OF

HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, April 18, 1961

Mr. PROXMIRE. Mr. President, the outstanding farm paper, the Wisconsin Agriculturalist, has been carrying a series of fine articles on the theme "Rural Education on Trial." They have been written by a distinguished Wisconsin farm writer, Mr. Ralph S. Yohe. The most recent two articles in this series describe recent developments in vocational schools and technical training.

Mr. Yohe notes that Wisconsin has one of the better vocational training programs in the Nation, established 50 years ago. Sixty-two cities in Wisconsin offer vocational and adult education courses. As of last year, well over 5,000 students were enrolled in these programs.

Mr. Yohe asks:

How does farm youth fit into this picture? Only 20 to 30 percent of the youth growing up on farms will be able to find good farming opportunities. This means that 70 to 80 percent must eventually find jobs in factories and offices.

Yet a smaller percentage of farm youth take training in the State's vocational schools than city youth.

The writer goes on to examine the reasons for this. He suggests in conclusion that vocational training schools be expanded and upgraded, to meet the needs of both city and rural young people. To better accomplish this he recommends that area vocational schools be established in various parts of the State.

In view of the great interest in vocational training that has arisen in connection with the area redevelopment bill, I ask unanimous consent that Mr. Yohe's articles and the accompanying table be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

HOW DO WE STAND WITH VOCATIONAL SCHOOLS?

(By Ralph S. Yoke)

Wisconsin has one of the better vocational training programs in the Nation. The Wisconsin Legislature established vocational and adult education in 1911—50 years ago.

The program was set up to furnish vocational and industrial training for people in the growing towns and cities of Wisconsin. At that time, there was little thought that such training might someday be desirable for rural youth.

"The growth of the schools has been correlated with the growth of the communities in which they exist; and as the communities have grown and expanded, greater demands have been placed upon the schools for broadened and more comprehensive service," says C. L. Greiber, director of the State board of vocational and adult education.

LAW ALLOWS AREAWIDE SCHOOLS

The original law set up the program as individual community activities. The courses are approved, the schools supervised and coordinated by the State board of vocational and adult education.

In 1955, the legislature passed a law to allow areawide vocational schools. Any county or area with 20,000 or more people can set up an area vocational school to meet their needs.

So far no such area schools have been established. Why?

Such schools must be built and run largely through local tax money. The areas that need them most are the least able to build and support them.

Most of the areas that are able to run and support vocational schools already have vocational schools in one or more of the cities.

Wisconsin's present vocational schools get most of their support from the local towns and cities where they are located. The State's vocational schools' income in 1960 came from: 75 percent, local property tax base; 4 percent, State funds; 3 percent, Federal Government; 7 percent, fees and tuition; 11 percent, other sources.

Last year the State's part of the $10 million for running vocational schools in Wisconsin amounted to $420,000. This year it will be upped to $1,785,000.

The Wisconsin program is quite in contrast to States like Connecticut, where vocational schools get nearly 100 percent of their help from the State.

The 62 vocational schools scattered over the State offer a variety of training—trade and business extension education, general adult education, training for apprentices, and instruction for high school age youth.

Wisconsin laws require youngsters to go to school until they are 16 or have graduated from high school. Where vocational training is available, youngsters under 16 who have graduated from grade school can take full-time vocational work instead of high school.

The law also requires that town and city youth from 16 to 18 who are not enrolled or have not graduated from high school must attend vocational school 1 day a week.

That is if there's a vocational school in the town or city where they live.

A very important part of the vocational school educational program is technical courses offered to young people who have graduated from high school. It is important because the Nation will need 40 percent more trained technical and professional workers in the next 10 years.

An impressive number of people are enrolled in the States vocational and adult schools. This includes apprentices, adults, continuation school students, and high school graduates—in night, part-time and full-time courses. Here's the total enrollment for the State:

1957–58, 132,746; 1957–59, 142,986.

The number is far less impressive, however, when we look at the number of high school graduates enrolled in vocational-technical training.

On February 15, 1959, 5,267 students were enrolled in full-time vocational technical courses designed for high school graduates.

On February 15, 1960, 5,319 students were enrolled in these courses. Most of them—4,323—were high school graduates.

In addition, some young people were enrolled in private or other public schools offering technical training.

Even so, the total is only a fraction of the number of students enrolled in various colleges and universities in the State.

ENOUGH PEOPLE AREN'T BEING TRAINED

Only a small percentage of the States high school graduates take full-time courses in vocational training. Yet it is one of the fields where our need for trained people is growing the most rapidly.

We have no figures on the percentage of rural youth enrolled in these full-time vocational technical training courses. But certainly it is only a small percentage of the total farm youth who will eventually seek jobs in factories and offices.

On February 15, 168 high school graduates, or those 18 years of age or older, were taking vocational courses half- to full-time at the Wausau Vocational School. Of this group, 102 were from the city, 66 from the surrounding county.

At Superior 209 were from town, 19 from the surrounding county. At Milwaukee 1,109 were from the city, 209 from the county.

At Madison 139 were from the city, 94 from the county. At Green Bay 166 were from the city, 75 from the county. And at Eau Claire 124 were from the city, 44 from the county.

Why don't more rural and urban youth take advantage of the technical vocational courses offered in vocational schools?

We'll try to answer this question in the next article.

YOUTH PASSING UP TECHNICAL TRAINING

(By Ralph S. Yohe)

Sixty-two cities throughout Wisconsin offer vocational and adult education. Twenty-eight of these schools offer full-time vocational technical courses at the high school graduate level.

Many of these schools are very good and well attended. The largest—Milwaukee—reports an attendance of more than 700, with a comprehensive vocational technical program carried on in 58 shops.

The chart below shows that the Nation's needs are greatest and most training is needed for professional and technical jobs.

On February 15, 1960, there were 5,319 students enrolled in vocational technical programs in the State's vocational schools.

This is an impressive number, but it is small compared to the large number of Wisconsin high school graduates who do not go on to college or other advanced training.

How does farm youth fit into this picture? Only 20 to 30 percent of the youth growing up on farms will be able to find good farming opportunities. This means that 70 to 80 percent must eventually find jobs in factories and offices.

The most opportunities are in fields requiring the most training

Occupation	Change in the Nation's needs 1955–65	Number of years of school completed by those in field, 1959 (years)
Professional and technical	37 percent more	16.2
Proprietors and managers	22 percent more	12.4
Clerical and sales	27 percent more	12.5
Skilled craftsmen	24 percent more	11.0
Semiskilled	22 percent more	9.9
Service workers	13 percent more	9.7
Unskilled laborers	3 percent less	8.6

ONLY A FEW FROM THE COUNTRY

Yet a smaller percentage of farm youth take training in the State's vocational schools than city youth. The map of Wisconsin shows the number of students attending the Madison vocational school from the various counties throughout the State (not shown here).

By far most vocational school students come from the city where the school is located. Only a small percentage comes from outside the county.

In view of the Nation's growing needs for technically trained people, why do not more farm youth in Wisconsin go to vocational schools for technical training? Fees are very low and many of the schools offer fine instruction.

There are probably many reasons, but some of the important ones are:

The vocational schools are run and are largely supported by taxes from the cities in which they are located. While students outside the city are welcomed, there is no great effort made to promote the school's program outside the city.

Most of the schools, with the largest variety of courses, are located in the more highly urbanized eastern part of the State. In northern and southwestern Wisconsin where there is great need among rural youth for such training, there are no vocational schools offering extensive courses.

Farm youth who wish to attend such courses must either travel long distances or live away from home.

Many student advisers in high schools fail to encourage or point out the advantages of taking additional training in vocational schools. Even excellent agricultural technical training is available in some of the vocational schools.

A general feeling that vocational technical training—"going to a trade school"—is a pretty poor second choice to going to college. We have an attitude that it's "college or nothing" in spite of the Nation's growing need for technically trained people and the fact that many technicians earn as good a living as many college graduates.

Area schools need to be established in those parts of the State where vocational education is not available at present.

If we are to get well-equipped and well-staffed vocational schools in these areas, it will mean that the State must bear a much heavier proportion of the cost of vocational training. The areas where new schools are needed are the least able to raise the taxes to support them.

The schools should be given more prestige by adopting a name more in line with the job they have to do. The term "vocational school" or "trade school" is hardly in keeping for the training needed for today's technician.

California calls its vocational training centers "technical junior colleges."

It is time that we get along with the serious job of expanding and upgrading our technical programs in our vocational school system. They must be designed to meet the needs of all our youth—both city and country.

This is not apt to come about so long as each community—regardless of its size or tax base—is forced to build and support its own vocational school.

What Kind of Revolution Are We Supposed To Be For?

EXTENSION OF REMARKS

OF

HON. CLIFFORD G. McINTIRE

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1961

Mr. McINTIRE. Mr. Speaker, I insert into the RECORD a timely article from the editorial section of the April 15 issue of the Saturday Evening Post, an article which establishes that there is an urgent need for the development of a proper perspective before we, as a country, can hope to go forward with a purposeful foreign policy:

WHAT KIND OF REVOLUTION ARE WE SUPPOSED TO BE FOR?

One way to gain unqualified approval with almost any group of Americans is to say, with a tolerant smile, "The United States must no longer be allied to the reactionary forces in the world but must participate in the revolution which is springing up everywhere, convincing the new elements that we share their hopes and aspirations." Recently Under Secretary of State Chester Bowles joined this chorus. He said that we must not be "linked with the forces of reaction and stagnation," but must participate in the effort to reform the world.

The only trouble with remarks like these is that, despite their acceptance in the best circles, they lack definition. They are loaded with emotion, but light on facts. For one thing, what are the forces of reaction and stagnation to which we are supposed to have been tied? For another, what are the forces of reform with which we are asked to identify ourselves? For a third, what are we supposed to do to be saved?

Well, we have had and, unless we are crazy, will continue to have relations with our European and Asiatic friends with whom we can hardly dispense in critical times like these. Just why countries like Great Britain, France, Nationalist China, Belgium, West Germany, Japan or Italy are supposed to be reactionary and stagnant is beyond us. Yes, some of them have, or have had, colonies in which, despite conflicts and errors, the people are generally better off than they were before the arrival of the imperialists. Would it be wise to become so outraged at discrimination at the white-imperialist country club that we throw over our friends and make our political bed with people who eat one another?

In respect to Cuba we tried to get right with the revolution and detach ourselves from the brutal tyrant Batista. Our reward is a Red satellite under Castro, who assures us that the "so-called free world will soon go down in defeat before the rising power of the Soviet Union."

Mr. Bowles agreed that "our international interests are incompatible with the global, long-range objectives of Soviet strategy." Unfortunately Soviet strategy is making good use of elements which describe themselves

as the forces of reform and revolution. They have made it appear to timed Americans that our "image" is so bad that, unless we get into the swing of things and picket our own embassies in revolutionary areas, we will lose the cold war.

Obviously we cannot hope to compete with the Communist conspirators in stirring up ruckuses. What we ought to do instead is look about a little, at least until we find out just what the genuine forces of reform are after. In many cases it will appear that all they want is to be as much like us as possible, to share our freedom and our economic progress. When the rioters and the bearded upstarts have shot their bolt—in Cuba, Japan or the Congo—it usually turns out that the Communist hell raisers did not have the box office which Moscow and its minions had claimed for them.

Thus in the case of Cuba thousands of exiles are now urging this country to "do something"—not to "ride, with the Castro revolution" but to get rid of it. In the Congo responsible elements form a confederation to deal with the Communist threat—but, instead of riding with their successful revolution against colonialism, we lend our planes to the United Nations to harass it. The effort to renew the outstanding charges of Soviet aggression in Hungary and to initiate proceedings against Communist genocide in Tibet did not rate so much as a debate in the United Nations, but the U.S. delegation voted to tell Portugal off for the way its African colony is administered. In Japan, after serious Red-inspired riots, the Diet ratified the treaty with the United States as if nothing had happened, and several student rioters, inspired by the Moral Rearmament movement, apologized to Jim Hagerty for mobbing him during his disastrous visit to Tokyo last year. What revolution should we have joined there?

What all this comes down to is the suggestion that, before talking about forces of stagnation and reaction versus the bright banners of progress and reform, it is important to decide which is which and where American interest in the struggle really lies.

Equality Claim Is Called Hoax

EXTENSION OF REMARKS

OF

HON. DALE ALFORD

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1961

Mr. ALFORD. Mr. Speaker, I have just read a newspaper article in the Memphis Commercial Appeal which really touches at the core of the racial situation in the South. Under leave to extend my remarks, I desire to place a copy of this article in the RECORD.

The article follows:

NORTHERN BORN BUSINESSS FIGURE AND FORMER MEMPHIAN LAUNCHES NEW BROADSIDE AGAINST DESEGREGATION

(By Paul Flowers)

On the thesis that there is "no such thing as equality even between two leaves on the same bush—that this was not just a matter of difference, but of inferiority and superiority in terms of the value judgments of persons, communities, nations, and cultures, and that the heart of the matter as regards race lay in the area of heredity," Carlton Putnam has launched a new broadside against desegregation.

Mr. Putnam, well known in business circles in Memphis and the South through his service as president of Chicago & Southern Air Lines, and as chairman of the board of Delta Air Lines, is a self-admitted Yankee. In fact, his book's subtitle, "A Yankee View," spots his geographical origin. It is "Race and Reason," and comes from the Public Affairs Press, Washington, at $3.25.

In a biographical introduction, he mentions his New England heritage, with Israel Putnam, Washington's first major general, and Rufus Putnam, founder of the Ohio Colony, admittedly to establish his position as observer and commentator not influenced by Southern birth and environment.

To produce his argument, an admirably organized and competently documented piece of special pleading, he fell back on a liberal arts-scientific education at Princeton University, and a law degree from Columbia. With acceptable scholarship in gathering his materials, and creditable legalistic skill in marshalling his arguments, he presents a case that will be convincing to many.

HOPES TO STRENGTHEN THE SOUTHERN STAND

Moreover, it is his expressed hope frequently in the book, that his evidence and arguments may first strengthen the position of southerners who do not accept the doctrine of racial equality, and that, despite calculated censorship in the North, his conclusions may penetrate into areas where many already regard with misgivings the consequences of the Supreme Court's rulings.

Basically, Mr. Putnam's case rests on these points:

1. That the theory of equality of all races, as advanced by Franz Boaz and his successors in modern anthropology, is a hoax imposed often by force on scientists, both natural and social.

2. That the Supreme Court went far beyond the Constitution to arrive at the edict handed down in *Brown* v. *Board of Education*.

3. That to lift up the Negro race by law necessarily means that the white man will be pulled down, in the same proportion, in the scale of civilization and culture.

4. That social status has to be earned.

5. That the Negro race has not demonstrated, either in its homelands or in the New World, the initiative, aggressiveness, and resourcefulness which Mr. Putnam submits are the qualities which brought Northern European peoples from savagery to civilization.

ARTICLE IN MAGAZINE INSPIRED REBUTTAL

Soon after the Supreme Court's desegregation decision, Mr. Putnam read, in Life magazine, an article by Virginus Dabney, editor of the Richmond Times-Dispatch. Mr. Dabney had stated the southern viewpoint, and Life had replied to Mr. Dabney with "an editorial wholly lacking in perception and full of inept analogies, and abandoned principles."

This inspired Mr. Putnam to compose a letter to Life, and he sent a copy of the letter to Frank R. Ahlgren, editor of the Commercial Appeal, with whom he had associated in Memphis. The Commercial Appeal reprinted Mr. Putnam's letter and Mr. Dabney followed by reprinting it in the Richmond paper.

Followed then Mr. Putnam's letter to President Eisenhower, in which he said, in part:

"Throughout this controversy there has been frequent mention of the equality of man as a broad social objective. No proposition of recent years has been clouded by more loose thinking.

"The whole idea contradicts the basic tenet of the Christian and Jewish religions that status is earned through righteousness and is not an automatic matter. What is true of religion and righteousness is just as true of achievement in other fields. And what is true among individuals is just as true of averages among races."

Mr. Putnam concluded his letter to President Eisenhower with:

"What evolution was slowly and wisely achieving, revolution has now arrested, and the trail of bitterness will lead far."

LETTER TO PRESIDENT WIDELY REPRINTED

The letter was reprinted in many southern newspapers; a Birmingham committee, stimulated by Columnist John Temple Graves, raised money to reprint it as an advertisement in 18 northern and western papers, with total circulation of 7 millions. Eight newspapers, the Washington Post, the Los Angeles Times and Examiner, the Pittsburgh Press, the Indianapolis Star-News, the Newark Star-News, and the Buffalo News, refused to carry it even in an advertisement.

Five months later, in March 1959, Mr. Putnam wrote to Attorney General Rogers, as "nonadversary party to the proceedings (one presumed) to have represented the people of the United States." Herein, he wrote:

"It is my considered opinion that two generations of Americans have been victimized by a pseudo-scientific hoax in this field (anthropology), that this hoax is part of an equalitarian propaganda typical of the left-wing overdrift of our times, and that it will not stand an informed judicial test."

QUESTION HAS FLOURISHES OF ORATORICAL RHETORIC

Mr. Putnam, with a flourish of eloquence, repeated a question he had put to Clyde Kluckhorn, a Harvard anthropologist, concerning Negroes' contributions to culture:

"I was curious as to one poem equal to Milton's 'Paradise Lost,' one history equal to Gibbon's 'Decline and Fall,' one novel equal to Dickens' 'David Copperfield,' one playwright equal to Shakespeare, one philosopher equal to Aristotle, one medical discovery equal to Salk's polio vaccine, one military leader equal to Napoleon, one inventor equal to Edison, one physicist equal to Einstein, one pioneer equal to Columbus, one composer equal to Beethoven, one painter equal to Rembrandt."

The potential for adaptation to a culture is one of Mr. Putnam's points for argument. On this theme, he writes:

"The Negro race has various and valuable qualities. In those great attributes of the heart—sympathy and kindness—and in a sense of humor—the average Negro, taken as an individual, is fully on par with the average white. In certain skills the Negro ranks above the white. If I were lost in an African jungle my life might depend on the talents of a Negro. In other qualities of mind and character, qualities specially involved in our Western civilization, the full-blooded Negro is congenitally only partially adaptable. Hereafter, when I use such words as 'inferior,' 'backward' and 'unequal,' I use them in this limited sense only."

NEW BOOK CLAIMS EQUALITY A HOAX

Follows then a long chapter of questions, put by correspondents, and answers provided by the author, along the entire spectrum of the segregation-integration controversy. Mr. Putnam repeats his conviction that races are not equal, that the anthropological doctrine of equality is a hoax and a fraud, that the 14th amendment to the Constitution is unconstitutional, and that the South's best hope is to enlist support, against odds, in other parts of the country wherever observers, faced with harsh realities, may be more receptive to the southern, and Mr. Putnam's point of view, and all implications.

In his reply to one question, Mr. Putnam wrote:

"In forcing integration upon the South, the North is demanding that the South do what the North itself in similar circumstances would not do. It is an established fact that white people favor integration throughout the United States exactly in proportion as they do not need to practice it."

He concludes:

"Minority groups, coming to us for asylum out of centuries of failure in the struggle for freedom, clamored to dilute those values, but their voices only made more necessary our own recommitment. I could repeat: To alter the foundations upon which a house is built is a doubtful way of preserving it. Let us continue building, let us extend the foundations, but let us not change rock to sand."

California Meets Educational Challenges

EXTENSION OF REMARKS

OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1961

Mr. ROOSEVELT. Mr. Speaker, it is a privilege for me to offer my colleagues excerpts from a speech delivered to the California Teachers Association and State Council of Education by the distinguished Governor of the State of California, Hon. Edmund G. Brown.

Governor Brown commends the teaching force of California for their great contribution to education, citing, for example, that California students led the Nation in scholarship awards and at the same time the State experienced a zooming population growth of school-age citizens.

For a few minutes I want to talk to you about what your State government is doing to meet our great challenges in education. By this, I don't mean the details of some of the controversial measures now before the legislature. I have been gone for about 10 days, and so much has been happening that I won't know what form many of them are taking until I return. There is so much flux and change in the legislative process, that I cannot properly give you a reading on the situation here today.

But I do want to tell you what the general philosophy of my administration has been in the field of education, and what we are trying to accomplish. For more than 2 years, we have insisted that our school programs move forward on all fronts.

We are proud of our unique chain of public schools. The elementary and high schools, and the junior colleges. Fourteen State colleges, with two more on the drawing boards. Our great university, with five campuses in being and three in the planning stages.

No part of the program has been neglected.

We must, first, supply the money, and we are doing so. Out of the total general fund budget of $1.7 billion, 60 percent is provided for education.

Let us put it another way. California spends more than $1 billion annually for education—more than the total budget in 43 of the other 49 States.

This is not a static thing. Over the last 2 years, we have provided a $50.3 million increase in State aid to local school districts—the first such increase since 1952.

During the current session of the legislature, we released nearly $30 million in State funds for school construction and site purchases; in excess of the increased monthly allocation of $12 million. This action is meant to help cut down double sessions in California, a steadily growing problem.

No one knows better than you how great are the problems posed by California's zooming growth. One measure of that problem is the number of students on half-day sessions. Here we have made real strides.

In the past year we have built more than 6,500 new classrooms and have reduced the number of elementary school pupils on half-day sessions by 20 percent. This record was achieved while our total public school enrollment was increasing by more than 170,000 pupils.

There can be no relaxing of effort. We have more than 3 million students in public school today and we will add another 2 million in the current decade alone.

The same challenge faces us in higher education, and we are meeting it head on. Last fall, we enrolled 203,000 full-time students in our public junior colleges, State colleges and the university. By 1970, we must provide space and equipment for more than 450,000 students.

During the coming fiscal year, we will provide for full-year operations of the Coordinating Council and the State College Board—a 44 percent increase in State scholarships—and nearly three-quarters of a million dollars for the new State colleges and university campuses, as well as a new medical school at San Diego.

In short, we are focusing the attention of State government on education in a manner without precedent in civilized history.

I emphasize that no licenses to luxury are being issued. If we are to justify new programs and new fiscal commitments, we must make certain that education and economy are not natural enemies.

This is the right time for me to pay tribute to the California Teachers Association, and the sense of responsibility you have consistently shown toward State government.

Of course, you recognize our pressing need to keep school programs abreast of growth. At the same time, you do not come to us and say: "Give us money—but don't worry about where it comes from."

We appreciate your responsible programs and the constructive way in which you help us find the answers to hard fiscal questions.

Our great schools are monuments to your wisdom. And every time a California taxpayer sees a new elementary or high school, a new State college, or a new university campus, he can feel proud that he has chosen to spend his money for this most worthy purpose.

At the same time, false economies have no place in a great system of public education.

I firmly believe that they are completely out of joint when they are made at your expense.

No other profession is asked to give so much for so little recompense.

I understand that the average teacher is 41 years old, has had 14 years of teaching experience, and 4½ years of college preparation.

In no other field will you find people with that experience and training making salaries at the teacher's level.

Great skills are demanded of you. The teacher must be a scholar, a specialist in people, and a decisionmaker as much as any corporation head or scientist.

Beyond this, you are asked to handle paperwork and clerical chores, collect money for various causes, take attendance, do stenographic work, and be constantly at the beck and call of your community.

Little time is given to advance your own knowledge, to prepare materials, to consult outside experts, to visit local resources for improving your preparation.

Gifted teachers receive no special recognition. And all teachers are asked to labor hard in the vineyard, sacrifice most current symbols of advancement, and teach our children the nonmaterial values of the spirit.

Somehow, you do the job. The record proves it. Last year, for example, California students led the Nation in scholarship awards following the National Merit Contest.

I believe all parts of our society must change the conditions which now prevail. We must do this out of simple justice—and out of our great need to attract more young people to the profession.

We must cut down on your petty tasks, pay the salaries you deserve, and seek other means of lightening your burden.

My new budget, for example, provides a small sum to expand the use of educational television. We expect further help through the Magnuson bill, now being considered by the Congress.

Certainly, educational television is no cure-all for our ills. But I believe you can use it to help lessen your teaching loads, and to increase the diversity and richness of education.

Turning to another projected program, I am asking for funds to help conserve human resources among our students.

Public education is no less a function of our society than public health.

If anyone proposed cutting down on public health expenditures, on the theory that a little typhus or polio wouldn't hurt our children much, we would react in shock.

We need the same sense of shock at the idea that we can't afford to educate our gifted children.

An estimated 68,000 California children have gifts and potential skills far above the average. If we allow them to lose interest in school and in themselves, priceless human resources go down the drain.

I have, therefore, asked for extra funds to a maximum of $250 a year for each of these children. The money would be used for special classes, facilities, and teachers to help develop their full potential.

We aren't trying to develop freaks. We plan no classes in third-grade Sanskrit. But we do want to foster a school atmosphere in which the high IQ is as valued as athletic skill, and where the general feeling is, "It's smart around here to do your schoolwork."

I also have asked consideration of a new program to assist children who are emotionally handicapped.

Steady progress is being made in other fields.

Curriculum improvements are going forward in ways you have recommended for many years. Science and mathematics enrollments are up. At the same time, you are successfully emphasizing the enduring values of the liberal arts.

So we can note accomplishment.

Yet the progress we are making would still be inadequate, without the new Federal leadership we have in Washington.

Everyone who believs in education must respond to the President's twin goals: a new standard of excellence in education, and the availability of such excellence to all who are willing and able to pursue it.

For public school construction and teachers' salaries, the President has recommended Federal grants of $2.2 billion over a 3-year period. The States would decide whether to use the grants for school construction, teachers' salaries, or both.

This recognition of national responsibility has long been lacking. Its absence has generated many of the problems we now face.

I want to emphasize this. No State and no nation in history has ever poured the money into public education that California is furnishing today.

Yet without Federal cooperation, the staggering future costs cannot be met.

Already we have the greatest school population in the Nation, and it is rising at a rapid rate.

Already we are pressing our resources to the limit. I, therefore, ask you to ponder this:

Under present building terms, the department of education estimates that more than $3.2 billion will be needed to house the increase in public school enrollment just during the current decade.

You are all knowledgeable men and women. You know it is right that education should have first priority on our public funds.

You know, too, that a dynamic State like California has other unmet needs. Without water development, our State would in great part revert to desert. Without essential programs of social welfare, social insurance and public health, we cannot keep our economy strong.

We must therefore establish the priorities, recognize that the State treasury is not a bottomless well, and support active programs of educational responsibility at all levels of government.

Now, I am not here to give you a partisan address. And I recognize that your own role is, very properly, nonpartisan.

But I emphasize this. The State and Federal administrations you now have are deeply concerned with meeting the needs of education and are acting on that concern.

I hope that you will seek and support administrations which reject the status quo, which do not bury their heads in the sand, and which insist on progress.

The spirit of regard for education now being shown in Washington is one which I have fostered for the past 2 years in Sacramento.

I am proud that this is an honest, progressive State—as I am proud of the foresight you have shown in your most important field.

Not for 1 minute do I forget that government's responsibility may be great, but yours is greater.

The President and the Governor can push your cause. The school board can set the salaries. The districts can levy the taxes. But in the final analysis, you exert the vigorous, lonely discipline. You do the job.

Without your leadership, the great halls of learning are hollow shells. And that is why General Garfield once said: "A pine bench with Mark Hopkins at one end of it and me at the other is a good enough college for me."

I pledge to you my continued recognition of your problems.

I know you will continue to instill regard for learning in California youth.

Continue, too, to discourage dropouts—the children caught in a terrible vacuum without a function, and with fewer jobs available to them every year. Remind them that three out of four unemployed have failed to finish high school. Remind them that after every recession, unemployment has still edged up—because jobs are increasingly scarce for those who lack skill and training in our complex age.

Certainly we ask a great deal of you.

From diverse materials, we ask you to fashion superior products. We ask you to tame the rebellious, embolden the timid, spur the laggard, sharpen the dull, and burnish the bright.

But we should also remind the public that schools can go only just so far.

Parents, and other parts of our society, have their own heavy obligation.

They must not make the teachers and schools the dumping ground for their worries about the H-bomb, and all other insecurities of our times.

I reject the fad for blaming teachers and schools for everything that goes wrong—from a misguided child to a misguided missile. This tendency is a sign of escapism and foolish immaturity.

As Governor, I will continue to do all in my power to help you fulfill great responsibilities—and meet great opportunities—in our times.

And meanwhile, let's not make a scapegoat out of education.

I congratulate you on what you are doing to build our State.

Yet I know that in your own handiwork, in the fruits of your labor, you find the deepest satisfaction.

In the words of Henry Adams, a teacher affects eternity, for he can never tell where his influence stops. Thank you.

Land Retirement Payment Rates

EXTENSION OF REMARKS
OF
HON. DON L. SHORT
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1961

Mr. SHORT. Mr. Speaker, yesterday I received a telegram from one of my constituents advising me of a wire which he had sent to the Secretary of Agriculture, Mr. Freeman, protesting what appeared to be a rather flagrant inconsistency in county yield figures established in different counties immediately adjoining, for the purpose of arriving at land retirement payment rates under the provisions of the recently enacted feed grain bill. This party advised me that, in general, there seemed to be a differential of as much as 33⅓ percent between adjacent counties located in North Dakota and Minnesota and lying within the area of the Red River Valley of the North. Since the productivity of land and climatic conditions in the Red River Valley is identical, for all practical purposes, I could see no justification for any such differential between the adjoining counties. To verify the general information furnished me, I secured a report of the county yields which had been established in adjoining counties located on opposite sides of the Red River, and consequently being within the States of North Dakota or Minnesota. Here are the figures which I find the county agricultural stabilization committees intend to use in arriving at the rate of payment for corn land that is to be retired from production:

Grand Forks County in North Dakota, 32 bushels per acre; Polk County, immediately across the river in Minnesota, 41 bushels per acre; Traill County in North Dakota, 29.3 bushels per acre; Norman County, immediately across the river in Minnesota, 40 bushels per acre; Cass County in North Dakota, 29 bushels per acre; Clay County, immediately across the river in Minnesota, 39.2 bushels per acre; Richlands County in North Dakota, 32.7 bushels per acre; Wilkins County, immediately across the river in Minnesota, 36 bushels per acre.

To carry this a little further, since Richland County, N. Dak., is the corner county in our State adjoining both Minnesota and South Dakota, to find what the comparative yield figures in the adjoining South Dakota county would be, I checked and found that in Roberts County, S. Dak., which immediately adjoins Richland County, a yield figure of 40 bushels per acre had been established as compared to the 32.7 bushel yield for Richland County mentioned above.

Mr. Speaker, there seems no rhyme nor reason to this very substantial differentiation in yield figures being used in adjoining counties where the soil and climatic conditions are practically identical just because the counties happen to be located in different States. I have done my best to get in touch with somebody in the Department of Agriculture who would be in a position to explain or adjust this apparent discrepancy, but so far I have not been successful. I am inclined to believe that the Department of Agriculture has every intention of treating farmers equally insofar as it is possible under the provisions of any farm legislation with which the Department is charged with the responsibility of administration. I sincerely hope that the question that has apparently risen in the minds of the North Dakota farmers that this is administrative retribution being leveled against a State which did not support the present dministration in the last election, is not justified.

Mr. Speaker, under leave to extend my remarks in the RECORD, I include a copy of the telegram received by me yesterday from Mr. Mark Andrews, a farmer of Mapleton, N. Dak.:

APRIL 17, 1961.

CONGRESSMAN DON SHORT,
House of Representatives,
Washington, D.C.:

Have just sent the following wire to Orville Freeman: "Urgently request you take immediate action correcting grossly inadequate corn yield figures set for many North Dakota counties under your Federal feed-grain program. If such restrictive legislation must be enacted it is extremely important to our farmers and our State's economy that these yield potentials be fairly set. As just one example of the gross inequity of your yield assumptions: the Minnesota counties of Polk, Norman, and Clay have been set 33 percent higher than our adjacent counties of Grand Forks, Traill, and Cass. These six counties are all in the heart of the Red River Valley with land values and climate virtually identical. Any person with a farm background would know that a political boundary cannot change soils and growing seasons. Comments are being made that this is a retribution given North Dakota for voting against Kennedy. If this were true, it would be the shabbiest, most vindictive political trick ever pulled on the people of North Dakota and one they will not easily forget."

Regards,

MARK ANDREWS.

The 1960 Oscar Awards

EXTENSION OF REMARKS
OF
HON. JAMES C. CORMAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1961

Mr. CORMAN. Mr. Speaker, since I represent in this body much of the area which contains the American motion picture industry, Hollywood, it is with some pride and affection that I call attention to the annual Oscar Award ceremony. I am sure that many of my col-

leagues, along with the rest of the Nation, watched last night's telecast of the program staged for the 33d year by the Academy of Motion Picture Arts and Sciences.

This event represents one night each year when the American motion picture industry honors its artists and its craftsmen for their outstanding contributions.

It, too, is a night when the moviegoers of America pause to recognize the unique qualities of the motion picture—a medium that over the years has brought entertainment and enlightenment to countless millions at home and abroad.

I compliment the 1960 winners on their well-deserved awards. I salute Hollywood for demonstrating once again that true artistry in all its many forms—acting, directing, producing, writing—is prized above all else in the American motion picture. I should like, therefore, to enter the 1960 Oscar winners in the CONGRESSIONAL RECORD. They are:

Best motion picture: "The Apartment" (Mirisch Co.)

Best leading actor: Bert Lancaster.

Best leading actress: Elizabeth Taylor.

Best supporting actor: Peter Ustinov.

Best supporting actress: Shirley Jones.

Best documentary features: The Horse With the Flying Tail," Walt Disney. Short Subjects, "Guiseppina," Lester A. Schoenfeld Films (British).

Best special effects: "The Time Machine," Metro Goldwyn Mayer, Gene Warren and Tim Baer.

Best costume design: black and white production—"The Facts of Life," United Artists, Edith Head and Edward Stevenson.

Best costume design, color production: "Sparticus," Universal-International, Valles and Bill Thomas.

Best score, musical picture: "Song Without End," Goetz-Vidor Pictures, Morris Stoloff, and Harry Sukman.

Best score, drama or comedy: "Exodus," Carlyle-Alpina S.A. Production, Ernest Gold.

Best song first used in an eligible picture: "Never on Sunday," from "Never on Sunday," Melinafilm Production, Lopert Pictures Corp. (Greek). Music and lyrics by Manos Hadjidakis.

Best directing: "The Apartment," Mirisch Co., Billy Wilder.

Best screenplay, based on material from another medium: "Elmer Gantry," Burt Lancaster-Richard Brooks Production, screenplay by Richard Brooks.

Best story and screenplay, written directly for the screen: "The Apartment," Mirisch Co., story and screenplay by Billy Wilder and I. A. L. Diamond.

Special honorary award: Gary Cooper.

Best film editing: "The Apartment," Mirisch Co., Daniel Mandell.

Special honorary juvenile award: Hayley Mills.

Best art direction, black and white: "The Apartment," Mirisch Co., Alexander Trauner. Set decoration: Edward G. Boyle.

Best art direction, color: "Spartacus," Byrna Productions, Alexander Golitzen and Eric Orbom. Set decorations: Russell A. Gausman and Julia Heron.

Best cinematography, black and white: "Sons and Lovers," Company of Artists, Freddie Francis.

Best cinematography, color: "Spartacus," Byrna Productions, Russell Metty.

Special Jean Hersholt Humanitarian Award: Producer Sol Lesser.

Best sound achievement: "The Alamo," Samuel Goldwyn sound department, Gordon E. Sawyer.

Special honorary award: Comedian Stan Laurel.

Best short subjects: cartoons, "Munro," Rembrandt Films, William L. Snyder, producer. Live action subjects, "Day of the Painter," Little Movies, Kingsley-Union Films, Ezra R. Baker, producer.

Best foreign language film: "The Virgin Spring," A. B. Svensk Filmindustri (Sweden).

Affection and Regard Accent a Homecoming

EXTENSION OF REMARKS
OF
HON. GEORGE A. GOODLING
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1961

Mr. GOODLING. Mr. Speaker, a brilliant sun in cloudless skies, and thousands of enthusiastic Pennsylvanians welcomed Dwight and Mamie Eisenhower home yesterday.

Men and women from every walk of life lined the streets as the motorcade proceeded from the railroad station to the capitol in Harrisburg. The familiar "I like Ike" shouts were repeated over and over as the procession traveled along the route. The general must have realized he was not the entire center of attraction as he stood in his car and recognized the friendly welcome with his customary outstretched arms gesture. Riding in a closed car directly in back of him was Mrs. Eisenhower. When she was not immediately recognized the "Where's Mamie" chant was heard along the entire way.

Upon their arrival at the capitol the distinguished couple was greeted by a vast throng who came, not out of curiosity, but to show sincere appreciation and pay well deserved respect to a great American. Leaders from both political parties joined in praising this outstanding couple for a lifetime of unselfish devotion to, not only their own country, but to the entire world.

As the brief ceremonies ended and they departed for Gettysburg, the first place they could actually call home, the best wishes of all present went with them. If two people ever deserved to live their own lives after a half century of loyal and devoted service, Ike and Mamie are those people. Welcome home, and may the dreams you have had of this day become a pleasant reality and continue for many years.

A copy of Governor Lawrence's remarks on this occasion, and an editorial from Monday's Harrisburg Patriot, follow:

REMARKS OF GOV. DAVID L. LAWRENCE WELCOMING FORMER PRESIDENT DWIGHT D. EISENHOWER ON THE OCCASION OF THE PENNSYLVANIA HOMECOMING OF THE PRESIDENT AND MRS. EISENHOWER, CAPITOL PLAZA, HARRISBURG, PA., MONDAY, APRIL 17, 1961, 8:30 A.M.

There has never been any doubt in anyone's mind of the deep and abiding affection the American people feel for the patriot we honor here this morning.

Pennsylvanians were among the first to make that affection obvious. When the chant that America liked Ike began to roll across the land, Pennsylvania's citizens were in the frontline of the chorus.

Because of the great respect we have felt for him for so many years, we were delighted when President Eisenhower chose the gentle, rolling, pastoral beauty of central Pennsylvania's farm country for his home. Somehow it seem supremely fitting to us that the Cradle of Democracy should become the home of one of democracy's greatest defenders.

Pennsylvania has given roots to America's richest traditions of freedom and equality. The voice of liberty was first proclaimed to the world from the streets of Philadelphia. The terrible grandeur of our great struggle between the brothers of our own Nation found its supreme climax not far from the spot where President and Mrs. Eisenhower make their home today.

I know that General Eisenhower will find the people of Pennsylvania grateful for his presence here; their high regard for him has not diminished.

I speak for all the people of this State when I say that this welcome today here in Harrisburg is only a symbol of the great and overwhelming friendship which reaches out to the Eisenhower family from Pennsylvanians everywhere.

Now that the tragic consequences of war are laid aside; now that the bearer of arms has, at long last, come to a time of relative peace in his own life and his time; now that the grave responsibilities of the world's greatest office have been turned over to new hands and a new generation, he has earned the right to come home.

If I may interject one other thought, it is to reemphasize the importance to our Nation of the ease of transition between the administration headed by our fellow Pennsylvanian and that guided by President Kennedy. It was not only indicative to the world of democracy's ability to provide continuity of government but was a great tribute to the wisdom and the character of General Eisenhower and his associates.

I was talking to President Kennedy last Thursday and told him of this occasion today, and he asked me to convey his warmest respects to the Eisenhowers and to express once again his deep appreciation for the support which the general has given in the Laotian crisis.

Now all of us can look forward to many years of warm friendship with our respected neighbors who will be able to spend more time among us and this is precisely the way in which Pennsylvania thinks of Dwight Eisenhower and his gracious wife. They are neighbors; they are friends.

We cannot possibly pay a higher tribute to either of them than this.

It is one of the most pleasant duties I have ever had, to say to them, this morning—welcome home to Pennsylvania.

AFFECTION AND REGARD ACCENT A HOMECOMING

It was a full century ago when the last man came home to Pennsylvania from the Presidency of the United States. In those unhappy times James Buchanan's homecoming was not what it should have been. Neither was Mr. Buchanan's reputation. "Old Buck" was on the receiving end of far more brickbats than bouquets.

Today another man comes back to his home in Pennsylvania from the Presidency after a brief rest and vacation in sunnier climes. He returns home in far different circumstances than prevailed for "Old Buck" with his reputation enhanced.

The times are not what he and all of us wish they were. Crisis and turmoil prevail in so much of our unhappy and divided world. But so does freedom. And not the least of the reasons it does is because of what

this man did during the eight rough and rugged years he had to live with and had to cope with crisis, chaos, and never-ending challenge.

Now he can look out upon his people and the world from the peaceful and quiet vantage point of retirement. The massive responsibility that he knew for so long has been handed on to another American who, not too many days ago signed a bill restoring five-star general rank to Dwight David Eisenhower, speaking of the action as a reaffirmation in behalf of the American people of the "affection and regard" for him.

In the same spirit this morning Pennsylvanians—from the Governor to the most obscure of citizens—are welcoming Ike and Mamie Eisenhower home in the hope they will know the bright sunshine of happiness and peace throughout the years of retirement.

Today's little "welcome home" by their central Pennsylvania neighbors stands as but a symbolic token of the great affection and regard in which they are held by all people, everywhere in the world, who love freedom.

House Resolution 211, Special Committee on Captive Nations

EXTENSION OF REMARKS
OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1961

Mr. FLOOD. Mr. Speaker, on March 8, 1961, I introduced a measure calling for the establishment of a Special Committee on Captive Nations in the House of Representatives. This measure is now House Resolution 211. There are not sufficient words to express my profound gratitude and personal delight to the more than 20 Members of the House who joined with me in that most stimulating and very enlightening discussion which took place then on the subject of the captive nations—CONGRESSIONAL RECORD, March 8, 1961, Russian Colonialism and the Necessity of a Special Captive Nations Committee, pages 3286–3311.

The popular response to House Resolution 211 has been so enthusiastic and impressive that I feel dutybound to disclose the thoughts and feelings of many Americans who have taken the time to write me on this subject. These citizens are cognizant of the basic reasons underlying the necessity of the proposed committee. They understand clearly the vital contribution that such a committee could make to our national security interests. In many cases, they know that no public or private body is in existence today which is devoted to the task of studying continuously, systematically, and objectively all of the captive nations, those in Eastern Europe and Asia, including the numerous captive nations in the Soviet Union itself.

Because their thoughts and sentiments are expressive and valuable, I request that the following responses of our citizens to House Resolution 211 be printed in the Appendix of today's RECORD:

SPACETRONICS ASSOCIATES,
New York, N.Y., April 4, 1961.

Hon. DANIEL J. FLOOD,
House of Representatives Office Building,
Washington, D.C.

DEAR MR. FLOOD: It has just been brought to my attention that you have introduced a House resolution for the formation of a Special Committee on the Captive Nations.

I am in complete accord with this resolution, and feel that it is a good step to implement the Captive Nations Week resolution of 1959. Moscow knows that the truth hurts. Therefore I also feel that the so-called Union of Soviet Socialist Republics should be exposed to the world as nothing but a conglomeration of captive nations. Once this becomes known on a worldwide basis I am sure the people of these captive nations and people outside them will be inclined to take various actions that will eventually contribute to the freedom of these captive Soviet Republics.

You have my full support for House Resolution 211. I am sure the Members of the House will not fail to accept so powerful a propaganda weapon as this resolution provides.

Sincerely,

RICHARD T. HANLEY,
Executive Director.

UKRAINIAN CONGRESS COMMITTEE
OF AMERICA,
Hammond, Ind., March 28, 1961.

Hon. DANIEL J. FLOOD,
New House Office Building,
Washington, D.C.

DEAR CONGRESSMAN FLOOD: The Ukrainian Congress Committee of America, branch in Hammond, Ind., takes this opportunity to congratulate you for introducing the resolution calling for the establishment of a permanent Committee of Captive Nations in the House of Representatives. This committee is needed badly. Soviet Union's goal is to rule the world, and we all know it, for we too live in the same world. Our enemy has weaknesses, and by knowing these weaknesses, lesser will be our battle.

A Committee on Captive Nations is a big step in the right direction. It would serve as an information center on the enslaved nations in the U.S.S.R. Our Government needs this information in making proper policies with respect to the captive nations. The committee's main function, however, would be to give the world and especially the American people the timely true picture of the inside of the Iron Curtain.

At this time we are also writing our Congressmen RAY J. MADDEN and C. A. HALLECK asking them to give their full support on this matter.

Sincerely,

ALEX ZALUCKYJ,
Secretary.

MARCH 29, 1961.

Representative DANIEL J. FLOOD,
House of Representatives,
Washington, D.C.

DEAR MR. FLOOD: I would like to express my approval of your recent bill dealing with the captive nations. I think the resolution for a permanent committee is an excellent idea.

I am sending a copy of this letter to the Representative from Florida, hoping that he will give it great support.

Sincerely,

Mrs. KATHRYN TALBERT.

ST. AUGUSTINE, FLA.

(Member St. Johns County Chapter of the Florida Coalition of Patriotic Societies.)

CHEVY CHASE, MD., *April 7, 1961.*

Hon. DANIEL FLOOD,
House of Representatives,
Washington, D.C.

DEAR MR. FLOOD: Recently, House Resolution 211, which you submitted to the House of Representatives on March 8, 1961, was brought to my attention. After studying the contents and meaning of the proposed bill, I am thoroughly convinced that a Special Committee on the Captive Nations is a vital necessity.

The establishment of a Captive Nations Week was a true advancement for the preservation and extension of free nations. The observance of Captive Nations Week in 1960 had very favorable results. The eyes of the people of the free nations were open, probably for the first time, with regard to their enslaved neighbors. It was clearly noticeable that Moscow feared that there might be even a greater awakening; but the results of this observance were insignificant when compared to those results which might be attained.

We are in what we call a cold war and the only way to fight it is with the plain, simple truth. If it is uncovered, truth can win the victory for us. Why prolong the war, when its duration can be brought to an abrupt end? Thus far our Nation has slept while Moscow has slandered us. Our biggest defense against this slander is to let the people of the world see the true Russia and her destructive goals.

The Captive Nations Week observance is the first step toward the freeing of the nations enslaved by Soviet imperialists. But why not make full use of this great weapon? The only way to do so is to set up a special committee on the captive nations. Only by such a commmittee could the full picture be represented; unless we fully open the eyes of the people of the world to this situation, the number of captive nations will be progressive instead of regressive, and we will take a further retreat in our position in the war in place of a victory.

In conclusion, I want to say once again that I am in complete favor of the proposed bill, House Resolution 211, and urge its passage.

Yours very truly,

THOMAS EDWARD DOLAN.

COSSACK REPRESENTATION IN EXILE,
Los Angeles, Calif., March 20, 1961.

Hon. DANIEL J. FLOOD,
House Office Building,
Washington, D.C.

DEAR SIR: Our organization wishes to express sincere congratulations on your introduction of the resolution for the establishment of a permanent Committee on Captive Nations in the House of Representatives.

The establishment of such a committee is of greatest importance. The problem of our times is the Soviet Union, where many nations and peoples are being held in slavery and despotism. These nations represent a constant weakness in the Soviet Union, due to their desire and eagerness to escape the Soviet Russian tyranny. We should take advantage of the knowledge of this weakness and work to augment it.

The Committee on Captive Nations would supply information and data on the various enslaved nations in the U.S.S.R. to the U.S. Government and its agencies, as well as to the world and mainly to the American people regarding the state of affairs behind the Iron Curtain. It would provide assistance to the Government in forming its policies with reference to the captive nations.

In writing to our Congressmen, Hon. GORDON MCDONOUGH and Hon. GLENNARD P.

LIPSCOMB, we hope for their full support of your resolution.

Respectfully,

VICTOR KARPUSCHKIN,
Chairman, Cossack Representation in Exile.

MANHASSET, N.Y., *April 3, 1961.*

DEAR CONGRESSMAN FLOOD: I was indeed pleased to learn that you had introduced House Resolution 211 in the Congress recenty. I have long been interested in the cause of the Captive Nations Committee and of Captive Nations Week. I hope to see the cause given permanent committee status within the framework of the legislature.

Mr. Lev Dobriansky has done a marvelous job in promoting the cause but so much more can be done under the new proposal. The State Department simply and obviously does not have the time to handle this great task as is should be handled. It is up to you, the representatives and voice of the people, to insure that every possible step is taken to overcome false Communist propaganda within these areas and replace fear with hope.

If something is not done now the already too long list of captive nations will expand.

I wish you the best of luck in making this proposed committee a reality. I speak for all of my associates who keep a close watch on the work of the Captive Nations Committee in congratulating you on your initiative thus far. I am,

Sincerely yours,

WILLIAM T. DAILEY, Jr.

ST. MICHAEL'S
UKRAINIAN ORTHODOX CHURCH,
Minneapolis, Minn., March 28, 1961.

Hon. DANIEL J. FLOOD,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN FLOOD: Our parish, St. Michael's Ukrainian Orthodox Church in Minneapolis, Minn.—a church organization with over 1,000 people—wishes to congratulate you on your bold and farsighted move in introducing the resolution calling for the establishment of a permanent Committee on Captive Nations in the House of Representatives.

Needless to say, such a committee is long overdue. One of the greatest problems confronting our Nation today is the Soviet Union, a prison house of many nations and peoples. These nations, ever eager and wanting to escape Soviet Russian slavery and despotism, constitute a perennial weakness of the Soviet Union. Therefore, it is to our advantage to know these weaknesses, and work to multiply them.

A Committee on the Captive Nations would serve as a reservoir of information and data on the various enslaved nations in the U.S.S.R., which information could be made available to the U.S. Government and its various agencies. Its main function, however, would be to inform the American people and the world at large on the state of affairs behind the Iron Curtain and assist the Government in formulating its policies with respect to the captive nations.

We are writing to our Congressmen: A. H. QUIE, A. NELSEN, CLARK MACGREGOR, J. E. KARTH, W. H. JUDD, FRED MARSHALL, H. C. ANDERSEN, J. A. BLATNIK, and O. LANGEN, asking them to support your resolution.

Sincerely yours,

PARISH COMMITTEE,
KATHERINE SPASYK,
Recording Secretary.
Rt. Rev. Dr. WOLODYMYR LEWYTZKYJ,
Rector of the Parish.

SHARON HILL, PA., *April 3, 1961.*

Hon. DANIEL J. FLOOD,
House of Representatives,
Congress of the United States,
Washington, D.C.

DEAR CONGRESSMAN FLOOD: It is my understanding that you have sponsored a resolution to establish a special committee on the captive nations. May I as an American citizen encourage you to keep on with this work. Prosecute it diligently and fully. It is most important to learn about the desire for freedom in the captive countries and to realize that many millions could use the proper kind of help and encouragement to gain the blessings of liberty for themselves.

A friend of mine, Mr. Isakjan I. Narzikul, formed a Turkestanian-American Association to help political refugees from Turkestan and other nearby countries of Turkish origin which are now under Soviet domination. I was one of some interested Americans who aided Mr. Narzikul to incorporate this association and we would be glad to cooperate with you in any way that you may see fit in this endeavor.

Please send us any information which you may judge helpful to keep us informed about your committee.

Very truly yours,

JOHN K. BROWN.

COSSACK AMERICAN
NATIONAL ALLIANCE, INC.,
Queens Village, N.Y., April 4, 1961.

Hon. DANIEL J. FLOOD,
New House Office,
Washington, D.C.

DEAR SIR: Our organization takes the liberty of congratulating you on your valorous proposal for the introduction of the resolution for the establishment of a permanent Committee on Captive Nations in the House of Representatives.

The necessity for such a committee is extremely great. The Soviet Union, holding many nations and peoples in captivity, presents today the greatest problem for our Nation. Those enslaved nations, eager to escape the Soviet Russian tyranny and despotism, form eternal weak spots of the Soviet Union. It is of vital importance to us to know these weak spots and work to increase them.

A Committee on the Captive Nations would be the source of information and data on the enslaved nations in the U.S.S.R., information which would be made available to the U.S. Government. Its main purpose, however, would be to inform the American people, as well as other parts of the world regarding the situation behind the Iron Curtain, thus assisting the Government in expressing its policies with regard to the captive nations.

Hoping sincerely for a full support of your resolution, we are writing in this respect to our Congressman, Hon. LEONARD FARBSTEIN.

Respectfully,

COSSACK AMERICAN NATIONAL ALLIANCE, INC.,
G. L. JEREMENKO, *President.*

ASTORIA, N.Y., *April 5, 1961.*

Hon. DANIEL FLOOD,
House of Representatives,
Washington, D.C.

DEAR MR. FLOOD: As an international affairs major, I am keenly interested in America's affairs of state. I am especially interested in the nations under the domination of Russia and would like to relate to you that your House Resolution 211 is the best thing that has come up in Congress, regarding the dominated nations, in a long time.

I think that this bill will impress upon the American people the importance of Captive Nations Week and will also impress upon them the fact that we must take some action for the subjugated nations.

I sincerely hope that you will do all you possibly can to make sure that this bill will pass through Congress.

Sincerely yours,

BEVERLY A. YURASHUS.

TRENTON, N.J., *March 26, 1961.*

Hon. DANIEL J. FLOOD,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN FLOOD: Congratulations for introducing the resolution for the establishment of a permanent Committee on Captive Nations.

At the same time we shall ask our Congressman, Mr. THOMPSON, to support your resolution.

Very truly yours,

D. KUZYK, *Chairman.*

Young Americans for Freedom Speak Out

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1961

Mr. SCHERER. Mr. Speaker, the Young Americans for Freedom is a comparatively new organization of young people who have interested themselves in the problems of government. This fine organization is doing much to promote sound, stable, and responsible Government in the United States at all levels.

I commend to the Members of the House the publication of this organization entitled "The New Guard." In its recent issue, it carries an article by William M. Schulze, a young man just 21 years of age and a senior at Antioch College, Yellow Springs, Ohio. The article, entitled "HUAC and Its Enemies," follows:

HUAC AND ITS ENEMIES

(By William M. Schulz)

On the morning of January 2, 1961, as a sleepy Nation welcomed in the second day of a new year, some 200 bright-eyed college students arrived in Washington after a 5-hour bus ride from New York. Their purpose was simple: to demonstrate against the "witch hunting" House Un-American Activities Committee and to publicize Representative JIMMY ROOSEVELT'S move to abolish the congressional body.

The "students"—ranging in age from 16 to 50 plus—searched for Congressmen and swarmed over Capitol Hill. They picketed the White House and held a well-publicized rally at Washington's All Souls Unitarian Church. Student leaders held a smooth running press conference for reporters representing Washington's three dailies, the Nation's two wire services and a half-dozen news magazines. The reporters' questions were not unusual, neither were the answers.

DENY CP CONTROL

One student was asked about a report that the anti-HUAC group was Communist-con-

trolled. Jacob Rosen, 22, of New York, answered by terming the query absurd. The mustached youth declared the movement spontaneous and unrehearsed. It was merely a coincidence, he continued, if his position happened also to be held by the Communist Party, U.S.A.

What Rosen didn't bother to announce was that he is one of the Nation's leading young Communists, a ranking party member in the New York Metropolitan area. He did not bother to admit that his participation in "Operation Abolition" was ordered by the Communist Party hierarchy, that destruction of the House Un-American Activities Committee was considered the party's No. 1 aim.

Rosen's background is all the more interesting because of liberal assertions that the anticommittee drive is spearheaded by sincere young students with no partisan political axe to grind. Rosen was sucked into the party apparatus while still in his midteens. At the age of eighteen he had been chosen to hold a key role in the party-controlled American delegation to the 1957 Moscow Youth Festival. The New York Times reported:

"Jacob Rosen, of 606 West 174th Street, Manhattan, a junior at City College, went without sleep to keep things moving. He carried a U.S. flag at yesterday's opening, dipping it in salute to Nikita Khrushchev and other Soviet dignitaries at the Lenin Stadium."

It came as no surprise to the Nation's security agencies when Rosen was identified under oath last spring as one of the top young Communists on the Eastern coast. And it came as no surprise when the young New Yorker took the fifth amendment on his party activities.

Although he remained tight-lipped about his Communist ties, it is known that Rosen has been charged with organizing party activities among the young. He is vice president of the new Communist youth group, "Advance," and a leader in the New York chapter of "Youth Against the Un-American Committees."

Working closely with Rosen in the party is Joanne Grant, an attractive young Negro who doubles as correspondent for the red-lining National Guardian. She, too, was active in directing the Washington demonstrations.

Despite her youthful years, Miss Grant is an experienced party functionary. In 1959 Communist top brass gave her the all-important job of raising funds to send an American delegation to the Seventh World Youth Festival in Vienna. In that capacity she worked closely with Nicolai Burov, secretary of the Soviet mission to the United Nations.

VISITS RED CHINA

Miss Grant herself attended the Sixth World Youth Festival in Moscow 4 years ago. Following that visit she slipped behind the Bamboo Curtain in defiance of State Department orders and conferred with top-ranking Chinese leaders including Chou En-lai. She is one of the few Americans ever to have an audience with Mao Tse-tung.

Testimony before a congressional committee that Miss Grant was one of the leading young comrades in the United States. Given an opportunity to refute the allegations, Miss Grant repeatedly found refuge behind the fifth amendment. Both Jake Rosen and Joanne Grant took instructions at Washington from a tall distinguished looking gentleman by the name of Frank Wilkenson. Agitating against the committee was nothing new to Wilkenson. For the past several years he has crisscrossed the country directing what the Communist Party calls "Operation Abolition." Wilkenson just happened to be in San Francisco last spring when the committee scheduled hearings, and Director J. Edgar Hoover has singled him out as one of those responsible for the student riots that followed.

EXPERIENCED ORGANIZER

Like Rosen and Grant, Wilkenson is an identified Communist. Fingered under oath by FBI Undercover Agent Anita Schneider in 1956, Wilkenson has never bothered to deny the charge. He has refused to testify about his Communist activities on three separate occasions, and in 1958 won a contempt of Congress citation for his silence. Convicted, Wilkenson has managed thus far to evade a 1-year sentence to Federal prison by appealing the verdict all the way to the Supreme Court.

Wilkenson was field representative for a group which called itself the Citizens Committee To Preserve American Freedoms when the national Communist leadership decided to intensify its drive against the committee.

Perhaps because the Citizens Committee had been officially cited as a red front, a new group was founded with Wilkenson again field representative. The National Committee To Abolish the Un-American Activities Committee was formed last fall. Seven of its fifteen directors were identified Communists. Operating out of the old Citizens Committee headquarters at 617 Larchmont Boulevard in Los Angeles, Wilkenson traveled from coast to coast setting up new fronts, collecting funds, and instructing party members in anti-HUAC agitation.

Two months before the Washington demonstrations, Wilkenson met with Communist functionaries in a top secret New York rendezvous to map overall strategy. At that meeting, it was agreed that Wilkenson would have complete control over the Washington protests.

Wilkenson organized New York rallies, arranged for busses to transport students to Washington, coordinated the efforts of Red agents throughout the metropolitan area. He arrived in Washington early, setting up headquarters in the offices of the Emergency Civil Liberties Committee, a group labeled by Senate investigators as a red front.

The move to abolish HUAC, as expected, failed. It did not surprise Wilkenson and company. But Party chieftains considered the Washington demonstrations a complete success. Reams of anti-HUAC publicity had been won. Lagging party morale was given a shot in the arm.

Immediately after the defeat, comrade Wilkenson announced that his group would continue to agitate against the Committee. He declared full support for Congressman Roosevelt's new move to "slash to the bone" the HUAC appropriation. He then embarked on a tour of the Nation's college campuses. Despite a momentary setback, the Communist-directed drive to destroy the Nation's security apparatus continues on schedule.

Students may be duped into working with the Wilkensons and the Grants and the Rosens unless they avoid euphemisms and call a Communist a Communist and recognize a conspiracy as a conspiracy.

Just How Guilty Are the Electric Companies?

EXTENSION OF REMARKS

OF

HON. SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1961

Mr. CONTE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial by Philip Salisbury in Sales Management magazine of April 7, 1961:

JUST HOW GUILTY ARE THE ELECTRIC COMPANIES?

When one of the indicted General Electric officials said the other day that the trial and subsequent jail term had ended his usefulness to the company and that, accordingly, he was resigning, I was reminded it was about time to file a minority report on the trial.

There has been much editorial moralizing about the case of the identical bids. I am just as much in love with motherhood, just as strongly against sin, as the next one, but I feel strongly that justice may not have been served in the Philadelphia decision.

Let's face the facts. There are in many industries giant corporations that could destroy most or all of their competitors. Do you think for a moment that General Motors couldn't destroy every other auto manufacturer, with the possible exception of Ford, if it used its superior facilities and huge surplus to undercut the field? Does GM control only half of the production because that's all it could get? Certainly not. General Motors, United States Steel, General Electric are examples of companies that hold a price umbrella over their marginal competitors, not because they are humane, but because enlightened selfishness tells them that the Government surely would move in if they became larger in a relative sense and therefore more monopolistic. Isn't it ironic that they should be indicted for noncompetitive pricing when they most surely would be indicted if they used their power to slash prices?

The truth is that for generations the ordinary law of supply and demand has been shoved aside in this country. No matter how great the surplus of labor, under law an employer is compelled to pay the minimum wage. No matter how great the surplus of food, the farmer's wage is underwritten. So, as the Value Line Investment Survey points out, there is a large body of law and a long political and economic tradition that not only permits, but even requires, control over price fluctuations. Besides that, facts show that during the period of controlled prices in the electrical industry, prices went up considerably less than in comparable high-ticket metalworking or construction equipment fields. For these and other reasons too numerous to detail in this limited space, I think the electrical companies received sentences and tongue lashings they do not deserve. They did break a law, but the law should be updated.

United States Is Ahead in Most Sciences

EXTENSION OF REMARKS

OF

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1961

Mr. WILSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Post of April 3, 1961:

UNITED STATES IS AHEAD IN MOST SCIENCES

(By Dr. John Turkevich)

The role of science is dominant in the future of nations and social and economic systems. That form of society will prevail that best integrates science into its structure, that makes science a vital part of its

defensive might, economic productivity, social well-being, intellectual activity, and spiritual aspirations.

The United States is superior to the Soviet Union in all major fields of science and technology but that of space.

For every excellent Soviet scientist, and they do have a number of outstanding ones, we in the United States have 10 as good or better.

Since 1941, 15 Americans received Nobel Prizes in physics. On the other hand only three Soviet physicists received the Nobel Prize. Only one has been honored in the Soviet Union for his work by election to the Soviet Academy. In chemistry we have nine awards in the last 20 years compared to one for the Soviets. In medicine the number is 18 Americans and no Russians in the last 20 years.

In the field of mathematics the Soviet contribution has been significant during the last half century. It has been along the lines of classical mathematics and has neglected such modern applied mathematics as information theory, operational research, theory of games, linear programing, cybernetics. In recent years many prominent Soviet mathematicians have started work in these fields.

In solid state physics, the work of the Bell Telephone Laboratories, the General Electric, Westinghouse, RCA Laboratories, and such university centers as California, Harvard, Illinois, and MIT have dominated the field that produced a revolution in electronics with transistors, photosurfaces, phosphors. The only field of excellence in the Soviet Union is that of thermoelectric devices which convert heat into electricity and electricity into cold.

In nuclear science the results of American scientists have been no less spectacular. It can be safely said that at the two Conferences on Peaceful Uses of Atomic Energy at Geneva in 1955 and 1958 nothing basically important in nuclear science was learned from the Soviet contributions. We did learn that they had many fine scientists following diligently and ably the leads indicated by the West.

The structure of organic compounds and the mechanisms of their reactions are widely studied. The scientific activity of the Soviet Union in this field is not on as high a level as in the United States. However, in the field of physical chemistry, Soviet scientists have shown strength for three decades.

Biology and biochemistry is in a said state in the Soviet Union. Before World War II Soviet scientists were outstanding in the important field of genetics. Both the influence of Lysenko, and the injection of Communist Party dogma into a scientific discussion killed genetics as a science in the Soviet Union and raised havoc with the whole field of biology.

Yet biology is one of the most exciting branches of modern science. This is the science of proteins, vitamins, hormones, drugs, viruses, physiology, molecular anatomy, genetics, radiation damage. American scientists have been awarded Nobel Prize after Nobel Prize for this work, scientific journals are filled with elegant and decisive experiments, the physician's bag with disease-curing drugs.

In exploration we have reached the North Pole from the air, over the ice cover, and with our atomic submarines, below the ice. We thus realized one of Jules Verne's scientific fantasies. We have reached the bottom of the oceans. Soviet activity in exploration is significant but pales with respect to the American accomplishment.

On the other hand, one must grant a glorious paragraph in the history of scientific achievements to the Soviet space scientists. The first earth satellite, the first cosmic satellite, the first hit on the moon, the first photograph of the back side of the moon, the first launching of a cosmic satellite from a space station, the heaviest mass of satellite—these are the impressive Soviet attainments.

The greatest achievement of Soviet science is its integration within the totalitarian socialistic society. The challenge that faces the United States and the Western World is how to integrate modern science into our domestic capitalistic society.

Israel's "Bar Mitzvah"

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, April 17, 1961

Mr. MULTER. Mr. Speaker, as I am sure many of our fellows in this Congress know, the State of Israel is celebrating the 13th year of its independence, its "Bar Mitzvah." It is my pleasure to commend to the attention of our colleagues the following article from the New York Journal-American of April 14, 1961.

It is refreshing to be reminded that the beginnings of democracy are very often the same in our world, no matter where freemen come together in a community. It is new evidence of the advantages of a free society when we read of the fruits that Israel is reaping from the former desert. The article follows:

ISRAEL'S "BAR MITZVAH" RECALLS BIRTH OF UNITED STATES

(By Morris Morgenstern)

JERUSALEM, April 14.—The bitter iciness of Valley Forge and the scorching sands of the Negev Desert are more than 170 years and 6,000 miles apart. But the characteristics of the people who fashioned two luminous chapters in history—the birth of the United States and the establishment of Israel—are virtually identical.

A tenacious spirit a resolute belief in the dignity and equality of man and an unquenchable desire to live in freedom these were the qualities which helped mold a new nation in a new world, and a vibrant new state in the land of the ancients.

In the past 2 weeks I have marveled at the astounding progress the State of Israel has made in 13 short years.

The resourcefulness of its people its firm dedication to remain alive leave the beholder with a feeling of genuine exhilaration and a profound respect for these gallant Israelis.

SURROUNDED BY FOES

Israel's fierce resolve to sustain its independence—and its every existence—are brought into sharp focus when one considers that this tiny nation—approximately the size of New Jersey—is literally surrounded by antagonists.

The war-like leaders of Israel's enemies snort in outrage at the very mention of democracy's oasis in the Middle East, and have repeatedly vowed its destruction. But despite their terrifying pronouncements, I am certain that they, too, realize that Israel is here to stay.

The year 1961 marks Israel's "Bar mitzvah" its 13th anniversary. In Jewish tradition, a young man who attains his 13th birthday stands on the threshold of manhood. He is ready to assume the responsibilities which accompany adulthood, and self-reliance.

The carefree days of youth are supposedly at an end.

The analogy, however, is only superficial. Since its birth in 1948, Israel has recorded monumental achievements, and its plans for the future are breathtaking in scope.

During my travels here, I have met with a number of government officials and leaders in industry and commerce. The stark figures hardly indicate the enormous advances Israel has made in a number of vital areas.

Nevertheless, to give you an idea of Israel's progress, I would like to cite a few statistics, to help underline the accomplishments of this young country.

PRODUCE OWN FOOD

From 1951 to 1959, industrial production in Israel more than doubled, from $400 million to $950 million, and is expected to soar even higher within the next few years. In keeping with Israel's belief in self-reliance, the country now supplies more than 75 percent of its own food, and has increased the number of agricultural settlements from 290 in 1951 to nearly 800 today.

Through the years, as the nation has become more industrialized, exports have soared from $45 million in 1949, to an astonishing $350 million in 1960. From the Sea of Galilee in the north, to the city of Elath at its southernmost point, Israel continues to harvest miracles of productivity with the apparent ease of plucking a fig from a tree.

In recent weeks, the city of Jerusalem has become the focal point of international interest, as the trial of Adolf Eichmann has reawakened the horrible memories of the plague that was nazism. Outwardly the people are calm. They realize that the fate of one man—no matter how despicable his crimes—can never bring 6 million Jews back to life.

It is my feeling that the Israeli people fervently hope that Eichmann's trial will be a stern warning to the entire world that the barbaric spirit of Hitlerism must not rise again to menace freedom-loving people anywhere on the face of the earth.

Railroads Need Help Now

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1961

Mr. DAGUE. Mr. Speaker, as one who depends entirely on the railroads for distant travel, and to some extent for intermediate journeys as well, I am becoming increasingly concerned over the plight of our railroads. The storms of last winter and the interruption of rail transit due to strikes have revealed how completely dependent we are on our railroads, particularly in the matter of suburban commuter service. And it serves no purpose to point out that when the railroads were riding high with little competition from any quarter they did little to develop and retain passenger good will.

In undertaking to create a healthier climate for the operation of the Nation's rail lines it must be strongly emphasized that the solution will not be found in imposing restrictive regulations on the other modes of transportation such as the airlines, river barges, and long-haul trucks. The railroads do have a legitimate complaint, however, when they

point to the extent to which their competitors have been subsidized and that distinguished columnist, Ray Tucker, in pointing out that the Union Station here in Washington was built by the railroads with their own funds and on which they pay almost $2 million in taxes each year, has this to say in his column on April 14, 1961:

A few miles away across the Potomac River is the National Airport. It was built by the Government at a cost of $32 million, and it pays no taxes at all. Southward, on the edge of Civil War battlefields in Virginia, the Dulles Airport is under construction at a cost to Uncle Sam of $101 million. It will pay no taxes. The airlines serving both fields compete with the railroads for cargo and passenger traffic.

The discrimination, together with other subsidized forms of competition—trucks, passenger cars and waterways like the St. Lawrence canal—helps to explain why the railroads face their most serious crisis in history, possibly wholesale bankruptcy or millions in Federal and State subsidies.

Indeed, there has been talk that nationalization is the only solution, despite its utter failure in England.

The railroads might also complain to Congress and the White House that they have been "overinvestigated," but with no remedy for their problems. Several agencies are now trying to diagnose and arrive at a cure—a Presidential Commission, the Interstate Commerce Commission, and two congressional committees.

The crying need of the railroads today is relief from punitive taxes and restrictive regulations that serve no useful purpose other than to extend unearned competitive advantage to other forms of transportation. The elimination of the iniquitous transportation tax and a reduction in the real estate levies imposed at the local level would go a long way toward bringing needed relief. From there it should be a simple matter to allow the railroads to compete with other carriers at their levels and not to be bound by antiquated and archaic regulations, even though such regulations may have once been justified when there were no other adequate alternate means for the movement of materials and personnel.

Mr. Speaker, this matter is of vital urgency. We simply cannot survive as a nation without a healthy rail system. In time of national emergency there simply are not enough trucks, barges and airplanes to move the goods necessary to meet the demands such a situation would present. And we must be prepared to protect the railroads from the threat of misguided union leaders who are trying to outlaw the so-called piggybacking of trucks. Let us continue to control all forms of transportation since it is in the public interest to do so. But let us also see that the controls are uniform in their application to all carriers and that some relief is found for our primary transportation system which seems presently headed for a disaster that could prove comparable to that of losing a war.

San Francisco's Midtown Terrace Home Owners Association Commended

EXTENSION OF REMARKS
OF
HON. JOHN F. SHELLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1961

Mr. SHELLEY. Mr. Speaker, I wish to call to your attention, and to the attention of my other distinguished colleagues two newspaper articles appearing in the San Francisco press summarizing an alarming incident that occurred in San Francisco when several young men discharged shots into the home of a Negro family living in the Twin Peaks district.

Shortly thereafter the neighbors of this family met, and through their homeowners association, the Midtown Terrace Home Owners Association, unanimously passed a resolution reaffirming the belief of the members of the neighborhood in the right of all persons to live there or anywhere without regard to race, color, or creed.

I believe, Mr. Speaker, I reflect the feeling of the overwhelming majority of San Franciscans in commending the members of the Midtown Terrace Association for their prompt and vigorous reaction to this vicious shooting by the passage of this heartening resolution.

The above-mentioned articles follow:

[From the San Francisco Examiner, Apr. 12, 1961]

NEIGHBORS PROTEST SHOTS AT NEGRO HOME

The Midtown Terrace Home Owners Association last night unanimously adopted a resolution expressing shock at the "cowardly and vicious" shooting into the home of a Negro family there Saturday night.

Ten shots were fired into the home of Elmo Ollison, a city maintenance worker, at 129 Marview Way. None of the five members of the family was injured.

The association, 160 strong, meeting at St. John's Armenian Church, 175 Olympia Street, resolved:

"By law, by San Francisco's tradition of tolerance, and by simple human decency, Mr. and Mrs. Ollison have the same right to live here and to raise their children here as anyone else.

"We welcome the Ollison as neighbors and we will support their rights to the fullest."

The association's board of directors had earlier passed the resolution for presentation to the full membership.

The association, the resolution added, "unequivocally affirms the right of all persons regardless of race, creed, or color to live in Midtown Terrace. We are shocked at the cowardly and vicious shooting into the home of Mr. and Mrs. Ollison."

[From the San Francisco Chronicle, Apr. 12, 1961]

TWIN PEAKS HOME—NEIGHBORS BACK "BLASTED" NEGRO

Neighbors of the Negro family whose home on Twin Peaks was shot up last Saturday came to their defense yesterday as police continued to check into the case.

Last night, directors of the Midtown Terrace Home Owners' Association passed a unanimous resolution defending the family's rights and expressing shock at the incident. Some 160 persons attended the meeting and word of the vote was greeted with applause.

The shooting occurred in the early morning hours at the home of Elmo Ollison, 35-year-old laborer who works at the department of electricity.

Meanwhile, police said yesterday they have got some names of people who may have been involved.

"We think it was probably two people and we're checking leads. That's all I can say now," said Inspector Nathaniel Pedrini.

Ten .22-caliber slugs were fired at Ollison's garage, car and house at 129 Marview Way, located in a predominantly white neighborhood. A blast which police believe came from a shotgun and a .22-caliber rifle tore into the garage floor.

Neither Ollison, his wife, nor their children, aged 13, 10 and 3½, was injured.

In its resolution last night, the association said: "The Midtown Terrace Home Owners' Association affirms the right of all persons, regardless of race, color or creed to live in Midtown Terrace.

"We are shocked at the cowardly and vicious shooting into the home of Mr. and Mrs. Ollison. By law, by San Francisco's tradition of tolerance and by simple human decency, Mr. and Mrs. Ollison have the same right to live here as any one else.

"We welcome the Ollisons as neighbors and we will support their rights to the fullest."

Ollison, a mild-mannered man, took yesterday off to answer newsmen's questions and received expressions of sympathy from his white neighbors.

"Six or eight of them have dropped by and let us know we're welcome here," he said.

Ollison explained that he and his family had expected trouble when they moved into the mainly white Midtown Terrace 4 months ago.

There was none, he said, and after 2 months or so they thought they'd passed the hurdle.

"When this happened we were completely relaxed. We hadn't even considered the possibility of it."

Postage Stamp in Memory of Dr. Thomas Anthony Dooley

EXTENSION OF REMARKS
OF
HON. FRANK J. BECKER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

Mr. BECKER. Mr. Speaker, under date of February 27, 1961, I introduced H.R. 4487, to provide for the issuance of a special postage stamp in memory of the late Dr. Thomas Anthony Dooley.

The great sacrifices made by Dr. Dooley received worldwide acclaim, and it seems such a little gesture on our part to carry out the provisions of H.R. 4887.

I am including herewith a letter from the Post Office Department in reply to my letter written to the Postmaster Gen-

eral on April 6, wherein I requested that he take this action. However, in light of his answer, the need of legislation is apparent. I can see little good in the issuance of such a stamp 25 years from now when the people of that day will perhaps have little interest in this matter. Therefore, I am once again asking the distinguished chairman of the Post Office and Civil Service Committee, the Honorable TOM MURRAY, to hold a hearing so that his committee can act upon and report the bill I have introduced, or any bill of a like nature.

I sincerely hope that action will be taken at this session.

The letter follows:

APRIL 12, 1961.

Hon. FRANK J. BECKER,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN BECKER: The Postmaster General has asked me to thank you for your letter of April 6 concerning the issuance of a commemorative stamp in memory of the late Dr. Thomas Dooley.

We recognize the many services rendered by Dr. Dooley but consideration cannot be given to the issuance of a commemorative stamp in his honor at this time. As you may be aware, it has been the policy of the Department not to honor an American citizen until at least 25 years after his death. Postmaster General Day is in accord with this stipulation, which is a provision of the Hall of Fame in New York, and is believed a proper one since there are many people whose "greatness" diminishes over the years.

The Department infrequently issues memorial stamps in honor of American officials who died in office, and it is in this category that the memorial stamps for the late Secretary of State Dulles and Senators Taft and George were issued in 1960.

We appreciate your interest in our philatelic program.

Sincerely yours,

JAMES F. KELLEHER,
Special Assistant to the Postmaster General.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. RICHARD E. LANKFORD
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1961

Mr. LANKFORD. Mr. Speaker, as debate nears on Federal aid to education legislation, I would like to call my colleagues' attention to an excellent statement in support of the administration's proposal by Mrs. Fred L. Bull, a distinguished Marylander and chairman of legislation for the National Congress of Parents and Teachers. Mrs. Bull's statement follows:

PTA POLICIES FOR EDUCATION LEGISLATION

Although it is understandable that we find a wide variety of opinions in an organization as large and as democratic as ours, we do have certain basic legislation policies, each of which must be approved by at least 30 of the 52 State PTA Congresses before it can be added to, or removed from, our national program. These previously adopted policies determine, at all times, our legislation action as a national organization. We can support only those specific bills that conform to these policies.

I shall mention only a few of these basic policies which relate to some of the proposed bills under discussion. We believe:

1. That our public school system should be maintained and strengthened to meet the ever-increasing demands of today's world.
2. That public education is a responsibility of government and requires action and financial support at all levels: local, State, and National.
3. That Federal support for education should go to publicly controlled tax-supported schools only.
4. That all Federal legislation for the support of education should include provisions to insure maximum local control.
5. That Federal funds be appropriated for the purpose of increasing educational opportunity among the States, with encouragement to the States to put forth their best efforts to equalize opportunities within their own boundaries.
6. That Federal funds be provided to augment State and local support for schools in federally impacted areas.

The policies were developed over a period of many years as problems in education became more acute and the need for Federal support become more apparent. In past years our national organization has supported many proposed education bills, such as those for emergency school construction which were rejected in previous years, and those which passed the House and Senate last year only to be held by the House Rules Committee. Our interest and concern continue as we note the many inadequacies in our school systems which rob children of the opportunity to develop their individual talents to the fullest. Each year's delay in the enactment of a good Federal support bill has compounded the problem and added greatly to the educational handicaps of countless boys and girls.

THE NEED GROWS

We parents who are so close to the schools are well aware of the mounting shortage of classrooms, the staggering number of teachers who do not meet the qualifications for certification, as well as many other urgent educational needs. According to the U.S. Office of Education there was a shortage of 142,000 classrooms last fall, almost 7,000 more than the shortage in the previous year. Some 685,000 children are on curtailed or half-day sessions. The National Education Association reports 93,917 teachers on emergency certificates; if we multiply that by 30 children (which is most conservative) it means that at least 2,817,510 children are being taught by such teachers. Think of it, and what this means to them and to the country, even when we recognize that some teachers on emergency certificates are very good teachers. It is equally shocking that there are still more than 25,000 one-teacher schools in the United States.

WE PROMISE SUPPORT

Among the proposals in certain Federal-support-for-education bills which have particular appeal to us are the following:

1. That assurance against Federal interference in schools is provided.
2. That Federal support be based on average daily attendance in public schools and personal income per public school pupil.
3. That a general program of aid be provided for all public schools, with additional aid to low income States, in order to equalize opportunity.
4. That State and local governments be required to maintain or increase their present support.
5. That Federal funds may be used for construction, salaries, additional teachers, or other purposes to improve education as each State might determine.
6. That a portion of each State's allotment would be available for special pilot, demonstration, and experimental projects in education.

We are very much interested in amendments to Public Laws 875 and 815, as proposed in H.R. 4970. A careful comparison of what this would mean to all the various States makes us wonder why the proposed reductions cannot be made more gradually. Such reductions seem a bit too sudden and too drastic especially for those States which have already compiled their budgets or will have done so before enactment. This would require them to call special budget sessions for readjustments or new levies. It would be most helpful to a great many States if these proposals could be adjusted upward.

Despite greater effort at the local and State levels, education needs have been accumulating for 3 decades and are at present greater than ever, and costs are higher. Like Alice in Wonderland, we have had to run faster and faster just to stay in the same place. Our members, as taxpayers, are willing to pay their fair share for quality education for their children. We are concerned not so much about the cost of providing a program of excellence as of the tremendously greater cost of not providing it.

Mr. Chairman, we recognize the outstanding ability and the sincerity of your committee. We are confident you will report out a good bill to which we can give our full support.

I thank you for the privilege of appearing before you today.

Improving Our Regulatory Agencies

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1961

Mr. EVINS. Mr. Speaker, the problems of improving our regulatory agencies is a continuing one and a matter in which the Members of Congress are increasingly concerned. In this connection, Dean James M. Landis, the President's counsel and adviser on improvement of the regulatory agencies and administrative process, recently made an address at my alma mater, Vanderbilt University, in Nashville. I desire to have reprinted in the Appendix of the RECORD two editorials following the address of Dean Landis' discussion of our regulatory agencies. The editorials are from the Nashville Tennessean, of April 14, last and the Nashville Banner, of April 15, last.

The editorials follow:

[From the Nashville Tennessean, Apr. 14, 1961]

PRESIDENT CALLS FOR REFORM WHERE NEED LONG EXISTED

In his message to Congress calling for a streamlining of regulatory agencies, Mr. Kennedy singled out the Federal Power Commission for the biggest overhaul—and with plenty of reason.

His adviser on the regulatory agencies, Mr. James M. Landis, charged in his report to the President some time ago that the Federal Power Commission was the "outstanding example of the breakdown of the administrative process."

In terms of foot dragging, solicitude for the natural gas industry, and a heavy case backlog, the Federal Power Commission represents much that has been wrong with all the regulatory agencies.

Mr. Kennedy noted the Federal Power Commission still hasn't ruled on 4,000 rate increases proposed by gas producers, and that 193 applications for pipeline construction were pending before it at the end of February 1961. Some $850 million in construction is involved here and the President is right when he says more prompt handling of these matters would help the employment picture. Neither industry nor the Nation is benefited by such delays.

This particular agency is something of a thorn in the side of the administration since its holdover Chairman, Mr. Jerome Kuykendall, refuses to resign. Mr. Kennedy wanted a Nashvillian, Mr. Joseph Swidler, to be Chairman, and we agree he should be.

By midyear, however the Commission will have a Democratic majority, and if Congress will—as there is pressing need for it to do—whip the regulatory agency setup into better shape, the Federal Power Commission should still be able to do its work despite the obstructionist Chairman Kuykendall.

President Kennedy views the regulatory agencies in their proper perspective when he says they "permeate every sphere and almost every activity of our national life * * * they are not merely regulatory but are designed to further the expansion of certain facets of our economy." And he is very much aware of their responsibility to the consuming public as his message indicated. The latter has often been the forgotten factor in regulation.

No facet of government is more in need of reform than these agencies, to which both the executive branch and Congress has paid too little attention.

It is safe to assume there will no longer be lacking any executive attention toward this headless "fourth branch of government." And if Congress will now level its sights on the problems of delay, of inadequate personnel, of lacking coordination among agencies, and other flaws, there will be re-created some of the high purpose for which these agencies were created in the first place.

[From the Nashville Banner, Apr. 15, 1961]

NEW DEALISH THICKET: NEEDED AGENCY OVERHAUL IS CONGRESS RESPONSIBILITY

On the matter of regulatory agencies—subject of President Kennedy's message to Congress Thursday—there will be general public agreement with the fact that an overhaul is needed. But more than that, and prior to it, a comprehensive study is essential, looking not only to efficiency, but to curtailment where excesses of bureaucracy inflict injury on Americans to whom all too many of these agencies accord "subject" status.

There are departmental operations that are valid and vital. There are subsidiary units created for useful functions. There are subalterns added through the years into a vast accumulation, some of them temporary in original designation, but perpetuated, and comprising a thicket of undergrowth which Government reorganizations to date have failed to weed out.

The mere replacement of top hands by the patronage turnover attending a change of administration will impart no cure.

In addressing himself to this big subject, Mr. Kennedy will do well to remember that the correction sought, if it is to be effective, entails a reversal of the direction his own element of political sponsorship has pursued since 1933. These were the exponents of big government under whose aegis the agencies mushroomed. By formal enactment, or by Executive order—usually in the name of "emergency"—they were brought into being.

Dr. James M. Landis, no stranger to Government during that mass incubation process, find fault with some of them—and, after a one-man task force look, supplied the surface fact sheet on which Mr. Kennedy bases his program for reform.

The Landis summary confined its criticism to a 10-year period involving two administrations, though, significantly, it was these same two Presidents (Truman and Eisenhower) who assigned the Hoover Commission to the task of study and recommendation. Point by point most of its recommendations have been submitted to Congress.

The Nation wants efficiency in the proper operations at all levels of government. It needs no reminder that the ponderous bureaucracy and many of the agencies in question had their beginning in the New Deal. It was in the orgy of that tenure that many of them arrogated to themselves the roles of judge, jury, prosecutor, and executioner.

Most lawmakers—excepting those who are of the big government persuasion—will agree in substance with the need for a new look at some of these operations. But they will recognize, too, that the responsibility for any revamping undertaken belongs to Congress. That is the lawmaking body; the agencies for the most part are created by law, and statutory changes will have to be by that process.

The thorough study proposed is in order. The overhaul it anticipates is mandatory.

The Dichotomy of Trade

EXTENSION OF REMARKS

OF

HON. HASTINGS KEITH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1961

Mr. KEITH. Mr. Speaker, many manufacturing firms in my district are suffering from the competitive effect of imported goods. Some companies seek relief by moving their operations out of the country. In other cases they import parts, and so forth, to use in finished goods. The results are equally discouraging for the American worker. Mr. Arthur Tisch, president of the Special Wire Nail Manufacturers of America has called my attention to a recent column of George Sokolsky, which points out some of the dangers involved in this situation. This article merits the careful study of all who are concerned with adverse effect of increased imports on our American industries.

The letter and article follow:

Hon. HASTINGS KEITH,
Member of Congress, House Office Building, Washington, D.C.

DEAR CONGRESSMAN KEITH: Although there may be no manufacturer of dry-cell batteries in your district, I feel sure that the subject matter covered in this column is pertinent to many of us. I wonder if you could have this column reproduced in the CONGRESSIONAL RECORD and call the Congress' attention to the closing paragraphs which I think are the most important in the entire column. As I have said many times, management is finding a way out of the dilemma by importing. It is the laborer who must suffer. The laborers' name are removed from two very important lists. One, the list of employed Americans and two, the list of customers.

Sincerely,

ARTHUR S. TISCH,
Director, Technical Sales President, Special Wire Nail Manufacturers of America.

BRIDGEWATER, MASS.

THESE DAYS: THE DICHOTOMY OF TRADE

(By George E. Sokolsky)

Every week, mail comes from some industry or some press agents dealing with the subject of imports. The concern is very profound. Certain American industries are convinced that they are being squeezed out of the American market by cheaper imported products. American workers are frightened.

Before World War I, when a free market existed, it was possible to fight unfair competition. Today, when governments determine the wages, hours of work, taxes, indirectly the prices of raw materials, when they subsidize enterprises by various devices, the markets of the world are no longer free and the danger to labor in a high-wage country is that jobs will be wiped out.

The storage battery manufacturers, who are in direct competition with Japanese, find that some Japanese batteries are sold at a lower price in the United States than in Japan.

The dry battery section of the National Electrical Manufacturers Association consists of seven companies which employ 8,000 Americans, and have an annual payroll of $35 million. This is not a very large number of workers, but they are widely scattered over the United States and their loss of employment would seriously affect many communities.

The transistor radio set has grown increasingly popular in the United States. Young people carry transistor radios with them to sports, games, and even to musical events. Having come into the market importantly in 1957, 3 years later, in 1960, the transistor portable radios sold against tube radios at the ratio of seven to one. Japanese manufacturers entered the American market immediately and can afford to underbid American manufacturers because of cheaper wages, lower taxes, and government subsidies in Japan.

The radio battery industry figures show this production (in millions):

	1959	1960	1961 (*estimate*)
United States	5.8	12.0	12.0
Japan	3.3	7.4	16.1

The basis for competition between American and Japanese radios is that the average American worker in this industry receives $2 an hour whereas a Japanese worker receives the equivalent of 30 cents an hour. Japanese No. 216 batteries cost in New York about 15 cents; American No. 216 batteries sell to distributors for about 70 cents. The argument that the American battery is superior and will last longer is not particularly pertinent as this is a price rather than a quality market.

The Japanese have to import not only raw materials but food. Their country being only about 20 percent arable, they have no alternative but to manufacture for export and they must have a market where there is no political opposition to them.

This then is the dilemma that faces both Japan and the United States. Japan's principal market is the United States, but everything that Japan exports to the United States in any quantity is manufactured in the United States.

The pressure of American labor for protection is becoming increasingly great. Instead of the industrialists demanding protection, they solve their problem by moving their plants abroad where wages and taxes are low. They, in effect, export jobs.

On the other hand, the labor unions are beginning to demand protection. The pressure can become a major political issue and therefore requires more than casual thought.

Jobs for the Handicapped—A Community Challenge

EXTENSION OF REMARKS
OF
HON. CLINTON P. ANDERSON
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES
Tuesday, April 18, 1961

Mr. ANDERSON. Mr. President, a great deal of justifiable concern has been attached to our national problem of unemployment and underemployment. Essentially, the problem is one of making full use of the skills and capacities of every American who wants to work. In this category are many men and women who have suffered physical impairments, who through special training and a determination to be productive are capable of holding down a gainful job.

The President's Committee on Employment of the Physically Handicapped, and similar committees in the States, have spotlighted the need for employers to consider the value of the handicapped worker to their firms and to the community.

As a device for educating the public to the potential of many of our handicapped citizens, the President's Committee, in cooperation with Governor's Committee on Employment of the Physically Handicapped, recently sponsored essay contests, State and National, among young people. New Mexico is proud that its State winner won second place in the national competition. She is Miss Claire Marek, of 2429 Wisconsin, Northeast, Albuquerque. Claire is a student at Albuquerque High School.

I ask unanimous consent that her winning essay "Jobs for the Handicapped—A Community Challenge" be printed in the Appendix of the RECORD.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

JOBS FOR THE HANDICAPPED—A COMMUNITY CHALLENGE

(By Claire Marek)

"Pencils for sale," a feeble voice comes from the weatherbeaten face of the old man sitting against the store wall. His shabby clothes and dilapidated shoes and hat present a sharp contrast to the fashions on the models in the store window above him. Dark glasses over his eyes, an old tin cup in his hand, and a white cane lying beside him complete the picture. A shopper, dropping a few pennies in the tin cup, so few that it hardly makes a rattle, passes by and remarks, "Why can't they do something about that?" "They," an easy way of passing the responsibility onto that vague group into whose care "we" place all the problems and mistakes of the world. The "they" should be you, I and all of us in the community where the pencil man exists.

The pencil man is of the older generation. Much has been done for younger people with the same handicap. One seldom sees a middle-aged person in the pencil man's plight. Still—

A young man wheels himself into the huge room furnished with benches and tables on which various electronic equipment is placed. His eyes are bright and his excitement is quite evident, for this is his second day on the job. A man stops to say hello and chat a moment, but at another table, another man speaks to his boss, "Why can't that crippled guy work somewhere else? Why does he have to be near me? I can't do my job right 'cause he makes me nervous."

The Government and the State have done their part of the job well. The man is efficient because the Government has trained him. He has a job. However, the community has failed to complete the work started by the Government. The community must educate the average person about the ability and efficiency of the handicapped. Some prejudice has been torn down. Young children in school stand a better chance than ever of obtaining jobs; but.

A 5-year-old boy pauses as his instructor shapes her lips to form a vowel and places his chubby hand on her throat. She utters the sound again and again. Then she turns the boy to the mirror and places his hand on his own throat. He tries. The process is repeated until a satisfied smile appears on the face of the young woman. Then one appears on the face of the boy. Watching through a one-way window, a society matron comments: "This education is fine, and we expect to raise quite a sum in our fund drive, but what good will it all do? Will he ever really amount to anything?"

Progress has definitely been made with the handicapped. Each succeeding generation has a better chance, but these questions—"Why can't they do something about that?" "Why can't he work somewhere else?" "Will he ever really amount to anything?"—are asked frequently throughout the United States, and they reflect a broad area of Americans' opinions.

The Federal Government has done much to remedy such situations as that of the blind man selling pencils, in the form of special education programs and facilities for medical treatment. But this rehabilitation and education of the handicapped is worthless unless the community is educated to accept the rehabilitated as truly rehabilitated. Pamphlets can be sent out showing how everyone benefits when the handicapped are hired, for they may serve as contributing members of the community. This information acquaints the community with the efficiency of disabled persons, but does not erase the prejudice entirely. The old adage that "experience is the best teacher" holds true in this respect. The community must experiment with their handicapped by trying them and trusting them. It must be a community effort, for the people of a Minnesota town are not going to help a blind man in an Indiana town; the people of a small Texas city are not going to see that a crippled factory worker makes a "go" of his job, nor that his neighbors accept him; and the people of a Tennessee town are not going to arrange that a little deaf boy in Arizona has a job in 20 years. But, the people of each community can help the handicapped in their own town, and only by this "teamwork" can successful placement of the handicapped be attained.

Moreover, a job involves more than mere placement or position. A job for a handicapped person means being accepted by his fellow workers to the extent that they are able to concentrate on his abilities rather than his disabilities. Americans did not understand it when the Japanese rioters made Eisenhower cancel his trip to Japan. The handicapped person is in the same way puzzled when a job is refused him because of his disability. He wants a job and acceptance, not a job and avoidance.

The little boy working diligently trying to learn to speak, wants acceptance also. Right now, funds from the Government and some from the community are paying for his education. He appreciates this, and will appreciate it even more in 20 years, for it will mean his bread. But now and in the future, he will need more than bread. The friendliness of his community will mean the difference between a drab, lonely, and embittered life and a life of contentment and sharing in the community's privileges and responsibilities. Modern equipment and experienced teachers can fit him for meeting the outside world, but is the outside world a fit place for him?

This question and all the others that have been asked by pitying donators and charitable clubwomen can be answered only by the community. These questions are the challenge that faces each community today. The answer is community cooperation to do something about that blind man on the corner. The community must educate its members against prejudice so that the crippled factory worker is sought after and accepted for his abilities. Finally, the community can prepare its future citizens so that the deaf boy in the special school will some day "amount to something."

This, then, is the complete challenge—the hiring of the handicapped devoid of any prejudice. When this challenge is met, each community, each State, and finally the Nation will be a better place for everyone—able and disabled alike—to live.

The Family Farm: Definition Needed

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1961

Mr. HARVEY of Indiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

[From the New Castle (Ind.) Courier-Times, Mar. 30, 1961]

THE FAMILY FARM: DEFINITION NEEDED AT THE OUTSET—95 PERCENT OF U.S. FARMS OPERATED BY SINGLE FAMILY

In President Kennedy's recent farm message to Congress, he reaffirmed the proposition that "the family farm should be protected and preserved as a basic American institution." The Wall Street Journal probably echoed the thoughts of many urbanites when it commented: "Now the reality is that time has outmoded the family farm, but it is nonetheless to be wrapped in the flag and, like Mount Vernon, to be preserved at all cost."

Depending on definition, the "family farm" may or may not be outmoded and inefficient. Some detractors might want to revise their opinions of the family farm if they studied one set of criteria—now widely accepted among agricultural economists—as to what constitutes such a unit.

If by "family farm" one is talking about 4 acres of submarginal land on which a family scratches out a mean existence, little justification can be found for its continued survival through Government handout. In actual practice, this kind of farm produces so little that Government price supports can add only a few dollars to its receipts, usually not enough to keep it in business.

But the modern definition of "family farm"—and the one substantially applied by the Farmers Home Administration in granting loans—is of a farm on which most of the management (not ownership) and most of the labor comes from the resident family. In actual percentage terms, the country's family farm, so defined, comprise about 95 percent of all farm units, and may be gaining slightly even as the total number of farms decline.

This seeming paradox is explained by an Agriculture Department economist in this way: Even though the actual number of farm units in the United States has dropped steadily since the end of World War II, greater mechanization has enabled farms which previously had to hire substantial outside labor to operate within the accepted definition of a "family farm." Moreover, reliable studies indicate that the cost per unit of production on a mechanized family farm of reasonable size compares favorably with costs on the larger and presumably more efficient "factory farm." Agricultural economists complain that "family farm" has become an emotive term which, lacking proper definition, sheds more heat than light on the issue of the Federal role in agriculture.

Howard Coughlin Speaks of Office Automation

EXTENSION OF REMARKS
OF
HON. ELMER J. HOLLAND
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 11, 1961

Mr. HOLLAND. Mr. Speaker, I would like to call the attention of my colleagues to the statement on office automation presented by Howard Coughlin, president of the Office Employees International Union, AFL–CIO, before the Subcommittee on Unemployment-Automation.

The statement follows:

STATEMENT ON OFFICE AUTOMATION PRESENTED BY HOWARD COUGHLIN, PRESIDENT OF THE OFFICE EMPLOYEES INTERNATIONAL UNION, AFL–CIO, BEFORE THE SUBCOMMITTEE ON UNEMPLOYMENT-AUTOMATION, U.S. HOUSE OF REPRESENTATIVES, COMMITTEE ON EDUCATION AND LABOR, MARCH 29, 1961

On October 18, 1955, I appeared before the Subcommittee on Economic Stabilization of the Joint Committee on the Economic Report and discussed the effects of office automation at some length.

In again reading my testimony, I find that we were right in many of the things that we predicted but came to a conclusion which I now feel is no longer a solution to the problems resulting from the introduction of automative devices in offices.

In 1955, I stated that "computers in an office are going to be like bulldozers in the construction industry." I also said, "I do not subscribe to the point of view that dire things lie ahead. We have had automation in our factories for some years without disastrous results. I do believe, however, that there will be serious problems caused by the introduction of automation in offices. Many individuals who have spent their lives acquiring certain skills and have come to believe implicity in their own indispensability are in for a rude shock. They will see machines do in seconds, work that takes them days and weeks to accomplish. They will see machines replace the jobs they and their fellow workers have come to feel are their permanent niches in the office world. A lot of people will lose their jobs. A lot of individuals will be forced to acquire new skills. There will be many new responsibilities placed on the employers of our country."

In conclusion, I stated, "we call upon the employers in the United States to conform to the practices instituted in our organization for the protection of persons displaced from office positions as a result of the introduction of automation. We feel that responsible employers should, as a matter of policy, insure the transition to automation without hardship to the office-workers of America. We further urge employers to share with labor the gain in productivity resulting from automation."

Our prediction of things to come in the statement I presented to that committee was correct. My conclusion, however, which indicated that employers might insure the transition to automation without hardship to the officeworkers of America was incorrect.

In 1955 office and clerical employment was rising steadily. In fact clerical employment has been on the rise since the year 1900. There are approximately 24 million white-collar workers in our Nation today.

In 1955 we thought in terms of giant vacuum tube-type computers which required thousands of square feet of space to house. These machines also required air-conditioned, moistureproof surroundings. We felt that it would require several years for a company to change over from a manual-type clerical operation to the giant computers. The time involved, therefore, would give companies the opportunity to cut their clerical staffs through attrition rather than through layoffs.

We did not take into consideration the startling improvements that have already evolved in electronic data-processing machines. Solid state transistor-generated computers no larger than an office desk are already in process. These newer computers require little space, are much more reasonable in price and are available for medium and smaller businesses.

Computer centers are springing up throughout the Nation. These centers are eliminating small office staffs overnight. It is a simple matter for a small company to use the computer centers and, at the same time, guarantee secrecy of confidential company information. Automation magazine, in its March 1961 issue, announced that self-service computer centers are now a reality. A do-it-yourself computer center has been opened in Los Angeles by Computermat, Inc. It operates along the same lines as a laundromat. The client solves his own engineering and scientific problems with a minimum of instruction. If assistance is needed, there is an experienced staff to help the client in the preparation of programs and in machine operation. An extensive library of programs and subroutines is also available. An IBM 1620 system which uses decimal arithmetic was selected for use in the center.

The New York Times, in its March 15, 1961, edition, illustrated the use of two computer service centers in the financial district of the city. These two computer centers, maintained by IBM and RCA offer for a few all of the advantages of electronic data processing without requiring users to buy or rent computers or their related equipment.

While the giant security concerns have their own computer systems, an increasing number of smaller brokerage houses are using the facilities of service centers. All of the back office accounting for three brokerage concerns is accomplished at the IBM unit, known as the Service Bureau Corp. Each day at the close of trading, all information dealing with customer stock trades, commissions due, and other important data are forwarded to the center. The centers work all night and deliver to the users, before 8 a.m. the next day, complete records for all customers. Complete monthly statements for each customer are also prepared and sent to the brokerage concerns.

RCA's Electronics Systems Center at 45 Wall Street provides daily individual processing of trades, including calculations of commissions, transfer taxes, and net amounts in customers' accounts.

Fees for this work vary, depending upon the amount of work accomplished. Obviously, however, the firms using these centers find it more economical to operate in this way rather than to pay regular salaries, taxes, and fringe benefits for permanent employees.

A solid state digital computer has been designed for small- and medium-sized firms by Autonetics Division of North American Aviation, Inc. The machine called Recomp III has a 4,096-word magnetic disk memory and can handle more than 8,000 instructions. It has a list of 32 standard commands plus five optional floating point commands. Standard input and output is 10 characters per second by typewriter or paper tape punch. The computer's potential can be extended in accordance with the needs of the purchasing firm.

New companies geared to build smaller computers are springing up all over the Nation. All one has to do is check the day-by-day activities of the New York Stock Exchange to find that electronic companies are getting the greatest amount of attention from investors.

There are varied estimates as to the number of computers which will be in operation in the coming years. The Bureau of Labor Statistics stated that in 1959 an estimated 2,000 electronic computers of all sizes were being used for a variety of business, scientific, and engineering purposes by private companies and Government agencies. It has been conservatively estimated that electronic data processing machine sales have reached $500 million as compared to only $10 million in 1950. Conservative estimates bring this total to $2 billion in 1970.

Computer Sciences, Inc., estimates that 10,000 computer installations will be made in the year 1961. Based on studies made by the Bureau of Labor Statistics (BLS), it is estimated that each computer will affect 140 jobs. It is, therefore, easily seen that in the year 1961, 1,400,000 workers will be affected by these new installations.

BLS has also indicated that 25 percent of the jobs affected will be eliminated. We, therefore, can anticipate that 350,000 white collar positions will be permanently abolished by virtue of computer installations in the year 1961.

We can reasonably expect that the number of computer installations will multiply at a rate in excess of 10,000 installations per year. If, for example, the increasing number of firms entering this field were able to double the number of installations in the year 1962, a minimum of 700,000 jobs would be abolished in that year in addition to the 350,000 which we estimate will be lost this year. This number will increase to gigantic proportions as additional installations are made.

We do not have any estimates of the effects of computer centers. In view of the fact that these centers can do the work of multiple firms at rates running from $25 per hour and up, I am sure that we can all agree that many additional hundreds of thousands of positions now held by white collar workers in small and medium sized firms will vanish from the American scene.

We have noted that some of the manufacturers of electronic data processing machines took issue with Congressman ELMER HOLLAND when he published an estimate which indicated that 4 million office and clerical jobs will be eliminated within the next 5 years through automation. While we can understand that some people may find it difficult to believe that 4 million clerical jobs can be eliminated within 5 years through automation, we do not believe that the manufacturers of computers are unaware of the serious results of large scale installations of computers.

Computers, however, are only a part of the problem of automation in the office. There are numerous automative devices other than computers which, over the next few years,

will eliminate many additional jobs. Some of these machines include the atuomatic sales clerk which can dispense as many as 36 varieties of merchandise and accept payment in return. These machines manufactured by Universal Match and Universal Controls will accept payment up to $5 and will give the customer the exact change due.

A major firm announced last fall that it has created, in effect, an automatic law clerk. This machine recently demonstrated to members of the American Bar Association performs 7 man-hours of legal research in a matter of minutes. In order to get the answers to a question involving tax exemptions, this brain analyzed 400 laws from 50 States and the District of Columbia. In less than 10 minutes, it had typed out all of the statutes and case citations and was beginning the full text of the material. While this machine is expensive and would cost $12,000 monthly if rented, it is also true that we can expect smaller and less expensive machines of similar capability in the foreseeable future.

Addressograph-Multigraph has a machine known as the optical code reader which electronically reads, punches, verifies, and totals numerical information imprinted on tabulating cards with Addressograph data recorders. Cards are punched at the rate of 180 per minute. This machine will eliminate the need for manual key punching.

IBM announced the development of a reading machine which scans entire typewritten pages at the rate of 1,800 words a minute and can automatically operate a teleprinter machine for long-distance transmission of messages. An electronic scanner is presently being used at the Atlantic City Electric Co. in New Jersey. It would take 24 keypunch clerks to do the work of this scanner.

Positions which were created by the giant computers have been eliminated by the smaller models. The use of magnetized tape is eliminating the need for key-punch operators. The use of microwaves will eliminate the need for those who punch magnetized tapes. In other words, the newer electronic machines are already doing away with jobs previously created by predecessor computers.

For example, most utilities use meter readers who forward information read from the commerical and private meters to the memory drum of the computer. It is now possible to eliminate the meter readers and have this information forwarded directly and automatically from the meter to the memory drum of the computer without use of humans.

It is also possible to have retail stores, through the use of electronic equipment, automatically notify their wholesalers or suppliers of depletion of items for sale through proper use of their cash registers, adapted to the particular electronic installations. This could eliminate salesmen, telephone order clerks and those regulating inventories.

Recently, we have learned that the David Sarnoff Research Center of RCA was working on a phonetic typewriter. This typewriter will automatically transcribe from the spoken word. At the present time, it uses a type of sound language similar to speedwriting. This machine puts down exactly what it hears and, therefore, is not orthodox in spelling. In accordance with an article published recently in the New York Times, the machine will transcribe the word "ultimate" as "ultimit" and the word "typewriter" as "tipriter." Just as in speedwriting, it is not difficult to understand the language used by the phonetic typewriter.

Two possibilities present themselves: (1) that through the use of such a machine, a new type of business language will result; or (2) the machine will be perfected to the extent that it will transcribe perfectly.

In commenting on RCA's request for a patent for the phonetic typewriter, the New York Times correspondent stated that the human secretary is safe in her job because the machine can't make coffee. We could add many other substantial reasons for the retention of the human secretary as opposed to the machine. However, we are sure that RCA is not spending its money in the development of this machine without purpose.

There is also experimentation in Kyoto University in Japan with the phonetic typewriter. It would appear from the translation of the material that we have received that the Japanese may well be ahead of RCA in the development of this educated typewriter. This machine, known as Sonotype is being perfected at Kyoto University in cooperation with the Ministry of Education and the Japan Electronics Co.

The Japanese stated that it eventually will be used for any language or dialect. While we are told that the phonetic typewriter has imperfections and is not ready for production, we believe that the committee should be aware that this machine, when perfected, can eliminate the jobs of 1,500,000 secretaries, stenographers, and typists.

I believe some of these examples can well indicate to you that we are facing something more than technological displacement of clerical workers.

We are facing a revolution in the office.

It is not possible for labor or industry to resolve the problems of wholesale displacement of office and clerical workers either unilaterally or bilaterally. This problem requires the active participation of the U.S. Government if we are going to avoid the possibility of millions of unemployed white-collar workers whose jobs have been permanently abolished.

Some optimists prefer to pass over this problem lightly, and point to the continuing increase in the numbers of clerical and kindred workers. They fail to point out, however, that the Bureau of Labor Statistics has found that the rate of increase in clerical and kindred workers in companies where electronic data processing existed is only 7 percent as compared to 15 percent in companies where such systems have not been installed.

These optimists also refuse to recognize the fact that the Bureau of Labor Statistics has found that 25 percent of the jobs affected by the installation of electronic data processing systems have been permanently abolished.

Our labor force is continuing to increase. High school and college graduates available for office and clerical work are also on the increase. The figures indicate that automation will soon curtail, if not eliminate, the positions sought by these newcomers to the labor market.

Worse still, our high schools and business colleges are continuing to prepare students for occupations in the business world which will cease to exist in the next few years.

It is easily seen, therefore, that the problem of displacement of office and clerical employees requires the study, planning and recommendations of organized labor, industry, and the Federal Government working together.

A Federal commission representing organized labor, industry and the Federal Government, after a complete study of the problems resulting from automation of the office, should have the power to make certain recommendations. These recommendations, along with others, should include:

1. Training and retraining centers through the unemployment insurance program.

2. Rehabilitation centers for those office and clerical employees advanced in age and not readily adaptable to the operation of automative devices.

3. Increased unemployment insurance payments and extended duration of time for receipt of such payments for those displaced by automation. We must recognize the difference between those temporarily laid off because of lack of work and those whose jobs have been permanently eliminated through automation.

Those office and clerical workers whose jobs have been permanently abolished due to automation represent a special problem and should receive special consideration. These people have not received secondary training for positions of a manual nature. It may be necessary to offer these people relocation in other cities in positions found by a Government agency. It may also be possible to have such individuals and their families moved from the city in which they are residing to the location of the new position; such expense to be paid through the unemployment insurance system.

Admittedly, it is better for the national economy to undertake payment of these expenses than to continue unemployment insurance payments or community relief subsidies indefinitely. This plan is in operation in Sweden and has proven successful.

4. Earlier retirement for women. Women now make up two-thirds of the white collar force. It is far more difficult for a woman in her forties or fifties to gain new employment than is true of a man.

5. Establishment of a shorter workweek. We believe this is inevitable, particularly in view of the greater productivity and increased profits resulting from the installation of automative equipment. We believe that a radical cut is inevitable in the working hours of office and clerical employees.

The House Committee on Education and Labor must concern itself with the fact that high schools, business schools, and colleges are continuing to train potential office and clerical employees in skills which are in the process of disappearing from the labor market.

Unless this is accomplished, we will find ourselves continuing to prepare people for long periods of unemployment rather than for the creative employment they seek.

In conclusion, I feel that a special tripartite Federal commission, representative of organized labor, industry, and the Government, should be appointed immediately to make a complete study of the problems resulting from the introduction of automative devices in the office.

This commission should report back to the House Committee on Education and Labor at the earliest possible date. Delay in taking action can be costly to the economy of the United States.

Freedom Shall Prevail

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1961

Mr. SCHERER. Mr. Speaker, Mrs. Grace Van Atta sponsored and conducted an Americanism essay contest in the Cincinnati public schools. Three outstanding Cincinnatians were judges of this contest; namely, Brady Black, executive editor of the Cincinnati Enquirer; Thomas Gephardt, editor of the editorial page of that paper; and Mr. Peter Grant, director of news for station WLW, the Crosley Broadcasting Co.

Mary Lyons Temple, of Cincinnati, Ohio, a student at our Western Hills High School, was adjudged the winner.

The purpose of the contest was to stimulate a greater interest and feeling of pride and appreciation for the American way of life; the ideals, customs and responsibilities of the American citizen.

Miss Temple's essay, "American Citizenship: What It Means to Me," is so outstanding that I feel it should be printed in the CONGRESSIONAL RECORD. The essay follows:

AMERICAN CITIZENSHIP: WHAT IT MEANS TO ME FREEDOM SHALL PREVAIL

(By Mary Lyons Temple)

Allow me to introduce myself. My name is George Washington. I served as Commander in Chief of the Continental Army during the Revolutionary War, and later, I became the first President of the United States. Now, I am here in America as a spectator to see what has become of the Nation which I helped to found.

I see all of the wondrous advances that have been made in industry and agriculture. Everywhere there are machines that run by themselves, lamps that shine without fire, and pictures that move and talk. I am greatly amazed by all of these things. I am shocked by the new language I find the people speaking—so like, and yet so unlike, that of my day. The clothes, too, are different from anything I could have imagined. Gigantic buildings loom everywhere, and people fly through the air above them like birds. Yet, I am able to understand these changes, for such progress is inevitable and, from what I can see, good. I would not want the people of America to stand still and not search for better things. No, it is not these material changes which frightens me and bewilders me; it is the change in the people themselves, in the way they feel toward their country.

There are now more than 180 million U.S. citizens, yet there seem to be no more, or perhaps not as many, true Americans as there were in my day. I hear the word "American" used as a synonym for "citizen of the United States." This is not right, for an American is someone who lives up to the demands of his citizenship. He takes an active interest in the affairs of his Government; he is proud of his country, and thankful to be a citizen of it.

He is eager to protect his rights and those of other citizens. He appreciates his great heritage as an American citizen. I have found few citizens of the United States today who could really be called Americans. The people of the United States, although they call themselves "Americans," have actually forgotten what it means to be a citizen. They have abandoned their sacred duties as citizens, and they have left their many privileges unguarded in a world where there is much danger of losing them.

The most tragic part of the lack of Americanism among "Americans" is that the people do not realize what is happening today. They think that they are good Americans because they say the "Pledge of Allegiance" at the opening of public gatherings, buy U.S. bonds, and can sing the first verse of "America." Undoubtedly, there are moments in every citizen's life when he feels pride and joy in being part of so great a Nation, but this is not enough. American citizens of the 20th century must be, as those of the 18th century were, true Americans every day.

I observe that on July the Fourth Americans celebrate with parties and firecrackers, but this is not really done in honor of, or in celebration of, American independence. It is done because the people of the United States want to have a good time. To be sure, there were many, many firecrackers on the Fourth of July in 1776, but they were a display of true rejoicing over the newly proclaimed independence of America. In 1776, the people knew what it meant to be free, for they had long been oppressed by British rule. On that first Fourth of July, Americans had good reason to celebrate, and they still do today. Citizens of the United States still have the same rights and responsibilities which they had in my day. They still have those rights given every citizen by the Constitution of the United States: to manage their own affairs; worship as they see fit; speak out on whatever they please; criticize the government; read and write freely; have a fair trial by an impartial jury; and, perhaps the most important, they have the right to govern themselves.

In 1787, I attended the Constitutional Convention where I helped to set down in writing these rights of the citizens. It never occurred to me then that in years to come these hard-won rights would simply be taken for granted. In my day, they were the most cherished possessions of the people; and they should be today. If the present attitude of American citizens toward their rights continues much longer, there will be tragic results. The rights, the very freedom, of the people will be lost gradually. Then these rights and freedoms will finally be appreciated, but it will be too late. The American people must learn now what it really means to be a citizen of the United States. They must know what their rights are so that they may protect them, and they must recognize their responsibilities so that they may carry them out. Then they will be true Americans.

Help Wheel Needy Ill of World

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1961

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter of transmittal from Mrs. Paul Bedford, of Wilkes-Barre, with which she forwards a feature article on the international humanitarian work done by the Wheel Chair Club of Wilkes-Barre, of which she is the founder. The aforementioned article was written by Mr. Sheldon Wintermute, a staff writer, Sunday Independent, Wilkes-Barre, and appeared in that newspaper on December 11, 1960. It gives me great pleasure to include this material as part of my remarks today which is in addition to previous remarks that I had made in the RECORD on this truly outstanding and humanitarian enterprise. Mrs. Bedford is to be warmly congratulated on the success of the Wheel Chair Club which she founded 25 years ago. I am sure I reflect the wishes of many thousands when I say that we all fervently hope that her good works will be continued and sustained for many more wonderful years.

The letter and article follow:

THE WHEEL CHAIR CLUB, INC.,
Wilkes-Barre, Pa.

Hon. DANIEL J. FLOOD,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN FLOOD: Thank you for putting in the CONGRESSIONAL RECORD the article about our sending 300 wheelchairs around the world in 3 years.

We wish instead of that you had put the enclosed one in which CARE sent to the Sunday Independent, without our knowledge. It shows our work in action. We appreciate greatly what you did.

Sincerely,

GERTRUDE BEDFORD
Mrs. Paul Bedford.

HELP WHEEL NEEDY ILL OF WORLD—BEDFORD RESIDENCE HEADQUARTERS FOR UNIQUE PROJECT

(By Sheldon Wintermute)

It was 25 years ago and Christmas was just as close when a Wilkes-Barre woman, who 4 years ago rightfully was honored as a Distinguished Daughter of Pennsylvania, founded the Wheel Chair Club of Wilkes-Barre, Pa., which now is known to handicapped children throughout the world.

The founder, Mrs. Paul Bedford, of 96 West South Street, city, had only a small group to help her plot the course for this international humanitarian project.

It was only last week that five wheelchairs were delivered to the Franklin Delano Institute for Crippled Children at Bogotá Colombia, as a gift of the Wheel Chair Club of Wilkes-Barre, the headquarters of which is the study in Mrs. Bedford's West South Street residence where she resides with her husband, one of the most distinguished members of the Pennsylvania Bar Association.

The official presentation at the institute in the capital city of the South American republic was made by Richard W. Reuter of New York, executive director of CARE (Cooperative for American Relief Everywhere), who was visiting Bogotá as part of a tour of CARE missions in Latin America.

TRIED FOR SIZE

Mr. Reuter reported to Mrs. Bedford that the chairs immediately were tried for size by five little Colombian girls being treated at the institute for polio.

Another chair earlier this year was delivered to the Physical-Social Rehabilitation Organization in Bogotá, which serves the crippled and blind poor.

Colombia brings to nine the number of countries to which CARE has delivered wheelchairs on behalf of the Wilkes-Barre club.

The others are Hong Kong, India, Italy, Panama, Philippines, Turkey and Vietnam.

Mrs. Bedford and her tireless aids are working on reports that chairs are urgently needed for a children's hospital in Israel and a school for the disabled earthquake-stricken Chile.

The former Gertrude Vaughn, Mrs. Bedford was cited as a Distinguished Daughter of Pennsylvania in 1956 for outstanding contributions through personal service, effort and humanitarian work in the field of welfare.

When it started 25 years ago, the Wheel Chair Club was merely an outgrowth of the Friends of Shut-Ins Club. Today there are 27 active units around the country helping to provide wheelchairs and walkers to the needy ill in this country and abroad.

Nature and the Man

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1961

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the RECORD

an article entitled "Nature and Man: The Two Faces of Management," which appeared in the Audubon magazine May–June 1960:

NATURE AND MAN: THE TWO FACES OF MANAGEMENT

(By Daniel McKinley)

(EDITOR'S NOTE.—Dan McKinley is a teacher of biology at Salem College, Winston-Salem, N.C. In the summer of 1959, he was on the staff of the Audubon Camp of Connecticut, and for 2 years was a teaching fellow in biology at Bowdoin College, Brunswick, Maine. In a recent letter to us, he wrote: "I grew up in the Ozark area of southern Missouri, where I learned certain Thoreauvian truths about dolomite glades, sandstone barrens, and other wastelands. They were places of great charm and interest * * * not real wildernesses but without them life would have been different." Dan McKinley has worked as a naturalist in Missouri State parks, studied wildlife management under William H. Elder, a disciple of Aldo Leopold at the University of Missouri, and has worked on ecological problems in Alaska.)

The dourest prophet has at least a despairing hope that human nature can be changed enough to make man's life compatible with the order in nature. Something of the sort, without a resort to quackeries, has to be done.

The common question goes: Where is science taking us? Can it be that science is taking us, as the question implies, to some end that we have not elected? The two most frequent replies are not reassuring—the hell of nuclear war; or the dubious utopia of a manmade world powered by atomic energy.

Today's shoddy promise of utopia is not a pretty one, even if it works; and we do not yet know what to do with the leftovers from peaceful atomic fission. Inevitably we shall see nature molded more and more by the cankering stresses of overpopulation and undreamed-of increases in material demands. Individual freedom will perish in the totalitarianism necessary for the running of such a factory of human protoplasm.

I think it conceivable there is no solution to the looming catastrophe of too many people in so frail a world. Like the dragon's brood we threaten our world with hydrogen bombs, atomic fallout, earth movers, and simple overuse by billions of men whose blindness prevents them from recognizing the earth's fragility. Municipal airports, superhighways, and suburbias weigh heavily upon land that ought to lie exposed to rain and light and life. Earthly life may soon consist only of that in managed man and his tanks of algae stewing in the solar gardens of the future. Farming as a way of life, wildernesses, arctic tundra, national parks, wild animals, and plants—all of these things may be dreams before we know it.

Maybe, as I say, we cannot do anything. But how justified is this view for the managers and technicians who do alter the world? Are we an ignorant society so mobilized by taboos that we act, but cannot guide our actions? What do we know about the tangled web of effects woven by the changes we initiate? So far, perhaps because of "science," it has not mattered much to us. We are utopia bound. What are esthetics and ethics, or even the practicalities of soil poisoning, pollution, and the extinction of species? But the web tightens. Bacteria, green plants, and molds are among mankind's greatest friends. They are the result of an almost eternally long balance in nature that man can never duplicate, and one in which he was never remotely involved until quite recently. Yet aside from whooping cranes, platypuses, and moccasin flowers, all beneath contempt because they have no market value, we may also be endangering the willingness of just such impersonal facets of life as chlorophyll, penicillin, and nitrification to support us. We know little enough about the kind of world required for their fruitfulness. Man, an ignorant parasite, sucks up their bounty, and without them he is lost.

I am the sheepish owner of a hope that a world fit for unmanaged men may yet come out of it all. It is an agonizing hope. Coupled with that hope is the belief that in completely managed landscapes only a managed man can fit without going mad. For, as much as politics, religions, schools, and automobiles, freedom consists of spaciousness, natural beauty, and complexity, and the familiar challenge of the unknown. If we lose these things, how can they be legislated back into a world spilling over with people?

Yet, suburban developments, tomorrow's slums, sprawl listlessly over once lovely hills. A living topsoil is bulldozed away and its basement cemented over. People spew outward from decrepit metropolises, into which are driven ever more displaced people from the farm. Gadget-filled lives have been invested with so false a halo that one wonders if the gadgets are not the proffered carrot that precedes the slipping on of the halter.

Where does the emphasis on material social creations put a naturalist? This skeptic yet remembers country summers in Missouri: grasshopper symphonies not confined to a Saturday afternoon. Although strayed from Ozark hillsides of oak and hickory, he yearns not for lost youth but for the lonely call of a blue jay in the emptiness of an oak forest in midwinter; for katydids rasping out their lives in gleaming summer evenings; for the cyclic drone of a cicada in a locust year; for nighthawks booming their own delights over a limestone glade; or, above the comforts of fellow creatures, sunset silhouetting neither skyscraper, power pole, nor jet trail.

What I describe is not the antithesis of human society, but its proper setting.

I am told to ogle the progress of mankind. Join. Socialize. Have faith. Faith in what? Faith in man—man possessed of the Midas touch; man the remover—not the maker—of mountains. Man so in love with his own image that he cannot see or reflect or weigh; so open to the faults in his faiths and practices that he now endangers the future of his species. Will he—can he—continue to love his fellow men when men fall over each other's feet, as will probably happen unless some infinitely terrible disaster prevents that horrible end?

Wisdom, management, education are the echoes I hear, encapsulated in American thinking in the word "conservation." Conservation is at best a focal point of deep and creative thought; at worst, a brain-stopping little slogan beginning and ending with "Wise use." Smog, alpine meadows, moorland sheep, Chesapeake oysters, almost everything you can name, may any day begin to poison us with radioactivity very appreciably more than at present; soils whose fire ants have been eradicated may soon become our savings account with death; the whole African continent may lose its elemental charms to make way for a teeming society that will in its turn starve—the ultimate in drab memorials to our political vacuity. Are we so very wise?

So we manage. We become professional, steeped in techniques that override our philosophies, silenced by Government subsidy, smug from the conventionally measurable services we provide the public. In wildlife management, for instance, any fool who can legally carry a gun can now pay to have a coturnix quail turned loose in front of his gun, a sick trout dangled from his prebated hook, or for a shot at a goose from a blind that he did not build within the territory that was recently sanctuary to the goose. This is no nightmare of our overpopulated future. This is management—but considerably strayed from the philosophy of its great founders.

In a day when American population pressures are still modest enough, we find game management plying the techniques rather wildly in its efforts to provide more heads of shootable game for the increasing baggers of game. This usually means chopping down the beech trees, shooting off the horned owls, mountain lions, and wolves, and introducing exotic animals to fill nooks where native animals can no longer live. It means cultivation, fertilizers, poisons; it means the intercession of more and more grades of expertness between producers and consumers; it means the channeling of the sun's energy through a few manageable species of animals rather than through a bright array of wonderful forms as nature has always done it.

And then, education. Not the slow and costly provisioning of human minds with perceptiveness. That might accomplish something. But we must be dynamic and progressive: great buildings, to shut out the sunlight; expensive equipment, to magnify the cell and lose the organism that makes it meaningful; and eminent measureableness, so that we can point with pride; an out-doing of the Russians, that Government funds may flow. Application: technicans, salaries, degrees, departments, politics, rottenness.

Our knowledge is backfiring into our faces, and yet the pressure to accentuate the practical can hardly have begun. More than mere wise use is required. Technology's balm will not touch the source of our infection, part of which is technology itself. Yet obviously we do need wisdom, management, and education. But humility before the facts of nature—before the marvels of nature—must be our point of departure. This is no grovelling before what we do not understand, but a loving caution in using facts that we think we are thoroughly familiar with.

We are surely lost if all sciences cannot become more a conviction that we are "the wiser * * * for knowing that there is a minnow in the brook" (Thoreau). So wisdom begins with luck—in having the brook in the first place; and ends with human restraint in preserving the brook and in keeping it unpolluted enough that minnows can live in it. Without some feeling for the precedence of nature, we shall soon have neither brook nor minnow nor wisdom.

And the minnow's service to mankind is in its own being—maybe even in the number of scales in its lateral line—more than in any arbitrary scheme of values assigned to its use as food, as object of bounty, as destroyer of agricultural pests, as eliminator of weak or sick prey animals, as pet to be caged, or specimen to be idly maimed in a freshman biology class.

People have to get into the open air, have a look at life, and see how fare the neat laws that the laboratory gives them. Man today needs badly to cultivate his qualities of seer and thinker. Human life is potentially richer where all of life is richer. Without that richness, all our education will be vanity. Life has the roots of its richness in areas that man has left alone, often those areas that in the past have been economically useless. We are no longer a people with hoes nibbling at the landscape; useless bits of land are being remodeled nearer and nearer our own image, and lost to nature so long as our age of concrete endures.

Civilizations destroy the useless and the harmful in nature (with increasing success), put the rest under the halter, and place more and more of the individual man into the icebox. Nature, on the other hand, is liberating, elementally and not merely legally, freeing the eye with its multitude of forms and saving the mind by its offering of

alternatives to dictatorships of fad and fashion and decree. If we look deeply into relatively undisturbed nature, we have used the most precious gift of science; if we understand even superficially we have had science's greatest blessing. True science does not consist of quarterly reports and sure-fire returns.

But man is not merely a thinker. He is a biological organism. He requires appropriate natural surroundings for the play of his activities. One function of a spacious world where natural beauty and complexity have full sway would be not only in its food for man's thought, but also in its being food and a place of refuge for his body. People are hardly justified in having bodies, they derive so little good from them.

Perspective cannot altogether be taught; it has to be "discovered" by the individual. If men, in their leisure time are lured away from the social and intellectual opiates of cities, something has been accomplished. If, during that harried truancy, they gain a glimmer of understanding, a minor miracle has occurred. There is real danger that a whole generation of people will one day be reared away from contacts with wild nature. Something compulsive is needed to make at least a few people into a part of the country: Not for fresh air merely, but for benefits that the country nurse can never measure.

It is indeed hard to see how man can long maintain contact with nature in the years that face us. A kind of human management is needed. We must do the managing, with nature and man's place in it clearly in view. No kind of self-management is so much needed as population control. Without that, any appreciable amount of "nature" of any kind is out of the question. Consider the bad names, the crooked statistics, and the hoots of derision with which Thomas Robert Malthus is proved wrong these days, and you will see the task that looms ahead.

Society worship lies deep among our roots. Abstractions of nature in still life, in formal gardens, or regimented agriculture, are held up as not only substitutes for but even improvements upon nature. The sense of husbandry fostered by forestry, game management, or outdoor recreation means for some people that they are not liable to the same ethical strictures that ought to govern human activity in any field of nature. The feeling is deep that more basic laws of nature can be discovered in the laboratory than in the field or at the observational level, and that the resulting control over nature is the chief glory of man.

Many persons also insist that a peculiarly mystical and durable essence of humanity gets entombed in bronze, cast into marble, molded onto canvas, or enshrined in great buildings. They belittle the role of environment, not only in its symbolical function, but also its vital role in providing the largeness of bounty that makes leisure possible. Such people desire—or in practice, encourage, and make inevitable—a world smothered into humanized stability. Some of them desire—or overlook—the stabilization of humanity that must follow as man, cut off from distances, rain, and natural life, revolves in ever smaller orbits around allegedly precious bronzes, marbles, books, committees, laws, canvases, and services. What began as opportunities for masterly individual achievements will end in mass strangulation of the individual.

What I have tried to say in suggesting a reorientation of man in nature is that where money and man are put immoderately before the whole of nature, the margin of safety for man himself is narrowed. One day, he will be caught short. Due to the taint of folly in our wisdom, a rot of our own making will surely undermine the foundations of man's termite civilization.

Natural history is a point of view, not a science. That is its salvation, and the source of its services to man. Human social life is no mere substitute for it. It is not a matter of money. Here is something that we cannot apply. It receives few subsidies from government, and hardly gets lip-service from many biology departments in colleges and universities. Yet, its prerequisites are those that any inspired amateur can bring to it. One may just see and appreciate, although few persons operate on so exalted a plane.

The lessons of natural history for mankind are not negative. The festering homocentrism that now leads us to commit devastation toward both man and earth might possibly be alleviated by a love for nature that places man in perspective.

Love of nature is the supreme aim. The study of natural history, in the interest of that love, must be encouraged. Neither natural history nor naturalists, however, can be particularly dictated, legislated, or financed into existence. Uncontrolled nature is the mother of both of them.

The creation of naturalists, of individualists, is more difficult than the training of technicians. And less measurable. Perhaps colleges, geared to run on money from self-satisfied tycoons, and State universities, pacing in the dignified steps of politicians, are both poor places to expect any such impalpable, immaterially good thing to be fostered.

Natural history in some way needs to remain in a state of perpetual amateurishness. The living world we see has to be, in a way not now clear, kept natural and rich; the individual man, in a manner yet to be discovered and practiced, must be left to explore, learn, and experience, as with a compelling passion. Naturalists only grow in such remarkable surroundings; I suspect that in this peculiar independence from extreme social coddling, they reflect a quality that is basic to healthy human beings.

Rugged Individualism

EXTENSION OF REMARKS
OF
HON. JAMES A. HALEY
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1961

Mr. HALEY. Mr. Speaker, with permission to extend my remarks, I wish to place in the CONGRESSIONAL RECORD an editorial which appeared in the Lake Wales News, April 13, 1961, entitled "Rugged Individualism."

I call this editorial to the attention of my colleagues because the thoughts expressed therein are so typical of those often expressed by the so-called rugged individualist. This is a man who has taken advantage of practically every Federal program available to him and has benefited from them. Now he has reached the security in life where he can demand that other people should stand on their own feet "without expecting handouts from the Government and, in turn, us taxpayers."

The editorial follows:

RUGGED INDIVIDUALISM

A young man lived with his parents in a public housing development; attended public school, and participated in the free lunch program. He entered military service and upon discharge, retained his national service life insurance. He attended the State university and worked part-time at the State capitol to supplement funds provided by his GI education check. Upon graduation he married a public health nurse, bought a home with an FHA loan, and obtained an RFC loan to go into business.

Their baby was born in the city hospital. Wanting some farmland and a home for his parents, he bought a small ranch with the aid of the veterans land program. For his livestock he obtained emergency feed from the Government. Later he put part of his land in the soil bank and the payments he received soon paid for the ranch. His father and mother lived comfortably on the ranch with the help of their social security and old age assistance checks. REA lines supplied electricity; the government helped him clear his land; the County Agent showed him how to terrace it; and the government built him a fishpond.

He read books from the public library, and his banked money was insured by an agency of the Government. His child grew up; entered public school; ate free lunches; rode in a school bus; played in the municipal park, and swam in a public pool. The man owned an automobile, so he favored the Federal highway program. He signed a petition, seeking federal assistance in developing an industrial project to help the economy of his area; was the leader in a move to get a new Federal building and went to Washington with a group who asked the Government to build a great power dam costing millions, so the area could get cheaper electricity.

Then, one day, after hearing that the per capita income tax bill in 1959 averaged $251.49, for every man, woman and child in the Nation (over 177 million persons), he wrote his Congressman:

"I wish to protest these excesive governmental expenditures and attendant high taxes. I believe in rugged individualism. I think people should stand on their own feet without expecting handouts from the government and, in turn, us taxpayers. I am opposed to all socialistic trends, and I demand a return to the principles of our Constitution."

Protest by Polish-American Party

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1961

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I insert into the Appendix of the RECORD the protest of the executive committee of the Polish Peasant Party against the new act of violation of the Polish nation's will. The Honorable Stanislaw Mikolajczyk, chairman of the committee, is the former Prime Minister of Poland and is President of the International Peasant Union.

The above-mentioned protest follows:

PROTEST OF THE EXECUTIVE COMMITTEE OF THE POLISH PEASANT PARTY AGAINST THE NEW ACT OF VIOLATION OF THE POLISH NATION'S WILL

April 16, 1961, will go down as the day on which the Communists committed a new infamous act of violation of the Polish people's will by holding the so-called elections. The Polish nation was the first to take up arms, in 1939, against Hitler, who, after concluding an agreement with Stalin, started World War II by attacking Poland. Through a great loss of blood and property

the Poles confirmed their will and their right to national sovereignty, to civic freedom, and to a free choice of a system of government and national economy.

This was reaffirmed at the end of the war by representatives of the three Big Powers, the United States, Great Britain, and the Soviet Union, who declared that Poland had the right to full independence, its own government, and determining its own political system through free and unhampered elections.

The nation's will and its right to self-determination were brutally violated by the Soviet Union and its agents during the 1946 referendum and the election of January 1947. Two memoranda and thick volumes quoting facts of various violations, beginning with arrests, obstructions, burning of whole villages by the Red Army and Secret Police, and ending with the murder of candidates of the only independent list of the Polish Peasant Party—were not only submitted to representatives of the Big Powers concerned, but they also constitute till this day, in the records of the United Nations and of all its democratic members, an indictment of the Soviet Union for the violation of the Polish nation's will in 1946–47 (84 percent of the Polish people voted in January 1947 for the independent list of the Polish Peasant Party) and remain a lasting evidence of the violation of international pledges by the Soviet Union.

The so-called election in 1952, along with the change of the constitution patterned after the Soviet model, was held in the Bolshevik style with only one list of candidates. The same kind of election, Soviet style, was held in February 1957, although in 1956, after the Poznan events, it was announced that the will of the people would be respected and the whole system liberalized. The worst of it is that, in 1957, on the eve of the election, Gomulka, who was afraid that the Polish people might boycott the election, threatened them with obliteration of Poland from the map of Europe, should they dare, when going to the polls, to strike off the names of the leading Communist candidates from the list.

In April 1961, when new nations in Africa and Asia are being granted the right to self-determination, which is recognized by the whole world, a new act of violation of the Polish people's right to determine their own system of government is taking place. There are no free elections for Poland. A nation with an over-1,000-year-long history of culture and statehood has been denied the right to determine its own system of government, national economy, and policy; and instead of an election a tragicomedy is being staged.

The tragedy is still greater when we consider the fact that the Polish people has not only been deprived of the right of self-determination, but that Polish citizens who do not belong to the Communist Party or its affiliations cannot nominate candidates they trust. In addition, they have been ordered to go to the polls and cast their vote for their enemies and for a system which destroys them and which they abhor.

Just like before Communist courts an innocent citizen has to confess uncommitted sins before receiving a death sentence, so in political life the citizen is ordered to vote for his enemy who is as hostile to him as to the majority of the nation; he must vote for the Communist system and the dictatorial rule of Moscow, which, having deprived Poland and other Iron Curtain countries of independence, is now planning to extend Communist dictatorship the world over.

The farce of the situation lies in the fact that in 1952 and 1957 the Polish citizens, who were forced to vote, cast into the ballot boxes ordinary pieces of paper with such shocking words that the Communist press said after the election that it was simply unbelievable that a citizen could write such obscenities on the ballot.

Under the new electoral system, scribbling on official ballots does not affect their validity. In other words one can write under the candidate's name on the official ballot the most insulting words and the ballot is still valid and is counted in favor of the Communist candidate.

As the Communists recognize only the dictatorial rule and treat the so-called elections as an instrument of forcing the citizens to cast their readymade ballots for the single Communist list of their oppressors—it is worthwhile to recall at this point their attitude toward elections in other countries.

A secret pamphlet written by a Czech Communist, which has been recently made public, says that the Communists in Western democracies must go to the polls and seek seats in their parliaments in order to destroy them subsequently from within.

An election was held recently in South Vietnam. There were three candidates for the Presidency and three for Vice President. The Communists staged attacks against individual leaders of the non-Communist parties and murdered them. Last year over 2,000 non-Communist leaders were killed. Most of them were peasants. They had been given land under the land reform and had no intention of joining the Communists. A few weeks before the election Communist bands attacked villages, murdered local leaders, and took away personal documents from the villagers to prevent them from going to the polls.

In this case the Communists not only conducted an open campaign against the elections, but also tried to prevent holding them by terrorist activities.

It is the general rule in the entire Soviet camp and also in Poland that an election is invalidated if less than 50 percent of those entitled to vote in an electoral district have cast their vote.

Last March, an election to national councils in U.S.S.R. was held. Instead of the usual 99.8 percent of the voters going to the polls, the voters abstained from voting in 18 districts in the Ukraine, in 6 districts in Kazakhstan, in 11 districts in Lithuania; thus, the required 50 percent of voters did not show up at the polls. These are the figures the Soviets admitted; but we do not really know how the things really were. But everyone who can read knows that the citizens availed themselves of this first opportunity to declare themselves against the Communist system by boycotting the election.

In 1946 Stalin told the Polish Communists in Moscow: we have determined the outcome of the 1947 election in Poland here, today. But what I want is that you do not rest content with merely adding votes. I want you to break the Polish people before the election, so that they go to the polls to vote for you.

The same thing has been done in Poland now. When the central committee of the Polish Workers Party discussed the question of election in Poland in October 1960, Gomulka ordered that the Polish people be broken before the election; in particular the opposition of the peasants and of the church should be overcome. This started the Communist campaign in Poland against the church and the peasantry. Hence the fear that the elections might be boycotted by the Poles and the linking of the elections to the parliament with those to regional councils.

Poles at home are mature enough and politically minded—so they do not need our advice from abroad in matters bearing on elections. After the past election, the Communists, enraged by the existence of the Mikolajczyk "remnants," quoted so many examples of national resistance against the so-called Communist election that no better methods of a bloodless opposition could ever be invented abroad.

There are some possibilities in the new electoral system, such as, for instance, of a mass boycott, so that the aforesaid 51 percent of the voters do not go to the polls; or to apply article 61, if one is forced to vote, and go to the voting booth and tear up the ballot into pieces so that the vote is counted against all the candidates on the list.

In the entire democratic world, an election in which a citizen has no right to nominate his own candidate and is obliged to vote for his enemy, is not considered a real election.

And that is why the most important thing is not the outcome of these Communist elections in Poland, since it is known that deputies or councilmen have been chosen by the Communists well in advance.

True, the Communist election system says that nominations can be made only by political, professional, and cooperative organizations, as well as by other societies of the working people. However, we know that no other party except the Communist Party, with its agencies, the United People's Party and the Democratic Party, can exist in Poland and have the right to nominate its candidates.

The same is true about other organizations. Already in 1957 and 1958, initial attempts by the peasant, socialist and boy-scout youth associations as well as by labor unions and agricultural associations to make themselves independent were thwarted by Communist terrorism.

The fact that Piasecki from the PAX had to pay larger taxes for a larger number of seats, or that Zawiejski-Kisielewski and Stoma—vestiges of the ZNAK, proclam the duty to vote—does not change the situation in the least. The fact is that the voters in Poland have only one Communist list to vote for and that they must go to the polls because the Communists fraudulently tell them that it is their civic duty to do so.

The citizen's duty is to vote only when he also has the right to nominate his own candidates. He has no duty to vote for his enemies.

The Polish Peasant Party published its independent lists in 1947, because, under the election law, 500 voters could submit their own list. The Communists arrested the Polish Peasant Party members and tortured them, even the women, by keeping them outdoors, behind barbed wires, in the winter cold, barefoot in icy water, and demanded that they withdraw their signatures, which they refused to do.

In 1952 and in 1957 there was no such rule, nor is there such a rule in 1961. Citizens have no right to submit their lists of candidates and therefore they are not obliged to vote for their enemies. The executive committee of the Polish Peasant Party, protesting against this new act of violation perpetrated by the Communists against the Polish people—will continue to insist that the international pledge be carried out in Poland, and that after the releasing of the Poles who have been deported to Russia and following the withdrawal of the Soviet forces from Poland, the freedom of the press and association be restored in Poland and that a truly democratic election under international control be held.

March Monthly Change Indexes

EXTENSION OF REMARKS

OF

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1961

Mr. YOUNGER. Mr. Speaker, the attached predictions by Dr. John H. Hoagland result from his compilation of reports from purchasing agents.

It is interesting to note that the most recent statistics support Dr. Hoagland's prediction made in February that the recession had reached bottom and that the trend from there on in 1961 would be on the favorable side:

MARCH MONTHLY CHANGE INDEXES

(By Dr. John H. Hoagland)

The latest recession ended in February and the business upturn began in March. Order backlogs were bigger; new orders were larger; production was greater; employment declines were less; and, inventory liquidations were smaller in March than during many recent months.

These important business trends for March are shown in the accompanying charts of monthly change indexes developed from purchasing business surveys. Again, purchasing executives are providing early and accurate evidence of a turning point in the business cycle, as they have successfully done so many times in the past.

In March 1961, as in May 1958, many of these key indexes shifted from negative to positive, signifying a cessation in the business decline and the beginning of the business recovery.

The purchasing business surveys showed March business trends improving throughout the Nation, as well as in important industrial areas—such as New England, Detroit, Cleveland, Pittsburgh, and Chicago. Monthly change indexes for these areas all moved upward during March. The majority of these indexes now have turned positive, signifying increases over the preceding month. Those indexes which continue to be negative, indicating declines, all showed a March rate of decline less than that of February.

The late 1960–61 recession did prove to be one of the shortest and mildest in history. Inventory liquidation, caused by the imbalances of the 1959 steel strike, was a major factor in this latest recession. Purchasing executives, however, readjusted inventories sooner than in previous recessions, and this helped keep the recession short and mild.

A FORECAST

Forecasting business trends is always hazardous, but perhaps now is an appropriate time to discuss some probable developments of the coming months. The current business recovery should continue at least through the first half of 1962. The present low level of inventories should increase in the coming months due to increased demand for final products, lengthening leadtimes caused by slower vendor deliveries, and anticipated price increases. By the fourth quarter of 1961, a strong inventory accumulation stimulus will be provided by the threat of a steel strike in the summer of 1962. Inventory accumulations and other stimuli should raise business activities to new high levels in 1961 and 1962. Inflation will probably be a major problem in 1961 and 1962.

The next danger period for a business recession will be 1963. It is more casual than coincidental that each of the last three recessions occurred within a year after a major steel strike. The steel strike threat of 1962 is thus likely to cause a business recession in 1963. Although not generally recognized in business forecasting, the threats of major strikes exert considerable influence upon purchasing decisions which, in turn, determine many business trends. Purchasing executives exert an important influence on their firms' profits, and their combined actions produce a major impact on the business cycle. Fortunately, the business surveys of purchasing executives have provided some of the very best monthly data for analyzing and forecasting business cycles.

NATIONAL

For March, the National Business Survey Committee of NAPA reported increases occurring in both new orders and production. The March new order increase was greater than any month since January 1960; and, the production increase was larger than any month since February 1960. In 7 out of the 8 preceding months new orders had shown declines, and production cutbacks had been registered for 6 of the 8 preceding months.

Employment in the industries of the National Business Survey declined for the 13th consecutive month; but there was definite indication in March that a turning point in the rate of decline was reached in February 1961.

Inventory liquidations continued in March. In this last recession, however, the inventory monthly change index was one of the first to pass a turning point, for its low point was August 1960. In most previous recessions, inventory liquidations continued to increase until after reductions were made in other rates of decline. Thus, it is indicated that purchasing executives made inventory adjustments earlier in the 1960–61 recession than they had in many previous recessions.

Prices during March remained relatively stable for the third consecutive month, according to the National Business Survey.

With the business upturn now started, these monthly change indexes will undoubtedly show further rises in the coming months. A pattern quite similar to that of 1958 and 1959 may be the result.

NEW ENGLAND

New orders in the New England area showed a greater rate of improvement in March than during any month since January 1960. March was a sharp change from the preceding 6 months, during which time there were 5 months of declines.

Production improved at the greatest rate since July 1960. During the first 3 months of 1961, improvements were shown for 2 of these 3 months.

Employment increased somewhat in the New England area, showing a better performance than any time during the preceding 9 months.

Inventories of raw material were liquidated only slightly. The rate of liquidation was less than any month since April 1960. For the third consecutive month, work-in-process inventories showed an accumulation. Turning points in both of these indexes were reached in December 1960.

Prices increased slightly for the third consecutive month.

DETROIT

The business conditions index for Detroit rose sharply in March, similar to the rise in May 1958, at the end of the 1957–58 recession. This index was higher in March 1961 than during any month since February 1960. Improved automobile sales and pre-automobile strike activity have stimulated business activity in the Detroit area.

Employment declines in March were relatively minor and much less than they had been in late 1960.

Inventories continued to be liquidated by industries, as they have been for the past year.

Prices increased slightly.

CLEVELAND

New orders and production in the Cleveland area increased in March, after having declined somewhat in February and risen in January. Peak rates of decline occurred in both of these indexes in December.

Employment continued to decline, but the rate of decline was less than any of the preceding 6 months.

Inventories were liquidated further, but the rates of liquidation in 1961 were much less than those of late 1960.

Prices increased more than any month since August 1960.

Order backlogs, volume of business, and production all increased in March. This was the first month since January 1960, that any of these indexes registered noticeable strength.

Employment decline was less than any time time during the preceding 6 months.

Inventory liquidation continued, but at a lower rate than during the latter half of 1960. Vendors provided somewhat faster deliveries, with the rate of improvement being the lowest since November 1959.

CHICAGO

Order backlogs were increased in the Chicago area for the first time since December 1959. Production increased, after having declined for the 8 previous months. The employment and inventory declines were less than any month since June 1960. Most of these indexes reached their turning point in October 1960.

Vendor performance improved, with the rate of improvement being less than any month since January 1960.

Prices rose slightly.

PURCHASE POLICY INDEXES

The purchase policy indexes show purchasing executives were making some extensions in their forward commitments. The national indexes for capital expenditures, production materials, and M.R.O. supplies all turned up in March. Each of these indexes reached a turning point in November or December 1960. The regional purchase policy indexes show very little change in the New England and Detroit areas; but, some reductions were made in the Chicago area.

Jazz: A Potent Force for American Diplomacy

EXTENSION OF REMARKS

OF

HON. JEFFERY COHELAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 10, 1961

Mr. COHELAN. Mr. Speaker, from the triumphs which have been scored by the jazz tours of Louis Armstrong, Dave Brubeck, and others, it is obvious that this native American musical form has a valid and important role to play in our cultural exchange programs.

Russ Wilson has been writing a regular jazz column in the Oakland Tribune for the last 5 years. This last year he was honored by a California young men's club for his "invaluable service in promoting jazz in California."

In a recent article, Mr. Wilson points out that Russia has made a bid to hear American jazz. I certainly agree with Mr. Wilson that we should test this invitation thoroughly and make full use of this potent force for American diplomacy. Under leave granted, I include the article, as follows:

REDS' BID FOR JAZZ SHOULD BE TESTED

(By Russ Wilson)

That outright appeal for jazz voiced in Moscow the other day by a distinguished Soviet musician gives our new administration its first opportunity to offer Russia a

chance to hear some of the greatest artists in this field—American jazzmen.

The bid for jazz was made by Leonid Utyosov, 65, whose popularity as an orchestra leader and singer has gained him the award, People's Artists of the Russian Federation. Even though this might equate with second lieutenant, it shows he's a man of some note.

Significantly, Utyosov's statement appeared in the official magazine of the Soviet Ministry of Culture. From all past evidence it seems sure the remarks were printed only after they'd been OK's by the Kremlin; that's the way things work in a dictatorship.

It might therefore be assumed that when Utyosov writes, "We need jazz; there is a demand for it; to make it a forbidden fruit is dangerous and interferes with the education of young people in musical taste" he is indicating a change in government policy which heretofore has opposed this musical form.

If this were not so one wonders why an official publication permitted Utyosov to assert: "Jazz is not a synonym for imperialism and the saxophone wasn't born of colonialism. * * * Good jazz is art and a bad symphony is not art," true though this is.

This Russian is no square; he cites a jazz historian as saying improvisation is the cornerstone of jazz and adds, "A man who has no talent can not improvise." He also discerningly points out that the roots of jazz "go not to bankers' safes but to poor Negro quarters." His ridiculous claim "that so-called Dixieland existed in Odessa before New Orleans" can be written off as party-line boasting—or as a sop that got his other remarks into print.

The important fact about the incident is that the United States has been given a wide open chance to offer jazz-hungry Russians a feast. As was reported here last November, President Kennedy is aware of the popularity of American jazz overseas and its high propaganda value.

Let's hope the wheels start turning. At the least we'll show up the Moscow bid as a phony. And if it should work out that we can send a first-rate jazz unit to Russia—say for example a big band led by Dizzy Gillespie—it will take care of business.

A Welcome Visitor

EXTENSION OF REMARKS

OF

HON. F. BRADFORD MORSE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1961

Mr. MORSE. Mr. Speaker, I was pleased and honored to be among the guests at the reception given by the Greek Ambassador for Prime Minister Caramanlis and his lovely wife this week.

As Representative of Lowell, Mass., the Athens of America, the experience was both rewarding and meaningful.

This distinguished visitor to our shores was given an open-armed editorial greeting by the Boston Globe, one which sums up the outstanding job Prime Minister Caramanlis has done for his country. Under leave to extend my remarks, I insert this editorial:

A WELCOME VISITOR

At the invitation of President Kennedy, Premier Constantine Caramanlis, of Greece, will come to the United States Monday. It will be the first visit to these shores by a prime minister of the great maritime nation whose civilization is one of the oldest in the world. It will be a happy visit; Greece today represents one of the clearest triumphs of U.S. foreign policy, so much under fire in recent years.

Greek recovery in the past decade is amazing. Threatened by economic anemia in the postwar years, the country was put on its feet by the Marshall plan. Chewed at by Communist guerrillas supplied by Iron Curtain neighbors, the nation was saved by the Truman doctrine, the heroism of the Government forces, and public pressure applied on the Communist countries through the United Nations. The U.N. denounced the rebel abduction of 20,000 Greek children; and condemned Bulgaria and Albania for assisting the Greek Communists.

With the defeat of the rebels Greece was able to contribute to the cause of freedom. She was one of 16 nations that sent military forces to the U.N. command in Korea. With the death of Stalin and the relaxation of cold war tensions, she was able to reestablish relations with once hostile neighbors. In 1951, with adjacent Turkey, Greece joined NATO.

From 1950 to 1955 the country built its fences at home and abroad. The domestic economy strengthened; the national income grew; merchant shipping increased. During these years, under the premiership of Marshal Alexander Papagos, a youthful Athenian lawyer, married to the niece of a former prime minister, began to distinguish himself. He was Constantine Caramanlis.

The new highways of Greece, familiar to the multiplying number of tourist, are a tribute to his industry. After serving as minister of labor, of transport, of social welfare and national defense, he became minister of public works in 1952. He still held the post when the marshal died, and King Paul turned to him to form the government. He assumed office October 6, 1955.

Since then, he has achieved a balanced budget, a stable currency, a sturdy credit, increased bank deposits, a 50 percent increase in the national economy, and has meanwhile held the cost of living to a 10-percent rise. In Norway in the same time, the cost of living has mounted 15 percent, and in France 30 percent. His 5-year development program is transforming the face of Greece; his foreign trade program is recovering and extending the markets lost in World War II.

Staunch ally of the United States, Greece stands today on a peak of economic achievement that may find the ancient country shaking off historic poverty and raising its living standard under free government to enviable levels. The prime minister is a welcome figure in the United States.

Four-Year House Terms

EXTENSION OF REMARKS

OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1961

Mr. MADDEN. Mr. Speaker, the following editorial from the Gary (Ind.) Post Tribune reveals facts which, if followed through, would greatly improve the efficiency and functioning of our House of Representatives.

A House Member should have a breathing time between elections to devote to legislation and the many added duties saddled on congressional duties during the last 30 years.

Under leave to extend my remarks in the Appendix of the RECORD, I include the editorial, as follows:

FOUR-YEAR HOUSE TERMS

A Gallup poll shows a majority of the American voters would approve lengthening the term of U.S. Representatives from 2 to 4 years.

The majority is rather substantial, 51 percent in favor of the 4-year term as against only 34 percent opposed, with 15 percent expressing no opinion.

A good many students of government believe the change would be of benefit to the country. Its personal benefit to the legislators themselves of course would be considerable.

The 2-year term presumably makes Representatives more responsive to the will of the voters. Senators serve 6-year terms and thus will act primarily on the basis of their own judgment as issues develop. But House Members must go back to the people every 2 years for a fresh mandate.

Objection is made, however, that the House Members must give so much time to campaigning that they do not have enough to put in on their duties in Washington. In a sense, a Representative must start preparing for the next election just as soon as the ballots are counted on the last one.

This doesn't hold true for legislators in many southern districts, or for some in the North, where one of the major parties is in overwhelming strength. The result is to give such House Members greater authority in its deliberations.

Modern methods of travel should be easing the situation for many legislators. By jet plane, they can give considerable time to affairs back home, and yet not lose many days from their duties in Washington. Yet the result may be that they are expected to give more attention to their home districts, by reason of easier travel conditions, and thus really get no relief from the planes.

In many States, there is a trend toward reducing the number of 2-year offices. That has been done with county government in Indiana, for example. Only 16 of the 50 State Governors now serve 2-year terms; the others all get 4 years.

On the whole, Government probably would be better served if the House membership was elected every 4 years. It would mean a long wait to get rid of a bad Congressman, but it might make us more careful about getting good ones in the first place.

Will Peace Corps Be Too Young?

EXTENSION OF REMARKS

OF

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1961

Mr. SCHWENGEL. Mr. Speaker, Clark Mollenhoff, of Cowles Publications, who is well known for this Washington coverage, has been traveling abroad during the past year and has been submitting some interesting articles for the Des Moines (Iowa) Register and the Des Moines Tribune.

Recently he had some observations about the Peace Corps in which he raised the question about the age of the group to which this program is having its greatest appeal. I found some food for thought in these observations and I would like to share them with the Mem-

bers. We will be called upon one of these days to evaluate this program and we will find some guidelines for doing this in the article by Mr. Mollenhoff.

Under leave to extend my remarks, I include this article on the Peace Corps in the Appendix of the RECORD:

WILL PEACE CORPS BE TOO YOUNG

(By Clark R. Mollenhoff)

VIENNA AUSTRIA.—The recent return from the Congo of 10 members of an Austrian medical team demonstrates some of the problems the Kennedy Peace Corps may face in helping the primitive people of Africa.

The returning medics reported that the 60-member U.N. medical team that went to the Congo last fall has lost nearly all of its enthusiasm for Africa and that all but 5 members of the team are eager to come home. The group found it could not cope with the problem of protecting itself from malaria and other diseases.

TOO YOUNG TO SEND

The Austrian trade union supporters of the team have not lost their enthusiasm for helping Africans. But at least one of them, Kurt Prokop, is skeptical about sending people in their early twenties into Africa or other underdeveloped countries.

"Africa needs help but it must be from experienced people," Prokop said. "I would say they should be between the ages of 35 and 45—old enough to have had considerable experience but not too old to be able to withstand the physical work involved."

In the last several months this reporter has discussed the Kennedy Peace Corps with dozens of persons in the Middle East, Africa, and Europe, most of them people who have been on the scene trying to help Africans help themselves.

A NOBLE IDEA BUT—

Invariably they started their comments with praise of the noble idea of the Peace Corps. But the skepticism started when questions were asked about the age group that could be used most effectively.

Israel's Minister of Labor, Giora Josephthal, who has had years of experience in sending Israeli teams to Africa, is skeptical about sending pure idealists with no practical experience.

"They must have more than the theoretic experience they would get in college and they must be people who have worked long enough to develop the patience necessary to deal with Africans who tend to be extremely sensitive and even unreasonable," he said.

WHAT MISFIT COULD DO

"The Peace Corps is a fine idea but 1 bad selection can destroy the work of 10 good people," Austrian Minister of Social Administration Anton Proksch said.

"Absolutely not," was his reply when asked if it would be advisable to send people just out of college in the age range from 20 to 25.

These views were echoed by Government officials, trade-union officials, U.S. diplomatic officials and educators with experience in the areas involved. They were not conservatives with built-in reservations about such projects, but in many cases were people of a definite Socialist background.

All agree that there is need for thoughtful work in Africa to offset wel-financed Communist propaganda. But if the warnings of these experienced people were heeded, the whole concept of the Peace Corps work would be changed from a program made up of people in their twenties to one made up of men in their thirties or forties.

HOW WILL THEY LIVE?

In addition, there are a number of practical problems involving food and housing.

The initial idea was to require that the Americans live the day-to-day life of the African. This was to include eating African food and living in African housing.

"It would be impossible for Europeans or Americans to live in the African housing," commented Prokop. "But the program would be defeated before it started if the Americans were to live in a European housing area or off away from the Africans."

Cheaper hotels in the African sections would provide the most practical housing, but such hotels are available only in larger cities.

It would be possible to construct housing of a modest but modern type, but this would not be regarded as roughing it with the natives.

Even if the Peace Corps members get over all of the practical hurdles of age, housing, and health, how long will they be able to endure the hardships of primitive living without complaint when they see the pleasant accommodations provided for Americans attached to embassies in the European sections of African cities?

A Passion for Justice

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 10, 1961

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Irving J. Fain, chairman of the Commission on Social Action of Reform Judaism, as it appeared in the April 1961 issue of American Judaism, which is the official publication of the Union of American Hebrew Congregations:

A PASSION FOR JUSTICE—ESTABLISHMENT OF THE FIRST JEWISH RELIGIOUS SOCIAL ACTION CENTER IN WASHINGTON REFLECTS THE CONCERN OF REFORM JUDAISM WITH APPLIED MORALITY

(The Emily R. and Kivie Kaplan Center for Religious Action will open this fall in Washington, D.C. The building will house the first social action center in that city established under the auspices of any branch of Judaism. The Washington office will strengthen the programs of the Commission on Social Action, joint body of the Union of American Hebrew Congregations and the Central Conference of American Rabbis, in response to an overwhelming mandate from the 1,000 reform Jewish leaders who attended the 45th General Assembly of the UAHC in Miami Beach, Fla., in November 1959. The Social Action Center will fight injustice by giving voice to the sentiments and translating into action the resolutions taken by the general assemblies of the UAHC and the conventions of the CCAR. The Commission on Social Action comprises, in addition to the UAHC and the CCAR, the following affiliated bodies in Reform Judaism: National Federation of Temple Sisterhoods, National Federal of Temple Brotherhoods, National Federation of Temple Youth, National Association of Temple Administrators, and National Association of Temple Educators. The Center for Religious Action also will serve as the headquarters for the Mid-Atlantic Council of the UAHC, serving Delaware, Maryland, North Carolina, Virginia, and the District of Columbia. In the following article, the chairman of the Social Action Commission of Reform Judaism tells why the center is being set up and what may be accomplished thereby:)

The passion for social justice, which had fired the prophets of ancient Israel, was rekindled by the founders of Reform Judaism. They cherished the faith that Judaism, as a way of life, must help to build a better world here on earth. They dared to believe—and to act on the belief—that Judaism had something vital to say to the great moral problems of society. They insisted that man is the copartner with God in ushering in His Kingdom of Justice here on earth. This divine discontent has helped to make American Judaism dynamic, modern, and relevant to the realities of a changing society. It has helped to make Reform Judaism a potent moral force in American life.

Historians of the future, in charting the dynamic growth of Reform Judaism in America, will list 1961 as a year of decision—a milestone in the life of the movement. For in 1961, the Union of American Hebrew Congregations established the Emily R. and Kivie Kaplan Center for Religious Action in the Nation's Capital to extend the social action program of Reform Judaism.

Concern for social ethics was expressed by the UAHC at every biennial from the beginning in 1873. Similarly, the CCAR spoke out repeatedly against racial, economic, social, and every other kind of injustice. In 1949, the Union of American Hebrew Congregations and the Central Conference of American Rabbis joined together to create a Joint Commission on Social Action to apply the ethical principles of Judaism to the urgent moral issues of the day. That commission has subsequently been enlarged to include the National Federation of Temple Sisterhoods, Brotherhoods, and Youth, as well as the National Association of Temple Educators and the National Assoication of Temple Administrators. Through intensive efforts, the Commisison on Social Action has stimulated the development of social committees in some 300 reform temples to translate the ethical principle of equality, justice, and peace into practice in the life of the community, the Nation, and the world. Such problems as housing, racial equality, interfaith relations, and juvenile delinquency have been dealt with by such committees.

And now this work has been enlarged and a long-nurtured vision has been realized. Made possible by a generous gift of Mr. Kivie Kaplan of Boston, the Washington center was authorized by the overwhelming decision of the delegates of the 1959 biennial assembly of the UAHC in Miami Beach after a long and comprehensive debate. The center will serve as the Washington arm of the national commission on social action, operating within the policies adopted by biennial assemblies of the UAHC and the conventions of the CCAR.

But historians of the future will also note that this major step—as with most milestones in the life of any living movement—was not taken without a measure of opposition and controversy.

Despite the overwhelming approval of the delegates at the UAHC biennial, a few congregations are vigorously exercising their legitimate right of dissent and are seeking to rally opposition to the Washington social action center.

Two congregations have appealed to other Reform synagogues to join them in protesting the acquisition of the center. They have contended that the UAHC is violating the autonomy of member congregations, in presuming to become the voice of Reform Judaism on public issues, and that the center may become a kind of religious lobby in Washington.

At this writing, the protesting congregations are seeking to win support for a special

biennial assembly of the UAHC to reconsider the Washington Center for Religious Action.

Inevitably, the Washington center has become a dramatic symbol of social action. Just as it has evoked enthusiastic commendations from most rabbis and lay leaders, it has also elicited the long-simmering opposition of those who feel that Judaism should not be concerned with social problems, that Reform Judaism should not take stands on such matters as racial segregation or war and peace, and that controversial issues should be avoided by religious institutions. Eyebrows were raised by the statements of the dissenting congregations in view of the obvious fact that the UAHC and the CCAR have historically adopted resolutions on social issues since the founding of these organizations. It was clear that many deeper questions of policy and personality must underlie the opposition to the Washington center, but one question at issue remains: Is it right to adopt a resolution on a social evil at a national convention—but wrong to implement that resolution through a Washington center?

At the same time, enthusiastic commendations have poured in to Judge Emil Baar, chairman of the UAHC board of trustees, from distinguished leaders of all faiths. Christian social action agencies with offices in Washington—including the National Catholic Welfare Conference, the (Protestant) Council of Churches and the Unitarian Fellowship for Social Justice—have welcomed the forthcoming cooperation of the Center as a "significant contribution to the national welfare" which will "strengthen the efforts of all denominations and faiths as they join together for a finer nation and a more just and peaceful world." Mrs. Eleanor Roosevelt, Governor Price Daniel of Texas, Rt. Rev. James A. Pike of California, and Secretary of Labor Arthur Goldberg are among the many prominent Americans who have warmly hailed the center as a "fine achievement" for Reform Judaism.

The center will serve the social action committee of UAHC congregations, federations, and regional councils, along with their sisterhoods, brotherhoods, youth groups, educators, and administrators. This service will range from informational materials about subjects best researched in Washington to suggestions regarding education which might be taken by local and regional social action committees. It will work closely and harmoniously with other Jewish bodies as well as with Christian social action agencies in the Nation's Capital.

Only a sterile movement, mired in its own platitudes, can avoid the clash of varied views. The price of progress in a healthy movement is honest controversy. It is so with the Union of American Hebrew Congregations—and has been so since Isaac Mayer Wise fashioned the UAHC out of 28 congregations in 1873. The years have rung with passionate controversy about ritual ceremonies, Palestine, the move of the UAHC from Cincinnati to New York, the American Jewish Conference, the 10-percent plan of dues payment and a host of other issues. These issues are fought out—sometimes painfully and stormily—and they are resolved in accordance with the democratic process.

And the Reform Jewish movement has gone from strength to strength.

Historians will thus judge the establishment of Reform Judaism's Center for Religious Action. They will also judge that, by that decision, Reform Judaism gave muscle to the ancient but timeless Jewish dream of a just and peaceful world. "It is not incumbent upon us to complete the task. But neither are we free to desist from it."

Burns Creek Project

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 17, 1961

Mr. SAYLOR. Mr. Speaker, a few supporters of the Burns Creek project in Idaho would have the Congress believe that everybody in Idaho is in favor of this power project, which is being called a reclamation project.

The following editorial from the North Side News of Jerome, Idaho, is a refreshing revelation that many in Idaho who believe in reclamation do not want this project.

The editorial is as follows:

[From the North Side News, Apr. 13, 1961]

IDAHO CAN MOVE AHEAD WITH RECLAMATION

As viewed from this corner, it is a pity that Idaho's reclamation goals have been placed in such an indefensible position as the Burns Creek project which is designed about 1½ percent for irrigation and 97 percent for public power. In the long run, pushing for such a government handout in the name of reclamation can only injure Idaho which has been developed under the exclusive and preferential privileges of the Reclamation Act.

Representative HALEY, of Florida, emphasized this very point in remarks on the floor last week with these words:

"Congress in its wisdom has put the 17 Western States in a very favored position at great cost to the other taxpayers of the Nation. There is going to come a time if you abuse this privilege which I think you are doing in this project (Burns Creek) when you will lose the preferential status. Do not forget that you are receiving huge subsidies in every respect and if you abuse this privilege, you are going to lose your favored position. You will bring it on yourselves by presenting to Congress projects that are not justified under the irrigation and reclamation laws of this Nation."

Other eastern Representatives attacked Burns Creek from similar viewpoints which should awaken the people of Idaho to a situation. Senator CHURCH admitted that unless this modest project is built cooperatives and municipalities might be forced to purchase supplementary power from private utilities. What a crime that would be. Some preferred customers exerting all the pressure for Burns Creek would have to pay for private power like the rest of us do. They want tax-free power at the expense of the U.S. taxpayer. A nice advantage if you can get it.

The Utah Power & Light has plans for two new coal-fed electrical plants. One in eastern Utah and another near Kemmerer, Wyo., both depressed economic areas. Approximately 500 coal miners at both plants would be employed. Eventually, 5,000 more consumers for Idaho farm produce just a hundred miles away. Without a Government handout to these depressed areas, Congress could stimulate industrial development on a legitimate, taxpaying basis. Does that make sense? Can you name a better method for the Kennedy administration to aid depressed areas without using a single tax dollar?

And then, maybe Idaho and its reclamation leaders could get back on the track. Build the simple $5 million reregulating dam below Palisades as originally planned instead of this $50 million power project. Let's survey our State for genuine reclamation. You do not see the people of the Colorado Basin holding back on account of the farm surpluses. They are going ahead as fast as Congress will let them in the development of new dams that will bring in more land for irrigation in spite of the farm situation. One reason is that by the time these projects are completed over a four-State area, there will be the need for more irrigated farmland.

What are we doing in Idaho for reclamation? Well, we have Burns Creek which won't even qualify. We have old, established tracts such as Richfield without enough water to get through a dry year. Wouldn't a supplementary reservoir on the upper Wood have saved carryover water for such a season? It was only a short time ago that Magic Reservoir spillways were overflowing for a month or more in the spring due to too much water.

What about the Guffy project on the lower Snake? We have literally hundreds of thousands of acres of the finest topsoil on the American Continent south, east, and west of Mountain Home. What is being done to develop it? The replenishment flow of the Snake River alone would take care of thousands of acres of new land if reclamation leaders would tie into such a project as that. The Fremont Dam in the upper Snake Basin has long been declared feasible and practical, but has anyone ever heard of this project?

The longer the Burns Creek project stands in its present form, the more wrath will Idaho stir in the Halls of Congress. We should not build dams to peg the prestige level of some of our politicians or a handful of preferred power users. We should build dams for Idaho that will develop new land and nurture the position this State by geography, climate and soil is best adapted—that of a breadbasket for the booming coastal States and the eastern consumer. That is the historical and basic southern Idaho story. We cannot change it.

A Journey to Ireland

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1961

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include another in a series of highly interesting and informative articles on Ireland written by the editor and publisher of the Wilkes-Barre Sunday Independent, Mr. Thomas Heffernan, this article having appeared in that newspaper on April 9, 1961. Mr. Heffernan wrote this series of articles following an extensive tour through Ireland last fall.

The indicated article follows:

A JOURNEY TO IRELAND

(By Tom Heffernan)

How would is seem if, about halfway down the first block of Wilkes-Barre's South Main Street there was a wide gate which opened into a courtyard in the midst of the South Main Street stores and about this courtyard were gathered the buildings which provide offices for the city government and perhaps the county government as well?

That's the way it is in Dublin—and in other towns on the other side of the water—and it groups things more conveniently.

Furthermore, since governmental buildings like city hall just about "kills a large segment of a central city block, this disadvantage also is avoided.

In the Irish capital, of course, some of the government buildings have been there for many, many centuries, with Chapel Royal, a feature of the section, having been built right into and made practically a part of famous Dublin Castle, which was built in the year 1100.

There is an incident in connection with Chapel Royal which appeals mightily to Irishmen, too.

Hung within are the portraits of all the Englishmen who served as viceroys to Ireland while the Emerald Isle was under British domination.

There was space for just so many, too.

And, as it happens, when the last space was filed the man who posed for the portrait turned out to be the last British viceroy to Ireland.

You can draw a moral or work up a bit of superstition as you desire.

SUPERMARKET PROVES IRISH HONESTY

Whether it means the average Irishman is more honest, we will not try to presume.

However, nearest thing we saw to a supermarket was in Dunne's store on Grafton Street in Dublin.

It had several big, double doors open to the sidewalk and most of the interior was occupied by a quite conventional type of store.

However, the full length of the lefthand wall was made up of canned goods and such on display in supermarket style, so no clerks were necessary and as in our American markets, you picked up what you wanted.

But where do you think were located the cashiers to whom you took the stuff to be checked and to be paid for? Right by the front door? No. At the extreme rear of the store.

With no one watching to make sure people weren't picking up stuff and walking right out the gaping front doors and hidden on the way by the crowds who filled the place.

Bet you could get away with nothing like that in the land of the free and the home of those who think that condition applies to everything that isn't nailed down.

RANDOM NOTES

The pub at the end of Lord Edward Street is named quite handsomely as Farrelly's Select Lounge. And instead of a sign out front announcing that there is TV inside the card announced "Telephone." Down a couple of blocks, in that baffling European manner, Lord Edward Street was Dame Street. The mailmen must have to be memory experts.

Irish girls are almost 100 percent modest but one and all will hike up their skirts to climb on a motorcycle. The name we know as Walsh was so often spelled "Walshe" and Eagen was "Egan" and Coughlin was "Coughlan." A mighty common name, on Irish business houses at least, was "Campion."

There are mighty few TV aerials in Dublin, none at all in Adare and one between Adare and Limerick. In answer to a question, "Lovely Adare" is about 45 minutes ride from Shannon Airport and it is impossible to imagine a better inn than Adare's Dunraven Arms.

A lot of advertising of coal is to be seen and one brightly lit one, showing a couple sitting before an open fire, read: "Donnelly's Cozyglo Coal." You can have a pocket full of British or Irish coins and still have little if they are those huge pennies, big as a half dollar. Towering Brigitte Bardot hairdos were common in Dublin and most of the girls wearing them were extremely short.

The fat sorrel we rode with the County Meath Hunt outside Dublin was the only hore we rode in Ireland that we coulld get on unassisted. It belonged to a chap named McGee and it was 15 hands 3 inches. Maybe we are prejudiced, but the school kids we saw—most carrying their books in bags which they wore on their backs like knapsacks—seemed as handsome a bunch as we ever had seen anyplace.

The waiter in the fine dining room of the Royal Hibernian did a fast turn by the headwaiter and, as he passed, smiled and said: "The All-America boy." But Donnybrook, where once the fairs were held that became famous for Irish fights, is now, we are assured, a most respectable neighborhood. It is, in fact, a pleasant residential suburb of Dublin. And the airline pilot seated on a stool at the Buttery bar in the hotel sought to interest two girls passing through by assuring them he was Irish as he said, "My name is Higgins." Actually, he was a most pleasant Dutchman.

ENGLISH LANGUAGE GIVES US PROBLEMS

Our stupidity with the various accents used by others who also speak the English language often becomes embarrassing—since we seem almost completely unable to understand any brand of English aside from that used in Luzerne County.

As a result, one day while we were out with the County Meath Hunt—over the beautiful County Meath country which was once "the seat of the Irish kings and the finest land in Ireland—the horse we rode had come in the same trailer as that of a lady member of the group.

To help us, she reminded us that we should look out for her at the end of the day and she would help us get to the proper place.

Some hours later, still trying to help, she came up to us at a moment when the hunt had checked to say what we understood to be that "The horse doctor would be at" a certain crossroad.

We were puzzled, asked her to repeat, understood her to say the same thing and then, trying not to be rude, asked why she was telling us about that.

After her next words we realized that what she was talking about was the "horse tractoh," not "horse doctoh" and by horse tractor she meant what we would call a horse trailer, hitched behind a car or truck.

It's a good thing we don't embarrass easily.

ZEBRA CROSSINGS IN IRELAND, TOO

Just as do England and Scotland, Ireland has its "zebra crossing" at which the pedestrian, crossing the street has the unquestioned right-of-way.

If a person on foot is hit using one of the zebra crossings to get across a street the motorist can only be wrong, no matter what the circumstances.

They are called zebra crossings because they are marked by stripes of white paint.

Kingston also has painted zebra crossings at points near Kingston Corners on Wyoming Avenue.

However, there is a great difference because, in Kingston, there are no provisions whatsoever for the safety of those using these crossing places so that they seem mostly to lull the users into an extremely false sense of security.

Would Award Scholarships for Ability, Financial Need Only

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1961

Mr. SCHWENGEL. Mr. Speaker, recently I had the pleasure to discuss college scholarships and scholarship programs with Dr. Edward Sandberg, of the faculty of Wartburg College, Waverly, Iowa.

Dr. Sandberg's views are worthy of note and I hasten to call them to the attention of the Members, by including his statement on scholarships in the Appendix of the RECORD.

The statement follows:

[From the Waterloo Courier, July 8, 1960]

WOULD AWARD SCHOLARSHIPS FOR ABILITY, FINANCIAL NEED ONLY

(By Dr. Edwin Sandberg)

Of serious concern to parents and educators alike is the need for many more college scholarships for capable students who might not otherwise be able to attend college. Yet before more scholarships are made available, the gross abuses in the awarding of many of the scholarships now available must be eliminated. If such an attempt is successful, the study involved can help to establish a clear pattern for the endowment of future scholarships.

First in this study should be a careful consideration of the legitimacy of granting any scholarships at State institutions if these scholarships involve a remission of undergraduate fees at such schools.

It must be remembered that every citizen pays taxes to support such institutions in order to keep tuition and fees low, and that this in a sense means that every student at a State institution is on a scholarship. Further remission of fees hardly seems justified on the undergraduate level. Private scholarships are an entirely different matter as are scholarships on the graduate level where these institutions are often the exclusive ones offering advanced programs.

Second should be the decision to award scholarships only to those students who have a demonstrated financial need for such aid. Many scholarships today go to students who come from financially secure families certainly not in need of financial help. It must be remembered that every time such a scholarship is awarded the chances are that a student who may not have scored quite so high, but is of superior mental caliber, is denied the opportunity to attend a particular institution and must look elsewhere or not attend college at all.

There is something grossly dishonest about the practice of parents with adequate finances even encouraging their children to apply for scholarships, and it is absolutely immoral for such people to accept them if offered. Some institutions thrive on the practice of buying students through scholarships—a deceitful use of funds leading to the perversion of the independent spirit of youth and compounding the belief of conformist Americans that the world owes them everything. There is a clear design for a scholarship program which avoids this evil—

the national merit scholarships—for these honor outstanding students but base an award on the need of the individual.

Third, no scholarship should be awarded for other than academic reasons, for this is a very repudiation of the meaning of the word. Athletic scholarships, accordingly, should be given to athletes only when their academic abilities indicate that they can do successful work in college and can make a real contribution to society after graduation. The function of a college is to educate, not to provide entertainment for rabid fans and alumni.

A final consideration is that scholarship programs should not carry so many restrictions as to regions from which students come, areas in which they specialize, lodge affiliations of their fathers, church affiliation, and other narrow requirements. The United States desperately needs leaders in all fields today, and there is only one way in which scholarships can do an effective job in providing such leaders in larger numbers: the awarding of scholarships exclusively on the basis of academic ability and recognized financial need.

California Attorney General Warns of Subversion From Fanatics of the Radical Right

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1961

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Los Angeles Enterprise, Friday, April 7, 1961, in which Attorney General Stanley Mosk expresses views on subversion from the radical right:

ATTORNEY GENERAL MOSK WARNS OF SUBVERSION FROM FANATICS OF THE RADICAL RIGHT

Subversion from the radical right is as dangerous as subversion from the radical left, according to Attorney General Stanley Mosk.

"With Communist activity under close scrutiny by Federal, State, and local governmental agencies, a number of fanatical groups on the extreme right have been springing up in California and other parts of the Nation," the attorney general said. "They must be as closely checked as the Communists, for they are equally dangerous to orderly democracy.

"One of these groups has labeled the last three Presidents of the Uniteed States as willing tools of the Communist conspiracy. Others have impugned the integrity of churches, schools, and other agencies in our society. These scatter-gun attacks achieve no purpose other than to destroy confidence in traditional American institutions."

Attorney General Mosk suggested six tests to ascertain whether an organization is extremist and should be suspect by loyal Americans:

1. Does it attack schools and churches with blanket accusations?

2. Does it attack other traditional American institutions with wild, unsupported charges?

3. Does it label everyone un-American or subversive with whom it disagrees politically?

4. Does it try to rewrite modern history by blaming American statesmen for wars, communism, depressions, and all the other ills of the world?

5. Does it resort to crude pressure tactics by such means as anonymous phone-calling and letterwriting campaigns?

6. Do the spokesmen for the group appear more interested in the size of their money collections than in the principles they purport to espouse?

"Apply those six tests, and you will avoid entangling memberships with and contributions to, such groups as the American Nazi Party, the Communists, the Ku Klux Klan, the John Birch Society, the Cinema Educational Guild, the Moslems, and others of that type," the attorney general advised.

Stock Options: Unfair Tax Advantage

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1961

Mr. MULTER. Mr. Speaker, I am pleased to bring to the attention of our colleagues the following article written by Mr. J. A. Livingston which appeared in the Washington Post and Times Herald on April 12, 1961. Mr. Livingston has here taken a jocular approach to what is a very serious problem. It is unfortunate that more publicity has not been centered on this situation. With direct reference to it I intend—within a short time—to introduce a bill which will eliminate the tax advantage which is now unfairly enjoyed by those corporate executives who have access to these options. The bill would make the profits received as a result of the options taxable as income rather than capital gains. The article follows:

HOW TO BUILD UTOPIA WITH STOCK OPTIONS

(By J. A. Livingston)

Contrite, unmitigated, unrepressed confession is ennobling medicine. You feel so superior to your fellow man afterward. That's why I herewith openly and self-consolably acknowledge error in churlishly opposing stock options.

Insistently have I clamored that they were a special form of largesse for executives to escape the burden of high-income taxes. Corporate commanders could get capital gains profits at virtually no risk and pay only 25 percent to the Federal Government.

I even went so far as to remonstrate with corporations which permitted fairy godmother committees to reduce the price of options when stocks declined. How wrong can you get?

On the golf course, if you miss a putt, it counts a stroke against you. Brashly and unsympathetically, I wanted to apply the same rule to executives. A broadminded, far-seeing person is responsible for my conversion—Troy M. Rodlun, a sales promotion man of Washington, D.C.

Give options to stockholders, he suggested to Transamerica Corp. He reasoned: If a company holds on to executives with options, the same sauce can be used on investors, too. The more I thought of this the more I felt it deserved extrapolation.

POLICEMAN'S INCENTIVE

Take the traffic policeman at the plant gate. He's a valued company helper. In the course of a year, he can save thousands of delivery minutes. At Christmas, maybe he gets a present. Every once in a while, someone will hand him tickets to a ball game.

Why not, instead, slip him a stock option? Think of the incentive to move those trucks into and out of the plant faster, and to hell with traffic that doesn't help the company.

But tie a string to the policeman's option. It can be exercised only while he's on the beat. Then he'll grant a suboption to the sergeant, who'll sub-sub it to the captain. Soon incentive will trickle up the whole police force. The company will own the commissioner.

Or, take the stockholder. No holder of a stock option likes to see a stock go down in price. And why do stocks go down? Because some impatient stockholder wants cash. By taking long faithful stockholders into the stock-option club, executives would reduce the floating supply of shares and help themselves to quicker profits on their own stock options.

FOR SUPPLIERS TOO

And let's reverse what happened at Chrysler. There, an executive owned stock in a company that sold door hinges to Chrysler. Why not, instead, give stock options to the door-hinge executives? To cash in on their options, they'd try to keep door-hinge prices down and quality up. In that way, they'd make more money on Chrysler than off Chrysler.

Options to customers would work far more persuasively than trading stamps. In a trice, quality control problems would vanish. Even if the product were a stinker, customers would continue to buy it rather than lose their options.

Options can be used as an incentive on Government officials. As an illustration, so long as stocks kept going up (never down) the chairman of the President's Council of Economic Advisers could get his pick of stock options out of a hat held by Keith Funston, president of the New York Stock Exchange.

And a group of major companies—United States Steel, Pennsylvania Railroad, the Ford Motor Co., and Consolidation Coal—would extend stock option privileges to the Secretary of Labor so long as wages didn't rise.

CUTTING THE TAX RATE

Options to the chairman of the House Ways and Means Committee would depend on a decrease in the corporate tax rate. This is a sure winner, based on the time-tested Chinese laundry principle of no tickee, no washee.

Finally, a special stock option would be meted out to Lewis D. Gilbert, the self-dedicated stockholder, who upsets corporate presidents at annual meetings, to stay away.

I am so ardently converted to stock options that I want to make them as multitudinous as assignats in 18th century France. As I see it, what's good enough for executives of the Generals—Electric, Motors, and Dynamics—is good enough for stockholders, vendors, customers, policemen, et cetera. Adroitly used, Livingston's economic law can become the modern Gresham's law: stock options will drive out stock options.

Man-in-Space Stunt

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1961

Mr. DEROUNIAN. Mr. Speaker, the Russian man-in-space announcement is shrouded in mystery and has evoked

many questions, so far unanswered. David Lawrence, in his article which appeared in the Washington Evening Star on April 17, brings out some of the discrepancies in the reports that have come from the U.S.S.R.:

DID GAGARIN REALLY ORBIT EARTH?—SEVERAL DISCREPANCIES IN RED REPORTS LEAD TO DOUBTS BY WESTERN OBSERVERS

(By David Lawrence)

Was the Soviet man-in-space stunt, as announced officially from Moscow, a hoax? Granted that something went around the earth, was a man really in it, or did the astronaut merely make a separate flight similar to that which an American airman, Joseph Albert Walker, recently made in an X–15 rocket plane at an altitude of 32 miles?

These questions are being asked by scientists because there are some obvious discrepancies in the boastful account of his trip given by Major Gagarin.

First of all, Gagarin says he was over South America 11 minutes after he started. This couldn't be right, and the tracking data collected by Americans tells the story of his gross exaggeration.

Second, Gagarin says he came down by parachute. It is now being implied by a Russian scientist that the satellite may actually have glided to the earth.

Major Gagarin, in his interview, said:

"While flying over Soviet territory, I saw perfectly great squares of collective farms. It was possible to distinguish between plowed land and grassland."

The Russian major declared he saw all this through portholes, but it isn't clear whether this vehicle had portholes. In fact, Dr. Anatoli A. Blagonravov, a noted Russian scientist, interviewed at Rome at an international space symposium, said at first that there were no portholes in the ship but later declared there were "slits."

Can the human eye really see 200 miles away through portholes or "slits"? It might distinguish large formations such as the lines on the moon, but it seems incredible that Major Gagarin could have seen anything as relatively small as meadows or fields such as he described.

Christopher Shawcross, chairman of the British section of the International Institute of Space Law, is quoted in a Reuters dispatch from London as saying a protest had been launched with the International Aeronautical Federation in Paris against an attempt by the Moscow government to seek registration of the space flight as an altitude record for man. He said the published evidence of the flight was not credible.

Walter Sullivan, a science writer for the New York Times, says in an article published over the weekend:

"Three days after man's first space flight there are still several puzzles concerning the circumstances of the trip. They pertained to its timing, the presence or absence of portholes in the manned capsule and the manner in which the occupant returned to earth.

"The timetable issued in Moscow said the vehicle had reached the sky over South America within 15 minutes. However, there is no point in Soviet territory from which an orbiting vehicle could come close to South America in so short a time."

There's another mysterious aspect. The Daily Worker, a Communist newspaper in London, published an article on the flight before it was officially announced as having happened. The article spoke on April 7 of the flight as having already occurred when it wasn't announced or tracked by American observing stations as in orbit until 5 days later. The Communist newspaper revealed that the astronaut, son of a Soviet plane designer, was under medical care. Later on, Russian scientists in Moscow denied that the earlier flight had occurred.

The Soviets are past masters at deception. It could be that they did have a man in flight and that the stunt failed. Not to be denied their laurels, the Communists may have substituted the experience of one of their highflying airmen, who may have simulated the kind of altitude venture which the American Joseph Albert Walker, achieved with his X–15 rocket plane. The sensations experienced might well have been identical with those encountered by a man in orbit. After all, to go 32 miles into the air might bring exactly the same sensations and perhaps the same view of the earth, and even, perhaps, the same observation of meadows and fields, similar to those exultantly described by Major Gagarin.

It probably is true that the Russians sent a satellite around the earth in 90 minutes. America has done this too. It is also probably true that Major Gagarin went high into the air. But whether he traveled around the earth as claimed, or merely achieved a high altitude in the air remains an unsolved mystery.

Just why would the Russians concoct the story if it isn't entirely true? One answer is that the Communists have no morals—they regard lying as a legitimate device in national and international policies.

Just now it is important for Nikita Khrushchev to divert the attention of the Russian people from their hardships with an appeal to their national pride. History records that the Czars of another era also engaged in huge spectacles, parades and displays to impress the people and cause them to forget or put aside their woes.

The Communists have much to explain. Scientists throughout the world will remain curious. Science has a way of probing into such things. Already the Soviet Government has declined to make its data public. Secrecy is always the refuge of totalitarian governments which do not hesitate to try to fool not only their own people, but the whole world.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

Appendix

The Polaris Fleet Ballistic Missile Weapon System

EXTENSION OF REMARKS
OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 19, 1961

Mr. WICKERSHAM. Mr. Speaker, a week ago last Sunday and Monday at the invitation of the Secretary of the Navy I had the pleasure to accompany several Members of this and the other body on a cruise aboard one of our new fleet ballistic missile submarines.

We boarded the U.S.S. *Theodore Roosevelt* at Cape Canaveral, Fla. and continued several miles out into the Atlantic. There we had demonstrated to us the amazing capability of this weapon system. We are indeed fortunate to have this fine submarine and crew on our side. Cmdr. O. H. Perry, the commanding officer, and his crew are outstanding in every respect.

At my request, the Navy liaison has furnished the following unclassified information, which has been cleared for release:

THE POLARIS FLEET BALLISTIC MISSILE WEAPON SYSTEM

The U.S. Navy's fleet ballistic missile (FBM) weapon system, became an operational reality on November 15, 1960, when the nuclear-powered submarine U.S.S. *George Washington* (SSBN 598) left Charleston, S.C., to go on patrol with a full load of tactical Polaris missiles. On December 30, 1960, she was joined in her silent domain by the U.S.S. *Patrick Henry* (SSBN 599) also fully loaded with Polaris ballistic missiles. Four more Polaris-firing submarines will join the fleet during 1961: *Robert E. Lee* (SSBN 601), *Theodore Roosevelt* (SSBN 600), U.S.S. *Abraham Lincoln* (SSBN 602), and U.S.S. *Ethan Allen* (SSBN 608). The *Ethan Allen* will be the first of a larger and heavier class of FBM submarines.

THE SYSTEM

Besides the missile itself, the fleet ballistic missile weapon system includes nuclear-powered missile launching submarines, support facilities, and personnel. The system became operational more than 2 years ahead of the original schedule. All phases of the program were brought along in parallel and through interlocking channels designed to have each component ready at the target date.

The first launching of a Polaris test vehicle from a submerged submarine took place on July 20, 1960, about 30 miles at sea off Cape Canaveral, Fla., at 12:39 p.m. e.s.t. Less than 3 hours later, at 3:32 p.m. e.s.t., *George Washington* fired a second Polaris.

The Polaris weapon system development is being managed for the Navy by the Director of the Special Projects Office, Vice Adm. William F. Raborn, Jr. Assisting him is an imposing team of Navy missile experts, major industrial firms, and scientific leaders.

Operational ballistic missile submarines are under the control of the Commander in Chief, U.S. Atlantic Command who exercises his authority through the commander in chief, U.S. Atlantic Fleet and commander, Submarine Force, U.S. Atlantic Fleet.

The Special Projects Office will continue to manage the research and development programs for longer range versions of Polaris missiles, advanced versions of Polaris firing submarines and associated equipment.

THE CONCEPT

With almost unlimited cruising range and with endurance limited only by the crew, the FBM nuclear submarine is capable of extended submerged operation in the international waters of the world which comprise about 70 percent of the earth's surface. Free of the need to surface or extend a snorkel above the surface for continuous operation, FBM nuclear submarines will remain hidden by an oceanic curtain, their locations unknown to any potential enemy. The FBM submarines will at all times be under U.S. control. The Polaris missiles, powered by solid propellant, will be ready for launch within minutes of receiving the command without the need for long countdown. Mobile, hidden, ready for instant action (or carefully considered delayed action), the FBM system will provide the United States a powerful deterrent to those who might start a global war.

THE MISSILE

Polaris, named for the North Star, is a two-stage ballistic missile powered by solid fuel rocket motors and guided by a self-contained inerital guidance system independent of external commands or control. Propellant is basically a polyeurethane compound with light metal additives for higher specific impulse.

The 1,200 nautical (1,380 statute) mile range operational missile is designated Polaris A–1. It is about 28 feet long, about 4½ feet in diameter, and weighs about 30,000 pounds. Each motor exerts thrust through four nozzles in the motor base. Thrust vector (direction control) is exercised by devices called jetavators. Both motor cases are made of steel.

Flight tests of the second generation Polaris A–2 missile began on November 10, 1960. Polaris A–2 will have a range of 1,500 nautical (1,740 statute) miles. The second-stage motor is made of wound fiberglass, and the first stage motor is about 30 inches longer than on Polaris A–1. The solid propellant used in the longer range missile has a higher specific impulse than its predecessor. Polaris A–2 is expected to be operational by early 1962.

Future development of a Polaris A–3 will give the missile a 2,500 nautical mile range.

MISSILE GUIDANCE

The inertial guidance system used in Polaris is a refinement of earlier inertial systems and is the smallest in use in U.S. ballistic missiles. Using extremely precise gyroscopes, accelerometers and its own electronic computer, the guidance system puts the missile on correct course at the time of launch. Should the missile be moved off course by high winds or other effects, the guidance system automatically computes a new correct course and puts the missile on it. The guidance system also maintains the stability of the missile in pitch, yaw, and roll planes. At the precise instant required, the guidance system shuts off the rocket motors and triggers separation of the reentry body from the missile. The reentry body then follows a ballistic trajectory to the target.

THE FBM SUBMARINE

FBM submarines of the *George Washington* class are about 380 feet long with a beam of about 33 feet and displacement of about 5,900 tons. *Ethan Allen* class submarines will be about 410 feet long and displace about 6,900 tons. Both classes are driven by steam turbines powered by water-cooled nuclear reactors. Both classes carry 16 Polaris missiles stowed in 8 pairs of vertical launching tubes in the space immediately behind the sail. Each submarine has a 300-ton capacity air-conditioning plant. FBM submarines are also equipped with air scrubbers and precipitators to remove irritants from the air and maintain the proper balance of oxygen, nitrogen, and other atmospheric elements. Electrolytic oxygen generators under development will permit the submarine to manufacture its own oxygen from sea water.

NAVIGATION

Two positions must be known for success in missile launching: target and launcher. In the FBM system this puts great importance on navigation since the position of the launcher is the position of the ship and is continuously changing. Several methods complement each other in the FBM submarine to provide a very high order of accuracy in determining ship's position. Heart of the system is the ship's inertial navigation system (SINS), a complex system of gyroscopes and accelerometers which relates movement of the ship in all directions, ship speed through the water and over the ground, and true north to give a continuous report of ship position.

Each submarine has three SINS, each checking on the other. Systems similar to the SINS used in FBM submarines guided the *Nautilus* and *Skate* on their historic voyages beneath the polar ice in 1958 and, more recently, *Triton* on her 84-day underwater cruise around the world. The converted Mariner class cargo ship, U.S.S. *Compass Island* (EAG 153), serving as navigation test ship has steamed well over 100,000 miles in development tests of the submarine navigation system. A number of equipments are included in the submarine navigation system to provide an all weather capability of checking on the accuracy of SINS. These include both optical and electronic devices. All are highly automated.

FIRE CONTROL

The fire control system feeds coordinated information to the missile guidance system as to ship location, local vertical, true north, target location, and trajectory to be flown. Corrections are supplied until the instant of fire. The fire control mechanism can prepare missiles for launch at the rate of about one per minute.

COMMUNICATIONS

Radio communication with submerged submarines has been possible for a number of years. The systems used have been devised with special care to protect the locations of the submarine and leave the advantage of concealment unimpaired. Recent tests have again demonstrated that the Navy's worldwide communication system has the power and coverage necessary to exercise command of the always-submerged FBM submarines.

LAUNCHING

Polaris missiles are launched by an air ejection system which forces the missile from its launching tube and propels it up through the water to a point above the surface. At that point the rocket motor ignites and sends the missile on its way. The system takes advantage of the reliability and instantaneous ignition characteristics of solid propellant fuel used in Polaris. The result is increased safety for submarine and crew. Each launching tube has its own air supply and is independent of the other 15 tubes. Vital parts of each missile are accessible for inspection and maintenance even when loaded in the launching tubes and while the submarine is underway at sea.

PERSONNEL

Each FBM submarine has two crews, called Blue and Gold, of about 100 men and officers. The crews will alternate on the long patrols with the off-duty crew employed in training ashore at specially designed team training simulators.

TRAINING

The average precommissioning training period for FBM personnel is about 8 to 12 months. Initially training was conducted by the factories supplying the equipment, but the Navy now has its own training facilities. After pretraining in transistor theory, digital computing theory, Boolean logic, and electronic circuitry, FBM personnel get an intensive and extensive equipment training course. Maintenance instruction culminates in a course devoted to the functioning of the entire weapon system.

SUPPORTING FACILITIES

Support facilities include missile testing sites, naval shipyards, submarine tenders, an experimental test firing ship and a navigational test ship.

Chief testing site is the Atlantic Missile Range, Cape Canaveral, Fla. The Navy complex includes three launching pads, a missile assembly building, missile checkout building, engineering building, and associated supply and maintenance buildings and shops. Two of the launching pads are conventional flat pads and the third is the unique ship motion simulator which mounts a submarine-type launching tube in a 200-ton hydraulic device which can simulate all the motions of a ship at sea.

U.S.S. *Observation Island* (EAG 154) experimental missile test firing ship is based at Port Canaveral. The ship, a post-World War II Mariner class cargo ship modified extensively to serve as a firing test ship, has a complete submarine-type fire control, navigation, and launching system. The ship serves as both a floating launch complex for missile flight testing and as a working example of the kind of installation which could be placed aboard surface ships. *Observation Island* has served the additional role as floating school for training FBM submarine crews and will be the seagoing link between the Atlantic Missile Range and FBM submarines when they visit the cape for training with live test vehicles.

Flight tests of Polaris are conducted at Cape Canaveral. Other tests on various parts of the missile have been conducted at Point Mugu, Sacramento, San Francisco, and China Lake in California, at San Clemente Island off the California coast, and in Carderock and Cumberland, Md.

Among naval shipyards being equipped to meet the special requirements of the FBM submarines are Portsmouth, N.H., and Charleston, S.C.

A Naval Weapons Annex at the Naval Ammunition Depot, Charleston, has been commissioned to serve as a missile assembly and loading point. Here completed sections and subsystems of the missile, including motors, controls, guidance, etc., are being received from contractor plants, assembled, checked out and stored or loaded aboard FBM submarines.

The submarine tender U.S.S. *Proteus* (AS 19) has been commissioned and will be able to provide supplies, service, and all but major repairs to the FBM submarines. This includes supplying missiles and loading them into submarines. A second tender, yet unnamed, is under construction.

American Policy in Cuba

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 19, 1961

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix an editorial entitled "The Blank Check." This editorial appeared in the Indianapolis (Ind.) Star, April 15, 1961.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE BLANK CHECK

Not since the unlamented days of Dean Acheson have the Communists been given a blank check such as that written for them this week by President Kennedy.

The precise words from the President were, "There will not be under any conditions an intervention in Cuba by the U.S. Armed Forces."

There can be no higher U.S. authority to which Fidel Castro or Nikita Khrushchev might look for an explanation, or a softening, of this statement. Even Acheson spoke as Secretary of State when he committed the blunder which brought the Red invasion of Korea.

Try as we might, we could find no other comment by the President in his latest news conference which qualifies this bald statement. His words are plain, clear, and easily understandable. They were reported exactly and in the same context by reliable newsmen and news services who were at that conference.

Perhaps the full implication of what he said was not realized by the President, and has not yet been fully appreciated in official Washington. He said the United States will take no action with its Armed Forces in Cuba "under any conditions." Without changing the meaning or the context, the President's statement can be rephrased, "Regardless of what Castro, the Communists, or any other nation does in Cuba, the United States will not act to protect its interests."

Does the President mean that U.S. Marines will not defend the base at Guantanamo, even if the Castro-led Reds attack that American installation? Can Castro's air force, furnished with aircraft and weapons from behind the Communist Iron Curtain, attack U.S. Navy ships and planes without fear of attack?

Can Russia proceed to erect rocket bases in Cuba, unhindered by any action on our part? Will bland disregard of Cuban affairs be the official policy of this country henceforward in the Caribbean?

These are not idle or speculative questions. These are matters of direct concern to the United States in its relationship with Cuba, and with the allies Castro has chosen for the Cuban people. These questions do not deal with remote possibilities, but with pressing probabilities which can be turned into ugly realities on the shortest kind of notice.

Again, we must reemphasize what the President said. The United States will not intervene in Cuba "under any conditions." While he followed this statement with an involved commentary on various Cuban affairs, the heart of his position is that Cuba and its Red allies can do anything they like with impunity. The Armed Forces of the United States will not be used to check them, or to protect this country should action be required in Cuba.

This is the strangest kind of position for the President to take. Less than 3 weeks ago, he was discussing use of American Armed Forces in Laos, halfway around the globe from this country. Suddenly, he pledges the Reds immunity to the use of force "under any conditions" regardless of what they may choose to do only 90 scant miles away from the continental United States.

Is this the new Kennedy peace program? Is this unilateral disarmament in a specific area? What, pray tell, did the President really have in mind?

There was triumph in the councils of Fidel Castro and his Red conspirators when this statement was heard. Here is proof from the President that the Yanquis do not dare set foot in Cuba "under any conditions." This is what Fidel boasted of before, and will gloat about in the future.

It must be pointed out that the American people had to pay in blood, tears, and treasure when the Reds filled in the blank check handed them in Korea by Dean Acheson. Must we make the same kind of payment in Cuba?

Mounting Taxes in Pennsylvania Together With the Recent Proposal To Tax the Proceeds of Life Insurance Policies Are Regarded as Detrimental in Attracting New Industries and a Callous Disregard for Widows, Children, and Elderly Citizens

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 10, 1961

Mr. VAN ZANDT. Mr. Speaker, it is a well-established fact that many Northern States and especially Pennsylvania have suffered from the competition for industrial expansion offered by other States whose guarantee of low taxes has proved to be no idle boast. Annually the flight of industry from tax-ridden States has proved a thorny problem to States like Pennsylvania whose industrial areas are to a great extent among the major distressed areas of the Nation.

The following editorial titled, "The Big Taxers," from the April 8, 1961, issue of the Altoona (Pa.) Mirror reveals the tax situation in Pennsylvania and the dismal future confronting the already overburdened taxpayers of the great Keystone State:

THE BIG TAXERS

Governor David L. Lawrence is making sure his administration will be long remembered by Pennsylvanians. It will be remem-

bered as 4 years in which State taxes were raised more than by any other administration in the history of the Commonwealth. It also will be remembered as the 4 years in which fewer people knew how the taxes were spent.

There isn't much that can be done about the Governor. He is an aged man, too old perhaps ever to be elected to another public office, so perhaps he need not care if the pension provisions that politicians have a way of devising for themselves are generous enough. There are, however, ways in which those who have voted for these tremendous tax increases can be remembered and dealt with by the voting public.

The 2-cent-per-gallon gasoline tax increase, the increase in the sales tax, the numerous other increases in State taxation during the Lawrence administration have been passed by the members of the Pennsylvania House and Senate. Isn't it about time the voters began to make a list of those who have voted for these raids on voters' pocketbooks and make a firm resolve never to put them in a place of public trust again?

Naturally it is a little disturbing to vote them out of office at local levels and then find them appointed to higher paying State jobs, but a change in administration at Harrisburg can solve a lot of that type of problem.

When Davy was running for office he promised time and time again that he would do something to restore jobs to those who were out of work in this State. He has done something about the lack of jobs all right—jobs have decreased month by month since the first 6 months he has been in office.

High taxes and the threat of even higher taxes yet to come have kept industries on the outside looking in. Despite the best efforts of communities, the help of a special branch of the State government known as PIDA and a number of other factors, the plain fact is the horses just are not drinking Pennsylvania water. Hundreds of prospects have been developed and interviewed, but relatively few have located here.

The newest plan to put life insurance payments into inheritance tax brackets is one that really will keep them out. Most owners of industry must carry sizable life insurance programs to keep the businesses they build up from being sold by the tax collector at the time of death. More often than not the bulk of the money in big life insurance programs goes to perpetuate the business and the jobs it provides by paying off the inheritance taxes on stock of which the owner died seised.

In smaller estates life insurance has been the safeguard of the widows and children. Tax it and you make the State a much less desirable place in which to live and work and do business.

The more business and industry are taxed and kept out of the State by high taxation and the more unemployment that develops from this situation, the higher the taxload becomes on those who are left at work and doing business. It seems quite probable that even sixth grade students could understand this situation. Why, then, is it so impossible for mature men, and especially those who seek and obtain public office to find it so hard to understand?

The Governor has been accused by many of his political foes as spending too much time outside the State. Perhaps he is just looking for a place to live in retirement that will leave for his heirs a little of the money he has collected as salary from the taxpayers of this State.

High tax States for a number of years have been losing a good percentage of their senior citizens of means to States where a more intelligent approach has been found in the matter of estate taxation. This robs the State of their guidance during some of the best years of their lives, it takes away revenues that would have been derived from a more reasonable tax approach and adds materially to the unemployment problems of the State, since many of these senior citizens of means are good employers and good customers during their golden years.

A tax on life insurance will cause quite an exodus of the older citizens of Pennsylvania who have other plans for their insurance benefits than keeping defeated politicians in high-paying State jobs. Establishing legal residence outside of Pennsylvania is not a complicated matter. It could develop into a serious situation for the Commonwealth.

Patriotic Principles of Americanism

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 19, 1961

Mr. THURMOND. Mr. President, last evening I had the pleasure of attending the national defense evening program of the 70th Continental Congress of the National Society, Daughters of the American Revolution at Constitution Hall. At this meeting Mrs. Wilson K. Barnes of Baltimore, Md., national chairman of the NSDAR's National Defense Committee, presented a very eloquent address calling for a return in this country to those patriotic principles of Americanism which have played such a vital role in making the United States the most enviable and the greatest nation in the world.

I know of no more patriotic, liberty-loving organization in this country than the National Society, Daughters of the American Revolution, and I commend the membership of this fine organization for its consistent stand in favor of preserving liberty and reawakening the American people to the importance of patriotism and sound government policies.

Mr. President, I feel that Mrs. Barnes' address of April 18, 1961, merits the attention of every Member of this body, every Member of the House, and every person in this country; I ask unanimous consent that her address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

In bringing you the greetings of the national defense committee, I am mindful of those hundreds of devoted members of this committee throughout our country who are laboring against great odds to restore the spiritual and moral fiber of our people. We have been too busy while we concentrated on building skyscrapers, splitting the atom, and conquering space—to build men. We have ceased to build Americans.

Centuries ago man invented a power greater than nuclear energy—the power of government. Individual citizens can wield this power for their common good, or they can surrender it to the State for their ultimate enslavement. The pages of history tell us that self-government is the only safe repository of freedom and whenever the people have relinquished this power to the State, a nation has fallen.

Five thousand years of reaching out for full expression of human aspirations in a free society culminated in the American dream—the spiritually thwarted and politically oppressed who fled their homeland for this land of hope and opportunity placed security of liberty far above paternalistic protection of their property under tyranny. They held to the principle that man is created with God-given rights and corresponding responsibilities. Today, however, the ominous cloud of so-called world understanding begins to darken the horizon of our freedoms.

The problems which confront the American people are manifold. Legislation proposed in Congress and the State legislatures is fraught with peril to those who are determined to preserve the liberties provided in our Bill of Rights and Constitution, sealed with the blood of the men who fought in every war since the foundation of this country to save our American heritage for their children.

We must alert our fellow Americans to the dangers that confront us. Many still do not believe, in spite of the fact that the United States is ringed and riddled by Communist forces, that communism is the greatest menace our country faces today. Some have never heard of metropolitan government and the death it would bring to local governments elected by the people. Others are brainwashed by pamphlets and courses of study supplied for their enlightenment by organizations many of whose members use them as a front for socialism and who themselves are affiliated with Communist fronts.

There is perhaps only a little one person can do to alert our people to the fact that in 5 years' time or even less the takeover of our country by subversion may be complete. This catastrophe would be accelerated by current appeasement of the Communists and by proposals for complete disarmament which would ultimately abolish even the Military Academy at West Point and the Naval Academy at Annapolis. With our country's credit endangered by reckless expenditures of money both abroad and at home and by the undermining of our children's love of country by the advocates of world government, the ultimate purpose of the Communists to enslave our people is being rapidly accomplished.

It is no longer possible in most instances to bring the true facts of our danger to the public through the press, radio or television. It is, therefore, necessary to rely on private sources of information including such publications as U.S. News & World Report, Dan Smoot Reports, Human Events, National Review, Counterattack, Inform, the DAR Monthly Mailings, and similar publications to determine the truth of daily events. Not only do many newspapers not furnish accurate accounts of world happenings but our leaders in government service are being muzzled, their warnings silenced.

The greatest good that our country can do the free nations of the world is to be and remain strong, spiritually, militarily, and materially. Here, upon this soil, because of freedom from regulation, our ancestors carved out of the very wilderness itself, without foreign aid, a great empire built upon the principles of freedom, equality, and justice. Our Government was proclaimed to be a government of the people, by the people, and for the people, whose just powers were derived from the consent of the governed. This freedom, so dearly bought, was not won in a day but the lessons learned in its winning should be instilled in those who would claim the right to nationhood. Freedom cannot be bought; it must be earned.

Some persons have called the position of the national society, DAR isolationist. Have they ever considered that true isolationists are those persons, who, by their ill-con-

sidered plans, have alienated from this country the best friends it had? What has happened to Syngman Rhee and the many other rulers of countries friendly to the United States, who are now either refugees from their countries or are now frowned upon by the liberal element in this country? Has our foreign aid, so generously given to the point of almost bankruptcy, won this country any friends? What about the neutral nations—is our influence waxing or waning with them in the United Nations? What has happened to our former friends in South America? In the hour of crisis, in spite of our largess and desire to be all things to all people, America will stand alone as she very nearly does now and will do unless she returns to her faith in the principles of government which made her great.

Yes, it is easy to believe in world government. The human heart yearns for peace and surcease from the troubles that beset us. How wonderful it would be to wake up one morning and be told that war would be no more. That one could travel freely from one end of the world to the other. That the imprisoned nations of the earth were again free. That our children could plan their lives and all people everywhere fulfill their yearned-for aspirations. This promise was as nearly fulfilled as anywhere in the world in these United States, because our people knew the secret of freedom—a system of checks and balances, knowing well that that government is best which governs least. The character of a world government, represented today in essence by the United Nations, is reactionary—a return to absolutism and totalitarianism so abhorred by those who for generations have fled from the tyrannical governments of the Old World. There is nothing to check the absolute power of world government, its decrees, its judgments; its legislative acts are final. Nations such as Soviet Russia do not abide by United Nations decrees except when it suits them, but nations who live by moral standards seek to abide by its regulations. Thus, we have noted that the United States picked up the tabs for the international police force and is contributing large sums for the Congo.

Americans who understand the foundations upon which liberty was erected realize that a world order is the greatest enemy of individual freedom, not a means to achieve it. True freedom depends on local self-Government, on effective access of the people to their individual rights and not on a distant and powerful world Government. The heirs of Washington, Jefferson, and Lincoln know that society is improved by the individuals who compose it, not by forcing a program of social reform down its throat. True freedom cannot be reached by climbing the steps of the welfare state.

Within the Declaration of Independence, the Constitution, and Bill of Rights lies the greatness of our past and hope for the future. These great documents encompass the rules and regulations of human happiness. Americans should read and study them, understand and live by them. Let us declare our independence from a pseudophilanthropic Government. Let us recapture the knack of being Americans. Then our people will labor for what they want, experience a pride of accomplishment and feel a security which centralized social insurance cannot supply.

Fellow Americans, let us take up our responsibilities and rule, owing no debt of gratitude to a bureaucratic Government. Let us see that our Government obeys us.

Some people say it is controversial to be patriotic; if that is so, then we need more controversy in America. Some say it is sentimental to express love of country; then we need more sentimentality. Some say it is old fashioned to respect the American flag, and if that is true, we have a great need for more old-fashioned people in the United States.

The active enemies of freedom in our country probably number no more than 2 percent of the population. And yet, by constant, crafty effort, they have planted the idea far and wide that there is something a little funny about any outward show of patriotism.

We do not hear the national anthem and other patriotic songs on the air very often. We rarely witness mass recitals of the pledge of allegiance to the flag on occasions where nothing could be more appropriate. We do not find nearly enough patriotic programs on radio and television—although our adversaries have no difficulty in getting their ideas aired. We hear that some patriotic programs we have enjoyed in the past find there is no longer a place for them.

We are wrong—dead wrong—to let the active opponents frighten or ridicule us away from demonstrations of our patriotism. Every American should have a feeling of pride in his heart at any opportunity to tell the world how he feels about this land of the free.

This is the country, let us remember with deep gratitude that gave first consideration to the individuality of man, his hunger for freedom, his faith in himself and his God, and his desire for the expression of this divinely endowed impulse. It is a proud and joyful thing to be an American, and Americans should take pride and joy in expressing their patriotism.

Here is what we must say: "You shall not take our freedom away. Nor shall you, by mockery or deceit, cause us to hesitate to take the course of thinking right—talking right—for America."

Our ancestors produced a great Republic. Let us keep it.

Secretary Ribicoff on Highway Safety

EXTENSION OF REMARKS
OF

HON. KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 19, 1961

Mr. ROBERTS. Mr. Speaker, for several years now the Committee on Interstate and Foreign Commerce, first through the Special Subcommittee on Traffic Safety and now through the Subcommittee on Health and Safety, has been conducting a study of highway accidents, which account for nearly 40,000 deaths and more than 4 million injuries annually in the United States.

On April 17, in connection with hearings on H.R. 903 and H.R. 1341, bills relating to motor vehicle safety, the Subcommittee on Health and Safety heard a very interesting and constructive discussion of the highway safety problem by the Honorable Abraham Ribicoff, Secretary of Health, Education, and Welfare. I wish to include this statement in the RECORD for the information of Members interested in this tremendously important problem. Secretary Ribicoff, who made a great contribution to highway safety as Governor of Connecticut, is one of the leading authorities in the country on this problem and I urge all who are working in this field to study his statement, which follows:

Mr. Chairman and members of the committee, thank you for inviting me to present the views of the Department of Health, Education, and Welfare on the subject of the Federal responsibility and capability to assist in reducing the tragic annual toll of highway accidents. On this subject, I am sure we shall find a high degree of unanimity of opinion between this committee and my Department.

The almost 40,000 needless deaths in highway accidents cause the loss each year of almost 1½ million man-years of productive activity. These losses drastically reduce the productive capacity of this Nation. While these deaths exact high costs, in both human and economic terms, they fade almost into insignificance when we consider the traffic injuries to over 4 million persons every year. A large percentage of these victims are in, or are approaching, the potentially most useful years of their lives. The sudden removal of this great number of people is a recurring and continuing disaster.

The accident prevention activities of the Department have largely been centered in the Public Health Service. However, other major bureaus of the Department have a very real interest in reducing the number of deaths and injuries from accidents.

For example, the interest of the Children's Bureau in accidental deaths and injuries is assured since accidents are the most important cause of death and disability in children. Much of the excellent services rendered by the fine staff of the Children's Bureau in saving the lives and improving the health of children are erased by motor vehicle accidents.

The Office of Vocational Rehabilitation has a significant stake in accident prevention. Many of their activities are devoted to attempts to partially compensate for permanent disabilities induced by traffic accidents.

The financial burdens of the Social Security Administration are magnified by the mounting welfare costs directly associated with unemployability because of auto accidents.

Fortunately, the nucleus of an accident prevention program (four people in all) was established in the Public Health Service in the early fifties.

For a number of years the rate of growth was small. In 1956 the budget for this activity was in the neighborhood of $50,000.

The first basic research grant for accident prevention was made in 1951.

In 1957 the Public Health Service, together with the American Public Health Association, and other professional groups began to see more clearly the responsibility of the Public Health Service, State, and local health agencies, physicians, and their professional allies in traffic accident prevention.

Recognition of this responsibility, once achieved, has resulted in strong support from Congress and the professional groups involved. For example, in fiscal year 1961, Congress added a million dollars to the appropriation for the activities of the Division of Accident Prevention.

At the same time a decision was made to transfer the administrative aspects of basic research grant management in the field of accident prevention to the Bureau of State Services. This responsibility has been delegated to the Division of Accident Prevention.

Expansion of accident prevention activities both in research and application has quickly followed.

The total staff of the Division of Accident Prevention now numbers 122. Of this total, 34 are engaged primarily in traffic accident prevention activities.

The number of basic research grants in accident prevention rose to a total of 33 in 1961, of which 23 were concerned with re-

search in various aspects of traffic accident prevention.

A few examples of current traffic accident prevention activities alone, conducted by the Public Health Service during 1961 will suffice to illustrate the broad scope and extreme complexity of this acute health and safety problem:

I. Application:

(1) A National Conference on Driving Simulation was held in California in February 1961. Jointly sponsored by the Automotive Safety Foundation and the Department of Commerce, it served to develop a consensus concerning the need for simulation devices.

(2) In Pittsburgh, Pa., in May 1961 a similar workshop on "alcohol and driving" will be held to bring together all available knowledge concerning the relationship of alcohol and traffic accidents. Cosponsored by the National Institute of Mental Health and the Division of Accident Prevention, five regional conferences of experts were held to prepare grist for the mill.

(3) The national seat belt campaign, jointly sponsored by the Public Health Service, American Medical Association, and National Safety Council, achieved its initial success when the five leading American manufacturers of automobiles agreed to install attachment points for front seat belts in 1962 models.

(4) The Connecticut accident prevention study, is making a notable contribution to the development of better scientific research methods in identifying the basic, underlying causes of traffic accidents.

It would be too time consuming to go into detail concerning many other traffic accident activities that have resulted from congressional action. A partial listing follows:

(a) Driving simulation feasibility studies.

(b) Films on seat belts.

(c) Participation in the action programs of the President's Committee for Traffic Safety and the National Safety Council.

(d) The development of cooperative activities between the State motor vehicle administrators, State health officers, and State medical societies through national and regional conferences.

(e) A saturation publicity program in Cleveland, Ohio, in cooperation with the Greater Cleveland Safety Council.

II. Research:

(1) Automotive crash injury research, $118,242.

(2) Experimental case studies of traffic accidents, $86,081.

(3) Causes of auto accidents of adolescent drivers, $30,782.

(4) Evaluating highway traffic safety motion pictures, $14,894.

(5) Accident inducing characteristics of motor vehicles, $84,953.

(6) Research on fatal highway collisions, $159,332.

(7) Safety devices for automotive vehicles, $15,111.

(8) Driving behavior and traffic accidents, $19,610.

(9) Human factors in traffic safety, $9,210.

In addition, there were several other research projects directly related to traffic accident prevention research, as well as several others of broader interest.

The greatest problem currently besetting the Department of Health, Education, and Welfare, the Public Health Service, and the Division of Accident Prevention is making a determination of how best to allocate the personnel, funds, and other resources currently available in the face of what at times appear to be overwhelming demands.

The greatest asset to the Department of Health, Education, and Welfare in assuming its rapidly expanding role in traffic accident prevention has been the friendly, helpful, and always cooperative attitude exhibited by other Government agencies, with a longer history in traffic accident prevention; the National Safety Council; and other equally well-known voluntary and professional organizations.

Truly, the traffic accident prevention effort has been and, I am confident, will continue to be a genuinely cooperative and mutually stimulating operation.

WHAT THE DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE CAN DO IN ACCIDENT PREVENTION

Accidents and accidental injuries and deaths have been an integral part of living since the days of primitive man.

As long as man is fallible and human environments continue to provide accident hazards (as they always will) accidents undoubtedly will continue to plague us.

However, a nation which has succeeded in reducing so dramatically the threat of once widespread infectious diseases cannot in good faith reject the challenge to mobilize these same scientific resources to lower the currently large and for the most part unnecessary toll of accidental deaths and injuries.

Past efforts to render human environments less hazardous have not been without success. Such efforts have been particularly fruitful in the case of large industries. Efforts will continue unabated to improve the safety of the environment.

However in the past much less attention has been paid to the importance of human factors in accident causation—to the importance of physical (i.e., vision and hearing); psychological (i.e., moods); and physiological (i.e., drugs and alcohol) factors which so strongly affect people who drive automobiles. This is a phase of accident prevention the study of which is peculiarly fitted to the talents of physicians, public health workers, and their professional allies.

A much better understanding of these factors, based on sound research is essential if the control of accidents is ever to be placed on an effective and truly scientific basis. For example, it is obvious that some people can work, live, and play safely in environments containing many potential accident hazards. It is equally obvious that other people have an unduly large number of accidents in environments containing relatively few accident hazards.

Accident prevention, a complex problem, cannot be solved by the use of signs, placards, and post cards. This has been proven.

The Department of Health, Education, and Welfare is taking the first steps along this research trail the end of which will be the production of lifesaving knowledge which can be applied in every city, town, and hamlet in this country.

RESEARCH

The Cornell crash injury research project in which the Public Health Service cooperated, serves as an excellent example of how research can translate basic research facts into an applicable system of knowledge.

Last month the application phase of this research project culminated in an agreement by the five leading American manufacturers of automobiles to install attachments for seat belts in the front seats of all cars sold in 1962.

Such researches are costly. They are time consuming. They require the recruitment of significant numbers of talented researchers who are dedicated to the accomplishment of a single purpose.

Similar applicable knowledge can be obtained through research involving a multiplicity of factors, both environmental and human, which are the basic causes of many of the 90,000-odd deaths from accidents each year.

The research grant program of the Public Health Service is expanding. As it expands, it will encompass an ever-broadening range of traffic accident research problems with equally applicable results.

Just a few selected examples of needed research will help to pin down this point:

(a) What are the minimum skills and abilities that are needed to safely operate a modern passenger car? No one knows. No one has attempted to find out in a systematic way.

(b) What effect do drugs, fatigue, and alcohol have on driving efficiency? There have been a lot of intelligent guesses but few, if any, truly objective determinations.

(c) Which, of the 250 identifiable psychological factors, contribute significantly to automobile accidents? No one knows. Several researchers have made a small beginning in researching small facets of this problem.

(d) Are elderly people being arbitrarily deprived of their driving privileges because of opinion rather than fact? No one can say definitely until basic research in this area is done.

The Public Health Service intends to pursue such research leads as these as rapidly as possible in order to build a foundation of fact for law enforcement.

Today the Public Health Service has no facilities for conducting intramural research in accident causation similar to the intramural research facilities that are available to other national research centers such as the National Institutes of Health. As soon as possible such facilities will be provided not only because of their stimulating effect on research efforts outside the Government, but also because of their training value for young men and women interested in a career in accident prevention research.

Oftentimes before basic research findings can be applied for the purpose of saving human lives an intermediate step is needed; namely, applied research. The breadth of the accident research problem, its depth and scope, suggest the necessity of greatly increasing the number and types of applied research projects which are so essential to the application of newly won basic knowledge.

There is the problem of attracting, and maturing, a growing number of highly qualified research workers in the field of accident prevention. A technique found very useful and productive by other Institutes has been their program of research fellowships. It is planned that accident prevention research fellowships will be provided to insure steady flow of qualified researchers into the ranks of those who dedicate their lives to finding the true causes of highway accidents.

SIMULATION

No discussion of research, no matter how brief, could be considered complete without at least passing mention of the need for the development of "simulation" devices as tools for research workers who wish to study the effect that human factors have on accident causation.

It is dangerous to experiment with drivers of automobiles in actual driving situations. Such a process is also extremely costly since a traffic accident only occurs about every 60,000 miles of travel. Therefore it is essential to support the developmental research required to permit the construction of several prototype simulators so that drivers can be studied under controlled conditions, in safe environments, thus avoiding the expensive nationwide epidemiological network that might otherwise be necessary (if it were feasible).

In addtion to supporting the construction of several prototypes of "true" simulators in which the driver has the illusion of almost complete reality, there also is a necessity to support the developmental research involved in producing "part-task" simulators which can produce valuable and needed information in such limited areas of driver interest

as vision, hearing, reflexes, etc. However, the validity of the research findings of "part-task' simulators can only be validated by checking out samples of their research findings on a "true" simulator.

At the recent workshop held in Santa Monica, Calif., on the subject of simulation (this conference was jointly sponsored by the Automotive Safety Foundation, Public Health Service, and the Bureau of Public Roads), there was a remarkable unanimity of opinion concerning the need for producing a faithful simulation of the driving situation just as the Armed Forces have found it necessary to produce a faithful simulation of flight experience using various models of planes, and the Navy with various types of submarines.

Since this group of experts in simulation and research have arrived at this conclusion, efforts will be extended to provide to researchers in the field of accident prevention the one tool that apparently is essential to unlocking so many of the hitherto inaccessible mysteries associated with traffic accident causation.

In brief, the Department will move rapidly to close the gap in applied technology between current research instrumentation and instrumentation that will take advantage of present technological knowledge, recently developed.

In no other way can progress toward the goal of identifying and properly evaluating the human factors involved in traffic accident causation be made so rapidly and effectively.

APPLICATION

Some facts are so obvious they long escape detection. This is particularly true of the fact that no matter how enlightening a research project may turn out to be, it remains of only academic interest until, through applied science, it is translated into a lifesaving potential.

Throughout the United States there are scattered concentrations of interest, skill, and ability that can be readily mobilized to fight the war on accidents if only a small contribution can be made available, in the form of project grants, to assist in the inauguration of unused plans and programs. Pump priming is badly needed. It is planned to seek methods whereby these interests and skills can be mobilized, particularly at the local level, in the next few years.

With a little help or boost, there are hospitals which can improve the training of their emergency squads; there are poison control centers which can conduct poison prevention programs; there is a tremendous latent interest in traffic accident prevention projects in many universities and schools throughout the Nation which can be activated if boostser shots are made available. A number of motor vehicle administrators, medical societies, and health departments are concerned and alarmed about the primitive status of driver licensing in their States and communities. They want to change this condition. With a little outside help they can bring about the changes that are needed. The Department plans to assist them in getting their long delayed plans underway.

The capabilities of the Department of Health, Education, and Welfare, particularly the Public Health Service, to give professional advice to the many persons and agencies who daily seek answers to tough problems involving State or local traffic accident prevention will be increased rapidly. Each of these inquiries represents the nucleus of a community activity which, if properly nourished, can grow into a livesaving action program. Experts in traffic safety, many of whom are currently available to the Public Health Service as consultants, will be called on with much greater frequency to extend the capabilities of the Service in the general area of technical assistance and consultation, particularly on matters pertaining to cutting down the toll of highway deaths.

Finally, following the historical success of the Department of Agriculture, young men and women will be trained in the specialty of accident prevention; they will be assigned to State and local areas; there they will encourage and consult with local officials who wish to improve their State or local traffic accident prevention services.

These young men and women will need to be trained, but once trained they will vastly expand the ability of the Department of Health, Education, and Welfare to assist in the growth and development of local projects in accordance with the capabilities, interests, and circumstances inherent in local situations.

INFORMATION EXCHANGE

The growing number of projects in all phases of traffic safety in the United States and the mounting interest of the citizenry in this subject has created a deluge of incoming information concerning State and local activities. If this information is not scientifically collected, tabulated, analyzed, and made readily available for rapid dissemination to other interested groups, one of the most valuable weapons of the Department's traffic accident prevention program will have been neutralized.

Why should community B struggle through the developmental phases of a program or project which, if the experience of community A in conducting a similar project were readily available, could be avoided?

If a unique and successful method for motivating citizens to wear seat belts is developed in one community, is it not wasteful and foolhardy for other communities to repeat the same project in order to arrive at the same results?

A wealth of invaluable data already has been collected in the field of traffic accident prevention, both in the areas of research and application, by the Public Health Service. It is planned therefore to continue the development of better and more scientifically sound, effective, and economical methods of soliciting such valuable information, digesting it, and making it readily available to others who show an interest in kindred projects and activities.

A modern information exchange program can serve as the focal point of information gleaned from the experiences of State and local agencies and others.

This center will have the responsibility for producing audiovisual messages in modern garb that can convey even to the mildly interested knowledge that has been collected for educational purposes.

TRAINING

It is the plan of the Department of Health, Education, and Welfare to develop three types of training activities to produce an adequate number of physicians, public health workers, and members of allied professions to carry the growing burdens imposed by the complexities of modern traffic.

(1) Short courses and seminars will be held for the purpose of teaching newcomers the concepts, principles, and practices which are peculiar to this new branch of public health. These seminars are in great demand throughout the States and in many localities.

(2) Medium range courses of 4 to 8 months' duration will be held to train young men and women, and public health professionals as well, in accident prevention techniques. Such training courses (curriculums have already been contracted for) will provide the maturity in accident prevention required of staff members assigned to States and localities. These courses however, will also be available for the training of State and local sponsored trainees.

(3) Long-range training will be provided in increasing amounts in a growing number of schools of public health, medical schools, and other professional schools for the purpose of encouraging physicians, public health workers, engineers, nurses, and others to integrate accident prevention activities into their daily tasks wherever they may be located or employed.

Finally, it is planned to provide training grants to institutions to make it possible for more accident prevention materials and projects to be included in everyday teaching curriculums.

The Public Health Service is going to do its best to save lives.

Health Insurance for the Aged

EXTENSION OF REMARKS
OF
HON. CLINTON P. ANDERSON
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES

Tuesday, April 18, 1961

Mr. ANDERSON. Mr. President, the new Assistant Secretary of Health, Education, and Welfare, Wilbur J. Cohen, addressed the Jacobi Medical Society here in Washington on Monday, April 17, last. I am advised that the cost will be $182.25, which is over the legal limit. I therefore ask unanimous consent that, notwithstanding the cost, the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

HEALTH INSURANCE FOR THE AGED

(By Wilbur J. Cohen, Assistant Secretary of Health, Education, and Welfare)

I greatly appreciate your invitation to discuss President Kennedy's program of health insurance for the aged and the factors underlying the development of this proposal.

"The health of our Nation is a key to its future—to its economic vitality, to the morale and efficiency of its citizens, to our success in achieving our goals and demonstrating to others the benefits of a free society." These are the opening words of the President's health message, delivered to the Congress on February 9.

The great challenges facing America in assuring the health of the people must be viewed within the broad scope of this overriding context. The President has recommended to the Congress a broad program aimed at getting good health care to people at the time they need it and under the best possible conditions.

Health insurance for the aged is, of course, a key part of the President's health program. But his other health proposals are also of major significance in the total effort to improve the health of the American people. These proposals would help to strengthen community services and facilities for better care, especially of the chronically ill and the aged; expand the Nation's capacity to train physicians and dentists; improve the health of children and youth; accelerate medical research; and control the pollution of our air and water resources.

Thus, the program recommended by the President provides for improving health care in four areas—health insurance, facilities, personnel, and research. I have been asked to address myself principally to the first of these proposals—prepaid health insurance for the aged.

The need to establish some public mechanism through which aged persons might find the means for meeting their health care requirements is universally accepted. A vast majority of our older people face a

situation not of their own making and over which they have little control. As people become older, millions find themselves confronted with the harassing fact of low income on one side and the worry if not the fact of greater need for medical services on the other. I am sure that you can all illustrate this from your own experiences. What the Federal Government has to do, of course, is to try to add all the individual cases together in order to arrive at a reasonable solution of how to accomplish the greatest good for the greatest number without undue strain on available resources.

Income data available on the aged vividly illustrate their limited financial ability. Different studies of this income may come up with somewhat different answers, depending upon the definitions used, but almost any one of these is likely to show that some 50 to 60 percent of all persons aged 65 and over have less than $1,000 in cash income during the year. Data from the Bureau of the Census, for example, show 55 percent of the aged with less than $1,000 income in 1959. Such data for individuals do not, of course, indicate how many persons the income must support, so that some wives dependent upon their husbands may be counted as having little or no income. However, less than one-fifth of all persons aged 65 or over are married women and many of the married couples have an income of less than $2,000 between them—so even if you allow for equal sharing by husband and wife there would be little change in the number with incomes of less than $1,000 a year.

Opponents of health insurance for the aged have quoted one particular survey made last year by two university men which showed a considerably more favorable income figure. However, this survey excluded from its sample all nonwhite persons and all persons receiving old age assistance, the very groups most likely to have the lowest incomes.

It is true, of course, that limiting the discussion to income does not present a complete picture. Older persons are more likely to have savings than are younger persons. In general, however, those with the lowest incomes are those least likely to have a nest egg set aside for a rainy day. Moreover, most of the savings of the aged are in the form of homes or life insurance and are, therefore, not readily available to meet the costs of medical care.

A Federal Reserve Board survey in 1959 showed that of the "spending units" headed by an elderly person, 29 percent had no bank accounts or savings bonds and 17 percent had less than $500. Those aged who live in the home of a younger relative—persons not generally very well off—are not even considered in these figures.

Coupled with this generally low income and poor financial position is the greater need of aged persons for medical care. National Health Survey data show that three-fourths of all aged persons not in institutions have one or more chronic conditions. Two out of every five aged persons have a chronic condition that prevents or limits their usual activity. About one out of every five aged is either confined to the house or has trouble getting around by himself. The health picture grows worse with increasing age. Among those 75 or older, for example, almost every third person is confined to the house or needs help getting around outside.

These increasing health needs lead, perforce, to an increased use of the various medical services. Aged people go to the hospital more often and stay longer than those at younger ages. As a result, older persons spend two to three times as many days in the hospital, on the average, as do younger persons—1,778 as compared with 764 days per 1,000 persons according to the national health survey data. And this survey does not include the hospitalization experience of persons who died during the survey year prior to the interview. Thus, the findings understate the actual situation, probably by a fair percentage.

Aged persons also see the physician more often than do younger persons, 6.8 as against 4.8 visits a year on the average.

This increased need for and use of medical services by the aged is reflected in expenditures for medical care. Persons aged 65 and over spend twice as much for medical care in a year as do persons under age 65, according to a health information foundation survey. This includes only the private expenditures of the noninstitutional population, leaving out the heavy costs for terminal illness among aged persons living alone. It also leaves out most of the cost of care in nursing homes, mental, or tuberculosis hospitals, and other institutions, which are usually publicly financed. Indeed, close to one-fifth of public expenditures for medical care are in behalf of aged persons, although they constitute less than one-tenth of the population.

Again, these average expenditures understate the magnitude of the problem facing many aged persons, owing to the erratic incidence of illness. They conceal wide variations, giving no indication of the very heavy financial burden that may be placed upon many individuals requiring hospitalization. A stay in a hospital usually means total medical costs will be high. A 1957 study of aged social security beneficiaries showed that at least one member of every fifth beneficiary couple was hospitalized during the year. For half of these couples with a hospitalized illness, total medical bills incurred were over $700, more than the cost of a modest food budget for the year. Average costs of hospitalization have been rising, of course, for a long time. In 1951, the average was $18 a day. Now it is about $32, and the end is not in sight. Again these averages do not tell the whole story. They can mean real hardship for many older people, especially those of low income in areas of above-average hospital costs.

To meet the costs of hospitalized illness, less than half the aged have health insurance of any sort and those who need it most to help pay their bills—the retired, those with low incomes, or those with major health problems—are the least likely to have it.

This distillation of life's varied problems into the depersonalization of statistics argues strongly for some action to assist aged persons in meeting the costs of health care.

MEETING THE NEED

All the data which we have and the personal experience which we gather point to an urgent need to protect our older citizens against the hardships of expensive illness. It is apparent that this need is not likely to be met solely by private insurance, since the heavy use of medical care services and facilities by aged persons would necessitate a premium which most could not afford from their limited incomes. As private means by themselves do not appear adequate to meet this need, public programs are necessary. As with other major economic hazards, prepaid basic protection against the high cost of illness in old age can—and in my opinion should—be provided through the national social insurance program.

The social insurance method would provide the means of spreading the cost of health services in old age over the working years. Under it, services to the aged would be provided in a way that preserves the dignity of the individual. Aged persons—including those with average and even above average income—constantly face the threat that costly medical care will wipe out their savings and force them after a lifetime of independence to seek aid from their children or from public or private charity. As the President said in his health message, the health insurance for the aged program will meet the needs of the millions of the aged who do not want charity, but whose entire financial base for security—and often that of their children—may be shattered by an extended hospital stay.

Programs relying upon a means test as a primary criteria for eligibility cannot effectively meet this need. By their very nature, they can become operative only after every other resource has been spent. They cannot provide the sense of security which attends the continuing assurance that the means of paying for needed health care is available whenever that care is required. The many, many aged persons barely able to provide the necessities of life for themselves do not want charity based on a means test. They will not get needed care under these conditions until care is forced upon them by a medical crisis. I take it for granted that we all feel that this is not the best method of dealing with this matter. We all believe, I am sure, that an aged person should be able to receive the care he needs irrespective of his financial resources and without being required to demonstrate complete poverty before the care is made available.

There is another basic reason why I favor providing health insurance for the aged as an addition to the existing social insurance program. Monthly benefits for retired workers and their families under this program are intended basically to serve as a partial replacement of the income lost owing to retirement. They provide a dependable basis on which retired persons can plan expenditures. However, it is impossible to know when serious illness will strike, so heavy medical care costs are unpredictable. They may easily be so great as to undermine the floor of protection established by the monthly cash benefits. They alone, among the expenditures which the aged face, may with unanticipated suddeness, destroy the financial security of an aged person, and effectively render the security afforded by the monthly benefits meaningless. The addition of health benefits to the cash retirement benefits under the social insurance system would do much to close this gap. It would enable people to take a long step toward preventing dependency by helping them remain self-reliant through their years of retirement.

The health insurance for the aged proposal calls for a well-rounded, yet modest, program of health services to be financed through the social security and railroad retirement systems. It, like the old-age survivors, and disability program now in effect, would not provide more than basic protection. It would provide payment for the cost of inpatient hospital care (after a deductible), skilled nursing home care after hospitalization, hospital outpatient diagnostic services (after a deductible), and visiting nurse and related home health services. It would do all this without changing or interfering with the way the individual gets his health care or the way the doctor or hospital provides it.

Since the heaviest medical financial burden falls upon aged persons requiring hospital care, we therefore have felt that the major costs of hospital care was the proper point of concentration in this insurance proposal. However, the proposal includes other benefits which would serve as less expensive substitutes for hospital care, and would assure that care given under the program would be geared to the level the doctor feels is appropriate to the patient's condition. Skilled nursing home services were included in order to assure that less expensive facilities than hospitals could be used for convalescence. Home health services would enable many older people to receive care in their own homes. Hospital outpatient diagnostic services would reduce the need for hospital admissions for diagnostic

purposes. It would also encourage beneficiaries to seek early diagnosis and treatment and thus enable them to avoid later hospital admission and perhaps an early death because of the advances of a detectable malady.

The services of the private physician are excluded from the bill. No service performed by a private physician at either home, office, or in the hospital, and no fee he charges for such services would be involved, covered, or affected.

As is the case with other social security benefits, the individual could build upon this basic social insurance protection and by his own means obtain protection against the cost of physicians' and dentists' services, drugs, and other health items not covered by the proposed legislation. The existence of the basic program would make it feasible for the individual to attempt realistically to obtain adequate health protection in old age. Just as old-age and survivors benefits under social security have been accompanied by a growth in supplementary pensions and life insurance, I would expect the insurance industry successfully to offer supplementary private health insurance to accompany health insurance under social security. In this way we can demonstrate, in these days of international competition, the vigor and strength and adaptability of our system and its ability through the cooperation of public and private agencies to provide a good way of life for older people.

Under the proposed program, some 14¼ million persons eligible for benefits under the social security and railroad retirement programs would be eligible for health benefits by the time the program got into full operation in 1963. The total number of persons 65 years of age and over at that time will exceed 17¾ million and may approach 18 million. Of those not covered, about one-quarter million former Federal Government employees will be entitled to health benefits at least equivalent in value to those proposed. More than half the remaining aged would be eligible for care in veterans' hospitals or under the public assistance program.

Just as in the area of income maintenance—old-age, dependency, and disability—public assistance is a resource when other means have failed. The State assistance program will be able to do a better job if the basic health needs of most people are met through social security and the States do not have to carry a large financial and administrative burden in meeting these needs.

Following enactment of the proposed health insurance program, the States, if they wished, could liberalize their income tests and otherwise work toward a more effective health care program for the few aged persons who would still need help in meeting their medical care costs. The medical assistance for the aged program, established in the Social Security Amendments of 1960, will still be needed. There will always be people with special needs that cannot be met through social insurance and other public and private pension plans and must, therefore, apply for public assistance.

HEALTH INSURANCE FOR THE AGED PROPOSAL

The administration-sponsored health insurance for the aged bill has been introduced in the Congress by Senator ANDERSON and Congressman KING. Under it, benefits would be available to all persons 65 and over who are receiving or who have applied for and are eligible to receive, social security or railroad retirement benefits.

The services provided would include:

(1) Inpatient hospital services for up to 90 days, with the program paying all costs in excess of a deductible to be paid by the patient of $10 a day for the first 9 days, but with a $20 minimum.

(2) Skilled nursing home services for up to 180 days immediately after discharge from a hospital.

(3) Outpatient hospital diagnostic services with a $20 deductible applied for each diagnostic study.

(4) Home health services of up to 240 home visits in a calendar year. These services would include intermittent nursing care, physical therapy, and part-time homemaker services.

Both inpatient hospital and skilled nursing home services would be subject to an overall limitation of 150 units of service during any benefit period, with 1 day of inpatient hospital services or 2 days of skilled nursing home care equal to one unit of service. A new benefit period would not begin until the beneficiary had been out of the hospital or skilled nursing home for 90 days. In operation, this unit of service limitation would mean that any beneficiary spending 60 days or less in the hospital would be entitled to 180 days in a skilled nursing home. However, any day beyond the 60th spent in a hospital would reduce the potential skilled nursing home benefit by 2 days. Thus, a beneficiary spending the full 90 days in the hospital would be entitled to a maximum of 120 days of skilled nursing home care.

The program would start with respect to inpatient hospital, outpatient hospital diagnostic, and home health services on October 1, 1962. Skilled nursing service benefits would begin on July 1, 1963.

Responsibility for administering the program would rest with the Secretary of Health, Education, and Welfare for social security beneficiaries and with the Railroad Retirement Board for railroad retirement annuitants. There would be an Advisory Council to advise the Secretary on policy matters in connection with program administration.

For a hospital, skilled nursing home, or home health agency to be eligible to enter a contract to participate in the program, it would be required to meet certain specified conditions set forth in the bill.

Essentially, these conditions are those generally accepted as being necessary for quality care.

In formulating the conditions for participation, the Secretary would consult with the States, with the Advisory Council, and with such accrediting bodies as the Joint Commission on Accreditation of Hospitals. In addition, a State could recommend to the Secretary of Health, Education, and Welfare that higher conditions be established for providers of service in that State.

The bill sets forth certain basic requirements for participation in the program that I am sure you will agree are prerequisites to good hospital administration. A participating hospital would need to be licensed by the State, have 24-hour nursing service, maintain adequate medical records, have bylaws for staff physicians, and have a committee of physicians to review necessity for admissions, lengths of stay, and services provided. Similarly, participating nursing homes would need to be licensed, have medical policies established by physicians, maintain adequate medical records, provide 24-hour nursing service, and have a nursing facility utilization plan.

In applying these standards and in the program's relations with providers, we anticipate that considerable reliance would be placed on State agencies. State agencies would advise us whether individual hospitals, nursing homes, and home health agencies met the conditions for participation. The State agencies would also consult with the providers to assist them in improving their services and administrative operations.

This program would be financed by an increase in social security tax contributions of one-fourth of 1 percent each on employers and employees, and three-eighths of 1 percent on the self-employed, plus an increase in the maximum earnings subject to the tax from $4,800 to $5,000. These contributions would amply cover the cost of all the benefits to be provided and would keep the social security systems self-supporting.

EFFECT OF PROGRAM ON HOSPITALS AND DOCTORS

I would guess that as you have thought about this health insurance for the aged proposal, one question has been paramount: "What will be the effect of this program on my freedom to practice medicine and upon my relations with patients? What changes will it cause in hospital practices?"

First, let me underline what the President has already said about health insurance for the aged; namely, that it is not a program of socialized medicine. The prerogatives of doctors and patients would remain unchanged. The patient would choose his own doctor, who in turn would be absolutely unhindered in practicing his profession.

One argument that has been advanced is that the program would crowd the hospital beds with aged persons. We do believe that a program which relieves an aged person of the worry about cost and allows him to get hospital care when his physician recommends it would somewhat increase the use of hospitals by the aged. That this would happen is demonstrated by the fact that aged persons with private health insurance now use more days of hospital care on the average than those without such insurance. However, we believe that the utilization will tend to stabilize over time at little above the present use levels for the insured aged. This level seems reasonable in view of existing need. I have too great a respect for the integrity of doctors and hospital admission practices to believe that aged persons who do not require hospital care will be admitted to hospitals in very many instances.

It seems to me that a program which would lift unmanageable cost burdens from an aged patient needing hospital care would also be a relief to the physician, for he could hospitalize his patient when necessary without fear of the economic consequences to his patient. It would give added substance, it seems to me, to the freedom of doctor and patient together to choose the kind of care best suited to the patient's needs. This freedom of choice is inevitably compromised when an aged patient needs but cannot afford hospital care and is unwilling to plead pauperage to obtain it.

I believe that within the framework of our institutions we have the capacity and the material and human resources to assure a full life and a fair measure of happiness for more of our people. Twenty-six years ago, the initiation of the social security program established a basis for the relief of economic dependency. On signing the Social Security Act in 1935, President Franklin D. Roosevelt said, "This law represents a cornerstone in a structure which is now being built but is by no means complete." Health insurance for the aged is an urgently needed addition to this structure.

We're Winning the War Against Dope

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 10, 1961

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I

wish to include the following report from the top Federal official in the fight against dope, the U.S. Commissioner of Narcotics, Harry J. Anslinger, as it was published in This Week magazine for April 16, 1961:

WE'RE WINNING THE WAR AGAINST DOPE

(By Harry J. Anslinger)

WASHINGTON, D.C.—Americans can take heart in the good news that we are defeating the cruelest enemy we've ever faced: The murderous traffic in dope.

Parents in particular should be encouraged because their children are becoming increasingly safer from the vicious infection of drug addiction.

A 5-year survey just completed by the Federal Bureau of Narcotics shows we're achieving a major breakthrough in our all-out war with the peddlers of living death. Here are the key facts in the battle:

The overall number of new addicts—our best gage—is declining. At the end of 1960 it stood at 7,479, a drop of 1,858 from 1956.

Youthful addicts under 21, an alarming 12 percent of the 1956 total, were down to 3.9 percent of 1960; teenagers under 17 came to 148, or 0.3 percent.

Even with these exciting gains, however, I want to emphasize the gravity of the problem. This is especially true in New York and California—two problem areas which are running counter to the national percentage decrease. They alone have more than 60 percent of the 44,906 addicts reported to the Bureau from all over the United States in 1960. Possibly several thousand more have gone unreported.

These Americans are begging, borrowing, stealing, and murdering to buy $500 million worth of dope each year. This is a big challenge to our national welfare. But 30 years ago when the Federal Bureau of Narcotics was set up more than 1 American in 1,000 was an addict. Now the statistics are 1 in 4,000. So from the point of view of Federal law enforcement we are in a position to get our hands around the problem. Before we couldn't.

It hasn't been easy. Most important factor in our recent breakthrough has been the Narcotic Control Act passed by Congress in 1956. It provided for stiff prison sentences of 5 to 20 years for a first offense and 10 to 40 years for second convictions, plus appropriately heavy fines.

It warned the big interstate and international traffickers, like members of the Mafia, that now we could fight them in the only way they understood—by a long-term quarantine in prison. They became more cautious in their operations. As a result, the dope traffic that they control has slowed down and addiction with it.

VICTORY ON SEVERAL FRONTS

I am now able to report that where strict State and local laws have backed up the Federal law, and where tough judges have handed down maximum sentences, we've been able to pick up our agents and move elsewhere.

We've closed our offices completely in several States. Baltimore, which had a severe dope-traffic problem 5 years ago, lowered it by 50 percent. In Ohio juvenile addiction has virtually disappeared.

Seattle, Las Vegas, Washington, D.C., Miami, and Honolulu are other greatly improved spots. So are several areas in New England and in the South.

Significantly, we find a radically different situation in New York and California. At last reports, New York had 20,648 addicts, or 46 percent of the national total. California had 7,411 addicts and 16 percent. The reason for this, as I have testified before the Congress, is that these states have not adopted the more stringent enforcement laws imposing the heavier penalties adopted by the Federal government and most of the other states.

So obviously we're still in for a long fight. Few people know this hard fact better than the 280 agents of the Narcotics Bureau who in slightly more than five years have been responsible for the Federal prosecution of 8,000 cases.

D)PE FROM RED CHINA

Theirs is a cloak and dagger operation, and even wartime espionage holds no greater risks cr demands greater skills or imagination.

The biggest headache they have to contend with is the traffic in heroin, an opium derivative used by 93 percent of the addicts in the United States. The bulk originates in Red China and winds up in our west coast ports.

The rest of the supply gets its start in the Middle East and is smuggled into Atlantic seaboard ports, either directly or via Canada, Mexico or Cuba.

Our agents do a fantastic job working underground in cooperation with the police of other countries involved in the traffic (with the exception of Red China, of course). They intercept tremendous quantities of the dope before it gets started or while it is en route. Last year, for example, they seized in excess of $25 million, a wholesale price that is multiplied many times over before it ends up poisoning the addict.

But once the dope does slip through, our men forget all about their lives and safety in the effort to track it down. It may take a day or it may take a year, as it did in one case assigned to an agent—I'll call him Edwards—in San Francisco. And every day of that year he lived with the knowledge that discovery meant violent execution in traditional Chinese tong fashion—a hatchet in the back.

BREAKING THE SAN FRANCISCO RING

We had learned that several tongs, both in California and Oregon, had gone into the dope racket. To get the evidence, Agent Edwards first set himself up as a dope trafficker, one of a hundred different roles assumed by a narcotics agent.

Then he moved into a section of San Francisco where many of the suspected tong members lived. He began to frequent the same bars and restaurants they did, becoming friendly with several of them. He played his part to such perfection that they accepted him for what he said he was. They decided to invite him to one of their clandestine tong meetings.

That was the moment for which he had risked his life for a full year. As he sat there, he heard full details of the complete smuggling operation which, he discovered, was headed by an above-suspicion San Francisco haberdasher. Result: Our seizure both of a rich supply of heroin, and records of how it had been smuggled into the United States.

Although our agents get a number of tips from professional informants, they also possess a sixth sense of sorts that tells them when they are speaking to a trafficker. That was what led another of our undercover men to a surprise catch in Turkey.

It all started when Agent Denis arrived in Ankara and took a taxi from the airport to his hotel. He still can't explain why, but the driver, who spoke English fluently, excited his suspicions. So he casually remarked that he was in town to look for good merchandise. "What kind?" the driver asked him. "Heroin or good morphine base," Agent Denis replied without pulling any punches. The driver said, "I have friends."

He did indeed, and showed up at Denis' apartment with one of them and 30 pounds of opium. Denis managed to keep them waiting outside until the Turkish narcotics police—with whom he had a prearranged signal—arrived. They promptly arrested the taxi driver, but the second man took off with Denis right behind him.

"As I gained on him he turned into an alley," Denis told me. "When I was right behind him, I hit him on the back of his neck with the palm of my hand. He fell, turned around, and got up on his feet. As he did, he pulled a knife from his belt. I drew my gun and fired one shot at his feet. He dropped the knife and raised his hands. I held him there until the Turkish police caught up with us."

My files are filled with these casual, self-effacing reports. Our men come to us from a wide variety of professions—we have lawyers and wrestlers—and are given intensive training. But their courage and devotion to duty can't be taught.

WHAT WE MUST DO TO WIN

However, we need more than our agents to win the war against the trafficker. We have to cure the addict who has already become infected. That's the only way we'll be completely successful.

It's axiomatic that 1 addict makes 4 more, and 4 will make 16, a frightening progression.

The communities not only must provide facilities similar to the two Federal narcotic hospitals—one in Lexington, Ky., and the other in Fort Worth, Tex.—but must make their use mandatory for the addict, not optional.

I know hospital space is at a premium, but perhaps some of the old CCC camps could be reactivated and used for the purpose.

Senator JAVITS, of New York, is sponsoring a bill that would have the Government pay half the cost in cases where the State or city hospitalizes the addict. If his bill is passed, it should serve as an incentive to those communities that say they haven't got the money to treat the addict.

The poppy, symbol of sleep and death, was cultivated as long ago as 5000 B.C. Its menace won't be eliminated overnight. Meantime, I am happy to be able to make this interim report to the American public: Our stronger law and strict enforcement have enabled us to make real progress in beating the traffic in dope.

New York Centennial Observance

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, April 19, 1961

Mr. JAVITS. Mr. President, the first regiment to march out of New York on the way to answer President Lincoln's proclamation for troops to protect Washington left the city 100 years ago today. New York units fought at Gettysburg, Bull Run, Chancellorsville, and in other famous battles of the Civil War. One of New York's most famous units was the 7th Regiment, organized in 1826 and the possessor of an enviable reputation as the New York State Militia long before the Civil War. As the crack National Guard regiment of the Nation, it was a natural training school for officers and during the Civil War 660 of its members served in the Union Army. On this memorable anniversary, New York is proud to honor this great regiment.

I ask unanimous consent to have printed in the Appendix of the RECORD with my remarks the article by William J. Roehrenbeck entitled "The Day New York Went to War," which appeared in Today's Living, the Herald Tribune magazine, April 16.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE DAY NEW YORK WENT TO WAR—THE SMART 7TH REGIMENT RALLIED THE UNION AS IT MARCHED OFF

(By William J. Roehrenbeck)

New York really went to war on April 19, 1861, when the 7th Regiment marched off to Washington. The previous week had been exciting, but slightly unreal. The news of the firing on Fort Sumter on Friday, the 12th, had come as a stunning and bewildering blow, and no one could quite believe that war had come at last. By Monday, New York, like all the other cities in the North, had worked itself into a frenzy of angry patriotism. President Lincoln's proclamation, calling for 75,000 troops to quell the insurrection and defend Washington, was applauded heartily. Recruiting offices were jammed. Opposition to the new Republican administration suddenly became highly unpopular, and irate patriots appeared at recalcitrant newspaper offices to demand that the flag be hung from the windows. Even Trinity Church, for the first time in history, flew the Stars and Stripes from the top of the steeple.

CURTAIN RAISERS ONLY

The 6th Massachusetts Regiment came through New York on the 18th, followed by the 8th Massachusetts on the morning of the 19th. The city gave them a rousing sendoff, but it was clearly holding back its real enthusiasm for the afternoon: Its own pet regiment, the New York 7th, was leaving then, and the whole town was ready to turn out and shout itself hoarse.

The 7th Regiment, New York State Militia, was in a class by itself among the volunteer military organizations of the day. There may have been one or two—in Richmond, or Philadelphia, or Boston—that could give it some competition. But none could drill quite so precisely; none could put on such a magnificent parade; none was quite so fashionable as the New York 7th. Over the years since its organization as a regiment in 1826 it had maintained high standards (despite the popular indifference to things military) and was now considered the model regiment of the Nation. Its members called themselves "The National Guards" in honor of Lafayette's famous Paris National Guard. Its ranks were filled with members of prominent New York families, who considered the regiment a most important social adjunct to New York City. Marshall Lefferts, its colonel, whose family had come over to New Netherlands in the 17th century, had already distinguished himself in the telegraph industry.

The 7th usually managed to acquire officers of the highest caliber. Like all other militia organizations, it elected its own officers. As the standards for admission to the regiment were high, it followed logically that the choice of officers was handled intelligently and that the results were excellent.

New York, for the most part, loved the 7th, and its reputation had spread throughout the East after a series of yearly excursions to other cities. Some citizens, however, had little use for it and called the militiamen "Old Greybacks." This was a result of the Astor Place riots in 1849, when a mob, goaded by American actor Edwin Forrest and sixth ward boss Isaiah Rynders, set on fire the theater in which English actor W. C. Macready (Forrest's rival) was performing. Astor Place was an area already ripe for riot, because slum clearance there threatened to dispossess and make homeless thousands of families. The 7th Regiment, called out to disperse the rioters, was forced to fire into them. Some citizens never forgot the incident and blamed the regiment.

When Sumter fell, the 7th was ready. As soon as Lincoln's proclamation was announced, Colonel Lefferts placed his regiment at the disposal of Gov. Edwin Morgan. The orders from the Governor came on April 17; the 7th was to proceed to Washington and report to the President. It was vitally important to get troops into Washington as quickly as possible, because Gen. Winfield Scott had only a few companies at his disposal to defend the city against a rebel attack.

Scott was familiar with the 7th Regiment. He didn't have much respect for volunteer troops generally, but he knew that the 7th was a well-equipped, well-disciplined unit, and he was eager to bring it to the Capital quickly. He probably realized also that the early mobilization of a regiment of such national prestige could have a deep influence on recruiting in other cities. Unlike most other militia units, the 7th was up to its full membership quota and didn't have to wait for recruits. In fact, hundreds were turned down during the 3 days preceding the 19th.

THE GRAND SENDOFF

At 3 p.m. on April 19 the regiment marched out of its armory at Tompkins Square and formed in Lafayette Place, filling the street all the way from Fourth to Eighth Streets. Meanwhile the city had gone mad with excitement. From Great Jones Street to Cortlands, Broadway was so packed with cheering citizens that the regiment could barely make its way through. Practically every building was draped with flags, and Maj. Robert Anderson, the Union commander at Fort Sumter, stood on a balcony at Prince Street and reviewed the troops.

At Broadway and Fulton Street was Matthew B. Brady, a former member of the regiment, who was destined to become the official photographer of the Civil War. He'd worked closely with Anthony & Scovill (the predecessors of Ansco) on the wet-plate process, and he was to spend considerable time photographing the 7th in Washington.

Eventually the troops managed to reach Cortlandt Street. Here they boarded the ferry to Jersey City, where again the whole town was out to greet them at the railroad terminal. It took 7 hours to get from Jersey City to Philadelphia because of the crowds that gathered along the railroad tracks. One of the men who marched with the regiment said later, "I think I didn't see a rod of ground without its man, from dusk till dawn, from the Hudson to the Delaware."

At Philadelphia they ran into two problems. First, it was impossible to go on by train to Washington. The 6th Massachusetts had been attacked by a mob on its way through Baltimore, and by now all the railroad bridges between Havre de Grace and Baltimore had been torn up by secessionists. Some other way was needed to reach Washington.

The second problem was less serious, but more annoying. Benjamin Butler, commanding general of the Massachusetts troops, was in Philadelphia, and he immediately started issuing orders to the New York 7th. Lefferts, whose regiment hadn't yet been mustered into Federal service, had no intention of letting New York troops be commanded by a Massachusetts brigadier whose commission was only a few days old—and questionably acquired at that. Butler wanted the 7th to move with the 8th Massachusetts to Perryville and there board a railroad ferry that would take them to Annapolis, thus bypassing Baltimore. Lefferts, who realized that the ferry was barely large enough to hold one regiment, refused. Issuing a draft on his own civilian firm, he chartered an old coastal steamer—the S.S. *Boston*—to take them down Delaware Bay and around the capes up to Annapolis. The *Boston* was much too small for the job, but the regiment was able to squeeze aboard, and they set sail from Philadelphia at 4:20 p.m. on Saturday, the 20th.

At dawn on Monday they reached Annapolis harbor. There they found the 8th Massachusetts crowded into the ferry boat *Maryland*, aground on a mud bank. Lefferts issued orders for the *Boston* to try towing her off, but the attempt was in vain. The 7th then landed in Annapolis, over the protests of the mayor and the governor of Maryland, and the 8th Massachusetts was taken ashore later by using the *Boston* as a landing vessel.

The problem now was how to get to Washington. Lefferts would need provisions and wagons to march across the hostile territory beyond Annapolis. These were impossible to obtain. By this time it had become evident that Annapolis was to become the key transportation center in the movement of troops from the North to Washington; the route through Baltimore was disrupted, and the rebels would probably be able to command the Potomac. The branch railroad between Annapolis and Annapolis Junction suddenly became highly important. It was now torn up, so it would have to be repaired. Once this line of communication was established, troops could be moved easily, as the railroad from the junction to Washington was in Union hands.

After much wrangling, Butler and Lefferts finally agreed that the New York and Massachusetts troops should cooperate in the attempt. Thus, at 2 a.m. on Wednesday, April 24, the advance guard of the regiment moved out through Annapolis for the 16-mile march to the junction. The next 24 hours proved to be a rugged experience for a group of week-old civilian soldiers. They alternately marched, replaced damaged rails, repaired rolling stock, rebuilt bridges, and served as flank guards throughout the next day and night. But they stuck to the job, and at 3 a.m. on Thursday they reached Annapolis Junction, where most of them fell into an exhausted sleep.

During all this time Washington was nervous and close to panic. It was now cut off completely from communications with the North. Everyone expected the rebel troops to appear momentarily and attack the Capital. And Scott had almost nothing to stop them with—just a few companies of regulars and the unreliable District militia. Some small Pennsylvania detachments and the battered 6th Massachusetts had come in, but this was hardly the relief of Washington. The 7th was needed badly, and at the moment of deepest gloom they arrived—12 noon on April 25. At the railroad depot they brushed off some of the Maryland mud from their natty gray uniforms, whitened their crossbelts, and paraded magnificently up Pennsylvania Avenue to the White House. The kid-glove regiment had been ordered to report to the President, and report they did—in style. Washington was relieved, and from that point on to the end of the war it was seldom in danger.

The rest of the 7th's term of service was anticlimactic. It was quartered in the Capitol Building for a few days, went into camp on Meridian Hill out on Washington's 14th Street, participated in the first crossing of Union troops into nearby Virginia, and helped build Fort Runyon on the other side of the Potomac. After 45 days of service the men were discharged with the praises of all Washington and New York ringing in their ears.

Teaching Credential Restored

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 19, 1961

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

[From the San Jose Mercury, Apr. 7, 1961]

STATE BOARD ORDERS RENEWAL—ERB PICKS UP HIS CREDENTIALS, TEACHING CREDENTIAL RESTORED

(By Harry Farrell, staff political writer)

SACRAMENTO.—Acting unanimously, the State board of education Thursday ordered immediate renewal of the teaching credential of former Camden High School driving instructor Tillman Erb.

The action followed by 1 day the filing of an attorney general's opinion that the credential could not be withheld because Erb invoked the fifth amendment last May before the House Un-American Activities Committee.

Similar action was taken in the comparable case of John W. Moss, former San Francisco City College teacher.

Immediately after the board's action, Erb stopped at the State department of education office and picked up the credential which restores his right to teach in the California public school system.

He said he has prospects of another bay area teaching job. Since his employment at Camden ended last year, he has been selling furniture.

The restoration of the credential, which had lapsed last June, does not signal Erb's reemployment by the Campbell Union High School District. Officials of the district have stated he was notified before his Un-American Activities testimony that he was not to be rehired for the current school year. He had not achieved tenure status.

Board of education member Raymond Daba of Atherton, who had delayed restoration of the credential a day in order to read Atty. Gen. Stanley Mosk's 30-page opinion, said Thursday he agreed with conclusions.

The renewal of Erb's right to teach reversed a recommendation made last December by State Hearing Officer Harold Furst, who held that the teacher's refusal to answer the committee's questions constituted unprofessional conduct.

Daba emphasized that nowhere, in the proceedings against Erb's credential, had the State introduced evidence questioning Erb's loyalty, character, or teaching ability.

Neither had the State asserted that he belonged to any subversive movement. The action was based, Daba said, only on Erb's refusal to answer the House committee's questions on possible Communist affiliation.

When he was before the committee in San Francisco, Erb offered to answer questions about himself if excused from informing on others, but the deal was rejected by the committee.

In his opinion Mosk said action against Erb's credential was improper without a hearing and a definite finding by his local school board that his conduct was unprofessional. No such finding was made.

Further Mosk said the State board of education itself, as opposed to the local board, could not make such a determination.

Judge C. W. Webb of Elgin, Tex., Was a Great American

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, April 19, 1961

Mr. YARBOROUGH. Mr. President, thousands of Texans were recently saddened by the death of Judge C. W. Webb of the town of Elgin, Bastrop County, which is located near Austin.

It was my privilege and pleasure to know Judge Webb for many years. He practiced law in partnership with his wife and his son Jack, both of whom are capable lawyers. His confidence, friendship and support have been one of my greatest treasures of public life for they were invaluable to me in both defeat and victory. His uniformly encouraging word and philosophy earned him the sobriquet of "the Abraham Lincoln of central Texas."

Columnist Anita Brewer, one of Texas' top-ranking newspaper writers, in her well-known column "Behind the Byline," wrote an exceptionally fine article concerning Judge Webb. I ask unanimous consent to have printed in the Appendix of the RECORD the column entitled "Behind the Byline," by Anita Brewer, from the January 11, 1961, Austin Statesman.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Austin Statesman, Jan. 11, 1961]

BEHIND THE BYLINE

(By Anita Brewer)

When Judge C. W. Webb, of Elkin, died last week, it was a front page story. The well-known and well-beloved man's death was important news.

But to Mrs. Mourine Amis, longtime friend of Judge and Mrs. Webb, the bare facts of his life—that he was dean of Bastrop County lawyers, that he had been a member of the school board, that he had participated in civic and church activities—did not reflect the essence of this great man, the personality that had been a guide and inspiration to many.

So Mrs. Amis, with her perceptive understanding, thought of the things amusing and inspirational which were so endearing about Judge Webb.

The judge was born with club feet, but he was never heard to complain nor did he consider himself handicapped.

He had never traveled very far from home, but he took great pride in having visited every county in Texas.

Judge Webb was a lifelong Democrat. He believed in party loyalty and could abide no party splinters to weaken the fiber of the organization. He considered himself a conservative liberal.

For 37 years he taught the John Wesley-C. W. Webb Bible Class at the First Methodist Church in Elgin. His Sunday sermonettes helped others to understand that God doesn't dwell just in a small box of a church, but that the Master is everywhere, every day.

Judge Webb for years was president of Cotton Stocking Row. It was the club members' responsibility to do as little work around the house as possible. One morning a report reached the president that a certain member was helping his wife wash. A committee was dispatched at once to check on this rumor. The committee found the wife drawing water and building a fire around the pot * * * her husband was still in bed. His membership in Cotton Stocking Row was intact.

He loved a good domino game and was one of the last of the great domino players and would brook no nonsense from the opposition.

Sunday at the Webbs was a memorable experience. After Sunday School and church, family and friends gathered around the large table. During World War II many lonesome, homesick soldiers stationed at Camp Swift shared the warm hospitality of the Webbs.

Judge Webb was an inveterate reader * * * the Bible, Shakespeare, Mark Twain, and the Austin American. Until just a few weeks ago he would ask for the daily paper and a cigar.

"May it please the highest court," asks Mrs. Amis, "when this kindly soul approaches the throne of grace, to wit * * * 'that he loved mercy, believed in and practiced justice, and walked humbly with his God' all of his days."

Needed: A Drive To Lower Prices

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, April 19, 1961

Mr. KEATING. Mr. President, there have been a number of little noticed comments in the press by leading Government figures urging a drive to lower prices. I think this is a terrific idea.

There is no question that hard work, energetic sales promotion, and diligent attention to cost cutting by individual firms and store owners would permit many prices in our economy to be lowered. Assuming that lower prices would stimulate sales, and I truly believe that they would, a decrease in prices would benefit consumers materially and would help our economy move faster.

Recent information to the fact that President Kennedy is going to appoint a Consumers Counsel led Mr. Joseph R. Slevin, national economics editor for the Herald Tribune, to urge that such a counsel be the administration's major force in launching what he terms "a drive for lower prices." The editors of a very influential upstate newspaper, the Warrensburg News, seized upon Mr. Slevin's suggestion and recently ran a hardhitting editorial calling for a campaign on price reduction. Such a campaign to lower prices would not be to the detriment or disadvantage of any group or individuals in our economy. Quite the contrary, such a campaign, spearheaded by the White House or by vigorous civic groups, would help step up our economy. It would assist our economy and our Nation as a whole.

Mr. President, I ask unanimous consent to include in the Appendix of the RECORD a copy of the article by Mr. Slevin and the above referred to editorial from the Warrensburg News. I also ask unanimous consent to include an article by the distinguished New York Times economic reporter, Mr. Richard E. Mooney, dealing with a recent statement by Federal Reserve Board Chairman, William McChesney Martin, in which he too calls for a concerted effort to lower prices as a means of "solving the Nation's economic problem."

There being no objection, the articles and editorial were ordered to be printed in the RECORD, as follows:

[From the New York Herald Tribune, Apr. 2, 1961]

U.S. ECONOMIC FRONT—KEY ROLE TO BE PLAYED BY CONSUMERS' COUNSEL

(By Joseph R. Slevin)

WASHINGTON.—President Kennedy is planning to appoint a special "consumers' counsel" and there will be more than one big job for the new adviser to do.

Naming a consumer spokesman will fulfill a campaign pledge that Mr. Kennedy made to a group of Bronx housewives just before election day. The job is being patterned after a post that Queensboro Community College Professor Persia Campbell held under former New York Governor Averell Harriman.

Many economists believe the most important immediate contribution a consumer's counsel could make would be to persuade the administration to launch a drive for lower prices. They argue that a price-cut campaign is the main ingredient that is missing from the administration's program to spark a vigorous business upturn.

There is no better way to spur consumer buying than to chop prices but the official barometers show that prices have been holding firm during the recession.

PRICE CUTS HELP ALL

Price reductions increase buying power and the happy thing is that they increase everyone's buying power—from Caroline Kennedy's to older workers living on social security.

Organized labor says the best way to boost buying power is to raise wages but that helps only one group of consumers.

Stockholders say the best solution is to increase dividends but that suffers from the same special interest limitations as a wage boost.

The administration is pressing for lower prices on one front. Attorney General Robert F. Kennedy is launching a number of anti-price-fixing suits in local communities.

But there is no concerted administration effort to push down prices.

There's nothing, for example, that matches the vigorous battle that the President has been waging to drive down long-term interest rates—the price of money. Mr. Kennedy believes that sticky money prices are a threat to recovery but he hasn't displayed equal concern about the prices of shoes, shirts, automobiles, refrigerators, and other merchandise.

Yet the President and his advisers are making a strenuous attempt to stimulate production by boosting buying demands.

They are trying to supply a large additional amount of demand by adding to Government spending.

ACTION IN CONGRESS

Congress has approved a $1 billion emergency unemployment compensation bill and the Senate and the House have passed different versions of a measure for helping depressed areas.

Mr. Kennedy is urging the lawmakers to enact social security, education, defense, and other measures that are designed to sluice more Federal money into the economy and he has ordered a speedup in Government procurement.

The President has endorsed yet another Government buying power stimulant in principle by promising that he will consider an antirecession tax cut next month if business activity fails to show signs of improving.

The classical method of stimulating demand and of increasing buying power is to cut prices. Former President Eisenhower suggested last January in his final economic report that lower prices would be helpful but the Kennedy administration hasn't chosen to bring the price weapon into play.

[From the New York Times]

HEAD OF RESERVE URGES PRICE CUTS TO RELIEVE SLUMP

(By Richard E. Mooney)

WASHINGTON, April 11.—The Chairman of the Federal Reserve Board made a strong appeal today for price reductions as a means of solving the Nation's economic problems.

"Throughout our country, we must not only increase our productivity but also pass some of the gains on to the consumer in the form of lower prices, rather than having all of it go exclusively to labor in higher wages or to management in higher profits," he said.

The Chairman, William McC. Martin, Jr., said that price cuts could stimulate buying demand that would "provide more jobs for those who are now unemployed, keep the economy moving to higher levels, and [provide] still greater job opportunities in the future."

SOME GAINS REPORTED

The Labor Department reported, meanwhile, a modest increase in the factory workweek and factory pay for March.

Mr. Martin spoke at the annual meeting of the Association of Reserve City Bankers at Boca Raton, Fla. Copies of his talk were made available here.

It was not the first time that a voice from Washington had been raised in favor of price cuts. It is a point that gets lost, however, in the debates most often heard here, over what the Government should or should not do. In the form presented, it is simply an exhortation. Neither Mr. Martin nor the Kennedy administration advocates price or wage controls.

[From the Warrensburg (N.Y.) News]

GOP MISSING THE BOAT ON PRICE REDUCTIONS

Joseph R. Slevin, national economics editor of the New York Herald Tribune, argues, as we do, for a national campaign to reduce prices. Noting that President Kennedy is planning to appoint a special consumers' counsel, he comments that "many economists believe the most important immediate contribution a consumers' counsel could make would be to persuade the administration to launch a drive for lower prices. They argue that a price-cut campaign is the main ingredient that campaign is the main ingredient that's missing from the administration's program to spark a vigorous upturn."

There is, he says, "no concerted effort to push down prices."

Republican Members of the Senate and the House are missing the boat when they fail to say on the floor that Mr. Slevin says so cogently here and what we said in our issue of March 16.

Progress in Building Complete Transportation

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 19, 1961

Mr. McCORMACK. Mr. Speaker, I have just read a very interesting and timely article concerning the problems of modern-day transportation which article was written by Mr. Morris Forgash, president of the United States Freight Co., and who is a renowned expert in the field of transportation. Mr. Forgash recently addressed the Syracuse Transportation Conference at Syracuse University on April 10, 1961. Under permission to extend my remarks I include the very informative article written by Mr. Forgash at this conference:

PROGRESS IN BUILDING COMPLETE TRANSPORTATION

(Remarks by Morris Forgash, president, U.S. Freight Co., at the Syracuse Transportation Conference, Syracuse University, April 10, 1961)

It is a pleasure and an honor for me to participate in this transportation conference which has been arranged as a preliminary to the 13th annual Salzberg Memorial Lecture. The brilliant and outstanding men who have consistently appeared on this program in the past have made this annual event a challenging and a noteworthy affair.

The spotlight is on the railroads today, but the fact that you have on the program such people as Jim Lyne, Dr. Williams, and me, is proof that the subject is not to be considered in a vacuum of self-analysis. Railroads are a very vital element of our national life, and it behooves us to candidly examine their current posture and critically analyze the direction in which they are going, but we must constantly keep in mind that our real objective is a strong transportation system, not merely a healthy railroad industry.

The significance of transportation to the culture, prosperity, and progress of people is nowhere better illustrated than here in Syracuse. The history of Syracuse, which can be traced back more than 300 years, is a veritable saga of American transportation. From Indian village to trading post—from giant salt-producing center to beautiful metropolis—the destiny of Syracuse has been shaped by transportation—Indian travois and packhorse, canalboat, and road wagon, railroad, motortruck, and airplane.

Syracuse is fortunately situated, transportationwise, but enterprise, not fortune, directs the course of events in transportation and it is a curious fact that among the many modes of transport which serve Syracuse today the coordination and means of interchange are not much better than existed between road and canal in the days when freight was transferred where Clinton Square now stands. True, we are at last beginning to make progress in the direction of complete transportation, but it has been a slow and painful process because of the resistance of apathy, atrophied thinking, and entrenched ideas.

The decade of the 1960's, which we have set within the scope of our sights for this conference, is the 14th decade of American railroading. In the last month of the year

1830, 'The Best Friend of Charleston," pride of the South Carolina Railroad, pulled the first train of cars ever drawn by a steam locomotive upon a track on the American continent. In the next several decades railroads literally mushroomed over the American landscape, and each road was built to its own specifications, with no thought of connection or completenes or interchange. The width of track ranged from 2 feet on the Brighton and Harrison to 6 feet on the Erie. The running and working parts of cars were equally individualistic.

Circumstances ultimately forced standardization of equipment and completeness of service among the various railroad systems, just as coordination and standardization will be forced upon our transportation systems today. The Civil War showed us the folly of having three widths of track between Chicago and New York. After many years of painful and costly process, we came to standard tracks and cars, and worked out the mechanics of interchange on the rail lines. We have been talking now for a long time about coordination and standardization of the 20th-century transportation plant, and we cannot afford to wait for a war to make up our minds that we must do something about it.

For more than half a century the railroad industry functioned without Federal regulation. In the words of the distinguished first Chairman of the Interstate Commerce Commission, Thomas M. Cooley, the railroads "were thus enabled to determine a great measure what rules should govern the transportation of persons and property; rules which intimately concerned the commercial, industrial, and social life of the people."

Then, on February 4, 1887—74 years ago—the act to regulate commerce was approved. The first report of the ICC is an interesting document. There were then an estimated 1,200 railroads, with about 138,000 miles of track. One hundred and eight railroads, operating more than 11,000 miles, were in receivership. The railroads were on the verge of destroying themselves, because they had lost the public confidence, largely because of widespread rebates, drawbacks, and special rates.

Nevertheless, it was not the purpose of the act to restrain or destroy competition. In their first report to Congress, the Commissioners, then five in number, said: "A study of the act to regulate commerce has satisfied the members of the Commission that it was intended in its passage to preserve for the people the benefits of competition as between the several transportation lines of the country." The Commissioners further said—and this is particularly important in the light of recent recommendations that have been urged upon Congress:

"It might possibly be within the competency of legislative power to prescribe for the several interstate railroads equal mileage rates for the whole country; but this, if endorsed, would put an end to competition as a factor in making rates, and to a very large extent deprive the great business centers of the country of their several natural advantages, and also of the benefit of expenditures made by them in creating for themselves new channels of trade."

That interpretation of the intent and meaning of the act has prevailed for three quarters of a century. It was, in effect, restated by Congress in the Transportation Act of 1958. It is still sound, and I am of the opinion that adherence to those first principles will result in rejection of recent recommendations for a statutory floor under competitive rates, and for severe restrictions on fourth section relief, as well as any other efforts to reverse what Congress did in 1958.

Moving down the corridor of time from the 1st to the 45th Annual Report of the Interstate Commerce Commission, we find the Commission again commenting about competition—this time a new and different kind of competition—that of the highway hauler whose superiority for certain tasks had been demonstrated by the First World War. In that report, filed in 1931, the Commission said that the railroads "have so many and so great inherent advantages of economy, particularly in the case of the longer hauls and the heavier traffic, that we cannot believe that they will not be able to withstand the competition of the motor trucks."

But, said the Commission, the "service must be provided which the shippers demand and require" and "it is probable that motor service may with advantage be used to supplement or to coordinate with the rail service." Means of making the necessary changes in service, such as "containers, demountable truck bodies, so-called railwagons, and changes in car types" were already appearing on the scene, the Commission pointed out. Finally, the Commission said that the old rate theories "often open a door to effective competition which might well be closed."

It is one of the inexplicable paradoxes of history that in the identical report in which the Commission made these wise and foresighted observations it referred to its decision in the Container case, rendered that same year, which rejected new pricing techniques for this new service, prescribed rates on the old classication basis, and dried up the very service which the Commission advocated for a period of almost 30 years.

When the Commission, in 1931, said that the railroads had many great inherent advantages in the longer hauls, and suggested that motor service might well be used to "supplement or coordinate" with such rail service, it had freshly concluded the most comprehensive investigation of motor service ever undertaken. The decision in this case, docket 18300, rendered in 1928, recommended Federal regulation of motor carriers. At that time the average length of haul of motortruck service ranged from about 20 to about 100 miles, depending on the territory involved. One large truck operator estimated, for the record, that the truckman's advantage over rail in ton-mile cost stopped at a point between 50 and 60 miles.

The kind of coordination the Commission then envisioned and advocated is the only kind that has any meaning—the joining of end-to-end services of differing modes of carriage so that each supplements and complements the other. Each mode must perform within the orbit dictated by its economic and services advantages. I think you will agree with me that this is a most descriptive and concise definition of the term "complete transportation."

It would not have been so formidable a task, back in 1931, to have worked out a plan of coordinated rail and motor service, given men in transportation with the will and the foresight to do so. Motor operations as they then existed were fully within the scope of their economic utility and ideally suited to complement rail service. But we let the golden opportunity pass for lack of initiative and imagination, and as motor service grew and lengthened out to be competitive with the rails for all distances, any idea of effective coordination became vastly more difficult to implement.

However, the picture has not changed to anything like the degree the public has been led to believe. We have long distance trucking, it is true, but it accounts for only a very small portion of the total service. The average motor common carrier haul per ton in 1959 was 273 miles. Although I have no official figures on the subject, I am confident that at least 90 percent of all intercity motor carrier movements in this country are for distances less than 500 miles.

Coordination or complete transportation based on the irrefutable economic facts that the railroads still are the most efficient medium for moving large quantities of freight over long distances, and that the trucks excel in the shorter hauls, can even now be achieved. In fact, it is being achieved on an increasing scale through the newer forms of piggybacking. But those who fear coordination of a type that will reflect the true economic advantages of the respective participants in any given joint haul have raised such a hue and cry that, to some who are not acquainted with the facts, the picture may seem to be one of contrived confusion.

Controversy and confusion are not limited to the area of piggybacking. The railroad industry, which has received a constantly declining share of the total traffic of the country over a period of 25 years or more—which has seen its employment cut exactly in half in just 30 years—stands accused of driving domestic water carriage to the wall, and of engaging in predatory and unfair raids on the traffic of motor carriers. It is time to examine the facts.

DO WE HAVE MORE SOLUTIONS THAN PROBLEMS IN TRANSPORTATION?

What is the problem in transportation? Certainly we won't find any solutions until we define the problem. We have a competitive struggle, yes, but competition is the essence of free enterprise in a democracy. If we ever eliminate competition we will destroy initiative. Could it be that we have mistaken competititve jockeying and jostling for more basic problems?

Let me take just a moment to recount how we came to be where we are today—using broad brush strokes. This is necessary for proper perspective and direction. In the 1930's competition of a lusty young motor carrier industry had a depressing effect on the railroad rate structure. Then came World War II which strained the resources of all carriers, and virtually destroyed intercoastal and coastwise shipping.

It is a monumental distortion of historical fact to charge either the railroads or the ICC with responsibility for the virtual disappearance of American coastal shipping. When the Government took over many vessels in this trade during World War II the industry was already sick. In the 10-year period immediately preceding the war the industry lost $8 million. The fleet of vessels was literally decimated by wartime activities. Many of the lines never resumed operations after the war. Those that did were beset by spiraling labor costs, incessant strikes, and astronomically mounting replacement and operating costs. Mr. Ralph E. Casey, president, American Merchant Marine Institute, summed the matter up very well in an address delivered in July 1959, before the annual convention of the International Longshoremen's Association at Miami Beach, when he said:

"You know, as well as I, that our once flourishing domestic trades are now dead. It is often said that this is the result of unfair treatment by the Interstate Commerce Commission. That may have played a part, but when they tell me it costs more to load a ship in New York and unload it in San Francisco than it does to bring it 5,000 miles around three coasts, including the transit of the Panama Canal, I question whether the Government is primarily to blame."

We should recognize the truth of what Mr. Casey said and should not require the competitors of the ship lines to subsidize them by holding an umbrella over their rates.

Now the railroads have ultimately heeded the repeated and long-continued admonitions of the regulatory agency and the Congress and are embarking on a vigorous pro-

gram of self-help. They have introduced not only new pricing techniques but new and improved services based on technological advancements and new ideas. They are reexamining their competitive posture up and down the line in an effort to recapture the traffic which they once indisputably enjoyed but which they lost to other modes of carriage.

The railroads were told to do these things as long ago as 1931 in the Commission's report to which I earlier referred. They were admonished by the Commission in some of the decisions in the ex parte rate cases to employ different ratemaking techniques. In its report in Ex parte No. 206, decided in 1957, the Commission told the railroads that "the time had probably come when consideration should be given to ways of increasing rates other than by means of horizontal increases." Congress bluntly told the railroads to improve their services and modernize their rate structure when it enacted the Transportation Act of 1958, and it made certain, by enacting section 15a(3), that in doing so they would not be required to hold a rate umbrella over their competitors. But when the railroads at last embarked on a determined program to arrest their declining position in the transportation picture the anguished cries of their competitors were heard across the land.

Again I say, "What is the problem?" Competition took traffic which the railroads once handled and which they perhaps thought, with a trace of complacency, they would always have. Is the problem now to prevent the railroads, by artificial barriers, from getting some of it back if they can do so through the exercise of their inherent advantages and a little initiative? I do not think so.

Congress thoroughly examined all facets of the transportation picture just 2 years ago. The responsible Senate committee heard evidence which now fills 2,300 printed pages in 4 volumes. The corresponding House committee held thorough but less exhaustive hearings. Weighing all the facts, the committees concluded and the Congress agreed, that the railroad industry was in need of immediate help in several directions.

Among the reasons for the plight of the railroads, the Senate committee found, were Government assistance to their competitors and overregulation of the railroads. But by all odds the most significant finding was that the railroads had not consistently been permitted to assert their inherent advantages in the making of rates. To correct that situation section 15a(3) was enacted.

The purpose of section 15a(3), as plainly stated in the Senate committee report on the 1958 act, was "to encourage competition in transportation." But the statement is insistently made, and repeated again and again: "Yes, Congress intended to insure greater freedom in ratemaking, but it did not intend to permit unfair or destructive competition." The statement is perfectly true, but what is it intended to prove? We must all agree that unfair and destructive competition is prohibited by the law. The Transportation Act of 1958 did not create the prohibition—it merely restated a provision of existing law. Is the repeated statement of the proposition now intended to imply that the ICC is ignoring or misconstruing a fundamental precept of the law, and, if so, that the courts will sustain the Commission in perpetrating unlawfulness? That would be a terrible indictment of our administrators and judges. Every decision on a controverted issue leaves a disgruntled litigant, and each of the basic modes of carriage has been disappointed with one or another of the Commission's decisions under section 15a(3), but the courts, not Congress, are where the issues should be reviewed.

The decisional process with regard to such factual situations as have arisen so far under section 15a(3) has not yet run its course, but there are insistent demands that the section be changed to fit this or that preconceived idea of what the final decisions ought to be. I suggest that Congress and the people knew very well what the policy of section 15a(3) was when it was enacted. The words of the statute are plain. They are reinforced by even plainer language in the committee reports. Only the Interstate Commerce Commission and the courts are vested with the legal authority to apply the language of the law to stated factual situations. We do not write our laws in sand, nor should we erase them with hysteria.

However well intended, I strongly believe that efforts to change the policy laid down by the Transportation Act of 1958 at this time are both premature and unwise. You are familiar with some of the specific proposals for statutory change. The Doyle report would place a statutory floor under competitive rates, based on a statistical formula, and establish "umbrella type" ratemaking by force of statute. S. 1197 would add a great many impossible complicating factors to the presently plain and simple provisions of section 15a(3), and hence would no doubt also result in statutory umbrella ratemaking.

These proposals would take us in exactly the opposite direction from the course we so carefully charted in 1958. In fact, they would reverse a policy to which, except for an unfortunate experience with the so-called recapture clause of 1920, we have adhered through the entire history of regulation—careful avoidance of ratemaking by legislative fiat. If we substitute statutory for regulatory ratemaking in the smallest area, it could spread dangerously and rapidly throughout all regulatory law.

Such proposals do not take account of the realities of today nor the potentialities of the future. If they were intended, for example, to aid the motor carriers someone has failed to calculate rightly. They could destroy the motor carrier industry. Ratemaking is not an exact science—it no longer follows a pattern—it reflects the terrific imbalance of traffic, particularly of manufactured products and products of the farm and the forest. The common carrier rate structure has been eroded by the cumulative effect of the contract carrier, the "gypsy" trucker, the "gray area" operator. Yet, we are told that we must be careful not to destroy traditional patterns of ratemaking—that we must protect the integrity of the rate structure. How can you destroy something that no longer exists?

To fill their vehicles and prevent costly empty movement—to meet the irresponsible rates of the unregulated carriers—to fulfill the demands of products that cannot possibly bear their full share of the transportation burden, the carriers make vast numbers of rates that will not meet any formula based on costs.

Statement No. 4–60, released by the ICC in September 1960 lists 80 commodities moving in rail carload service which do not defray out-of-pocket costs. A similar study would undoubtedly show a larger number moving at submarginal rates in motor service. We are not going to change the factors that cause these commodities to move at below-cost rates: What are we going to do—force the common carriers to give up the traffic, or give the first common carrier in the field squatters' rights by refusing to let anyone else meet his rates? I repeat that, whatever alternative we choose, the motor carrier industry may well be the first victim of any scheme of statutory ratemaking or inflexible rate floors. I am, personally, having a great deal of difficulty in visualizing or understanding how any standard of ratemaking in the form of legislative directives to the regulatory agencies can make due provision for these extenuating circumstances and conditions that a carrier encounters almost daily. I have extreme doubt that anyone can produce the appropriate legislative language free of confusion and devastating ambiguity.

Once we embark upon ratemaking by legislative fiat we will have put our feet upon a road that will lead to the ultimate stifling of initiative and stultification of progress. I respectfully commend these observations to the careful consideration of our lawmakers and all others who have a responsibility in the matter.

From what I have said so far you may have gained the impression that I am talking about roadblocks rather than progress in the building of complete transportation. What I have been trying to do is to clear away some of the confusion so as to arrive at a clear point of departure. And I will ask your indulgence for one more detour because it is important that we understand the factors bearing on the subject if we are to understand the subject itself.

GOOD ADMINISTRATION OF TRANSPORTATION LAW REQUIRES GOOD MEN—SOME WAYS TO SECURE AND KEEP THEM

Since 1940 the national transportation policy of the United States as applied to domestic surface carriers has been directed to three ends—the developing, coordinating, and preserving of a national transportation system, by various means, adequate to meet the needs of the commerce and defense of the Nation. We have entrusted the implementation of that policy to 11 men. Unfortunately, we could not vest them with magic wands by which to discharge their fateful task. Sometimes I am afraid we have not vested them with even the least of their due—our complete confidence. Lately I have been more apprehensive on that score.

As I said a little earlier, it has become a popular pastime to make the Commission a scapegoat for everything that is conceived to be wrong in transportation. We should always remember that so long as we adhere to our established principles of Government we must depend on these men who sit on the Commission to interpret and enforce the law, and if we so impair the standing of the agency as to make it impossible any longer to obtain the services of dedicated men of talent and integrity, we will have destroyed one of our greatest legacies. We will have sold our birthright for a mess of pottage. Maybe it has only an indirect bearing on my subject matter, but I ask you to consider for a few moments some matters relating to the ICC that I consider to be of vital importance.

I am reminded that the then Chief Justice of the Supreme Court, the Honorable Charles Evans Hughes, addressing a meeting of the Association of ICC Practitioners in 1930, said:

"I suppose that no agency of Government has more complicated problems than those which confront the Interstate Commerce Commission, and no intelligent student can fail to realize that the success of this endeavor in a sphere of the highest importance is to a very great extent the measure of our capacity for self-government."

Viewed in that light, to insure the success of the Interstate Commerce Commission in its mission becomes a personal and a demanding obligation of every citizen.

We have been extremely fortunate in the caliber of men who have been attracted to service on the Interstate Commerce Commission throughout its long history. It was Eastman who gave us his famous 12-point Primer on Administrative Tribunals just a few weeks before he died in 1944. The sixth

point has been more quoted than any other. It reads:

"The statutes which the tribunal administer should be well, simply, and carefully framed, but the personnel which does the administering is more important than the wording of the statute. *Good men can produce better results with a poor law than poor men can produce with a good law.*"

What has attracted and held the great men who have made careers of service on the ICC? There is an indefinable spark which kindles in men a desire for unselfish public service—we see it in the teaching profession, in the sciences, and in Government. Over and beyond that, however, is the fact that the high public esteem in which the ICC has traditionally been held has invested membership on the Commission with an aura of dignity like that surrounding the high courts, the National Legislature and the Cabinet posts. If that standing and dignity are lost, a great deal of the incentive to men of stature and dedication will disappear.

In view of the absolutely incalculable importance of the proper administration of our transportation laws, we should, instead of maligning and belaboring the Commission, immediately take steps to strengthen it—give it adequate and competent personnel—put it on a healthy financial diet—and insure its ability to continue to attract men of the highest order of intelligence and integrity. What steps can we take?

A good place to start is with the Commission's budget. James M. Landis recently said that "economic rigor, if not parsimony" has characterized the Budget Bureau's attitude towards the agencies for almost a decade. In the last couple of years a little more generosity has been evidenced, but still the budget of the ICC is ridiculously low considering the importance of its mission. Twenty million dollars to regulate an industry that bills us twenty billion a year for its services. Twenty-three hundred people to man an agency that employed twenty-six hundred in 1940. And since 1940 the Commission has acquired jurisdiction over two new agencies of transport—three parts have been added to the act—we have acquired two new States and added numerous new laws to the statutes which the Commission administers.

If the Commission, accustomed to a starvation diet for these many years, is too modest to ask for what it needs in the way of budget and staff, management consultants can be hired to advise Congress. Delays in the functioning of the administrative processes can cost the carriers and the public in a matter of days what we pay to run the ICC a whole year. Is that the way to run any business—or a Government agency?

We get back, of course, to the fact that that the essential ingredient of good administration is good administrators, and administrators are people—people with families and responsibilities. We should insure them of more adequate compensation and security. No board of directors of any corporation in America or the world makes more important or far-reaching decisions than the 11 members of the Interstate Commerce Commission. To attract the kind of men that you and I want on the Interstate Commerce Commission I suggest that a salary of $30,000 a year be provided. And with adequate salary should go a reasonable allowance to reimburse agency members for expenses necessarily incurred as an incidence of their position.

Tenure of office is more important than salary to men who value their independence. Until comparatively recent times the vast majority of appointees to the Commission quite evidently accepted the post as a career, and those who distinguished themselves, as a surprising number did, were insured of reappointment regardless of the political party in office. Aitchison set a record of service with 34 years and 9 months—then came Balthasar Meyer with 28 years, Eastman and Clements with 25, Mahaffie with 24, and a long list with 15 to 20 years of service. In contrast, all of the present members of the ICC have been appointed since 1953.

This is not something which reflects unfavorably on the current members of the Commission or on the administration, past or present, but it is a symptom which ought to be arrested before it becomes a chronic condition. How can we have any continuity of policy or attract men who seek public service as a calling, and not a stepping stone, unless we insure them a tenure of office that will permit them to plan ahead and relieve them of tension and pressures? We should provide a statutory term of office for members of the regulatory agencies of 10 years, and allow for reappointment up to the age of 65. Retirement pay should be adequate to insure that no ex-Commissioner would have to go out in industry and seek a job.

We are well aware of the constant pressures to which our agency members are subjected. Why not give them a little insulation against these forces by providing them with a tenure that will extend through two presidential terms and into a third?

Precedent is one of the most important facets of our system of jurisprudence. It gives stability to the law and inspires confidence in the people that they can proceed in a given manner without fear of reprisal. Continuity of service helps to insure stability of policy. One other way to insure such continuity and stability is to follow a custom that seems to have fallen into disuse in recent years of elevating career men to Commission membership when career men of stature and ability prove themselves worthy of such appointment.

Perhaps you may think I have unduly emphasized this point, but it is one of the most important issues in transportation today. Crisis has been developing around our independent agencies and, as Chief Justice Hughes said long ago, this is an area so vital to our well-being that its success will measure our capacity for self-government. I have been an advocate of a Department of Transportation for promotional activities and I am convinced that we will ultimately come to that, but the problem of the regulatory agencies is an entirely separate matter. They do not belong in an executive department. I have suggested three immediate steps that we should press for, and we can muster the strength to put them through if we really try. They are:

1. Sharply increase the budget of the ICC with authority and direction to hire the necessary personnel at all levels to get the job done, whether in safety, enforcement, or the decisional process.

2. Increase the salaries of the members of the Commission, and provide them with reasonable allowance and adequate retirement. I would also increase the salaries of the top-level career employees.

3. Provide for statutory tenure of 10 years, with authority to reappoint up to retirement age.

This may not be the complete answer to the problems revolving around our agencies which have given rise to tons of studies and reports in recent years, but it is something concrete. It is a good starting point.

CONTAINERIZATION, STANDARDIZATION AND SIMPLIFIED PRICING—KEYS TO COMPLETE TRANSPORTATION

I can think of no beter way to indicate to you why I have spent so much time leading up to what I shall make a very brief report on progress in building complete transportation—which boils down to progress in containerization and piggybacking—than to quote from the January 1961 issue of Fleet Owner, as follows:

"Month by month piggyback takes on more weight and size than a razorback hog in Arkansas. This consistent growth over the past 2 or 3 years is in spite of a tangled web of rate conditions, a tug-of-war for control between trucks and rails, and a wide range of nonstandard equipment. The reason's simple. Shippers like the lower mileage rates and the convenience."

This innovation in transportation that is growing like a razorback hog cannot be considered in a vacuum. I think, however, that I have discussed enough of the atmosphere in which it exists, now for a brief discussion of the containerization and piggyback movement without which complete transportation is unattainable.

In 1954, in a declaratory judgment proceeding before the ICC, the common carrier truckers vigorously pressed the position that the railroads could not haul highway trailers on flatcars without motor carrier certificates. The Commission brushed this aside, and said that the railroads not only could haul their own freight in their own trailers, but could haul the trailers of shippers, forwarders, and private carriers, but not those of common carrier motor carriers except under joint rates and divisions.

Unfortunately, in my view, the Commission, in its decision in the case I am referring to—and that was in 1954—strained the definition of "joint rates" beyond all recognition. It gave its blessing to a device that had been employed in a few places, whereby motor carriers forwarded their trailers over the rails rather than pulling them over the highways. This was called "substituted service," an apt term. The Commission said the motor carriers could not so forward their trailers, and pay the published rates of the railroads, but when the fiction of a "joint rate" was indulged, and the rate paid by the motor carrier was put in a contract labeled "division sheet," the same result was accomplished. The substituted service arrangements came to be known as plan I. When true joint rail-truck rates are entered into we have plan V.

Notice ought to be taken of the fact that the long-distance motor carriers are not satisfied with the two plans of piggybacking which the Commission has said are available to them—plans I and V. They seek authority to use published tariff rates of the railroads, of a type represented by plan III and IV which I will presently describe. Clearly, as the Commission has said, this would make them carriers and shippers at the same time—it would cause them to violate their permits which specify movements over the "roads, highways, streets, and ways by motor vehicle"—it would require rewriting the definition of a motor carrier and practically the whole of part II of the act. It might even raise constitutional questions.

Plan I—substituted service—has not prospered very well. It has nothing to recommend it to the shipper—he deals only with the motor carrier, pays the regular motor carrier rate, and if any economies accrue from the service they stick to the motor carriers' hands. It is not coordination but substitution.

Plan V piggybacking has had and continues to have a stormy career. As I said, it rests on a true joint-rate and through-route arrangement between railroads and motor carriers—the type contemplated by the statute. But not many such arrangements were ever entered into for the transportation of general freight. In the hauling of new automobiles plan V gained considerable headway, and caused a tremendous furor.

A year or so ago some of the railroads and automobile haulaway carriers—in most cases the short-haul motor carriers—began entering into arrangements for the hauling of new automobiles, in motor trailers loaded on flatcars. A flatcar would hold two such trailers with four or five automobiles each. This improved speed and efficiency and re-

duced costs and it was an eminently satisfactory arrangement to the railroads and motor carriers involved and to the man who pays the bill—the shipper. But it took some traffic from the long-distance automobile haul-away carriers and they cried that they were being driven out of business. A propaganda barrage of unrivaled proportions was mounted against plan V piggybacking, and it still continues.

Oddly enough, advancing technology rendered the original plan V operation practically obsolete before it ever got a good start. Now, instead of loading truck trailers on flatcars the railroads use, very largely, specially designed, lower-level flatcars fitted with trilevel racks which will accommodate 12 standard or 15 compact cars. This still could be termed "piggybacking" and still could rest on a joint rail-truck rate, but it is, in fact, something entirely new in transportation.

Now what crime have the railroads committed in thus initiating a new and complete transportation service? Why, according to widely publicized charges, they are hauling new automobiles at rates generally 50 percent or more under rates offered by the truck-away companies. Think of that. The transportation costs on 5 million new motor vehicles can conceivably be cut in half. What are we to do—ban this innovation which for the first time in 25 years holds forth the hope of halting the continuing upward spiral of freight rates?

But, says truck labor, if you don't stop this it will destroy the jobs of 15,000 truck employees. To this rail labor asks, would it be in order for 450,000 rail employees who have lost their jobs largely because of erosion of rail traffic to send condolences?

The truly phenomenal thing about this innovation which enables the railroads to slice the freight rates on automobiles in half is that it still is only 50 percent as efficient as it could and ought to be. Just as he always has in the case of the automobile haul-away service, the shipper is still required to buy a round-trip ticket for a one-way ride. The rail equipment, specialized like the motor equipment, has to deadhead back to origin after it delivers each payload. Why? For lack of an idea? No—for lack of initiative.

Equipment that will haul new automobiles in one direction and dry cargo—even liquid cargo—in the other, is already in actual production. Isn't it time that we started to give the poor, long-suffering shipper a break? Why not bring back to him what he consumes and uses in the same car that hauls away what he produces? Everybody will be the beneficiary.

Plans III and IV piggyback, under which shipper-owned trailers, or shipper-owned trailers and flatcars are hauled from ramp-to-ramp at a stated charge per flatcar movement, are now too well known and too well accepted to require detailed description. These plans, too, have come under attack in legal proceedings and by propaganda. The opposition reflects the competitive efficacy of the service.

By these plans the railroads found a way of bringing about coordination through the leverage of economics. By publishing a charge that reflects their own cost advantage for the movement of trailers on flatcars, they can and will make it uneconomical for the shipper to use his own trucks for the long haul. The rail and truck services then will seek their own level with a resultant combination of road and rail hauls that is tailored to shippers' needs, not carriers' convenience.

Piggybacking of the type represented by plans III and IV, and automobile hauling, represents the first break the shipper has had in a generation in the matter of freight charges. It constitutes the first simple answer to the equation into which the shipper resolves his transportation problems—time and price. The traffic manager views transportation as a link in the distribution chain and, since it is a very expensive link, he buys it with care. He no longer has to take the carriers' word for how much it costs to move his goods from factory to store—he can find out for himself and he will buy his own trucks if he is pushed too far.

But the railroads have not lost their inherent advantages as mass and distance haulers—they simply neglected to exploit them for a while and the parade of progress almost passed them by before they woke up to what was going on. The railroads can beat the private hauler's costs, and better his speeds. They have proved it by plans III and IV piggyback. There is no other development on the horizon that offers any hope of stemming the tide of private carriage. And the key to success of these plans in meeting private carriage is the simplified freight rate—so many dollars per movement—the same basis on which the shipper calculates his cost of doing it himself.

Piggyback service, once it got moving, developed with such startling suddenness that it is still beset by growing pains, not the least of which is the lack of standardization of equipment and method. The problems are being earnestly studied, and, while there will be a certain amount of obsolescence as we experiment or jump the gun without carefully analyzing the situation, in time uniformity will be achieved.

No transportation service in modern history has moved ahead so far so fast as piggybacking since its revival in 1954. In 1960 piggyback flatcar loadings were more than a third greater than in 1959—more than double what they were in 1958—five times greater than in 1955. This means that well over a half a million cars, loaded with more than a million trailers, were handled in 1960. Still accounting for only about 2 percent of all freight car loadings, it is obvious that if the present rate of growth continues piggyback loadings will account for a very substantial portion of rail service within a comparatively short time.

As a matter of fact, many railroad officials today admit that the fate of the boxcar as the predominant factor of rail transportation—a position it has held for more than a century—is sealed. It will not be good business to continue to buy boxcars from which the railroads obtain only 46 miles of service a day when flatcars in TOFC service average 175 miles a day and some perform up to 450 miles. It will be uneconomical to continue to move freight in boxcars with a 40-percent empty return ratio when that empty mileage can be cut in half, or more, by piggyback service.

An editorial in the Washington Post on March 21 of this year, dealing thoughtfully with the situation in transportation, said:

"The nub of the transport problem is rapid technological, urban and industrial growth and change. It is a problem of rapid adaptation, calling for the closest coordination of all types of common and private carriage."

The editorial does not tell us anything we did not already know, but it is something that should have been said sooner and more often. Industry simply moved away from the railheads. Plans III and IV piggyback are the first practical media the railroads have found for providing the off-track shipper a through service combining the flexibility of the truck with the speed and economy of the railroad.

The shipping public will demand more and more piggyback service—they will demand its speed, its low basic cost at a unit price, its nearly damage-free safety, its predictability and its convenience.

That is, very briefly, a report on progress in building complete transportation as it looks to me today. Rome was not built in a day, so we must have patience and perseverance. On the other hand, we are told that construction of the Tower of Babel stopped instantly when the people were caused to speak different languages. We must understand what we are talking about when we speak of coordination—it is not to be confused with substitution. We must make certain when we talk of transportation problems that we are not speaking simply of somebody's attempt to gain a competitive advantage, or slug a competitor. Our effort should be to produce the best possible transportation for the development of commerce and the defense of our Nation.

Progress in building complete transportation is being achieved despite great turmoil and uncertainty. It is being achieved because some people in transportation, and I am one of them, have faith that when all the shouting has died down we will emerge still holding fast to first principles. It is being achieved because competition is forcing change, stimulating new ideas, putting the spur to enterprise. It will continue so long as we adhere to the principles of regulation first established 74 years ago and consistently followed ever since—a maximum of competition with a minimum of control. Progress will stop when we abandon these principles of free enterprise, for when enterprise ceases to be free it is dead.

This is a time for cool heads and firm resistance to hysteria. Radical changes in basic transportation laws are being urged under the mantle of expediency. We are being importuned to bridle competition with the halter of legislative fiat. Our regulators are being assailed and maligned.

The call now is to statesmanship, in and out of Government. The regulation of transportation, no less than transportation itself, is at a crossroads. Let us remember the truth of what Chief Justice Charles Evans Hughes said long ago—the success of this endeavor in a sphere of the highest importance is to a very great extent the measure of our capacity for self-government. The call is to you and to me, and we cannot afford to remain silent. Our destination is clearly indicated—let us march.

Abuse of the United States by the Castro Regime in Cuba

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 19, 1961

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the following editorial entitled "How Castro Knifes Us His Dupes," which appeared in the Fort Wayne (Ind.) News-Sentinel, April 4, 1961.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Fort Wayne News-Sentinel, Apr. 4, 1961]

HOW CASTRO KNIFES US HIS DUPES

How segments of American citizenship unwittingly, in most cases, were partly responsible for elevating Cuban Dictator Castro to be the power and menace that he is today to the entire Western Hemisphere, and how he continues to add amazing insult to injury by subjecting the United States to the most vicious abuse and vituperative of prop-

aganda was graphically portrayed over the Manion Forum Network nationwide radio program over the past weekend. This horrific, but most authentic revelation of how we were duped by Castro and are now being subjected to diabolic vilification as our reward, was presented to the American people by one who has witnessed the ramifications of the Castro regime at firsthand.

He is H. W. Balgooyen, executive vice president of the American & Foreign Power Co., Inc., which has for years been one of the largest and most constructive U.S. business investments in Cuba and other Latin American countries. Dr. Clarence Manion, director of the Manion Forum Network, on the basis of his own firsthand knowledge, pointed out in introducing Mr. Balgooyen how:

"In the Communist technique, when A robs B, the thing for A to do is to shout the big lie that B has robbed him. So it is that Castro, who has taken a billion dollars worth of property from American industry in Cuba continues to scream the lie that American capitalists have robbed the Cuban people. As a matter of fact, in Cuba and throughout all of Latin America, U.S. business firms have always paid the highest wages and the highest taxes. These companies also provide the best housing, living conditions, and fringe benefits for their employees that are to be had anywhere in the countries where they operate."

"What I have to say," said Balgooyen, "is partly about Cuban Dictator Castro and his ties with the international Communist conspiracy. It is partly about the United States' position in this hemisphere, which has been undermined by Communist propaganda and eroded by years of inattention and abdication of the responsibilities of leadership."

Mr. Balgooyen pertinently added that he was obliged to return an indictment against certain ultra-liberal or positively subversive molders of thought and public opinion, "who have fostered a moral and intellectual climate on which these tragic events could come to pass. He declared that:

"While many of our businessmen have been immersed in their business as usual, our politicians in their politics, as usual; and our intellectuals in their breast beating as usual, the international Communist conspiracy has established a beachhead in Cuba, and a highly organized and fantastically successful campaign of propaganda and subversion has been sweeping through Latin America. The highly-trained professional conspirators who are achieving these spectacular results have been aided and comforted by a pack of Marxist intellectuals in our own country, who bay in full cry with every foreign chorus of vituperation against the United States and against the system of enlightened and socially-responsible private enterprise which is both the inspiration and the practical expression of the American way of life."

Mr. Balgooyen documented chapter and verse how Castro has "completely betrayed his early supporters in Cuba's propertied classes, who lost all their possessions and were driven into prison and exile; has deliberately betrayed Cuban labor whose wages were slashed and whose leaders were liquidated and replaced by Communist stooges; has cynically betrayed the Cuban campesino, who was promised land of his own, but was given instead, a job as a slave laborer on a collective farm; has ruthlessly betrayed private investors whose properties were confiscated; and has heartlessly betrayed Cuba's God-fearing mothers and fathers whose children were indoctrinated in atheistic communism." And he cited how recently "the paean of hate that is spewed forth daily over the captive Cuban radio included the following message to President Kennedy:

"Open letter to an illiterate millionaire, Mr. John F. Kennedy. For some time now, we have been following your political trajectory in your attempt to replace that decrepit and stupid old man who answers to the name of Caesar Attila Eisenhower on the throne of the Yankee empire. We understand, Mr. Kennedy, that you must preach slimy lies; but what we cannot justify and approve, Ediot Mr. Kennedy, is that you use Cuba's name in your political maneuvers. You are nothing less, you imbecile, than a piece of the yoke that oppresses the U.S. people. As to the warning that our revolution will perish, we would like to have you come to Cuba so that we can hang you by your tongue."

We submit that should arouse anyone from his lethargy.

Dr. Philip Loven Elliott

EXTENSION OF REMARKS
OF

HON. BASIL L. WHITENER

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 19, 1961

Mr. WHITENER. Mr. Speaker, on Friday, April 14, 1961, North Carolina lost one of its most distinguished educators in the passing of Dr. Philip Loven Elliott. At the time of his death Dr. Elliott was President of Gardner-Webb College, an outstanding junior college in Boiling Springs, N.C.

The Shelby Daily Star and the Cleveland Times, newspapers published at Shelby, N.C., carried editorials on April 15 and April 18 with respect to the life, character, and public service of Dr. Elliott.

With the thought that my colleagues in the House would like to read these editorials and the story of Dr. Elliott's passing, which appeared in the Cleveland Times for April 18, I include them in the Appendix of the RECORD:

[From the Cleveland Times, Apr. 18, 1961]

FINAL RITES CONDUCTED ON SUNDAY FOR PRESIDENT PHIL ELLIOTT OF G-W

Dr. Philip Lovin Elliott, for 18 years president of Gardner-Webb College and who would have retired at the end of the present school term, died suddenly Friday morning around 9 o'clock after suffering a heart attack at his desk in his college office. Classes at the college suspended until Monday morning.

Dr. Elliott had previously suffered a heart attack in 1954 and was away from Gardner-Webb for almost a year. He notified the board of trustees several months ago he was willing to retire if a successor could be found and it was announced just recently that he would be succeeded by Dr. E. Eugene Poston.

The beloved president guided Gardner-Webb through its greatest years of growth, having accepted his post in 1943 when the college had 71 students and 12 staff members with total assets of the college listed at around $300,000. A student body of 640 fills the campus today and the institution owns 36 buildings with total assets at close to $3 million.

Native of Wayside in Swain County, he was the son of the late Isaac Bartley and Rachel Jenkins Elliott. He was a graduate of Mars Hill and Wake Forest College from which he received his A.B. degree in 1919. He earned his master's degree at the University of North Carolina in 1925 and did graduate work at Johns Hopkins and Duke University. An honorary doctor of education degree was conferred upon him by Carson-Newman College in 1951 and an honorary LL.D. degree by Wake Forest College in 1959.

He was an ordained Baptist minister and had served as principal of Mitchell Collegiate Institute in 1919–20. At Mars Hill he was dean, vice president, and head of the English department from 1923 to 1930, later going to Western Carolina College at Cullowhee as head of its English department when called to Gardner-Webb.

Dr. Elliott was a member and past president of Shelby Rotary Club and among the positions he has held include: trustee of Southern Baptist Theological Seminary; president of the North Carolina College Conference in 1952; member of the Governor's commission on adult education in North Carolina member of the Governor's commission on interracial cooperation.

Surviving are his widow, Mrs. Etta Maurine Carringer Elliott; three daughters, Mrs. L. T. Oakes, of Roanoke Rapids; Mrs. Edward Grady, of New York City; Mrs. Geoffry Churchill, of Chapel Hill, and Philip L. Elliott, Jr., graduate student at the University of Georgia, and four grandchildren.

Funeral rites were conducted Sunday afternoon at 3 o'clock in Boiling Springs Baptist Church with the Rev. Max Linnens, pastor, officiating. The body lay in state for 1 hour prior to the services and burial was in Cleveland Memorial Park.

Officials from many educational institutions were in attendance for the funeral services.

[From the Shelby Daily Star, Apr. 15, 1961]

HE PRESSED ON TO A HIGH CALLING

If Dr. Phil Elliott could have chosen the place for his last few moments of physical existence on this terrestrial globe, chances are that it would have been at his desk in the institution he loved—Gardner-Webb College.

There, surrounded by the walls he had helped to build, within earshot of college officers, faculty and staff members, and not far from the students whose lives he sought to enrich through Christian education, Phil Elliott felt at home.

His last, full measure of devotion to the Baptist institution was expressed during the year when he offered to step down early and make the transition smoother for his successor as president. Again, he had placed the good of the institution above the personal interests of Phil Elliott.

Not many years ago a local businessman remarked about Dr. Elliott:

"He never gets enough for that college but that he always wants more."

But a friend nearby rejoined:

"True enough, but you can't deny he wants it in order to better educate your youngsters and others like them."

There were many facets to the abilities of Phil Elliott. He prided himself in being first of all a teacher, and he brought to that calling a background rich in scholarship. He was a successful educator, an accomplished orator, a dreamer who worked to make his dreams come true for Gardner-Webb College.

He was a man of high principle, steady in his faith and rockbound in his convictions. Yet, he was tolerant and compassionate, careful to respect the sincere views of others and jealous of freedom of belief and expression.

Phil Elliott's wants and needs were simple, and they were determined by a finely hued sense of values, a sure determination of what is important in life—family, friends, love, religious faith, education, introspection, nature.

As the officers, faculty, employees and students of Gardner-Webb say an earthbound goodby to their beloved president, it would be well for them to remember his words:

"This is no time to congratulate ourselves on past accomplishments when there is so much yet to be done. We must keep pace with the needs of our people, and like Alice in Wonderland, we must run as fast as we can merely to stay where we are."

Phil Elliott has run the good race. He has finished the course. He has accepted the prize.

[From the Cleveland Times, Apr. 18, 1961]

DR. PHILIP LOVIN ELLIOTT

Dr. Philip Lovin Elliott is dead.

In one of his final addresses to the student body at Gardner-Webb College he quoted these lines from Tennyson's "Ulysses":

"I am a part of all that I have met;
Yet all experience is an arch where through
Gleams that untraveled world whose margin fades
Forever and forever when I move."

Even though death was unexpected and came as a shock to Clevelanders, educators, students, and all who knew and loved Dr. Elliott, still ringing in the ears of faculty members are his recent farewell remarks: "We climbed the hill together * * *," as he quoted Robert Burns: "To me we haven't done all we've dreamed, as I come to the end of the official journey * * *"; "As we come to the end of these experiences together, they melt into a mosaic of beauty for me, like the rays of the sun and the clouds of a beautiful sunset * * *"; "I know a little bit of loneliness, disappointments, heartaches, hurts * * * and being on the brink * * *"; "I shall be watching you wherever I am. It is my hope that this institution, under God, with your dedication, scholarship, and devotion, will be dedicated to the production of human beings that shall be of value and have integrity."

Dr. Elliott was wise, noble, lovable. He stood for all that is good, and this goodness will live with the hundreds of young scholars and friends who knew a better way of life through him, not only at Gardner-Webb but at other educational institutions and communities which can boast of his leadership.

In the words of Gardner-Webb President-elect Dr. Eugene Poston, "The death of a Christian is never a tragedy. It is always a victory."

We, too, believe that this man who achieved so much for Gardner-Webb and lived an exemplary life, continues to be watching over those he loved so well and is praying for us.

His life indeed melted into a beautiful sunset.

Disabled Combat Veterans

EXTENSION OF REMARKS

OF

HON. WILLIAM HENRY HARRISON

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 19, 1961

Mr. HARRISON of Wyoming. Mr. Speaker, I have received a letter from a disabled American veteran calling attention to hardships he and other disabled veterans are suffering. I believe his letter should be read so that others may be informed of this unfortunate situation. The letter follows:

[Very urgent please]

APRIL 11, 1961.

The Honorable WILLIAM HENRY HARRISON,
House Veterans Affairs Committee.

DEAR SIR: Fifteen percent compensation increase, desperate appeal in behalf of aging, totally disabled combat veterans, the inadvertently forgotten men.

This is an urgent appeal for a humane economic existence for these men and their wives, by means of a liberal increase in compensation. Out of due respect for them, I ask your forbearance with its lengthy contents.

A vicious economic cycle has clamped a stranglehold on the miserable existence of these unfortunate people. The continued rise in living costs has long ago entirely erased the increased benefits they received in 1957. Everybody drawing money from the Federal Government received an increase in 1960, except our combat disabled veterans. The aging, totally disabled are economically worse off today than ever before. The rapidly soaring prosperity of our Nation has left them far behind, in the lowest one-third of all American families insofar as effective buying income is concerned. Only Congress can, and must help them, without any undue delay.

They exist on $248 a month. Aren't they entitled to live decently in their last years of life? I know you have always been one of their loyal friends. Won't you please do something for them now, by interceding with your Chairman TEAGUE for expeditious enactment into law of a liberal increase in compensation for them? Irrespective of which compensation bill your committee reports to the floor of the House, and as very specifically requested in the President's March 24 budget message to Congress, I very strongly urge that a 15-percent increase be justifiably and belatedly accorded totally disabled combat veterans. Nobody will ever accuse the Congress of being too generous for this worthy group.

I am their spokesman. You won't get letters from them, as they are resentful and disillusioned. As in the past 18 years, I visited many of their homes again last Christmas season, and found deplorable economic conditions everywhere. I assure you their plight is real. I am 100 percent for economy in Government, but never at their miserable expense. I know you agree with me. They only ask for the necessities of life, including medical care for their wives. Are they asking for too much, this minimum of existence?

They won't be with us very long. They have hope and faith in their country, and are worthy of your urgent and favorable action in their behalf. Please don't disillusion them, and thereby destroy their self-respect and human dignity.

Trusting you will favor me with some good news for them at your earliest convenience, and with all good wishes, please believe me.

Very respectfully,

PHILIP E. RICHARDS,
Disabled American Veterans.

Employment up in Port Angeles

EXTENSION OF REMARKS

OF

HON. JACK WESTLAND

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 19, 1961

Mr. WESTLAND. Mr. Speaker, the employment outlook in areas of my district is becoming brighter. This is particularly true in the Port Angeles, Wash., area where seasonal unemployment in logging and construction trades is a problem during the winter months. Now with spring upon us and with the possibility of increases in the price of timber products, the employment situation on the Olympic Peninsula is changing for the better.

Under leave to extend my remarks in the RECORD, I enclose a story from the Port Angeles Evening News entitled "Work Picture Brighter." This story which appeared March 24, 1961, Mr. Speaker, indicates a firm economy and growing prosperity in the Northwest:

WORK PICTURE BRIGHTER

More than 230 workers in Clallam and Jefferson Counties were called back to work in February, Floyd J. Hill, manager of the Port Angeles office of the Washington State Employment Security Department reports.

And the future looks better. A survey recently completed by the local employment office in cooperation with 78 employers in Clallam and Jefferson Counties indicates that they expect to increase employment before the end of April this year. Most of the increase will occur in the lumber and wood products industry. The anticipated increases may be even greater still if the price of lumber, plywood and shingles improves sufficiently to permit additional expansion, Hill said.

Five contract construction firms were surveyed. They reported a 38.2 percent increase (from February) in employment anticipated in April, and a 55.9 percent increase anticipated in June. In other words, employment stood at 68 persons in February. Anticipated employment in April is 94 and anticipated employment in June is 106.

Twenty-two lumber and wood products and pulp and paper products firms sampled indicated a 3.5 percent increase in April and a 7.2 increase in June.

The number of State unemployment insurance claims filed in Clallam and Jefferson Counties decreased more than 15 percent between the week ending February 4 and the week ending March 4, Hill reports.

Most of the resulting employment expansion occurred in the lumber, logging and related wood products industries.

During the first 10 days in March, more than 100 workers had been called back to work—particularly in logging and construction activities.

Horace Godfrey Demonstrates Leadership in Farm Stabilization Job

EXTENSION OF REMARKS

OF

HON. HAROLD D. COOLEY

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 19, 1961

Mr. COOLEY. Mr. Speaker, in checking over the work done by the Department of Agriculture to launch the new feed grains program, I am impressed by the leadership demonstrated by Horace Godfrey, the new Administrator of the Commodity Stabilization Service.

Godfrey's effective performance during his first weeks in office is a matter of personal satisfaction and pride for me,

since he hails from the great State of North Carolina, he is a personal friend, and for many years he successfully directed our agricultural stabilization programs in North Carolina.

I have here a copy of some remarks made by Mr. Godfrey at the Atlanta area meeting on feed grains which point up his emphasis on local farmers' work and cooperation in operating successful farm programs. With the permission of the House I shall insert these remarks in the Appendix of the RECORD:

REMARKS BY HORACE GODFREY, ADMINISTRATOR, CSS, MADE AT THE ATLANTA AREA MEETING, MARCH 27, 1961

There are just a few things we want to say before we adjourn. To start this off, I would like all of the new State committeemen to stand up, if they will. I asked you to do that, because I wanted the rest of the group here to look at the new State committeemen. We have been attempting to do something here today primarily for them, although it applies also to the others, the older State committeemen that have been on for some time—and also to our State office employees.

We told you this morning at the very beginning that we think we set a record in getting this feed grain legislation signed last week, and getting it into the field and into operation. We started out with the meeting in Omaha on Thursday—then one in Denver on Friday, and now the one here today. Maybe we should have reversed the order of the meetings, because the earlier planting area is in the Southeast. But we felt that the kickoff should be in the heavy feed grain producing area.

We found in connection with these meetings, that there were two things that we needed to do—two things primarily. First, we needed to give our new State committeemen and our State office employees a little briefing on their part in connection with the overall activities of the Department of Agriculture, and let them see where they fit into the entire Department. And, second, we needed to give them sufficient information to kick off the feed grain program.

We started out this morning by trying to outline the activities of the Department of Agriculture. We followed that with an address by the Under Secretary, outlining to you some of your responsibilities and pointing out the fact that you are members of the official family of the Department of Agriculture, and that upon your shoulders rests a tremendous responsibility. He not only talked to State committeemen and State office employees, but he also talked to the others representing the Department of Agriculture here today.

Then, this afternoon, we have attempted to outline to you the provisions of the emergency feed grain legislation. We told you that we did not have all the answers, because the legislation was just passed into law last Wednesday afternoon. We started to work on it, of course, approximately 2 months ago. Many of you in the field started to work on it about 5 weeks ago, and much work has already been done. We have attempted to give you a few of the answers this afternoon as you raised them. We will be sending you additional information and additional answers as time goes by, but we felt that we could not wait until we had all of the answers to get into the field and get into operation.

As someone mentioned this morning, spring began a week ago today, and planting had already started in many areas. So, it was necessary that we get into the field with the information that we had, and then furnish you additional information—and maybe correct some that we have already furnished you—just as quickly as we possibly can. That's what we have attempted to do today.

I think that Secretary Murphy pointed out to you this morning, very effectively, that we believe this program will work. He also pointed out that he said, "We believe," because the final decision rests upon State committeemen and State office employees. With whatever program we give you out of the Washington office, or that the Congress gives you, the decision still rests with State committeemen and State office employees as to whether or not that program will be successful. Because upon you, upon your shoulders, rests the responsibility for generating or motivating county committeemen and county office employees. Unless the county committeemen and county office employees want the program to really work, then it will not work. But, if they want it to work, if you create in them a desire for the program to work, then it will be workable.

The statement was also made this morning, and I would like to reemphasize it, that this is our chance as farmers to convince the Congress, and our friends in the city that helped us get this legislation, that we can make a farm program work as far as feed grains are concerned. Now, those of us here in the Southeast know that a farm program can be made workable. We know that in the Southeast, because we have made a tobacco program work. I think we can say that we have made a peanut program work, and, for all practical purposes, we have made a cotton program work. But there is some doubt in a lot of peoples' minds throughout the United States as to whether or not a program can be made workable for feed grains. We believe it can be made workable. We believe we have a program now that will work for 1961, and upon your shoulders rests the responsibility of seeing that it works.

I said a lot of work had already been done. We are well pleased with what's been done in the field. We like the way you took hold of the instructions that we sent you about 5 weeks ago, and went out to the field and obtained the data from farmers. You really did an outstanding job in getting the data in from farmers. The way you went about it reminds me of the old days way back in 1933 and 1934 when we first started farm programs. But that is just the beginning.

We are now on the launching pad, so to speak, and whether or not we get off the ground depends upon you, because the job is yet in front of us. You as State committeemen and State office employees now must go back home—after tomorrow, after you finish your meeting here tomorrow—you must go back home and decide either before you leave here, or imemdiately after you reach home, what you are going to do to get this program into operation in your State, and in every county in your State.

What's necessary? Now, I can tell you that it will not operate by itself. You will not get participation by merely getting out a lot of material through the mail. You will not get participation by merely getting a lot of newspaper publicity. You will not get participation merely by having a lot of TV programs. That all helps, but it takes more than that. I could suggest many things for you to do, but I think the situation is going to be different in each State and possibly in each county within a State. I think you're going to have to use every means that you've ever used before and borrow a few that you haven't used before in order to get the participation that we want in this program.

Secretary Freeman said the other day in a press conference that this is more or less a "beg and pay" program. A "beg and pay" program. We're begging on the basis that this is an opportunity for farmers to show that they want a farm program, and we're paying in an effort to get the fullest participation possible. That's the way he put it. I say you're going to have to use every means that you've ever used before and then borrow some that you've never used.

I would suggest that you immediately decide how you're going about it, that you go back home and hold the necessary meetings of State people. Include your sister agencies within the Department of Agriculture, your allied State agencies of the Department of Agriculture, your fertilizer people, your farm-machinery people—in fact, everybody that's interested in agriculture. Sell them on the provisions of the program.

Then, just as soon as you finish your State meetings, I think you should immediately plan for district meetings and county meetings. I think, it's going to take a lot of meetings where you can have an opportunity to answer questions that are being raised by farmers and by others as to what does this program mean? How does it operate? You'll have to be in a position to answer those questions. You can't do that by merely sending out a piece of letter material. Now, this background information is good. The leaflets that we're going to furnish you are good, but that personal contact is the best means of getting participation.

Now, in your meetings with county people, in your meetings with your fieldmen that work with your county offices, let it be understood that you—as the State committees, and State administrative officers and program specialists—are expecting the fieldmen, county committees and county office employees to do everything within their power to explain the advantages of this program. You let it be understood without any doubt that you expect them from this day forth to have a positive attitude because the attitude of county office employees and State office employees will largely govern participation in the feed-grain program. We've seen evidences of that influence many times in the past. We have seen participation in ACP, for example, more than doubled in a county merely by changing the ACP clerk that contacted farmers in the county office. Merely by changing an attitude. And I say, from here on we must have a positive attitude on farm programs. We have no alternative.

Now, for those of you that are new State committeemen, let me give you just a little advice as to the ways and means of getting a positive attitude. I might say that throughout the Southeast the attitudes are a little bit different than they are in many areas of the country. I don't think you're going to have any difficulty in securing a positive attitude on the part of State office employees or on the part of county office employees. But, let me hasten to say that if you have any difficulty, if there are any individuals in a State office or in county offices that do not feel that they can adopt a positive attitude and attempt to work constructively for this program, then they should be honest enough with themselves and with us to disassociate themselves from the organization. Second, if they are not honest enough to do that, then it should be your responsibility, and it is your responsibility, to see that they find more compatible work outside.

Now let me go a little bit farther. There are employed in county ASC offices and State ASC offices many dedicated and loyal employees that have for several years been waiting an opportunity like this to help a farm program. Now, you new State committeemen can use the experience of these county employees—these State employees who are dedicated. We hope that you will rely upon them and use the knowledge and experience that they have.

I don't think you'll have any difficulty whatsoever in separating the employees that

are dedicated and have a positive attitude, and those that want to drift, or go back. And I think you have the responsibility to separate them. This is a responsibility to the general public, to the Secretary of Agriculture, and to the President. You have a responsibility now to see that farm programs which come under your supervision are made workable.

We are looking to you to carry out this responsibility. We know that you can do it. We know that it's inherent in every individual to want to do a good job. We know that every individual wants to be recognized for doing a good job. We know that in CSS we can do a good job. We are counting on you to do a good job. With that, let's get on with it. Thank you very much.

Deadly Suds

EXTENSION OF REMARKS
OF
HON. ELMER J. HOFFMAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 19, 1961

Mr. HOFFMAN of Illinois. Mr. Speaker, the problem of water pollution is an evergrowing menace, not only to plant and fish life but to the reservoirs and filtering plants which prepare our water supply for human use and consumption.

The Daily Journal of Wheaton, Ill., is undertaking a project to inform its readers as to the growing seriousness of this problem. One source of concern in solving this problem is the elimination of the effects of using detergents. I commend to you the editorial which follows:

DEADLY SUDS

Cleaning the laundry isn't the only dirty work laid to tons and tons of household and industrial detergents used in every city, village and hamlet in the United States.

In recent months, newspaper accounts have told of conferences on this very real menace to several facets of our American way of life.

As far back as 1959 Arthur S. Flemming, the Secretary of Health, Education, and Welfare, said, "We may be confronted with a crisis of such gravity as to jeopardize the further growth and development of many areas of the country, and even the health of millions of people."

His successor, Abraham Ribicoff, recently told a House subcommittee in Washington that the waters of the Ohio River are used 3.7 times before reaching the Mississippi.

Ribicoff might have added that each time it is used, the water gets another charge of detergents, only a microscopic percentage of which is lost in passing from one municipal treatment plant to another.

In our State, foam on the Illinois River, as it passes Starved Rock, presents what appears to be whitecaps on the water. Closer inspection shows patches of foam at times 25 feet or more across.

Plumbers complain the insoluble elements eventually clog up drainpipes, while health department sanitarians deplore their use where household sewage depends upon septic fields for disposal.

The porosity of the soil is destroyed by the accumulation of the nonorganic particles.

The reservoirs of many cities depending upon rivers for their water supply have found as much as six parts per million of these cleansing agents in their drinking water.

In 1957 the first conclusive evidence in this country was published showing that detergents were destructive to aquatic life. Clarence Tarzwell, research engineer at the Robert A. Taft Engineering Center, Cincinnati, reported that detergents are toxic to fish in concentrations of four parts per million.

Three research scientists working with Tarzwell cited these facts from their studies. (1) Concentrations of syndets, synthetic detergents, in sewage from various cities have ranged from 4 to 45 parts per million; (2) a concentration of 3.5 parts per million killed 50 per cent of fish in a relatively short time.

The studies were made on five widely sold, packaged household detergent products.

The culprits in each of the cleaners were chemicals called alkyl benzene sulfonates. These are the same ingredients that get daddy's grimy overalls so "spanking clean," mom's clothes so antiseptic white—and which kill the fish in our rivers, kill the bacteria in our sewage treatment plants, create many allergies and rashes, ad infinitum.

The detergent first appeared on the American scene in 1934, but the real boom came as detergents became a war baby to take the place of the soluble fats and greases that went to war instead of into soap.

It is sometimes easy to condemn and deplore a condition, and do nothing about it. This has been done many times since detergents helped out the housewife during the war.

The Daily Journal believes the detergent manufacturers should take it unto themselves to eliminate this great nuisance.

Such publications as Journal of The American Water Works Association have published accounts of experimental research on development of organic detergents, which would dissolve.

One speaker at a national convention of soap manufacturers went so far as to exclaim that things were getting so bad they might even be compelled to return to the manufacture of soap.

We propose that the manufacturers of these products establish a fund, with contributions being supplied by the makers of these Frankensteins of the laundrytubs.

We urge that they put researchers to work to remely the havoc they have wrought, and have permitted to go unchecked for so many years.

Who Was in Orbit, Gagarin or Khrushchev?

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 19, 1961

Mr. DAGUE. Mr. Speaker, in any evaluation of our space accomplishments with relation to the unsupported claims of the Russians it is perhaps pertinent to note the depth of sheer demogogery reached recently by a certain columnist who undertook to place responsibility for our alleged defeat in space on former President Eisenhower.

In refutation of that charge a résumé of the sequence of events following the end of World War II is most revealing and it seems proper to point out that under the Democrats we allowed the Soviets to pick up, gratis, a wealth of scientific missile date captured by American troops in Germany. The real deterrent to a realistic program, however, was had in the outright refusal of the Democrats under Truman to appropriate money or authorize a forthright plan of space exploration.

By contrast the Republicans under Ike, in 7 years, closed the missile gap and gave the United States an actual scientific leadership in space exploration, if certain unauthenticated claims of the Russians are taken with the grain of salt they deserve. Be that as it may, in only one area—rocket thrust—are we behind the Soviets and we surrendered that advantage when the Democrats under Truman were sitting on their hands and doing nothing.

Apropos of the current situation, in discussing with a number of my constituents over the past weekend the Russian claim of having launched a man into space and brought him back without mishap I found most of them strongly skeptical of the Soviet's latest propaganda, their skepticism understandably being based on the known Russian reputation for skulduggery and duplicity.

In my conversations with my constituents I found them reflecting the doubts voiced by certain news media both here and abroad, which point up the obvious discrepencies in the Russian claims. For instance, the claim by Yuri Gagarin, the "cosmonaut", that he orbited the earth suspended on air within his vehicle runs counter to the accepted practice of strapping the astronaut to his seat to protect him from the violent impact of the initial blastoff. It was also noted that while Gagarin reported detailed earthly scenes as he flashed by a 18,000 miles per hour a noted Russian scientist claimed that the vehicle was without windows of any kind.

There is also the matter of timing and with the flight officially reported to have taken place on April 12 we wonder how the London Daily Worker had it taking place on April 7 when they gave out the word that the space traveler had circumnavigated the globe and had returned to earth suffering from acute shock. Failure of the tracking stations of our National Aeronautics and Space Administration to make contact even with the burned-out casing of the lofting rocket until several hours after the Russians reported the astronaut's return further indicates the unreliability of the reports.

The fact also remains that no tracking station outside of the Iron Curtain had advance word of the experiment and none reported catching the spacecraft while in orbit. All of which, coupled with the Soviets' record for fabrication, prompts most of the people with whom I have talked to reach the conclusion that this incident was probably designed to cover up previous failures, in which their space travelers may have lost their lives, and was staged as a face-saving device in anticipation of an American breakthrough at an early date.

In support of these reservations by people who are not inclined to accept unsupported Soviet claims, as so many col-

umnists and scientists seem inclined to do, I would like to underscore that portion of a Washington Evening Star editorial which puts forth these rather pointed questions:

Exactly where, for example is the place that should have a monument built on it as the site of the launching of Major Gagarin into orbit? And precisely where did he land in the U.S.S.R. after his single celestial circumnavigation of the globe? As for the spaceship that carried him on his history-making voyage, what does it look like? Why are there no clear photographs or verable descriptions of it? When will outsiders be vouchsafed the opportunity to inspect it, or at least to read detailed accounts of it? And how explain the fact that the Kremlin's spokesmen, even the "cosmonaut" himself, have been almost ostentatiously evasive in responding to these and similar queries? Is there something to hide? Does the furtiveness cover up facts that the world ought to know? Is a fraud involved here—or a military advance—that the Soviets are determined to keep under wraps?

And then my favorite columnist David Lawrence, in the same issue of the Evening Star, concludes with these pertinent observations:

Just why would the Russians concoct the story if it is not entirely true? One answer is that the Communists have no morals—they regard lying as a legitimate device in national and international policies.

Just now it is important for Nikita Khrushchev to divert the attention of the Russian people from their hardships with an appeal to their national pride. History records that the czars of another era also engaged in huge spectacles, parades, and displays to impress the people and cause them to forget or put aside their woes.

The Communists have much to explain. Scientists throughout the world will remain curious. Science has a way of probing into such things. Already the Soviet Government has declined to make its data public. Secrecy is always the refuge of totalitarian governments which do not hesitate to try to fool not only their own people, but the whole world.

The Futility of Depending Upon Good Faith of the Communists

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Wednesday, April 19, 1961

Mr. DODD. Mr. President, a recent column by Jim Bishop published in the Washington Evening Star on April 12 contains a valid assessment of the Soviet Union and of the futility of any policy which depends upon the good faith of the Communists. Mr. Bishop makes some thoughtful comments about Communist tactics in the world struggle and the success that they are achieving.

I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

VISHINSKY MADE IT CLEAR
[By Jim Bishop, reporter]

The Soviet Union, as a phenomenon of the 20th century, will be the first to go down in history as a predatory nation with no honor. The Caesars, at their worst, had some. So did the Huns, the ancient Persians and, of course, the Greeks. The only nation that approaches the Soviets in lack of integrity is Adolf Hitler's Germany, but he lasted only 12 years.

The Russian Revolutionary Government has been in power 43 years. It grows stronger, not weaker, and its goal has remained fixed: Communist domination of the world. The Russian bear lumbers slowly across the snows of Time. Ahead, the Western Powers in their droshky toss the Bear a baby nation now and then to slow him down, but his appetite is insatiable.

He stops for a moment to kill and digest, but he moves on at a trot, never tiring, never frightened, always closing in. The ideology of the Soviet is godless intellect coupled with national aggrandizement. Whatever adds to the power of Russia is good for all.

The sun has set on all the major empires of the West, now it rises in the East. The Communists control a land mass from the Arctic Ocean to Malaya, from Anadyr Peninsula to Berlin—the Caesars of Rome never had an empire like that. It will grow bigger before it starts to shrink.

It was Andrei Vishinsky, prosecutor in the purge trials of 1934, who listened to an unhappy defendant confess that he had been friendly with the Germans because "our policy was to be friendly, at the time." Vishinsky chuckled. He shook his head as though such stupidity was beyond him. "Do you not know," he shouted, "that, no matter what the public policy of the moment, true socialism cannot live with any other system of government? The working class must establish governments in every nation. Has this not been the unfailing, unchanging policy of Marx and Lenin and Stalin?"

It has. Anyone who says that the West can negotiate with the East is naive. Negotiation in Laos, in Berlin, in Korea—anywhere in the world—must result in a Soviet advantage or there will be no agreement. The game, as the West plays it, is to see how cheaply the bear can be bought for a moment's peace.

The Russians fight with propaganda and economics. For a young nation, they use these well. They have beaten us so many times in the field of propoganda that now, when a new crisis develops, the world does not look to Washington for a solution; it turns to Moscow.

These are clever weapons, well honed, and they win battles without sacrificing Russian lives. The Soviets take a chunk of territory here, enslave a few million people there, win a concession somewhere else, and all the time they keep the world in such a chronic state of fright that the West spends more and more, trying to be ready.

The propaganda weapon may not kill us, but the economic one could. Our defense spending this year will come to 43 billions. Each American wage earner will owe $683 for missiles and planes and warships alone. This is an enormous sum for an average man to owe his Government each year. It will grow greater because the policy of the Soviet Government is to keep feinting the United States toward heavier armament while the Russians hold two keys: One to war; one to peace.

It is not necessary for them to put either one in the door of history. They can jangle them, and achieve notable results.

A thousand years from now, children will be studying the witless mistakes of the West in the 20th century. That is, if there are any children.

Migrant Farm Labor Problems and Harvest of Shame"—XIII

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

Mr. ROGERS of Florida. Mr. Speaker, this is the 13th in a series of articles presented in the public interest by the Palm Beach Post-Times to show the members some of the progress being made in Florida to solve problems relating to migrant farm labor which were left out of the television presentation "Harvest of Shame." The omissions of all that has been, and is being done in this field did a great injustice to the Floridians who have given their time and efforts to these problems over the years. It is hoped that by reading these articles and the ones to follow the Members and public will have a better understanding of this important matter.

[From the Palm Beach Post, Feb. 3, 1961]

CLEAN, GOOD FOOD—NEW COASTAL MIGRANT CAMP

("In the survey of 21 States conducted by the national council of churches, the migrants themselves listed the evils of labor camp life—bad housing, flies, mosquitoes, dirty beds and mattresses, unsanitary toilets, lack of hot water for bathing."—Harvest of Shame)

The Palm Beach County Board of Health eyes with satisfaction a new 600-acre farm of American Foods, Inc., on Lantana Road west of Military Trail.

Joseph Alvarez, the board's chief sanitarian, points to the facility as a good example of the trend toward betterment of migrant labor health conditions in the area.

Inspecting the facility less than 2 weeks ago, Alvarez didn't hesitate to approve its licensing.

Jess Vielma, farm labor contractor, reported 180 men already are employed at the farm. Most are working on 140 acres of strawberries.

But the farm will employ considerably more, according to Archie J. Rutledge, vice president in charge of operations.

He estimated the figure will grow to 600 later this year.

The labor force includes domestic and imported labor.

Rutledge said his company, formerly Florida Mushroom Co., has invested more than $80,000 to provide proper living conditions for the men who will grow the crops of strawberries, cucumbers, bell peppers, watermelons and other items.

Much of the planting already has been accomplished.

The company has erected gleaming corrugated aluminum buildings for the labor force. Numerous jalousie windows provide for cross ventilation and light.

Barracks have been built on concrete slabs, which authorities have found easy to keep clean and sanitary. Double-decked bunks similar to that in some Army barracks have been provided.

Tasty food is served in a military-style mess hall. The dinner menu last Wednesday included fried chicken, green beans, potatoes, rice, coffee, and bread and butter.

"We provide three meals a day and serve hot lunches in the fields," Rutledge said.

For $12 per week, the migrant worker gets 21 meals, his living quarters, electricity,

and water for laundry and bathing, the vice president reported.

"Word about the camp is getting around," he said: "We don't expect any trouble in finding the labor we will need."

The company has provided a small canteen where workers may buy candy, cigarettes, tobacco, and soft drinks. A few items of clothing are stocked, and there is a jukebox.

How much do the men earn?

The hourly rate paid by American Foods is 65 cents, Rutledge said.

"We expect to provide a 9-hour day, 6 days a week," he added.

Vielma said the camp will be in operation this season until May, or perhaps longer.

To expand its operations, the company late last year issued $500,000 worth of stock. Its headquarters is in Miami. It has growing ventures at Delray Beach, Goulds, Immokalee, and Burgaw, N.C.

Rutledge was unable to estimate the cash value of the crops to be grown at the new farm.

"Our volume last year was over $2 million," he said.

The company has leased a plant formerly occupied by Strazzula Bros., near Lake Worth, and will use it for precooling of its crops before shipment.

The firm processes and markets as canned goods much of its production.

The Price of Federal Aid

EXTENSION OF REMARKS
OF
HON. PAUL FINDLEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 19, 1961

Mr. FINDLEY. Mr. Speaker, the morning mail recently brought this notice:

The U.S. Department of Agriculture today, April 13, announced the fair and reasonable wage requirements for the 1961 crop of sugar beets in all producing regions. USDA officials stated that the wage rates of this determination are within the producer's ability to pay under the prospective price and production conditions for the 1961 crop.

Payment of wages not less than those set by the Secretary of Agriculture is a requirement that producers must meet to qualify for payments under the Sugar Act of 1948, as amended.

This notice is a clear example of the price we pay for Federal aid, be it in agriculture, education, or any other field. The Government does not aid without naming its terms. At first the terms may be simple. Sooner or later, strings are attached. In the case of aid to sugar producers, the strings are many and strong.

It all started innocently as a means of assuring dependable sugar supplies. Now Government runs the whole show with the U.S. consumer paying an artificially high price for every pound of sugar he buys off the grocery shelf.

Is that bad? It is if you are not producing sugar, but would like to. It is if you want freedom in managing and marketing your product, and in negotiating for wages. It is if you are a consumer and want a fair price for sugar you buy.

Organized labor is involved, too. When a country shifts from a free-enterprise economy to controls, many of the gains of collective bargaining are tossed aside, and the voice of labor is hushed. Wages are determined by Government edict.

The controls are acquired a little at a time. Suddenly, as in sugar, we realize the price of Federal aid, but there seems to be no escape. Tobacco growers are now so entangled in controls that the privilege to produce has a dollar value. It can be sold, traded, or inherited. When you buy an acre of tobacco land, you pay between $1,500 and $3,000 an acre for the right to grow tobacco.

Controls get built into business procedures and into the soil itself, so much so that even a gradual relaxation is complicated.

A Real Missile Gap

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1961

Mr. HIESTAND. Mr. Speaker, too many times we are prone in our legislation to doctor the symptoms of the diseases rather than get to the causes thereof. The Wall Street Journal of Monday, March 27, 1961, had a revealing editorial on the real missile gap, which is so thought-provoking, it should be widely read:

A REAL MISSILE GAP

There seems to be doubt inside the Kennedy administration about whether this country faces a missile gap vis-a-vis the Soviet Union. But there can't be any doubt about the reality of the gap between planning and launching pad in construction of key missile bases—a gap which the Pentagon warns will remain despite urgent speedup orders.

Investigating the snail's pace of the base program, the Senate Government Operations Committee has found a fantastic loss of time through strikes, work stoppages and wildcat walkouts by union construction workers. Since July 1959, for example, 4 major missile bases have suffered 125 strikes, causing a loss of more than 100,000 man-days.

Trivial jurisdictional disputes and ludicrous grievances are often the cause of the base work stoppages. Union members are quick to strike these essential projects because, in contrast to civilian jobs, missile base construction must proceed on a top-priority schedule, and hang the overtime. Hence, a strike means a big payoff. Some skilled union craftsmen have pulled down as much as $1,000 a week catching up on work they refused to do at straight time.

Obviously, these delays weaken national security and could conceivably exact a catastrophic cost. The dollars-and-cents cost is already staggering. Indeed, some unions themselves are belatedly talking of self-restraint and adopting "no-strike" pledges.

The country is entitled to something more binding, such as tougher legal restraint on the secondary boycott and other union practices. Yet, amazingly, a bill introduced in Congress with strong administration backing would legalze secondary boycott picketing at "common situs" construction sites, thus inviting new delay and waste in the missile program.

The taxpayers have given unstintingly of their dollars to obtain the best possible defenses, and the administration plans to ask further sacrifices. Dollars won't be enough, however, so long as the unions are permitted to exploit the very real gap they have opened in this country's missile program.

Individual Americans Hold Key to Preservation of Freedoms

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 19, 1961

Mr. WILSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the San Diego Evening Tribune of April 7, 1961:

INDIVIDUAL AMERICANS HOLD KEY TO PRESERVATION OF FREEDOMS

The key to the preservation of our freedoms lies in the understanding mind and patriotic hearts of individual Americans.

Not in fuzzy wishful thinking about the aim of communism.

Not in fainthearted unwillingness to meet its deadly challenge.

But in knowing where we stand, and why * * * what we must do, and how, individually and as a Nation blessed with a priceless heritage of liberty.

Let us get with it.

This theme ran ringingly through remarks of two eminent speakers in San Diego Tuesday.

One of them was former Vice President Richard Nixon.

The other was Carlos P. Romulo, Philippine Ambassador to the United States.

Said Nixon, in his call for direct involvement of every individual American in the great issues of our times:

"It is very easy to talk of freedom in the abstract and fail to recognize that it is impossible for any individual in a free country to sit on the sidelines. Whatever your politics may be it is the responsibility of people in your stations of life to provide leadership for our political institutions.

"The political bosses, to whom some want to leave government, are only as good as people like you. Only to the extent that you provide leadership can our possibilities for development be realized. Only in this way can you make the ideals you believe in prevail in this world."

Romulo, speaking at the sixth and last "Pillars of American Freedom" luncheon sponsored by the San Diego Kiwanis Club, gave three premises by which Americans should judge our Nation's actions in international affairs.

First, the United States is not imperialistic.

Second, the basic Communist objective is world domination.

Third, the United States is engaged in a life and death global struggle with the ruthless monolithic ideology that is communism.

These are valid yardsticks—borne out by the record, ours and the Communists'.

We neither sought nor accepted an inch of territory after emerging victorious with our allies from World War II. In fact, we shared our abundance with prostrate friend and foe alike.

At the same time the free world was opening the gates of independence to millions, the Soviet Union and Red China were

enslaving even more millions of once-free peoples.

Neither Soviet Premier Nikita Khrushchev nor Communist China's Chairman Mao Tse-tung have denied that the ultimate goal of the Communists is world domination. On the contrary, they boast of its inevitability.

These are the facts that we must face squarely and accept unflinchingly.

To do less is to fail our forefathers, to forfeit their legacy of liberty.

The Drive To Subvert Youth

EXTENSION OF REMARKS
OF
HON. ROMAN L. HRUSKA
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 19, 1961

Mr. HRUSKA. Mr. President, everywhere the focus these days is on youth. Much of the publicity, however, does not call attention to the strength, courage, enthusiasm, and constructive attitudes that almost every young American possesses. They know that they have the greatest of stakes in the results of the current ideological struggle, because they will live longest under its resulting regime.

The Communist knows this all too well and is constantly working to win by fair means or foul the minds and loyalty of youth to programs consistent with the Communist goals, usually not carrying the Communist label.

Recently an article appeared in Life Lines, published in Washington, D.C., that exposes this scheme and offers some suggestions. I think it deserves wide readership.

Mr. President, I ask unanimous consent that this article entitled "Mistaken Continue Their Drive To Subvert Youth" be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MISTAKEN CONTINUE THEIR DRIVE TO SUBVERT YOUTH

The mistaken drive on youth, in America and around the world, continues. The freedom-haters have coldbloodedly determined to make every possible effort to turn the enthusiasm and vigor of young people to forwarding their own evil ends. They are using all the subtlety and craftiness in which they have long been trained to subvert youngsters in the United States, in Latin America, in Japan, in Europe.

The Un-American Activities Committee of the U.S. House of Representatives is much aware of the problem in this area. The committee is on the job, making studies and conducting hearings of Communist activities and propaganda among youth groups. Much information of value to fighters for freedom has been developed.

Committee Chairman FRANCIS E. WALTER has said:

"I know that this committee's investigation in this area will probably precipitate a barrage from the Communist press and from Communist sympathizers characterizing our work as an investigation of youth. The Communists know as well as we do that the overwhelming majority of the young people of this Nation are of unquestioned patriotism and dedication to all that is good and noble in our society. But by equating an investigation of Communist activities among youth with an investigation of youth itself the Communists and their sympathizers hope to becloud the issue.

"This, of course, is an old trick which the Communists repeatedly use. When this committee investigates Communist activities in defense plants, the smokescreen that the Communists use is that we are investigating organized labor. When we investigate Communist activities in an educational institution it is protested by the Communists that we are investigating education.

"I am sure that the overwhelming majority of Americans readily see through this fraud and it shall not dissuade us from our task."

One of the witnesses appearing before a recent hearing of the House Committee on Un-American Activities on Communist activities and propaganda among youth groups was Herbert A. Philbrick of Rye Beach, N.H. Mr. Philbrick, a former undercover agent of the Federal Bureau of Investigation serving in the Communist Party, stated that youth has always occupied a top position as a target of the Communists. But, he said, the mistaken antifreedom forces recently have felt that they are in an especially favorable position for a new drive on young people.

Mr. Philbrick said that the overall purpose of Communist-front youth organizations is "to strengthen the position of the Soviet Union and to weaken the position of the United States, to break down if possible, the loyalties of young people, their respect, their regard for their own nation, their own country, their own background, their own heritage."

In discussing the role of a Communist-front organization as a transmission belt for Communist propaganda Mr. Philbrick stated:

"The Communists knew that perhaps very few of the young people would be vulnerable to direct appeals by the Communist Party itself.

"They knew, for example, that if a leaflet or a pamphlet were to be given to the young people and it was clearly and accurately labeled Communist Party, they might tend to disregard it or perhaps not to believe it. However, if they were to take the same propaganda written at Communist Party headquarters, take off the label 'Communist Party' and put on a new label, such as 'American Youth for Democracy,' this they hoped would sufficiently disguise the subversive propaganda and the material would be accepted. The Communists called these organizations transmission belts. That is not my term. That is their term."

Commenting on the doubletalk used by the mistaken forces in their efforts to penetrate youth groups, Mr. Philbrick testified:

"When the Communists, for example, speak of the sharp struggle for peace, democracy, and security, what they really mean, of course, is the struggle on the part of the Soviet Union to win, to be victorious over the free world. When they speak of the democratic movements of youth, they, of course, do not mean democratic movements. They mean a totalitarian movement.

"They say groups of youth interested in Marxist study and action have appeared in a number of cities among college students, teenagers, and other youth.

"When they talk about Marxist study groups, they mean, of course, Marxist indoctrination groups, and it is interesting to note that the Communists are here bragging that these Marxist indoctrination groups have been formed among college students, teenagers, and other young people."

Mr. Philbrick recognizes the fact that the overwhelming majority of American young people are loyal and patriotic. In his testimony before the House Committee on Un-American Activities, he offered this advice:

"I would first of all, suggest that our loyal young people support this committee in its efforts to make the truth be known, because there is one thing that the Communist Party fears more than anything else and that is the truth. They know they cannot survive if the truth were known. Hence, it is important that this committee and other investigating committees constantly procure and obtain the truth and make known these facts about communism and Communist activity in our country. Therefore, young people should support the work of this committee and of the Congressmen who give so much of their time to it.

"Secondly, our young people should demand that their schools and colleges provide them with information about communism. This is not being done now. There are very few schools and colleges which have adequate courses concerning communism. This they should demand because it is impossible for them (or for anyone) to fight an enemy unless they know their enemy.

"Third, our young people should not only be aware of the great crisis that we are in today, the worldwide crisis, the threat that communism poses against all of the free peoples and all of the free world, but they should also diligently study, learn, and come to appreciate the wonderful heritage, the great things of value which we have to protect and defend in this country."

There is thrilling evidence that young America is rising to the challenge of mistaken propaganda. Recently a group of college students formed what they call Young Americans for Freedom. Their organizational statement in part said:

"We, as young conservatives, believe that foremost among the transcendent values is the individual's use of his God-given free will, whence derives his right to be free from the restrictions of arbitrary force; that liberty is indivisible, and that political freedom cannot long exist without economic freedom; that the purposes of government are to protect these freedoms through the preservation of internal order, the provision of national defense, and the administration of justice; that when government ventures beyond these rightful functions, it accumulates power which tends to diminish order and liberty."

This is an affirmative program. It suggests a course that America will do well to follow.

Textile Industry

SPEECH
OF
HON. VERNON W. THOMSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1961

Mr. THOMSON of Wisconsin. Mr. Speaker, I wish to commend the distinguished Congressman from Georgia [Mr. VINSON], for bringing to the attention of this body the tragic plight of the textile industry, and particularly the woolen and worsted manufacturers. He has at long last touched upon one of the very basic reasons for the so-called depressed areas and surplus labor communities in this Nation. In my district we not only produce wool in large quantities, but also have there located the only surviving woolen and worsted mill in the Middle West. While woolen and worsted mills are closing all over the Nation, last year alone 61 million yards of woolen fabrics were imported into the United States.

This is enough fabric to keep between 60 and 70 mills operating the year round. The well-being of American industry is vital to the economic health of this country and the prosperity of wage earners and business, but this industry, along with many others such as rubber, zinc, storage batteries, furs—to name a few in my district alone—can no longer compete successfully with low-wage imports which have become a clear and present danger to the industries mentioned and to our national security and welfare. These industries have modernized their plants, improved their efficiency, invested huge sums in their businesses, and now face economic ruin by the tremendous increase in imports at prices below the American manufacturers' costs. If we act now we can save these American industries, provide jobs and wages, reduce unemployment, and eliminate the need to appropriate money from the Federal Treasury as aid and redevelopment for labor surplus areas in this Nation. Huge sums for redevelopment provide relief for the effect of these imports, while action in this field will remove the cause, and I again commend my colleague from Georgia and his associates for their efforts in this field which is so basic to the welfare of America. I would like to associate myself with the purposes outlined so ably by Congressman VINSON.

Effects of Foreign Textile Importation in Wisconsin

SPEECH
OF
HON. HENRY C. SCHADEBERG
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1961

Mr. SCHADEBERG. Mr. Speaker, I would like to take this opportunity to briefly show some of the effects which the increase in foreign textile importation has had in my district, Wisconsin's First.

In 1950 the First District of Wisconsin had 13 manufacturers of textile products; today there are 9. In addition one of the remaining firms is sharply curtailing its employment. This happens to be one of the largest.
